CRITICAL PROBLEMS OF THE DISARMAMENT CONFERENCE

BY STEPHEN BONSAI

An expert analysis of the situation that will confront the Conference for the Limitation of Armaments and of the chief problems that will come up for settlement—The United States at the parting of the ways in regard to enforcing the Open-Door policy

BY a happy coincidence which is symbolic rather than fortuitous, on the 11th of November next, at the same hour, one of our nameless rather than unknown heroes, brought from the battle fields on the long-endangered frontier of humanity, will join the bivouac of our glorious dead in Arlington, and the World Disarmament Conference of broadened scope will assemble in Washington. The memory of the dead, the thought of those who live to mourn as well as of the generations unborn who should be spared such experiences, if it is in our power to prevent them, are, as they should be, associated with the date that closed the slaughter and the destruction of Armageddon, let us hope for all time.

I say conference of "broadened scope," I think advisedly, because the principal naval powers of the world, as well as those with special interests and responsibilities in Asia, are invited in the solemn words of President Harding's invitation "to participate in a conference on the subject of the limitation of armament, in connection with which Pacific and Far Eastern questions should also be discussed."

The formal program of the conference, in so far as Far Eastern problems are involved, is subject to future agreements and is to be shaped by "suggestions to be exchanged before the meeting of the conference."

Subject then to the accords that may be reached in the diplomatic exchanges now in progress between the powers, the scope of the conference and the tentative program as outlined in the President's call is as follows, expressed in the President's own words:

1. *The limitation of armaments, naval and others, which are a menace to the peace of the world.*

2. *The discussion of Pacific and Far Eastern questions.*

3. *To formulate proposals to control in the interests of humanity the new agencies of warfare.*

4. *By a common understanding with respect to Pacific and Far Eastern problems of unquestioned importance, to arrive at a solution through the conference that may serve to promote enduring friendship among the peoples.*

Prompt acceptance from all the powers was forthcoming, except from Japan. After some delay, however, and explanatory correspondence between Tokio and Washington, Japan has accepted, though advising that questions which may be regarded as accomplished facts, or "as more properly problems such as are of sole concern to certain particular powers, be scrupulously avoided." In other words, while it is couched in courteous diplomatic language, Japan makes a sweeping reservation and retains full liberty of action in case her suggestions as to the more profit-

able scope of the conference, now being received in Washington, are not followed. Without in the least seeking to minimize the force and the effect, since until they are adjusted that those far-seeing statesmen in Washington and elsewhere, who are seeking to establish a new world procedure enlightened by and open to the currents of aroused public opinion on the subject of war and armament, have secured an initial triumph and that a hopeful expectancy toward coming events is fully justified.

The pending questions awaiting solution and retarding the development of the countries across the Pacific, and, indeed, of world-wide effect, since until they are adjusted, all drastic disarmament proposals should be regarded as dangerous experiments, may be briefly enumerated as follows: First, the status of the Island of Yap, pivotal in world communications. Second, Japanese immigration to California, a *casus belli* whenever the will to war and conquest prevails. Third, the control of Shantung, from which is inseparable the policy of equal opportunity and the Open Door in China. Fourth, the scope of the Anglo-Japanese Treaty, its renewal or discontinuance. This last question may be kept off the agenda, but it will and should figure in the real proceedings, as it is a very powerful factor in a situation which intelligent world opinion everywhere is seeking so to compose, that disarmament may be regarded as a sane policy.

THE OPEN DOOR

Great Britain, France, Belgium and the United States are all vitally interested in the Open Door to Chinese markets, but some of these powers, unfortunately, have other vital interests. For instance, France is vitally interested in the protection of her Indo-China possessions, and she has sought to safeguard them in a special treaty with Japan—imposing mutual obligations—that is still operative. Great Britain is, of course,

keenly interested in maintaining her possessions on and off the East Asian coast, and her sphere of influence in the Yangtse Valley, not formally renounced in favor of the later policy of equal opportunity. The leaders of the British Colonial Office are today embarrassed by a tie with Japan which is none the less binding because it is rarely emphasized. They know what would have happened in all human probability to British Malaysia but for the opportune arrival of the Japanese warships at Singapore in February, 1915, and the drastic way in which they suppressed the mutiny of the Indian troops with which the native Malays openly sympathized.

So perhaps it would be wise to admit that there are two categories in the ranks of the upholders of the Open Door: Those who think with us that it is a promise of peace and a guarantee of the salvation of China, and the others who see alternate measures a little way up-stage, by which, in certain contingencies, at least their commercial interests might be safeguarded.

England has generally maintained much the same attitude toward China as we have, but her financial affiliations are quite different from ours, and it is quite clear that there are certain British financial groups, powerful in the Far East, whatever their strength in Downing Street may be, of which I know nothing, who might be able to see with placid equanimity our attempt to internationalize Yap for cable purposes fail. For, if we succeed in our purpose as stated by Secretary Hughes, and President Wilson's contention as to what was agreed upon with respect to this infinitesimal speck of land at the council of the Big Four in Paris prevails, the present cable supremacy of the British in East Asia would be a thing of the past.

In business and in diplomatic circles it is not necessary to point out how imperative an all-American cable to China is in the present world situation. Without it, the Chinese

would continue to regard the Open Door as a delusion, perhaps as a snare. Our business circles, in the light of recent experience, not limited to this world quarter, are sufficiently enlightened as to the trade-getting qualities that a cable in the unrestricted hands of a commercial rival possesses. While other and more influential countries have acquiesced in our position, as so ably stated by Mr. Hughes, the warmest supporter of our policy in this regard is probably Holland, a country which was vitally interested and closely associated in the imperial German attempt to escape from the coils of the English cables during the ten years preceding the war. Indeed, the cables that Germany laid, and the connection with the Dutch cable from Java to Europe, constitute the present subject of contention: that, and the fact that the Japanese have transferred the former Yap-Shanghai cable to Japanese waters, and that American business to reach the Asiatic mainland must still pass over British or Japanese wires. Hope of reaching an agreement on this vital matter, before the formal conference, is widely held in Washington.

JAPANESE EXCLUSION ISSUE

The question of the status of the Japanese in California is really a petty domestic issue, but it is susceptible of being magnified into a grave question at the whim of political demagogues on either side of the Pacific. While little is printed to this effect, least of all in the Japanese press, Australia, Canada and New Zealand are much more drastic in their methods of excluding Japanese than we are, or than even the most ill-considered proposals of California legislation contemplate. When the real history of the Paris Conference is written, it will be plain that the Japanese plea of racial equality could and undoubtedly would have been accepted had the Japanese plenipotentiaries been willing to accept a stipulation insisted upon by Premier Hughes of

Australia expressly reserving the regulation of immigration matters as economic measures within the discretion of each State.

Although we did it with the best intentions, and were inspired by the most creditable motives, it was admittedly an initial mistake on our part to enter upon the "Gentlemen's Agreement" dealing with the immigration question. Both the Japanese and the American authorities have in an honorable spirit lived up to the terms of the agreement; nevertheless, since it came into operation the Japanese population of California has increased threefold, from thirty thousand to nearly a hundred thousand, largely through evasion of the terms of the agreement, by people who were not Japanese or American or gentlemen.

Japan has handled the same question as it arose in her ports in a commendably frank way, and frankness has proved to be the best policy. On this matter, all the world knows where Japan stands. By imperial ordinances and formal statutes, the immigration of laborers into Japan is forbidden, and foreigners cannot obtain individual landholdings. They cannot engage in agriculture or in fishing, and the introduction of Chinese or Korean farmers or laborers is expressly and specifically forbidden. And yet these races do mix when they meet in other countries. Intermarriage is frequent, and not unsuccessful. In Japan, only the economic necessity of protecting the native farmer and laborer exists, and Japan reacts to it as we do, as do the Canadians, the Australians and the New Zealanders, but she makes her decision in the open light of day, and no Chinese or Korean troublemaker can misrepresent her action and her attitude, as I am afraid our policy under the "Gentlemen's Agreement" is frequently misrepresented by men of low standing, but who, none the less, at times are influential molders of public opinion in Japan.

ANGLO-JAPANESE ALLIANCE

And now comes the far-reaching question of world-wide effect—the Anglo-Japanese Alliance. Today it is continued by common consent. The opinion of the Lord Chancellor of England, who holds that it is still binding, that it is not suspended or invalidated, was hardly required, because, according to the explicit terms of the instrument, the treaty cannot be abrogated at all; in wartime and in time of peace, twelve months' notice from one of the contracting parties is demanded.

Let us make this matter very plain. Should Great Britain give notice of her wish to discontinue the treaty on Dec. 1 next, she would yet be held by its terms even under peace conditions until Dec. 1, 1922, and if, in the course of these twelve months, Japan should enter upon a war, even with a single power, or be attacked by a single power, Great Britain would be committed by solemn treaty obligation to assist Japan with all her forces. It is further held, and by the highest authorities, that not until twelve months after the conclusion of these supposititious hostilities, and not until twelve months after notice to this effect had been given, could Great Britain escape from the obligations which this solemn pact imposes.

In view of these hard facts, which are well known, but not as well known as they should be, it is not surprising that public opinion in England and in the Dominions should be greatly exercised at the present status of the Anglo-Japanese Alliance. Now and again the comforting suggestion is launched that the agreement is in a state of suspended animation; that it will be carefully put away at an early opportunity, and that at present it is inoperative. But, unfortunately, these reassurances are not valid. The treaty is a public one, and it is duly filed and acknowledged before the Registrar of the League of Nations. It should prove at least as binding as the secret treaties of 1915-17 between the powers with regard to territories

on the Adriatic and on the Yellow Sea. And yet, while regretting the necessity, the powers involved held themselves in honor bound to live up to the terms of these treaties, world disturbing as they admittedly were.

Acknowledging as they do the important war services rendered by Japan—not in the least exaggerated by the recent eloquent speech of the Premier in the House of Commons—yet Englishmen and colonials alike are uneasy and indeed alarmed at the fact that the foreign policies of the empire are today not within their immediate control. England knew why the treaty was negotiated in 1902 and why it was renewed, but, with Russia and Germany having ceased to exist as militaristic powers, few see any justification for another renewal. To many—and this idea is not wholly exaggerated—Great Britain finds herself today a member of a "blind pool," with Japan the directing partner and Britain bound to an almost automatic obedience. Now, with all due respect to the strong pro-League of Nations sentiment in Japan, and to the growing sentiment in favor of a reduction of armament, with unquestioning belief in the sincerity of the criticisms of Japan's actions in China that have recently been made by such important and influential Japanese leaders as Mr. Takahashi, the present Minister of Finance, and of Mr. Ozaki, the recent Minister of Justice, this is indeed a strange position for an empire of free men composing free Commonwealths to be placed in, and still stranger if they should remain placed in it long.

But, after all, that is their predicament, and it is our own, to which we should devote our attention. For we, by our treaty commitments and the public pronouncements of our leaders in and out of Congress, are held to a policy of equal opportunities in China, without the suggestion that there is an alternative that would be agreeable to us, by which we could be placated. So far as I can see, we are the only power pledged to back the Oper-

Door policy, that is, the only power that stands today in this clear-cut, unequivocal position, without reservations or alternatives.

JAPAN'S AIMS IN CHINA

Japan's avowed aims, at least with respect to China, are widely held, and it seems to me that, as publicly stated, they are wholly creditable. They are inspired by a very natural desire on the part of the Tokio Government to obtain for the Japanese the fullest opportunity possible to develop China's natural resources and so secure at moderate cost the raw materials which are absolutely necessary to Japan's development as an industrial country. Japan wishes likewise to secure in China an important retail market for her manufactured articles, which, with the development of the country and the increasing wants of its inhabitants, might well become what it is so frequently called in enthusiastic anticipation — the "greatest market in the world."

When this has been said, undoubtedly some of the political aspects of the situation force themselves upon the attention of the ruling classes, and to a limited extent upon the commercial classes of the nation. When Japan as a result of her successful war with Russia obtained world-wide recognition as a great power, China was in swift political decay; her partition had begun, and its completion was daily threatened, nor was it an idle menace. The respective zones of the predatory powers had been carefully staked out, and almost all the conflicting claims to tidbits of territory had been more or less amicably adjusted. The successful completion of these plans would have meant commercial ruin to Japan, and, to put it mildly, political insecurity. Japan immediately attacked with energy the vital problem which this situation presented, but in the light of what has followed it is fair to say with little success.

And yet the difficulties were and are admittedly very great. To save

the situation, China was told she must abandon the philosophy she had clung to for ten thousand years and enter the very real world of today under the tutelage and in the leading strings of the long-despised "dwarfs" of the islands off the coast of the Middle Kingdom. The attempt was made to develop China's latent strength and inspire her with sympathy and understanding of the Japanese pro-Asian policy at one and the same time. In this task the Japanese have failed and the policy is abandoned. It is now admitted that a strong China might become an even greater danger to Japan than the annexed territories of the predatory powers on the East Asian shores. Hence the growing strength of the doctrine that is frequently, although not always, in the ascendant in Tokio and often expressed in these words: "What we need of China is to secure our military position, and our materials and our markets must be in our own safekeeping."

This doctrine has secured many adherents during the last ten years, and it was emphatically in the ascendant the last three years of the great war. Japan took advantage of the embarrassment of the West, just as the West had so frequently taken advantage of anarchic conditions in the East. If this attitude is maintained at the Pacific conference, the resulting steps toward disarmament will be short, and even these may prove dangerous. I do not ignore the voices that have been raised in Japan in favor of disarmament or of the League of Nations, or in criticism of recent Japanese policy in China. They are sincere and they are important, but as long as it is clear that the military party in Japan under the titular leadership of Yamagata, that aged bow-and-arrow soldier, is in actual control of the destinies of his country, disarmament might prove a costly experiment and invite burdens in comparison with which the present grievous load of armament might seem but a feather weight indeed.

The Japanese, without distinction of party or of caste, are convinced that they have as much right to a predominant position on the Asiatic shores of the North Pacific as we have to our claim of supremacy and control on our side of that ocean, and, as a people, they are inclined to underrate our military and naval power, although not to the extent they indulged in before the events of 1918. Suggestions from war-locks and war-mongers—they have them in Japan as well as elsewhere—creep into the columns even of influential papers from time to time, and the impression grows that, while the present Administration in Washington is alarmed at the outlook and proposes to “build a navy second to none in the world,” our people are war weary and are forcing Congress to scrap whatever instrumentalities for war we developed during the years of world danger.

DANGER OF ANOTHER WAR

The word goes forth—I admit not from very influential sources, but still it goes, and many converts to this point of view are secured—that in the East there is developing another “irrepressible conflict,” and that perhaps today or at latest tomorrow the inevitable issue should be faced, now that America is war weary and unprepared, and Japan is eager and relatively better prepared than her finances and her prospective income will permit her to be, say ten years hence.

The Japanese public and, I believe, the Japanese Government are watching the developments in the Philippine Islands as they have not watched them since the day when it looked as though American was to yield to German control—when Dewey with vague instructions, and Diederichs with very specific orders, lay face to face with ships cleared for action in Manila Bay. The Japanese hold that the people of our trans-pacific islands are somewhat disaffected as a result

of the sharp change from the Wilsonian promise of independence and the Jones bill, which gave it Congressional sanction, and of the attitude upon this question, as yet, however, only outlined by the Harding Administration. I was told in Berlin some months ago by a leading German republican and democrat whom I have frequently found to be well informed that when the pros and the cons were debated by the Imperial War Staff and the great councilors before Emperor William in “shining armor” that momentous afternoon in Potsdam, the justification or the pretext of the war decision there reached was a report from an Embassy Secretary upon the disloyal attitude of Ireland. Stranger things have happened then than that the state of the Philippine Islands should be the pretext of an equally momentous decision.

At such a juncture Japan, with an army of thirty-one divisions and a navy in some respects superior to our own and with a reserve of trained sailors greater than that of all the other naval powers taken together, would not only have to face a potentially great power, but actually a very disorganized one. Japan's war-tried ally, whatever else she might do, could not be expected to rule the seas in a spirit unfriendly to Japan. In this posture of affairs it might take us some time to mobilize once again our resources, which saved the world, but unfortunately were not permitted to lead it into a relatively safe haven. Perhaps then for a season we should have reason to regret that while the territorial integrity of Japan is guaranteed by the signers of the Covenant of the League our boundaries and our possessions, as belonging to a non-member, are outside the immediate sphere of the League's influence and activities. In a word, in the face of an always possible aggressive thrust on the part of Japan upon the Philippines or Guam or Hawaii, the powers with whom we were so lately asso-

ciated, and with whom our taxpayers and our treasury will probably be associated to the end of time, could act as they saw fit and as their interests dictated. They would be foot-loose and word free. There would be no scraps of paper to tear up.

In the confused appeals that are voiced in China today by the few, in the inertia of the great silent masses of the million-headed population, there is little promise of salvation. Admittedly there is a growing desire to save China, but, unfortunately, each graduate of a technical school insists upon saving China in his own way. The leaders do not lead, and the compromisers do not achieve even group solidarity. Racial pride is aroused, it is true, by the pitiful state of the Middle Kingdom, and this may grow into effective national consciousness; but the way to it is still long, and perhaps the time available is short.

POSSIBLE TRIPLE ENTENTE

Only one thing seems certain and stable in all the confusion—instability, and, above all, the world insecurity that is inherent in the present Far Eastern situation. If this thing can be shaped into a practical plan we should, perhaps, not grasp it unconditionally, but at least we should scrutinize it carefully, even if the source and inspiration of it should prove to be exclusively Japanese. Even should it be proved that Japan is solely responsible for the present conditions in China (in my judgment this is far from being the case), the rest of the world must share the consequences. Japan will not reap the whirlwind alone.

The present Premier of Japan, Mr. Takashi Hara, with his party, the Seiyukai, behind him, subject of course to the uncertainties of party supremacy, has publicly presented a plan to world scrutiny and examination, from which he confidently asserts that the salvation of China, world peace, and gradual disarmament

may be expected. He has declared with his great authority that Japan would welcome an Anglo-American-Japanese understanding for the purpose of formulating and enforcing a reconstruction policy in China. There is, of course, nothing new under the sun, least of all in China; and even superficial observers of the trend of affairs in the East will recognize in this project a revival of the old plan of an international stewardship in a more limited and more concrete form than it has been presented before. Premier Hughes of Australia has publicly approved of the plan, and he joins with Mr. Hara in expressing the belief that the execution of such a project will require the good-will, the cordial approval and perhaps the active co-operation of the United States. Hara and his followers are the men, it should be recalled, who in 1915 and since have combated always the twenty-one demands of the Japanese military party. They have given guarantees of good faith.

Clearly, then, public opinion in the United States should be prepared to face very definite proposals on these lines at the world conference, which is admittedly convened to discuss Far Eastern problems intimately, indeed inextricably, involved in all sane plans of world disarmament. We may well be asked at an early day with what grace we can insist upon the maintenance of the Open Door if we refuse to share in the guardianship of the gates or to make any move to assist in the establishment of a stable government in those regions which, when the Open-Door policy was enunciated, constituted the greatest potential market in the world. But today how changed the situation! Conditions in China no longer border on anarchy; they overstep it. And the troubles are no longer localized. Murder, rapine and lawlessness are endemic in practically all the Chinese provinces today.

It is a grave decision however we make it. If we assume the share of

responsibility which will probably be assigned to us, how can we hope to make our action palatable to our Chinese friends, who are well-nigh unanimous in denouncing a scheme in which they think they have discovered another drive, more carefully cloaked, however, than previous ones, of a group of Japanese imperialists who seek to secure in this indirect way what they failed to achieve by frontal attacks?

Here again we are at the parting of the ways. Here again the situation in which we are involved must be carefully considered. One thing and one only in this connection is certain: Until a stable government emerges from the present anarchy and disorder, world disarmament would be premature; and for Japan, just outside the gate—from which there is no telling what will emerge, perhaps a White Wolf of world vision, a modern Kublai Khan—it would be suicidal.

We must recognize that a change has come over China. The pacifist victim of the predatory powers has at last become inoculated with the virus of militarism. After all, the handling of the situation in China will be the acid test of the conference in Washington, as the treatment of Russia tipped the scales of world judgment in Paris. It is perhaps not too soon to say with some insistence that the Chinese situation cannot be measurably improved unless the American people is prepared to take a grave step fraught with far-reaching consequences, and entailing an abrupt departure from principles long honored and undeviatingly pursued.

JAPAN'S ENERGETIC ATTITUDE

At this point the question presents itself, unavoidably, What are the basic terms in which Japan's present foreign policy, admittedly, until quite recently, disturbing to all plans for world peace and disarmament, can be expressed? I think I find something approaching a clear keynote in Japan's recent plea to the members of

the Four Powers Consortium. In this important and, as I think, revealing document Japan appears to waive her specific claims to the independent construction of railways in Manchuria and in other districts comprised in her claimed spheres of influence. She subscribes once more to the principle of co-operation and mutuality—that is, to the Open Door—but with the understanding, I take it, to be a clear reservation, recorded in Lord Curzon's covering dispatches, that the Governments behind the financiers of the consortium will not permit any activities or operations "inimical to the security of the economic life and the national defense of Japan."

This may mean peace or war in the Far East. Such pronouncements generally are ambiguous. Interpretation depends upon the viewpoint. Is insistence upon the twenty-one demands of 1915 indicated here? Does Japan, as a measure indispensable to her national defense, insist upon the recognition of her secret military agreement with China, which was literally forced from the Peking Government in 1918? The terms of this agreement, which is said to be operative in the eighteen provinces of China proper, have never been made public. It has never been submitted to the Registrar of the League of Nations, as required by the covenant binding upon all subscribing members, including Japan and China. It may be harmless, and it may be justified by existing conditions in China, as the few Japanese who admit its existence assert. It may also mean the knell of China's independence and her appearance on the Far Eastern stage as a vassal State. This is what the war mongers of Shanghai assert it is, and they will never be silenced until the document is produced; and the conference in Washington, which it is so widely hoped will make smooth the path toward disarmament, would seem to be a most appropriate occasion for it to be brought into the light of day.

The expression as to steps "inimical to the security of the economic life of Japan" is a large and comprehensive reservation. Is it to be applied locally or to the Continent of Asia? It may well be interpreted as demanding a favored, even an exclusive position in the markets of China, both as to the sale of manufactured articles and as to the procurement of raw materials. Such an exclusive interpretation has been made time and again, but unofficially, in Japan, where many economists, and not always of the frankly jingo school, assert that Japan's survival as a great power is dependent upon her dominant position in the Chinese field. Should this principle be asserted as a national policy, openly and officially, just as it is secretly but most efficiently enforced in Manchuria today, it would mean the closing of the Open Door in China at least as far as the powers other than Japan are concerned.

ISSUE MOMENTOUS FOR US

Do we intend to acquiesce in any such decision? How far do we mean to go in the defense of the Open-Door policy? Since 1915 it has been infringed upon or ignored, and the issue will be presented in unmistakable terms at the Washington conference. True, we have time and again served notice upon all concerned—and no less recently than last June—that we cannot "recognize any agreement or undertaking impairing the treaty rights of the United States and its citizens in China." Now, do we mean this? Are we aware where this policy may lead us, and are we prepared to face whatever may be the consequences of such a policy—and are we determined to enforce it? Is the Open Door a cardinal principle of our polity and foreign policy, or was it the whim of an hour or of an Administration which died with John Hay and is not binding on the nation? I have no doubt that the Department of State is fully

prepared to defend the interests of the United States in this matter, as well as in other important questions, as far as its powers extend, but without the keen support of an awakened and an enlightened public opinion its powers do not extend very far.

The second series of solutions which Japan announces that she will not accede to are those "inimical to the national defense of Japan." Certainly the return of Korea to an independent status falls in this category. The whole trouble in the Far East of recent years is due—as many have said who love to put problems in a nutshell, if not quite correctly—to the fact that the Korean coast, two hours' sail away across the Tshushima Strait, was in weak, unfriendly hands and was coveted in turn by the relatively strong hands of China and of Russia. Admittedly, Korea was not so much to be feared as the masterful invader her weakness seemed to invite. A change in the present control of South Korea would undoubtedly weaken the national defenses of Japan and would require extensive armament expenditures. Japan, of course, would fight any proposition of this nature, and the friends of Korea are ill-advised in advancing it. Japan will defend her dearly bought rights in the Peninsula with all her force and all her strength, and in the present posture of world affairs she is wise in assuming this uncompromising attitude. The hope of the Koreans lies in other solutions.

Then comes the status of the Philippine Islands, always a minor problem with us, since it has practically passed out of campaign literature; but it looms with increasing potential importance once you have the Pacific behind you. There is no reason to believe that Japan covets these islands now. The sad lesson of the cost of tropical possessions inhabited by uncertain and probably unruly races, as illustrated by her experience in Formosa, has sunk it. But Japan was keenly interested in the

Philippines when, in 1899, it looked as though we meant to abandon them and Germany was on hand eager to step into our shoes. Now, of course, the Philippines, in the hands of a strong naval power or as the football of an unprepared democracy, such as many think the islands will reveal when abandoned by us, is an important and direct concern of Japan. She cannot and should not be expected to be wholly disinterested as to the possible changes in the political complexion and control of the archipelago. But Japan's attitude toward the present phase of the Philippine problem, while it has not been formulated in any public document or declaration of policy, is not concealed in the secret archives. Undoubtedly it is very much like our policy or attitude toward the Spanish occupancy of Cuba, which we maintained undeviatingly down to the Spanish-American War of 1898.

As long as Spain lived upon terms of neighborliness with us and maintained comparative peace and law and order throughout the islands, or at least prevented her West Indian possessions from becoming an international nuisance, we would not and did not interfere. But, as indicated in the exchange of notes with Lord Malmesbury and the French Foreign Minister of his day, and in many others, we would not sanction any change that might be made in the status of Cuba without consulting us. This is a natural position for Japan to assume, and there is some reason to believe that she will shortly state it in a public manner. Japan has, of course, the same right as we have always had, and generally exercised, to keep at arm's length undesirable imposed Governments or the development of unruly and inefficient ones in her sphere of interest and immediate concern.

If this natural anxiety and indirect responsibility of Japan in the Philippine solution, yet to be found, were recognized, many thorny developments of the future would be entirely

obviated or smoothed over. I personally do not expect a breakdown of efficient government in the Philippines in the event of our withdrawal, but I know that many Americans and quite a few Japanese have this apprehension. Certain it is, however, that upon our departure the responsibility for the good behavior of one of Japan's closest neighbors will pass from strong, tried hands into hands that have not been tried and that are steadied by but little experience.

In conclusion, let us try to resume in a few words the fundamentals of a situation which I have but outlined. China's weakness and Japan's strength, coupled with our sincere desire, in the words of the Department of State, "to supplant the present intense spirit of competition by a spirit of mutuality and co-operation," are the pivotal factors of the Far Eastern problems today pressing for adjustment. It is, then, high time to ask, and if possible ascertain, if China's present weakness and disorganization are beyond revival and recall; to learn if possible how long and in what directions Japan will continue to use her giant strength as a giant. Then we should have something as authoritative as a silent plebiscite in regard to our own purpose. Are we prepared to safeguard China in its present great extremity? Are we resolutely determined to keep open the greatest market in the world for our merchants, our manufacturers and our wares, or are our pleas in this regard merely academic or platonic?

To make even progressive disarmament possible, all these vital questions will have to be answered unequivocally at the Pacific Conference, and upon the tenor of these answers will depend the peace of the world for the next generation, the prosperity of the United States for many decades to come—in fact, the course of history, for as long as short-sighted man should dare to cast its horoscope in a world filled with grim realities and flooded with dark shadows as well as promising rays of light.

TWO BILLION DOLLARS FOR FARMERS

BY JULIAN PIERCE

Meaning and operation of the new law which authorizes the Government to finance the farmers of the United States in their present emergency, enabling them to hold their crops for a better market—Terms on which the loans will be made

PRESIDENT HARDING, on Aug. 24, 1921, approved a law which empowers the Government to lend \$2,000,000,000 to finance the farmers of the United States and the dealers in farm products. The loans are designed to be used for two broad purposes: To enable farmers and dealers in farm products to withhold them from the market until prices reach a profitable point, and to enable farmers who have borrowed money for "agricultural purposes" on short term notes to renew their notes and borrow more money.

The \$2,000,000,000 of "relief" do not reach the producers and dealers directly. The Government, through the War Finance Corporation, will lend the money to the banks and similar institutions. The banks, in turn, will relend the \$2,000,000,000 to the producers of farm products and the middlemen who deal in them. In the term "farm products" is included everything, animate and inanimate, whose habitat is land, from peanuts to watermelons and pumpkins, from day-old chickens to ostriches, from veal calves to fat steers and breeding stock.

This Government adventure is a serious attempt of the Congress of the United States to meet and ameliorate a crisis in American agriculture more severe and threatening than any known in recent years. It is the major measure of the special session

of the Sixty-seventh Congress to restore national prosperity. Congress has a basic theory concerning national prosperity and its causes. That theory rests upon the assumption that the prosperity of all the rest of the people depends upon and starts from the prosperity of the farmers.

It is a rather unusual method—to stimulate prosperity by encouraging debt. Yet, claiming to understand the farmers' condition thoroughly, Congress decides to start the cycle of agricultural good times by enabling the farmers to increase their mortgages by a round two billions of dollars. To understand the plan it is first necessary to get a vision of the present plight of American agriculture.

Present world conditions and industrial farming militate against the farming industry. With modern machine production the farmers produce annually a large surplus of agricultural products—a surplus in excess of the purchasing power of the American people. This surplus of staple farm products, which is chronic in present-day agriculture, must be sold in foreign countries if our agriculture is to thrive.

But the 1920 surplus was larger than usual. There are vast accumulated supplies of cotton, rice, corn, hides, barley, oats and meatstuffs. With the 1920 surplus unsold, the sunshine and the rain and the other

fructifying forces of nature keep rapidly at work producing new crops. The prospects for the 1921 crops are "fair to good." Consequently, an addition to the last year's surplus is visioned.

CAUSE OF THE EMERGENCY

During the war the Department of Agriculture and the Food Administration urged the farmers to produce and produce and then produce. It was their patriotic duty to see how much of every farm product they could raise. Increased production was necessary to feed ourselves and our allies. After the war, increased production was held to be necessary to assist in the economic reconstruction of Europe. Under these influences the farmers acquired the habit of a large output, relying on European demands to take the surplus in excess of American needs at fair prices.

Trade experts predicted that, after the war, commerce with Europe would not only be large and ever larger, due to reconstruction conditions, but they expected that trade would be resumed on the same basis as existed prior to the war. The experts went wrong. After the war Europe did not buy our agricultural products in the quantities which she was accustomed to purchase before the war. Nor did Europe buy those products in the short period of time during which she formerly satisfied her requirements.

Take cotton. Cotton is our leading export commodity. The cotton situation is a fair example of what European conditions have done to the American farmer. In pre-war times European textile manufacturers bought nearly a year's supply of cotton in the Fall; at least 80 per cent. of our cotton exports went abroad in the six months beginning with September, that is, during the first six months of the cotton year. Now it is different. Due to the exchange situation and the general financial situation abroad, European

cotton buyers are buying "from hand to mouth," buying as they need the cotton for immediate use, so that but 40 or 45 per cent. of the cotton crop is marketed during the first six months of the cotton year. The rest of the crop has to be carried over. If it didn't have to be carried over, the present two-billion-dollar Government loan would not have been provided.

The same condition applies in varying degrees to all other agricultural staples. There is a large exportable surplus, *and it has to be carried over.* To accentuate the agricultural depression came the industrial depression. From the railroads down and up manufacturers and other employers dismissed some 6,000,000 workers. Ordinarily, discharged employees do not have cash reserves to draw on. Their purchasing power is limited by the contents of the weekly pay envelope. If their wages are reduced, their purchasing power is diminished. If their wages are stopped, their purchasing power is reduced to nothing. And inasmuch as the workers' wages are largely spent for necessities produced either by the farmers themselves or from farm products, the unemployed army raised the farm products surplus still higher and at the same time reduced the price still lower for what was marketed.

Then, too, in the cost of production the liquidation of prices has hit the farmers harder than any other industrial group. Price adjustment stuck fast when it reached the agriculturalists. They were unable to resist the conditions which forced down the prices of their staple crops. On the other hand, they were insufficiently organized to beat down the prices of the raw materials which they had to have in order to produce those crops.

As the inevitable result of this one-sided price adjustment, the most reliable statistics reveal that hides, cattle, cotton and corn, making up a considerable part of the farmers' output, are selling at less than pre-war prices, while many of the commodities they

are compelled to buy to operate their business still stand at from 50 to 100 per cent. above the pre-war level.

Moreover, in many instances the prices for which they sell their products, if they are compelled to sell, do not meet their costs of production. The farmers declare that they should not be compelled to sell their crops below the cost of production. They go further. They insist that they should be able to secure prices that will give them a reasonable profit. They see but one course to take, and that is to hold their crops until the law of supply and demand raises prices.

Hold their crops! But they have been operating on a credit basis. Their bills are due. Their creditors are clamoring for the settlement of their accounts. Their bankers are "calling" notes. Their credit is exhausted. And unless they can obtain an extension of credit, unless they can obtain more credit, unless they can borrow more money, unless they can run still further into debt, they must sell, and sell at bankrupting prices. With renewed credit, with more credit, they can hold their crops for higher prices. And it is the judgment of Congress and the President that \$2,000,000,000 of Government money should be used for this purpose.

THE FARM CREDIT SYSTEM

Now we come to the farm credit question itself, which in turn must be understood; for, in spite of the huge surplus of farm products and low prices, if farm credit as operated under the private initiative of the banks had functioned adequately the Government would never have intervened with Government credit. Due to the wide extent of tenant farming and to the specialized agriculture of the South, the farm credit system there is complex, and consequently more disorganizing. The credit system exists in a similar form throughout the United States. A picture of

the complex will lead to a clear knowledge of the entire system.

In the South the agricultural credit supply stores are found in every town. Landlord farmers and tenant farmers, commercial farmers and self-employing or "dirt" farmers, all buy their farm supplies on credit during the crop growing season with the understanding that the notes will be paid when the crops are harvested and sold. The farm implement dealer, the fertilizer dealer, the horse and mule dealer, and all the other dealers, load up during the crop growing season with farm paper, which signifies chattel mortgages on the growing crops. But none of these dealers are able to carry these credits. They sell the farm paper to the local banks. The farmers usually settle with the banks at the end of the crop year. And the cycle continues normally. But last year the price of cotton was so low that even the cotton farmers who sold their entire crop were unable to liquidate their chattel mortgages.

In the meantime the bankers had to finance this year's crop, taking the same sort of short-term farm paper. In business and commercial life the Federal Reserve Banks would come to this sort of business distress by loaning Federal Reserve Bank money on short-time commercial paper. But the Federal Reserve Board ruled that it would not make loans on farm paper held by Federal Reserve member banks. Consequently the member banks could not make loans on the farm paper held by the local banks. The local banks were tied down to loaning merely their own resources, which quickly brought the cycle to an end. They have gone as far as they can. The burden is too great for them. Agricultural credit by private initiative does not adequately function. And wholesale bankruptcy is impending in many sections unless the credit situation is relieved.

Extensive selling of staple crops at present prices would menace the entire farming industry. Therefore the

crops must be held until the price situation improves. And to the organized farmers and Congress two billions of Government credit appeared to be the only solution of an impending national calamity. In the language of Senator Simmons of North Carolina:

We are unable to find a present market for our surplus products. The owners of these surplus products, unless they obtain such relief as is now proposed, will be forced to sell that surplus in the markets of this country for whatever it will bring—and that will be whatever speculators in these products wish to pay for them.

If we are to escape this disaster, we must provide some means by which the owners of these surplus products may hold them and carry them over, not for a day or a month, but as long as is reasonably necessary in order to enable Europe and other markets of the world to take them as they are needed and can be purchased for consumption.

What we need to relieve the situation is a provision to advance money to enable the producer of agricultural products to carry those products until they can be marketed in an orderly way.

In short, the farmer's money, with which he buys a living for himself and family and operates his farming business, comes from the sale of his crops. If he holds one crop, or a portion of one crop, while he is growing another crop, he must borrow the money required to keep the food flowing and the new crops growing. The loanable money supply of the local banks is exhausted. And the only other source of supply is the money fund of the Government of the United States. And Congress starts the adventure with an authorization for \$2,000,000,000 of Government money for the "relief" of producers of and dealers in agricultural products.

The language of the law is clear as to the purposes for which the Government money is to be loaned. The Government's agent is the War Finance Corporation. And the law declares that whenever the Board of Directors of the War Finance Corporation is of the opinion that economic conditions "have resulted in or may result in an abnormal surplus ac-

cumulation of any staple agricultural product of the United States or lack of a market for the sale of same or that ordinary banking facilities are inadequate to enable producers of or dealers in such products to *carry them until they can be exported or sold for export in an orderly manner*," then the corporation is empowered to loan \$2,000,000,000 to enable the producers and dealers to hold staple farm products until the increased demand enables them to be sold in an "orderly manner," which, of course, means in a manner that will result in a profit.

HOW LOANS ARE MADE

The War Finance Corporation is empowered to make loans to various classes of people associated with the farming industry, usually through the medium of banks or similar money loaning institutions. To relieve the persons whom Senator Simmons had specifically in mind the corporation is authorized to make loans to "any bank, banker, or trust company in the United States, or to any co-operative association of producers in the United States which may have made advances for *agricultural purposes*, including the breeding, raising, fattening, and marketing of live stock." Note the breadth of the term "agricultural purposes." Inasmuch as the Secretary of Agriculture, who is a farmer, is a member of the Board of Directors of the War Finance Corporation, while the rest of the members, including Eugene Meyer Jr., the Managing Director, are bankers, there promises to be some interesting board discussions as to the interpretation and inclusiveness of "agricultural purposes."

The corporation is also authorized to make loans to the so-called Edge law banks; to any bank, banker, or trust company in the United States which has made or makes loans to any concern, individual or association engaged in dealing in or marketing or producing staple agricultural export commodities,

provided such loans have been made or are made to enable the borrowers to carry such products until they are exported or sold for export in an orderly manner; to any concern in the United States dealing in or marketing the products; to any association of persons engaged in producing such products; and to any individual engaged either in producing, dealing in, or marketing the products.

Outside of the United States, the corporation may loan money to any concern purchasing exportable products in the United States. This provision will enable us to finance foreign concerns which wish to purchase agricultural products on long-time negotiable securities.

The Edge law banks were authorized by the Edge law and given certain privileges to finance our export trade. The idea underlying the law was that the banks would sell American commodities in foreign countries on long-time payments, issue Edge law bank bonds in the United States with the European notes as security and sell them to the American investors, use the funds so acquired to finance more exports sold on the same terms, sell more Edge law bank bonds to more investors, and continue the process indefinitely.

Actual experience under existing conditions indicated that the investment market was a little chary of the foreign securities which were the basis of the Edge banks' activities. So the two Edge law banks already organized have not undertaken to sell their debentures. But now the present law bill for "agricultural relief" is to extend to the Edge law banks. In his testimony before the House Committee on Banking and Currency, Eugene Meyer Jr., Managing Director of the War Finance Corporation, made it clear that it is the intention of the corporation to use a portion of the \$2,000,000,000 to put the Edge law banks on their feet and sustain them while they are endeavoring to acquire the ability to navigate with safety the troublesome waters

of international finance. Mr. Meyer said:

We thought that by giving the War Finance Corporation authority to purchase some of these debentures (debentures of the Edge law banks), thus co-operating in the marketing of them in the public investment market, we might accelerate the coming into usefulness of the Edge law banks, which Congress hoped would add materially to the banking resources of the country in our foreign trade.

In order that every money loaning institution in the United States may participate in the distribution of the \$2,000,000,000 of Government money to the farmers and dealers, the law specifically declares that the words "bank, banker, or trust company" shall be held to include "any reputable and responsible financing institution incorporated under the laws of any State or of the United States with resources adequate to the undertaking contemplated."

This definition lets in national banks, State banks, private banks, savings banks, in fact, any reputable person or persons engaged in the money loaning business, provided the loans which they have made or make are for "agricultural purposes," and especially if the loans are made to assist people to hold farm products for higher prices; or, to use the language of the act, to assist people to hold the products until they can be marketed in an "orderly manner." It is estimated that something over 31,000 banks will qualify as go-betweens in passing the money from the War Finance Corporation to the farmers and dealers in farm products.

But the banks and similar institutions are not permitted to profiteer with the Government funds. They are prohibited from charging more than 2 per cent. per annum in excess of the interest which the corporation charges them. It is expected that the corporation will fix 6 per cent. as its rate. It is also expected that the bankers will add the maximum differential. So that the people who wish to hold farm products for higher

prices will pay at least 8 per cent. for the privilege.

Should the War Finance Corporation make the maximum loans authorized by the law, namely, \$2,000,000,000, the farmers' and dealers' annual interest charge at 8 per cent. will amount to \$160,000,000, of which the banks will take \$40,000,000 as their 2 per cent.

The impression has gone abroad that individual farmers and dealers will be able to borrow money from the War Finance Corporation. There is a provision in the law which permits the corporation to make loans to individuals. But it was inserted for psychological effect. It is what is called a legislative "joker," which will be eliminated by administrative processes.

Lastly, the agrarians responsible for the law saw to it that its time terms are flexible enough to accommodate even such a long turnover agricultural business as stock raising. It is provided that the notes given by the farmers may be extended to a

maximum period of three years from the date of the original loan.

The "agricultural relief" law makes no appropriation to provide the funds from which the loans may be made. How is the War Finance Corporation going to get the money? Mostly by selling the credit of the United States Government. The corporation is capitalized at \$500,000,000, fully paid up. The Secretary of the Treasury bought all the capital stock for the Government, paying cash for it. This was during the war. The corporation loaned considerable money, and has got the most of it back with interest. At present it has about \$500,000,000 in cash in its Treasury, which will keep it going for a few weeks. As for the remaining \$1,500,000,000, Congress authorized the corporation to raise that by borrowing it from the investing public by issuing War Finance Corporation bonds at an attractive rate of interest, made more attractive by the usual tax-exempt provision inherent in Government bonds.

THE HALL OF THE LAST SUPPER

THE Italian press has recently published several articles claiming from the British Government the possession of the famous Coenaculum, or Chamber of the Last Supper, at Jerusalem. The ground of this claim is historical. King Robert the Wise of Naples, the patron of "il gran Petrarca," in 1333 purchased the Coenaculum from the Sultan of Egypt, then ruler over the Holy Land. Granted by him to the Franciscans as a permanent abode, it remained in their possession until 1449. It was again given to the monkish fraternity in 1470, and it remained in their custody until 1547, when the Moslems expelled them on the ground that the subterranean chambers held the tomb of David, especially revered by the Moslems. From that date down to 1918 the Coenaculum remained under continuous Moslem control.

Shortly after the armistice the Italian Government made a separate arrangement, without the assent of the Allies, with the

Sultan of Turkey. Under this agreement the Coenaculum was ceded to the King of Italy as heir of the Angevin Kings of Naples. Italy, as the chief Catholic country of Europe, feels that not only by historical, but also by religious right, this holy place should be hers. The beautiful frescoes at Milan depicting the Last Supper are but a part of her artistic claim. It is understood, however, that another Catholic country—Spain—also claims the custody of the Coenaculum.

The British position is very simple. The Government merely points to Article 95 of the Treaty of Sèvres, under which a special commission was appointed "to study and regulate all claims relating to the different religious communities" in Palestine. The Italian claim obviously falls within this category. As the mandatory power over Palestine, Great Britain, of course, has now a strong claim of its own to possession of the hall sacred to all Christianity.

THE MONTH IN THE UNITED STATES

Fate of German property seized by the Alien Property Custodian during the war finally determined—Overthrow of the New York Soldiers' Bonus act—Tax Revision bill passed—Serious labor troubles in West Virginia

[PERIOD ENDED SEPT. 12, 1921]

IN a conference on Aug. 31 between President Harding and Colonel Thomas W. Miller, the Alien Property Custodian, questions were discussed dealing with the formation of a policy governing the ultimate disposition of German and Austrian property seized during the war. Colonel Miller said that, under the provisions of the peace treaty with Germany, it was indicated that property now in the hands of the Alien Property Custodian would be held by this Government until arrangements had been made by Germany and Austria for the satisfaction of claims of American citizens against those Governments arising before the United States entered the war, the most outstanding examples of which were those for the Lusitania sinking. It is understood that such claims total about \$400,000,000.

The property holdings in this country consist not only of industrial establishments, which are being operated by the Alien Property Custodian, but many million dollars' worth of securities, which in the present state of the market are at a low figure, but which will increase in value if the security market advances.

WAR LAW STATUS

Attorney General Daugherty, it was stated on Aug. 27, had been requested by President Harding to have the Department of Justice make a

report on the war and emergency legislation that will be affected by the new peace treaty between this country and Germany.

Considerable uncertainty existed respecting the time the various unreppealed wartime laws and joint resolutions have to run, and this had caused some trouble to legal officers in the different executive branches of the Government. One reason for the puzzle was the fact that Congress proceeded with no uniformity in the enactment of its wartime legislation. Some of the acts were to terminate at "the end of the present war," others were enacted for the "period of the war," or until after "the existing state of war between the United States and its enemies shall have terminated"; and still other phraseological forms were used.

THE BERGDOLL SCANDAL

The special Congressional committee which investigated the escape of Grover Cleveland Bergdoll, the draft deserter, who fled while on a journey leading to an as yet unfound "pot of gold," rendered its report to the House of Representatives on Aug. 18. There were actually two reports, one a majority report signed by Representatives Johnson of Kentucky and Flood of Virginia, both Democrats, and Representative Luhning of Indiana, a Republican; the other a minority report signed by Representatives

Peters of Maine, Chairman of the committee, and McArthur of Oregon, both Republicans.

The majority report charged that while "there are many who participated in the conspiracy leading to Bergdoll's escape and the acquittal of those who brought it about, there are three who are more culpable than the rest," and named in this connection Samuel T. Ansell, formerly Brigadier General in the army and one of Bergdoll's counsel; Colonel John E. Hunt, Commander of Fort Jay, where Bergdoll was confined, and Colonel Charles C. Cresson, who did not come into the case until after the escape, but who prosecuted Colonel Hunt when that officer was court-martialed. Respecting General Ansell, the majority report said:

He is now out of the army. He is beyond the jurisdiction of court-martial proceedings, but provision should be made against his future practice before any of the departments, before any court-martial or in the courts of the District of Columbia or the nation, above whose safety and integrity he has placed gold. Anybody who has seen and heard all of those associated, directly or indirectly, with the plan and manner of Bergdoll's escape, not only must recognize Ansell as the master mind of them all, but as their dominating and controlling spirit.

Colonel Hunt was charged with having participated "criminally" in the escape and Colonel Cresson was accused of laxity in Hunt's prosecution.

The minority report severely criticized Ansell, but held that the evidence did not support the charge that his motives were improper. It held Major Gen. Peter C. Harris, Adjutant General of the army, primarily responsible for the escape, though it absolved him from improper motives. It accused no one directly of conspiracy except Bergdoll, D. Clarence Gibboney, a Bergdoll lawyer; "Judge" Romig, the Bergdoll agent and friend; Joe Stecher, Bergdoll's chauffeur, and "possibly" Mrs. Bergdoll. The report specifically said that no commissioned or non-commissioned officer in the army knowingly participated in a conspiracy or

received or was approached in connection with a bribe.

Both Ansell and Cresson issued vigorous denials of the charges contained in the majority report. The latest news regarding Bergdoll was that he had gone from Germany to Switzerland.

BONUS ACT OVERTHROWN

The New York Court of Appeals ruled on Aug. 31 that the State law providing for the payment of a soldier bonus was unconstitutional, on the ground that it lent the credit of the State for the benefit of individuals. Five Judges concurred in the decision and two dissented. The action was brought to the court on an appeal from the decision of the Appellate Division, which upheld the constitutionality of the State bonus bond issue for \$45,000,000. New York was the first State to declare soldiers' bonus legislation unconstitutional. Nine of the States have sold issues totaling \$69,500,000, and in some of them the bonuses have been paid. In eight other States bond issues totaling \$191,500,000 await referenda to make them effective, and in twenty-one other States \$370,939,200 has been provided in legislation now pending.

BATTLESHIP NOT OBSOLETE

The battleship has not been rendered obsolete by the airplane, in the opinion of the Joint Army and Navy Board, whose report on the recent aerial bombing tests off the Virginia Capes was made public Aug. 19. The opinion of the board, as approved by the Secretaries of War and the Navy, was thus summarized:

(a) The mission of the navy is to control vital lines of transportation upon the sea. If no opposition is met from enemy naval vessels, this mission can be accomplished without entering an enemy's coast zone within which aircraft bases on shore or in sheltered harbors are effective.

(b) Without an effective navy in time of war, a nation must submit to an economic blockade fatal to its trade and the importation of necessary materials for the production of war supplies.

(c) If heavier-than-air craft are to be effective in naval warfare they must have great mobility, and since their radius of action is not great, additional mobility must be obtained by providing mobile bases—i. e., aircraft carriers.

(d) So far as known, no planes large enough to carry a bomb effective against a major ship have been flown from or landed on an airplane carrier at sea. It is probable, however, that future development will make such operations practicable.

(e) Even in the present state of development the aircraft carrier, as exemplified by the *Argus* of the British Navy, is a type essential to the highest efficiency of the fleet.

(f) Aircraft carriers are subject to attack by vessels carrying guns, torpedoes or bombs and will require, as all other types of vessels require, the eventual support of the battleship.

(g) The battleship is still the backbone of the fleet and the bulwark of the nation's sea defense, and will so remain so long as the safe navigation of the sea for purposes of trade or transportation is vital to success in war.

(h) The airplane, like the submarine, destroyer and mine, has added to the dangers to which battleships are exposed, but has not made the battleship obsolete. The battleship still remains the greatest factor of naval strength.

(i) The development of aircraft, instead of furnishing an economical instrument of war leading to the abolition of the battleship, has but added to the complexity of naval warfare.

(j) The aviation and ordnance experiments conducted with the ex-German vessels as targets have proved that it has become imperative as a matter of national defense to provide for the maximum possible development of aviation in both the army and navy. They have proved also the necessity for aircraft carriers of the maximum size and speed to supply our fleet with the offensive and defensive power which aircraft provide, within their radius of action, as an effective adjunct of the fleet. It is likewise essential that effective anti-aircraft armament be developed.

TAX REVISION BILL PASSED

The House of Representatives on Aug. 20, by a vote of 274 to 125, passed the revenue bill, which revised the war revenue laws to raise in taxation about \$3,366,000,000 so as to reduce taxes \$818,000,000 by 1923. Representative Garner, on behalf of the Democrats, moved to recommit the bill in order to cut out the provision repealing the present

surtaxes, which range as high as 76 per cent. The motion was rejected by a vote of 230 to 169. Fifty Republicans deserted their party and joined with the Democrats on this motion, while only one Democrat, Campbell of Pennsylvania, refused to follow his party. On final passage three Democrats voted for the bill and nine Republicans opposed it.

The only important departure from the original intentions of the Ways and Means Committee and the Republican leaders was the decision to repeal the excess profits taxes and reduce the income surtaxes next January. The original bill provided that these should become effective as of Jan. 1 last, but a Republican caucus forced the committee to make the repeal and reduction begin next January, when it is planned to have a 12½ per cent. corporation tax substituted for the repeal of the excess profits tax.

RAIL RELIEF BILL

On Aug. 22 the House, acceding to President Harding's request for railroad relief legislation before taking a recess, passed the Administration bill by a vote of 214 to 123. It was sent to the Senate without substantial amendment. While there was some opposition to the bill, especially against the section which prohibited any of the funds being used to pay the railroads for the alleged inefficiency of labor during Government control, it was not strong enough to force an amendment. Representative Webster of Washington, a Republican member of the Interstate Commerce Commission, offered a motion to strike this section from the bill, which was rejected by a vote of 145 to 17.

ONE LIQUOR BAN LIFTED

Temporary suspension of the customs ban prohibiting intoxicating liquors which are shipped from one foreign country to another from being moved across the United States

was announced by Secretary Mellon on Aug. 17. Mr. Mellon said:

In view of the injunctions granted at Detroit and at New York requiring the Collector of Customs to continue to permit the transportation and exportation entries for liquors in bond, the Treasury Department has deemed it advisable temporarily to suspend its order regarding such shipments. Accordingly, and until otherwise advised, the Collectors of Customs will permit intoxicating liquors shipped from a foreign country to move over the territory of the United States when the destination of such liquors is another foreign country. This has been done so as to avoid the unnecessary multiplication of litigation, and in order that the important questions involved may, if possible, be speedily and finally determined by the court.

Shipments of liquor from a foreign point of origin by way of this country to a foreign destination were held by former Attorney General Palmer in an opinion to be in violation of the prohibition laws. After hearing protests by Canadian shippers against the ruling, Attorney General Daugherty upheld the opinion and early in July customs regulations were promulgated by the Treasury forbidding the in transit shipment of intoxicating beverages across the country.

WEST VIRGINIA "INSURRECTION"

An uprising that proved serious enough to call forth a proclamation from President Harding took place in the latter days of August and the early part of September in Kanawha, Boone, Fayette, Logan and Mingo Counties, W. Va. The outbreak came as a climax to the labor troubles that had convulsed Mingo County for two years past. A struggle had been going on there to unionize the coal fields, and great bitterness had developed between the miners on one hand and the operators, supported by bands of hired detectives, on the other. The avowed purpose of the miners and adventurers who gathered in neighboring countries about Aug. 20 was to march into Mingo County and forcibly unionize the field. Armed bands that were rapidly augmented until they were said to number from 10,000

to 15,000 set out on the march and citizens and State forces were hastily marshaled to oppose them. Desultory warfare ensued, largely of the guerilla or "sniping" variety, and the uprising assumed such alarming proportions that the Governor of the State called upon the Federal Government for help. President Harding issued a proclamation on Aug. 30 ordering the insurrectionists to disperse by noon Sept. 1, and stating that if the order were not obeyed troops would be sent to enforce it.

The proclamation was disregarded, and in consequence a comparatively small force of soldiers under the command of Brig. Gen. H. H. Bandholtz was sent to the troubled area. The effect was almost instantaneous. There was practically no fighting, and large numbers of the miners yielded up their arms, while the bulk of the others dispersed to their homes. By Sept. 10 the troubles were under control and most of the troops were ordered back to their depots. The number of casualties in the fighting was undetermined, but was believed to be small.

REDUCTION OF WAGES

The United States Steel Corporation on Aug. 19 announced another adjustment in the wages of its employees, the third to be put into effect since the decline in steel prices began. It became effective on Aug. 29 and amounted to a reduction of 7 cents an hour for unskilled labor, bringing the wage down to 30 cents an hour, or the level which prevailed on May 1, 1917. Other wages and salaries, it was said, would be equitably adjusted.

On the basis of the ten-hour day, unskilled labor will receive \$3 a day, which is 50 per cent. above the wage paid at the beginning of 1915, but about 40 per cent. below the wages paid on Feb. 1, 1920, when laborers were receiving \$5.06 for a ten-hour day. The high rate was 153 per cent. above the 1915 level.

Judge Landis, sitting as arbiter in

the building trades wage controversy at Chicago, handed down a decision on Sept. 7 which made wage cuts varying from 10 to 33 per cent. from the old uniform rate of \$1.25 an hour for skilled workers.

• Workmen on eight of the forty-four building trades ruled upon by Judge Landis will receive less than 85 cents an hour and those in ten crafts which are in the laboring class will receive 70 cents. Considering the elimination of all restrictions on labor-saving machinery and materials, Judge Landis estimated the saving in actual cost of building would be about 20 per cent. The decision opened the Chicago territory to all contracting firms and, according to contractors and union men, prepared the way to renewal of millions of dollars' worth of construction.

The average weekly earnings of factory workers in New York State decreased 13 per cent. from last October to Aug. 1 of this year, according to a statement from the office of Industrial Commissioner Henry D. Sayer, issued Aug. 7.

The State Department of Labor made a special inquiry to ascertain the extent to which reductions in wages had been put into effect in factories, the statement said. Replies were received from nearly 700 plants, which normally employ more than 300,000 workers. About 500 factories with more than 230,000 workers reported having made wage reductions in wage rates of various amounts, while 200 factories with about 75,000 workers reported no reductions.

RETAIL FOOD PRICES RISING

Statistics prepared by the Department of Labor for fifteen principal cities of the United States were issued Sept. 9, and showed that for the month from July 15 to Aug. 15 there was an increase in the retail price of food in all of the cities over the previous thirty days.

The greatest increase, 8 per cent., was in Rochester. Buffalo showed an

increase of 7 per cent.; New York City and Baltimore, 6 per cent.; Milwaukee, Newark and Norfolk, 5 per cent.; Charleston, S. C., Louisville, Manchester and Portland, Me., 4 per cent.; Houston, 3 per cent.; Butte and Dallas, 2 per cent., and Minneapolis, 1 per cent.

For the year period, Aug. 15, 1920, to Aug. 15, 1921, there was a decrease of 30 per cent. in Butte; 28 per cent. in Louisville; 26 per cent. in Baltimore, Charleston, Dallas, Milwaukee and Minneapolis; 25 per cent. in Buffalo, Manchester and Norfolk; 24 per cent. in Houston, Newark, Portland, Me., and Rochester, and 22 per cent. in New York.

As compared with the average cost in the year 1913, the retail cost of food on Aug. 15, 1921, showed an increase of 62 per cent. in Manchester; 60 per cent. in Milwaukee; 50 per cent. in Baltimore and Charleston, S. C.; 50 per cent. in Minneapolis and Newark; 47 per cent. in Dallas, and 43 per cent. in Louisville. Prices were not obtained from Butte, Houston, Norfolk, Portland, Me., or Rochester in 1913.

"REASONABLE" RENT DEFINED

The problem of defining "reasonable rent," which had been the subject of great controversy in the municipal courts of New York, was settled on Aug. 31 by the Appellate Term of the Supreme Court in Brooklyn, N. Y., which ruled that a reasonable rent was a return of 10 per cent. on the present value of a house.

In the opinion, written by Justice Shelby and concurred in by Justices Cropsey and Lazansky, five rules intended for the guidance of municipal courts, landlords and tenants, were promulgated. These involved determining the present fair market value of the premises, the gross rentals demanded by the landlords, the allowable operating expenses for the previous year. Deducting from the gross rental the operating expenses would give the net rental. If this net

rental should not exceed 10 per cent. of the present value of the property, the rent demanded, in the opinion of the judges, would not be unreasonable.

NEW SECRET SERVICE HEAD

Attorney General Daugherty, on Aug. 18, announced the appointment of William J. Burns, head of a private detective agency, whom he had known for years, to be Director of the Bureau of Investigation of the Department of Justice. Mr. Burns was sworn in Aug. 22, succeeding William J. Flynn. In response to questions, Mr. Daugherty said the appointment of Burns did not necessarily mean that the investigation agencies of the Government would be co-ordinated under the Department of Justice, though there would be some housecleaning. "I have known Mr. Burns

personally for thirty years and have watched him develop in his specialty," Mr. Daugherty said. "The bureau will be reorganized as expeditiously as possible and brought to the highest point of efficiency."

The State Department received on Sept. 3 a telegram from the American Minister at Bangkok announcing that exchange of ratifications of the new treaty of commerce between the United States and Siam was effected on Sept. 1. The document followed in large part the usual lines of such treaties between the United States and other countries. Full fiscal autonomy was accorded to Siam and a protocol was annexed under which the United States surrendered extra-territorial jurisdiction over American citizens in Siam, reserving the right of revocation for a period of five years from the date of the treaty.

PREPARATIONS FOR THE ARMS CONFERENCE

*Acceptance of President Harding's invitation by the nations concerned—
Messrs. Hughes, Lodge, Root and Underwood, our representatives in the
conference—Preparations for the great event*

THE British Government's formal acceptance of President Harding's invitation to the Washington conference of Nov. 11 on limitation of armaments and for a discussion of international problems presented by the Pacific and the Far East, was received on Aug. 22 by Secretary Hughes and made public at the State Department. It took the form of a note from Lord Curzon, the British Foreign Minister, to Colonel George Harvey, United States Ambassador to Great Britain, expressive of the British Government's "ready" acceptance of the invitation, with the "earnest and confident hope that the conference might achieve far-reach-

ing results conducive to the prosperity and peace of the world." The text of the British note follows:

I have the honor to acknowledge the receipt of the invitation proffered to his Majesty's Government by the Government of the United States to participate in a conference at Washington, beginning on the 11th of November next, for the discussion of the limitation of armaments and in connection therewith of the international problems presented by the Pacific and Far East.

It is with sincere gratification that I have the honor on behalf of his Majesty's Government to request your Excellency to convey to the United States Government our ready acceptance of their invitation to take part in this auspicious meeting, with the object of which his Majesty's Government and the British nation are in whole-hearted sympathy. It is the earnest and con-

fidant hope of his Majesty's Government that this conference approached, as it will be, by all concerned in a spirit of courage, friendliness and mutual understanding, may achieve far-reaching results that will be conducive to the prosperity and peace of the world.

The Japanese reply to the invitation was communicated to the American Government on Aug. 24, and, apart from one modification, was a hearty acceptance. Reciting that the peace and welfare of the world had long been an object of solicitude to the Japanese Government and people, the note asserted that the Japanese Government warmly welcomed the idea of the limitation of armaments as a means of removing from industry and cultural development the deadening burden created by competitive armaments.

Japan had a pre-eminently vital interest in the preservation of the peace of the Pacific and the Far East, the note declared, and she regarded the discussion and removal of any causes of misunderstanding that might exist and the arrival at an eventual agreement with regard to general principles and their application which would insure friendship, as of great value and importance. The part of the note bearing on the proposed modification read as follows:

The Japanese Government gladly concurs in the proposal of the United States that the scope of the discussion of Pacific and Far Eastern problems shall be made the subjects of a free exchange of views prior to the assembly of the conference. They hope that the agenda of the conference will in this way be arranged in harmony with the suggestion made in the memorandum of the Japanese Ministry of Foreign Affairs of July 26, 1921, bearing on the same subject, in order that the labors of the conference may meet speedily with the fullest measure of successful achievement.

In the memorandum referred to (the full text of which was published in September CURRENT HISTORY, p. 920), the Japanese Government expressed as an implied condition of acceptance the opinion that the agenda should be arranged prior to the assembly of the conference, and that "introduction therein of prob-

lems such as are of sole concern to certain particular powers, or matters that may be regarded as accomplished facts, should be scrupulously avoided."

China also, on Aug. 18, accepted the invitation to take part in the conference, as far as its discussions might bear upon Pacific and Far Eastern problems, and expressed satisfaction that she had been put on a footing of equality with other Governments in "this beneficent movement."

Because of the opposition of Senator Lodge, one of the American delegates to the conference for the limitation of armaments, Senator Harrison, Democrat, of Mississippi, withdrew on Aug. 23, before a vote could be had, his amendment to the Shipping Board Deficiency Appropriation bill directing the American delegates "to use every effort and exert every influence to have the sessions of the conference held in public and not behind closed doors." Senator Lodge declared that the adoption of the amendment would be an exhibition of "futile bad manners" and an "incivility" to the great nations invited by the President to participate in the conference.

In withdrawing his amendment, Senator Harrison announced that this did not mean the abandonment of the fight to have the sessions held in the open. When the Congress reconvened, following the thirty days' recess, he would reintroduce the amendment, he stated, in the form of an independent joint resolution, and would make an effort to bring it to a vote before the conference convened on Armistice Day.

It was determined on Aug. 26 that the conference for the limitation of armaments would be held in the Hall of the Americas of the Pan American Union Building in Washington. On that date, Senor Don Beltram Mathieu, the Chilean Ambassador to the United States, who is also Vice President of the Governing Board of the Pan American Union, sent a let-

ter to Secretary Hughes, offering the use of the building for the conference. The Secretary hastened to reply, accepting the offer and expressing the sincere thanks of the American Government for the action taken. The building stands at the corner of Seventeenth and B Streets, N. W., about three blocks south of the State Department Building, and is in the midst of a group which will also be utilized in connection with the Washington conference.

It was announced at the State Department on Aug. 27 that the United States, as host at the conference, would provide the machinery of the sessions and bear the expense of the Secretariat General, the corps of translators and stenographers and all bills for official printing.

The White House on Sept. 9 stated that the main American delegation to the conference would consist of four members. These would be Charles Evans Hughes, Secretary of State; Henry Cabot Lodge, Senator from Massachusetts, Chairman of

the Senate Committee on Foreign Relations and Republican floor leader in the Senate; Elihu Root, former Secretary of State, also former Secretary of War, ex-Senator from New York and member of The Hague Tribunal; and Oscar W. Underwood of Alabama, former Democratic floor leader in the House, father of the Underwood Tariff law and present leader of the Democratic minority in the Senate.

The statement also was authorized from the White House that the main delegation from each country participating in the conference would comprise four members, who would sit in the sessions, although each delegation would be assisted by an advisory group of indefinite number, the members of which would be designated as "advisory members." The advisory council to be appointed to assist the main American delegation would consist of twelve persons, and these would be chosen for their expert qualifications in military, naval, aeronautic, political and economic knowledge.

HISTORIC RUNNYMEDE NOT FOR SALE

RUNNYMEDE is a name which to every Englishman and American spells liberty, for it was on that quiet meadow by the Thames, between Windsor and Staines, that the embattled armies of the English barons, on June 15, 1215, after defeating King John, wrested from him the priceless Magna Charta, on which the liberties of all English-speaking peoples are founded. Yet that historic meadow was recently put up for sale as an ordinary bit of grazing land by the Commissioner of Woods and Forests, who was getting only \$660 a year from the three tenant farmers who were using it. Instantly all England rang with an outcry of protest. The Government quickly realized that these ninety-nine acres of former Crown land in the Parish of Egham were

more than so much sheep pasture in the esteem of the nation—that the people still regarded it with an almost religious devotion, and would not tolerate its being sold into private hands. So the Minister of Agriculture, Sir Arthur Boscawen, decided to withdraw "Lot 8" from sale, and so informed the House of Commons on Aug. 10, 1921. His announcement was made in reply to an interpellation which inquired whether he was aware that this historic property was not only "one of the beauty spots of England," but was also looked upon with feelings of the utmost veneration "by all the English-speaking democracies in the world." His announcement that Runnymede would be retained as Crown property was hailed with universal approval.

ITALY'S CRIMINALS IN THE UNITED STATES

BY TOMMASO SASSONE

The facts regarding the high percentage of violent crimes committed in American cities by men of South Italian birth or parentage—Evil methods and ideals of the Camorra and Mafia transplanted from Italy to this country

[The writer of this article has made careful researches, and his statements are authentic. The better element of Italians in this country, who comprise the overwhelming majority, deplore the carnival of crime due to groups transplanted from Southern Italy, and are sympathetic with all efforts to bring the criminals to justice.—Editor Current History.]

CRIMES of violence in our larger cities have recently become an increasingly ominous feature of current news, and no careful observer can have failed to notice the preponderance of Italian names in this evil record.

A part of the prevailing lawlessness, no doubt, is due to the extraordinary conditions following the World War. After all wars the disbanding of armies causes social irregularities, but the circumstances in this case have been intensified. When the men were called to the army, great numbers of women were engaged in their places, and often in employments never before filled by women. After the armistice there was a disposition to restore soldiers to their jobs, but in many cases the men have found themselves permanently displaced. Some of these, destitute and confronted by an abnormal cost of living, took to crime to supply their living need. A world-wide industrial depression has come, throwing vast numbers of men and women out of work. These conditions have been responsible for a share of the prevailing crimes, especially those against property.

But there is a criminal class that

comes under an entirely different category. This class is not a fortuitous product of great social disturbances. It is a transplanted product. To this class crime is not a makeshift, but a trade and a cult. Its crimes are not solitary or sporadic, but deliberate and organized.

In the list of recent crimes the operations of what are popularly called the "Black Hand" have been markedly prominent. Robbery, blackmail and murder are its inevitable handiwork. A short time ago 5-year-old Giuseppe Verotta was kidnapped in New York City, and, because his father would not or could not pay a ransom of \$2,500, was thrown into the river and drowned. Reports from other cities constantly tell of the murderous activities of the "Black Hand." With alarming frequency murder succeeds murder, and, as if protected by some mysterious, powerful influence, the murderers usually succeed in escaping.

Only last year the United States Government sent Captain Michael Fiaschetti of the New York police force to Italy to demand of its Government the capture of thirty-two murderers who had returned there from America. On the very day that Captain Fiaschetti disembarked at Naples Lieutenant Giuseppe Monda, who, after amassing wealth in America, had returned to Italy for war service, was waylaid, shot and

killed by two masked persons a few yards away from his house. While in Italy Captain Fiaschetti arrested a murderer who two years previously had killed two persons on Brooklyn Bridge. In August, 1921, confessions were obtained in New York City from members of an Italian "murder syndicate" believed to have been responsible for more than 125 assassinations in New York City, Detroit, Buffalo, Pittsburgh, Chicago and Bridgeport during the last four years.

Of the foreign-born inhabitants of New York City the greatest proportionate number of convictions in the courts are those of Italians. Leading New York's foreign-born population of 1,991,547 are people from Russia totaling 479,765, and next come 388,978 Italians, but the percentage of crime is greater among the Italians. The latest available report of the Department of Correction—that of 1919—shows that 4,392 Italian prisoners were committed to the workhouse, penitentiary and other city penal institutions, while the number of Russian-born persons sentenced was 5,046. Russian prisoners were numerically greater, but proportionately less, than Italian, the percentage of Italians to their total number being 1.13, Russians 1.05. The crimes for which Italians were imprisoned were generally of a more serious nature than those of other nationalities. Assaults, burglary, robbery, blackmail, extortion, carrying dangerous weapons, and other such offenses were common grounds for convictions of Italians.

The greatest number of foreign-born convicts in New York State's prisons—Auburn, Clinton, Great Meadow and Sing Sing—are Italians. Of a total of 928 foreign-born convicts in these prisons the 1920 report of the New York State Commissioner of Prisons states that 378 were Italians—about 40 per cent.—whereas their percentage of the total should be 19. The foreign nationality having the next largest number was the Russian, of which there were 171 convicts.

Assaults, robbery, abduction, kidnapping and homicide were among the chief crimes committed by Italians, and larceny figured prominently among those by Russians. The New York State penitentiaries have fewer Italian prisoners than Irish, Russian, or Austrian, but their offenses are usually grave. In the New York State reformatories Italians lead all other foreign-born prisoners.

How does it happen that the Italian nationality has become so conspicuously identified in America with blackmail, kidnapping, murder and bomb outrages? What, furthermore, is the "Black Hand"? Is it a myth or a reality?

To get a clear understanding of the addiction of certain sections of Italians to crime it is necessary to go far back and describe antecedents. Northern Italians have different traits and characteristics from those of the South, and again the Sicilians have dispositions and traditions different from the mainland peoples. In Southern Italy for years homicide has been five times and assault three times more frequent than in Northern Italy, while in Southern Italy five robberies occur for every one in the North. The Sicilian records have shown seven times the homicide, four times the brigandage and four times the obscene crimes committed by Northern Italians. Manslaughter and murder have been fourteen times more frequent in Sardinia than in Lombardy.

It is from Southern Italy that 80 per cent. of Italian emigrants to the United States have come, and 70 per cent. of these have been illiterate. But illiteracy has not been the worst evil brought over. The most vicious and malignant influence transplanted here has been that of two powerful and dreaded secret societies—the Camorra, with headquarters at Naples, and the Mafia of Sicily. A description of the origin and development of these will tend to explain how it was that brigandage and mur-

der became recognized industries in Southern Italy.

THE CAMORRA

The Camorra is both a society and a system. Writers disagree as to the derivation of the name, as the word is not taken either from the Italian language or the Neapolitan dialect. The usual assumption is that it comes from the name of a Spaniard, Gamurra. Saturated with the old ideas of chivalry, he conceived the idea of founding at Naples, in the sixteenth century, a society for the suppression of robbers and bandits on the highways. At that period Naples was under Spanish domination and was a haven for the worst element of Spanish cutthroats. Gamurra's organization gradually became known as the "Onorata Società della Camorra"—the Honorable Society of the Camorra. It became a notable power. As the roads between Naples and other cities were infested by highwaymen, the aid of the members of the Camorra was abundantly sought as escorts, for which service they were paid.

It was not long before adventurers saw a fertile opportunity to avail themselves of the Camorra's functions to enrich themselves. Under the mask of disinterested service they entered the society, and when assigned to protect travelers would, after they had set out on escort, refuse to do their part unless lavishly rewarded. If their demands were not complied with they would send word to the highwaymen, and when the traveler was attacked contrive to be absent from the scene. The robbers would share the proceeds with the confederate escorts, and, in fact, the two became a kind of union. By successive stages the Camorra degenerated into a society of extortioners, blackmailers and bandits who did not scruple to commit murder when thought necessary.

But the Camorra was something more than a criminal organization. It professed to have a patriotic side,

warring secretly against political domination of Naples and the adjacent country by foreigners. To assault or slay a foreign official was esteemed a praiseworthy act, and to give information to the authorities was scorned as the deed of a traitor. It was this patriotic phase that enlisted the support of many influential natives who would not have entered a criminal organization. The leaders of the Camorra became rich, and when the feudal and later the ecclesiastical estates were broken up and sold, many of them bought land and became great landlords, respectable to all appearances. Their power in the Camorra, like their estates, frequently descended from father to son.

After the consolidation of the various Italian States into the Kingdom of Italy the patriotic phase vanished, and the Camorra became and has remained a politico-criminal organization. Its ramifications have extended from the highest to the lowest strata of society. Under its two executive heads—the Capo, or Chief, and the Treasurer—the Camorra has a corps of twenty-four leaders, two for each district of Naples. In turn each of these leaders has forty-eight picciotti, or probationers—men who have already served an apprenticeship in crime. Assisting the picciotti are the "honorary members," usually men of shady careers masking their activities under the cloak of some semi-respectable business.

The whole society is divided traditionally, although not actually, into two classes—the Alta, or Higher, Camorra and the Bassa, or Lower. The Alta has concerned itself with the more important affairs, such as political intrigues, corruption of officials, large robberies and assassinations. To the Bassa has been given the function of levying blackmail on petty gamblers, pickpockets, sneak thieves and other violators of the laws and seeing that they are completely subservient to the political and other designs of the Alta. Assassinations decreed by the inner circle or court

of the Camorra have usually been carried out by means of what is called the "*dichiamento*," or picked quarrel. The intended victim has been isolated from his friends in some restaurant, surrounded by his enemies, drawn into a quarrel and finally stabbed as though the act were done in self-defense.

THE MAFIA

The Mafia is distinct from the Camorra and is peculiar to Sicily. It originated as a secret political society, the object of which was to rid the island of foreign rule. But it also has been aptly described as a mixture of felony and patriotism. As in the case of Ireland's attitude toward England, Sicily has long nursed grievances against the Italian mainland, accusing it of both exploiting and neglecting it. Centuries of foreign domination and oppressive government long ago bred in the people of Sicily a contempt for law and a hatred for authority.

Any Sicilian who applied to the authorities for help, or gave them any kind of information, was condemned as acting in bad faith toward his fellow-Sicilians. Long insistence on this code gave criminals practical immunity. Like the Camorra, the Mafia has two branches, a high and a low. The members of the low Mafia are the instruments used by the high Mafia in attending to the slanders, persecutions, perjuries, conspiracies, blackmailing, robberies and murders ordered by the high Mafia. Controlling the high Mafia have been men of social and administrative rank who have unhesitatingly destroyed the career or life of any foe. Everywhere in Sicily there has long been a dread of the Mafia, and no Sicilian, under peril of death, has dared to divulge its crimes to the authorities.

Powerful Sicilian politicians have supported and protected the Mafia as a necessary league for the defense of Sicilian interests. During the reign of King Humbert, Senator Count Condonchi was personally appointed

by that King as High Commissioner for Sicily for the express purpose of stamping out the Mafia there. He tried hard to suppress it, but failed. "It exercises its baleful influence all over Sicily," he said; "all fear it, and in order to secure their property and persons, people are compelled to submit to its behests. Its power knows no obstacles, not even at the hands of the Government." The Mafia, in fact, drove Condonchi into retirement.

Two codes persist in Sicily. One is the vendetta; the other is "*onestà*." The highest national virtue in Sicily is "*onestà*" (literally, honestly), meaning that one must never in any way assist the authorities by giving information of crimes within one's knowledge, even if he himself is the victim. So strong is the hold of this code that if a man has been badly or even fatally wounded he will stanchly deny all knowledge of the identity of his assailant. Should he recover, he will make it his life mission to avenge himself; but nothing will induce him to turn informer or "*cascittuno*," which is considered the most opprobrious term in the Sicilian dialect. "If I live, I shall kill you; if I die, I forgive you," runs the old Sicilian saying, which is the keynote of Sicilian action.

The vendetta originally was caused by retaliation against foreign officials sent to rule the island. Finding it impossible to have them removed or punished for oppression, the natives often disposed of them by assassination, which became exalted as a laudable act. In the course of time the idea was elaborated into the doctrine that clans, families or individuals had the right to take private vengeance. Sometimes the grievance was personal, sometimes economic, and often both.

At least two-thirds of the owners of proprietary estates in Sicily have long been absentee landlords. Salviola, in his book on the subject, describes them as descended from bandits and extortioners, and Alongi, in his treatise, traces their beginnings to organized robbery. The men, he says, who

became proprietary landlords "were energetic, audacious characters and masters of that robber class from which they sprung and which even then were called Mafia." Their descendants were often unscrupulous. They violated families and forced agricultural laborers to work for the poorest kind of pay, frequently as low as a few cents a day. Against their outrages and tyrannies the people felt that they had no legal way of striking back. So the vendetta became the established method, and the stiletto or pistol was used to obtain a satisfaction denied by law itself. The vendetta requires an implacable memory and a vigilant noting of the auspicious moment to strike. For ten, perhaps twenty years, the marked victim may go his way confidently and unsuspectingly. Suddenly he is murdered, and so mysteriously that there is not a clue to the motive or perpetrator.

TRANSPLANTED TO AMERICA

It was not until recent decades that the activities of the Camorra and Mafia were transplanted to America. In 1879 the total immigration from Italy was only 5,791. In 1880 to 1890 it ranged from 12,000 to 52,000 a year, chiefly from the south of Italy. The police in different cities noted the increasing number of murders among Italians, but there was then not an Italian member of any police force, and the sources and causes of the murders remained mysteries.

A succession of dramatic events in New Orleans first fixed the attention of the American people upon the fact that a new and dangerous criminal element had fastened itself here. For years secret murders had baffled the New Orleans police. Witnesses always knew nothing, and invariably the victim would refuse to identify the murderer. The source of these outrages, it transpired later, was a secret society with 300 members who would kill any one standing in the way of their designs.

There were two factions of Italian

stevedores, one of which had supplanted the other in the profitable business of unloading fruit. On the night of May 5, 1890, the ousted party ambushed and attacked seven of their successful competitors on the street and riddled three with slugs from shotguns. The victims recovered; but as the Louisiana law defined shooting with intent to murder while lying in wait as a capital offense, the six Italians convicted were sentenced to life imprisonment.

Later in the same year—though as a separate episode—came the assassination of Chief of Police David C. Hennessy. About a dozen years previously Hennessy had incurred the hostility of the lawless Italian element in New Orleans. He had arrested and shipped to New York the notorious bandit Esposito, who was then deported to Italy, tried and convicted. Hennessy had also learned certain secrets of Italian societies transplanted from Italy. A vendetta was proclaimed, and the Chief of Police was marked for death. Year after year assassins grimly waited, until on the evening of Oct. 16, 1890, he was shot down as he was entering his house.

This was the first instance of an American victim of the vendetta. Some persons unfamiliar with Italian conditions declared it to be the work of the Camorra, but this was unlikely, for a traditional rule of the Camorra was never to take revenge on a police official. It was the work of the Mafia. There was great excitement in New Orleans. A Committee of Fifty was organized, arrests were made, and the prosecution pushed. When on March 13, 1891, the verdict was given, a great multitude surrounded the Court House. It expected conviction of the six prisoners, for the evidence was strong against them. But, to the surprise of every one, they were acquitted. Charges were made alleging bribery. "It is known," said a dispatch from New Orleans, "that large sums of money have been received and expended by the defense.

The amount is estimated as high as \$75,000 or \$100,000. Italians all over the country are made to contribute \$2 apiece. Thousands of dollars have come from New York and Chicago, and every day brings in more collections."

Prominent New Orleans citizens issued a call for a mass meeting the next day at Clay Statue. A big crowd attended. "The law has proved a farce and a mockery," said Mr. Parkerson, one of the speakers. "Are we to tolerate organized assassination?" The crowd went to the prison, forced the doors and shot down eleven Italian murderers. Italian Consul Corte admitted that the Mafia society was strong in New Orleans and that he and Father Manoritta had been warned to keep out of the Hennessy case. Father Manoritta had been told by a friend that more than 360 bandits in New Orleans were being protected by the Mafia society. They had managed to escape from Italy, where many had been convicted and sentenced to be imprisoned or hanged.

The Italian Government made an international issue of the matter, professing horror at the incident, although no one knew better than it did the appalling frequency of murder in Italy. After capital punishment had been abolished in Italy, in 1875, murders had greatly increased. In 1890 and following years Italy exceeded all other countries in the number of its murders; its annual list was about 2,470, a ratio of 29.4 per 10,000 deaths; Spain followed with 1,200 annual murders, a ratio of 23.8 per 10,000 deaths.

American public sentiment supported the action of the New Orleans citizens, and even English publicists such as Moreton Frewen approved it. Whatever the abstract considerations of the affair, it had one notable practical effect. Criminal Italians thereafter were more careful to respect the lives of American officials. The long roll of their lawless acts continued,

but it was mostly a case of Italian against Italian.

INRUSH OF SOUTH ITALIANS.

Immigration of Italians annually increased, reaching the 100,000 mark in 1900. Its proportions grew yearly, going to 285,731 in 1907, falling off somewhat in each of the succeeding years and then swelling to 265,542 in 1913 and 283,738 in 1914. From 1901 to 1910 there were 2,045,877; and from 1911 to 1918 a further 1,012,495 Italian immigrants were admitted. The bulk of this inrush was composed of people from South Italy. Thus in 1909 there were 165,248 from South Italy and only 25,150 from North Italy, and the same proportion was generally true of the Italian immigration of each following year.

Great numbers of these immigrants had not the slightest intention of becoming American citizens. Their sole aim was to amass some money as quickly as possible and return to Italy. The standards and influences of their home regions followed them here, dominated them, and impelled them to go back. In 1905 fully 31 per cent. returned; the next year 38 per cent., and in 1907 the rush back to Italy reached 62 per cent. From 1908 to 1910 at least 30 to 42 per cent. of Italian immigrants went back to Italy. Many later returned to America, but it was with a renewed infusion of the spirit, ways and methods of their native land, chiefly South Italy.

A change now came in some American cities. It was welcomed by honest, law-abiding Italians and equally resented by the criminal Italian element. In cities where there were large Italian colonies administrations began to put officers of Italian extraction on their detective forces. These policemen knew how to deal with their countrymen.

One of the ablest of these detectives was Police Lieutenant Joseph Petrosini, on the New York City force. He

arrested many Italian criminals who had committed crimes both in America and Italy. One of his noted arrests was that of Errico Alfana. Early in 1906, members of the Camorra attended a banquet in Naples and decided on the execution of Gennaro Cuocolo and his wife. He was a Camorrist with a long criminal record; both he and his wife, Marie Cutinelli, a woman of a much tarnished past, had somehow incurred the enmity of various Camorra members. The Cuocolos were murdered in May, 1906. The Naples police made a show of investigation, but that was all. Finally one of the King's relatives, reported to be the Duke of the Abruzzi, complained to the King of the inactivity of the regular police. Thereupon the military police were put vigorously at work upon the case.

Errico Alfana, one of the Camorra leaders, fled to New York City. Petrosini located him. One afternoon Petrosini approached and said, "Errico, do you want to submit right away, or shall we have to extradite you?" "I am a gentleman," Alfana replied, "and this is hard on my nerves. But I will go back to Italy, as you say." When, in 1909, Petrosini was sent to Italy to bring back some criminals wanted for murder, he was shot and killed in Palermo. The perpetrators of this crime have never been discovered.

The Italian Government did seriously try to break up the Camorra and punish those of its members accused of the murder of the Cuocolo couple. The Camorra called into action every possible influence to delay the trial, hoping meanwhile to get rid of witnesses who had turned State's evidence. The trial of eight accused Camorrists, however, was at last begun at Viterbo in 1911 and lasted sixteen months. The official report of its proceedings occupied 40,000 pages and filled sixty-three volumes. Former Mayor George B. McClellan of New York City, who had formerly resided in Italy, attended the trial, and it was to him that Abatemaggio,

one of the chief witnesses, thus described the Camorra: "It will do anything you hire it to do. It will kill your enemy or carry you an election or bring you your heart's desire."

In July, 1912, the eight Camorrist chiefs on trial were found guilty and each sentenced to thirty years' imprisonment at hard labor. On hearing this sentence Dr. Marinas, one of the prisoners, cut his throat in court. But later a rehearing of the case was granted on the allegation that seven principal witnesses had committed perjury. Then came the war and the hearing was delayed because of the absence at the front of important witnesses. There has been no recent cable dispatch as to the final disposition of the case.

IN AMERICAN CITIES.

The enormous increase of crimes in the United States, especially those of personal violence, led to an investigation of immigration and crime by a joint committee of Congress. This committee reported (United States Senate Document No. 750, 1911), that in gainful offenses, such as burglary and robbery, Americans exceeded. Of immigrants the Russians led in larceny, the French in prostitution, and the Greeks in violations of city ordinances. Then the report went on:

The Italians have the highest percentages of the aggregate of offenses of personal violence shown by the data. * * * The Chicago police records alone show a different condition; in them the Italian percentage is exceeded by the Lithuanians and Slovenians. Certain specific crimes of personal violence also belong distinctively to Italian criminality. Abduction and kidnapping * * * form a larger percentage of the crimes of Italians than of those of any other groups of offenders. In the Chicago figures the Italians rank second in percentage of these crimes, being slightly exceeded by Greeks.

Of blackmail and extortion the Italians also have the highest percentage in the four sets of data having a sufficient number of cases to make comparison possible. In all five sets of data the Italians have the highest percentage of homicide. Rape likewise forms a higher percentage of the crimes of Italians than those of any other nationality in the statistics of the New York City

magistrates' courts, the New York Court of General Sessions and the penal institutions of Massachusetts. * * * Of the aggregate of offenses against public policy, the Italian percentage exceeds all others in two sets of data. * * * Of violations of city ordinances shown in the records of the city magistrates' courts of Greater New York, the Italian percentage is greatest, while of the same offenses shown in the records of arrests by the Chicago police, the Italian percentage ranks third.

The report then described the tendency of the Italian of the second generation to break away from the criminal methods of the immigrant generation and to take up those of the American native-born criminals. Court figures showed that the Italian of the second generation committed many more gainful offenses than the Italian immigrant and fewer crimes of personal violence and offenses against public policy.

Recent reports of various State prison boards confirm the findings of that Government inquiry. The 1920 report of the California Prison Director shows that of 659 foreign-born convicts there were—of European immigrants—more than twice as many Italians as members of any other nationality. The 1920 report of the Massachusetts Bureau of Prisons shows that the largest number of prisoners in jails and houses of correction were Irish, but their offenses were mostly minor transgressions; of the 1,094 Irish prisoners 845 were sentenced for drunkenness. On the other hand, the 169 Italian prisoners were largely convicted of serious crimes, ranging from carrying weapons and assault to rape and manslaughter. In Newark, N. J., the record of arrests shows that of the foreign population Italians supply the greatest number of prisoners. The same is true in Rochester, New York, New Orleans and various other cities. Chicago is one of the few cities having considerable Italian populations where more of other European nationalities than Italians are arrested, although the offenses committed by Italians are usually more serious.

ACTIVITIES IN DETROIT

The earnest energy with which the police departments of American cities are trying to grapple with organized Italian criminality is shown by the attention given to the problem in the 1920 annual report of the Detroit Police Department. How thoroughly South Italians have transplanted their peculiar standards is shown by these extracts from the report:

Every once in a while an Italian or Sicilian is shot or stabbed, but seldom are the police able to learn who has committed the crime. The victim will tell his father, or his brother, or some other relative or friends who his assailants were, so that he can be avenged. But the police—never! That, according to his standard and belief, would not avenge him. And so the quarrels have been carried on among the families, each one gathering to itself all the available male strength, and the quarrel never ends until every male member of at least one side has been exterminated. Several have already been ended that way in Detroit.

But the killing of one another often becomes dull as a pastime. Then the members of the different clans are employed to kill the enemies of others, to bomb houses, kidnap children and hold them for ransom or to thieve. This is the way they earn their daily bread. * * * Yet the police, though they may know who has committed the crime, are seldom able to obtain a conviction in court. Witnesses afraid of the power of the "Black Hand" refuse to testify.

The Black Hand is an offshoot or extension of the Mafia. When in Milan last year, Captain Michael Fiaschetti of the New York City police force said that his mission was directly connected with a new campaign "for the extermination of that tremendous network of dangerous criminals who constitute the Black Hand gang and who come to us principally from the Sicilian provinces of Trapani, Girgenti and Palermo." Captain Fiaschetti further said:

It is a sad fact that some of these Black Hand daredevils are recruited from the professional classes. In a dramatic raid on a country inn in the suburbs of New York I had the good luck to find thirty famous Black Handers in conclave in underground vaults. Three of them were Italian medical men, specialists in the department of the Black Hand concerned with the fabrication of false dollars.

Shortly afterward two brothers were done to death in their own dwelling, their bodies being riddled through and through with revolver shots. Within a month I succeeded in capturing the four authors of the crime. They confessed that the murders were wrought with their own hands in the execution of a mandate from the Black Hand, or *La Mano Nera*, as they call it, because the victims had been judged guilty of having betrayed to me the subterranean meeting place of several chiefs of the organization.

While Captain Fiaschetti was in Naples he received a cable from Police Commissioner Enright of New York City warning him that two desperadoes were on their way to Italy and that it was believed their errand was to kill him.

ITALIAN "BOOTLEGGERS"

Since prohibition of liquor came into force in the United States, Italian criminals have turned to bootlegging as a quick means of illicitly acquiring wealth. One of their leaders was Albert Altieri. For years, from his quarters in New York City, he had directed the operations of a Camorra gang in New England who blackmailed and also ran chains of gambling houses and other unlawful resorts. They murdered other Italians venturing to encroach upon their self-assigned monopoly. According to the police, many of these murderers were

sheltered by Altieri and his aids, provided with funds and hurried to Italy. Altieri and his crew expanded their operations to include bootlegging.

Having accumulated a fortune of several hundred thousand dollars, Altieri retired from the criminal business. Later, however, members of his old gang in Providence, R. I., demanded his assistance in some trouble. He refused to give it, and an agent was sent to New York City to kill him as an ingrate and a renegade. Several attempts upon Altieri's life were fruitless, and Altieri was about to leave for Italy. At last, at noon on Feb. 10, 1921, Altieri was caught off guard at Mulberry and Grand Streets, New York City, and shot. Characteristically, he refused before dying to tell the police the name of his murderer. His body was embalmed and sent to Italy for burial.

The Italian record of criminality is a gory one. But this is not because all Italian immigrants are criminally disposed. Herded in cities, out of contact with American ways, they are preyed upon and dominated, as Villari says in his book on the Italian immigrant, by a horde of adventurers and camorristi, who maintain in the new country the factions, superstitions and methods of the old. There is an orderly Italian element which applauds every effort to exterminate these destructive influences.

THE ETYMOLOGY OF "JAPAN"

BOTH the name "Japan" and the sobriquet, "Land of the Rising Sun," come from the same source—two Chinese ideographs, "Yih-pen," or "Sun-origin." This name was given by the Chinese to their Mongolian neighbors across the Yellow Sea because of the geographical position of the Japanese archipelago on China's east. From "Yih-pen," the Japanese themselves, following the laws of their own phonetics, developed a native form, "Nihon." The familiar name Nippon is a corruption of this. The form Nihon was officially adopted by the Japanese in the year A. D. 670. Before

that time the name used was "Yamato," properly the name of one of the central provinces, an example of the well-known rhetorical principle of using a part as the designation of the whole. Japanese poetry and belles-lettres still prefer to use the name "Yamato" today. The English name, Japan, comes to us through the Portuguese, who spelled "Yih-pen" as "Japon," the "J" in Portuguese being silent or pronounced as aspirate "h." Spanish, Portuguese and French have all crystallized this form. The English form, Japan, represents only a slight modification.

THE PASSING OF TURKEY

BY ADAMANTIOS TH. POLYZOIDES

Editor of the Greek Daily, Atlantis

Narrative of the successful campaign of the Greek Armies against the Turkish Nationalist forces under Mustapha Kemal—Facts about the strength of each side and summary of the chief battles—Why the Turkish Empire is gone forever

WITH the triumphal advance of the Greek armies in Anatolia, with the fortresses and cities of Kutahia, Afioun-Karahissar, Eski-shehr and Ismid fallen in quick succession to the victors, and with Angora itself threatened, one may attempt to write the closing chapter of the passing of Turkey. The Ottoman Empire, which was created by the sword, is being ended by the sword, and the nation which is dealing the coup de grace to the once mighty horde of Osman is, as if by some strange decree of fate, the one on whose ruins five hundred years ago Turkish power was founded. It is not only, however, as a military force that Turkey is dying; bad as her military plight is, it is further complicated by the debacle of Turanian nationalism, for which there was no room in a twentieth century Europe.

The Young Turk revolution of 1908, the starting point of the Turkish collapse, was encouraged by all those who calculated that its success would bring about the overthrow of Teuton influence in the Ottoman Empire. That influence, beginning in the late '80s, had acquired a new impetus after the famous pilgrimage of Wilhelm II. to Constantinople and the Holy Land in 1897.

The Young Turk revolution was launched in the small Macedonian town of Resna, by two young officers, Enver and Niazi Beys, with whom, later on, such leaders as Shevket Pasha, Djemal Pasha and Talaat Bey were associated.

It was then thought that the object of the movement was to bring about the federalization of the empire in a way that would give equal rights and opportunities, as well as an equal share in the government of the country, to all the different native races of the Turkish Imperial State, and this fact alone explains the sincere and undisguised enthusiasm with which such racial elements as the Greeks, Armenians and Arabs, as well as the Albanians, Bulgars, Serbs, Syrians and Kurds, came together fully prepared to help in the reconstruction of their common country. For a time the United States of Turkey was the slogan of all those people.

Now, indeed, that plan, honestly and sincerely applied, would have saved the Ottoman Empire, and in all probability would have prevented the World War. But it soon became apparent that what Enver and his party were scheming for was not the liberalization of Turkey, but the complete Turkification of an empire four-fifths of which was non-Turkish. The Young Turks feared that by giving equal rights to all the former subject peoples of the Sultan they were running the risk of entirely changing the racial and national character of the empire, and, extremely nationalistic as they certainly were, no sooner had they established their regime than they raised the banner of "Turkey for the Turks alone."

To fight these tendencies the Balkan countries for the first time in their long history buried the hatchet

of racial differences and formed that famous coalition of 1912 which was to finish the Sultan's hold over nine-tenths of his European possessions, and over all the Greek Archipelago.

On the other hand, such events as the Austrian annexation of Bosnia and Herzegovina, and the definite amalgamation of Eastern Rumelia with Bulgaria, in 1908, and finally the Italian war in Tripoli in 1911, although not directly due to the nationalist character of the Young Turks, nevertheless indicated the desire of Austria, Bulgaria and Italy to take advantage of the weakness of Turkey before her new regime succeeded in strengthening the decrepit empire; the same psychology actuated, partly at least, the policy of the Balkan States when they decided to put an end to Turkey's hold on Near Eastern Europe before the Young Turks got a chance to galvanize into life the crumbling Ottoman State.

After her Balkan defeats, Turkey threw herself into the arms of Ger-

many. She did so, first, because Enver and his party believed that Turkish Nationalism was not compatible with the interests of the Western Powers, and, second, because an alliance with Russia was out of the question at that time, and the only alternative left was co-operation with the Central Empires of Europe.

The great war ended for Turkey in the last days of October, 1918, and with her defeat the first phase of her nationalist revival, initiated ten years earlier, was closed.

Enver Pasha was overthrown with his entire party, and the victorious Entente, occupying the whole Turkish Empire with the exception of portions of Asia Minor, and being master in Constantinople, forced the formation of a Turkish Ministry diametrically opposed to the ideas and the policies of the Young Turks. Thus the work of Enver Pasha was undone.

SCENE OF THE SUCCESSFUL CAMPAIGN OF THE GREEK ARMIES AGAINST THE TURKISH NATIONALISTS

SECOND NATIONALIST MOVEMENT

We come now to the second phase of the Young Turkish Nationalist movement, the utter debacle of which we are witnessing today. It may appear as a paradox, but it is nevertheless a fact that the second revival of Young Turk Nationalism was the indirect, but none the less actual, result of the mistaken allied policy pursued in Turkey immediately after the armistice. And this is how it all happened:

When the war ended with the coming of the allied fleet to Constantinople and the shattering of every Turkish front from Mesopotamia to Palestine and Thrace, an immeasurable fear seized the entire population that still remained under the more or less nominal control of the Sultan. The victorious alliance was still too strong and too compact to permit the Turks any indulgence in hopes they considered vain. The whole universe seemed to be crumbling on Turkey's head, and those who up to that time sat in the seats of the mighty were more dazed than the others by the sudden and unexpected turn of events.

At that time General Allenby in Asiatic Turkey and General Franchet d'Esperey in Thrace had under their command ten times as many troops as would have been needed to occupy and disarm the whole of Turkey. The state of mind of the population was such that an international gendarmerie could have put the whole country in order. It was then, however, that the old Turkish *deus ex machina* appeared in the shape of allied discord; because, no sooner was the Turk defeated than the various allied diplomats resumed their ante-bellum courtship for Turkish favors. French diplomacy began to suspect Britain, British policy began to distrust France, while Italy more openly than either came out in favor of the Turk.

Discussions of the different "mandates" were then going on in full pressure all over Europe and

America, and during those discussions each power interested in securing the mandate over some section of Turkey had its organization working overtime in the localities concerned, and in Constantinople. This condition was so propitious for the Turkish interests that an old and accomplished diplomat, the Grand Vizier Damad Shereef Pasha, was quick to understand all its portent and to act accordingly. Damad, who had been appointed to his position by the Entente, succeeded so skillfully in playing one allied diplomat against the other that he was enabled to create a double political and diplomatic Turkish front, the one loyalist in Constantinople, and the other revolutionary in Asia Minor, with the object of winning by one or the other way the diplomatic victory which alone could save Turkey from the consequences of her military defeat.

With this object in mind he dispatched, early in February, 1919, first to Samsun and then to Amasseia and finally to Angora, Brig. Gen. Mustapha Kemal Pasha, whom he placed at the head of the revolutionary movement of the Turkish Nationalists. Mustapha Kemal hails from Larissa, in Thessaly, and has studied in the Imperial Turkish Military School in Constantinople. Contrary to what is commonly said, he is not a graduate of the Berlin Kriegsakademie. He was formerly an officer of the Turkish General Staff, where he was known as an able but very eccentric militarist. During the war he was Divisional Commander in Gallipoli Peninsula, but he soon disagreed with his German chief, General Liman von Sanders, and with Vehib Pasha, after which he was sent to Syria. There, however, he became objectionable to General Djemal Pasha, who sent him to the chief of the Eastern armies, Izzet Pasha, with headquarters in Mosul. Shortly afterward he was recalled to Constantinople and accompanied the heir apparent to the Turkish throne—now Sultan Mehmet VI.—to

Berlin. On their return from Germany he remained in Constantinople until he was sent to Asia Minor to organize the Nationalist movement.

CREATING THE KEMALIST ARMY.

The Turkish Army being demobilized soon after the armistice, Kemal was from the first confronted with the difficulty of raising a new body of troops. Nevertheless, he succeeded in rallying to him a number of officers, and through them he incorporated various irregular bands into a more solid organization. These bands were made up of all sorts of adventurers and the riffraff of the Turkish prisons, who had been released during the war by Talaat Pasha with the special mission of exterminating the Armenian and Greek populations of the Pontus and the interior of Anatolia. Kemal appointed the local leaders as Military Governors of the provinces in which their bands were operating, and to each he attached a prominent Young Turk civilian as counselor and personal representative of the supreme chief, which meant himself. In order to give an idea of the elements that Kemal used in the formation of his army, it is enough to say that an ex-boatman of Kerassund was appointed Governor of the Pontus and was instrumental in annihilating two-thirds of the entire Greek and Armenian population of that province. The original Kemalist organizations contained twenty to fifty men each, but when the prospects of loot increased their strength was soon trebled and quadrupled.

In the course of his organizing activities Kemal Pasha made use of his bands for the forcible conscription of the Turkish peasantry, the collection of all kinds of taxes from the population, and the service of his commissariat. Finally Kemal completed his organization with numerous Lazian pirates, who proved their worth by smuggling in arms and ammunition to Samsun from Batum and Constantinople.

EXTENT OF KEMALIST STATE

In the whole territory subject to Kemal's control the genuine Turkish population has never amounted to more than 1,500,000, scattered over a wide territory with primitive communications. On the other hand during the ten years of almost continuous war and conscription, that part of the population which was capable of bearing arms was reduced by half, so that, considering the circumstances, Kemal could not expect to raise more than 50,000 or 75,000 men if everything went well. According to the best information obtainable, the forces of Kemal from the central and northern part of Anatolia last April reached the figure of 60,000 men.

The Turkish Nationalist leader, however, had another source of strength in the vast number of former officers of the imperial army whom the armistice had released in idleness and left starving in the streets of Constantinople and other cities of the empire. It is calculated that the Ottoman army employed over 25,000 officers, a considerable proportion of whom were not Turks, but men drawn from the Albanian, Khurdish, Arabian and other elements of the country that do not sympathize particularly with Nationalist Turkey. It is safe to say that at least 5,000 officers of the former army joined the forces of Kemal as the only open way to a decent livelihood. To these forces must be added the men that the southern provinces of Anatolia contributed to the Nationalist movement after it was well under way. These may be estimated at between 30,000 and 40,000 men. Finally comes the assistance given more or less openly by the Constantinople Government and the territory under the Sultan's jurisdiction. This is an unknown factor, but on the whole it is safe to assume that when Kemal took the field early in the Spring he had between 180,000 and 200,000

troops for use against the Greek armies.

In order to equip this army Mustapha Kemal had to depend on the following supplies: First, he had at his disposal the military stores of the Turkish eastern armies, chiefly located in Sou-Shehri, about a hundred miles inland from Kerassund. This was the base of the Turkish Third Army, which, after the armistice, ought to have been turned over to the Allies, but which remained in the hands of the Kemalists. In addition there were other smaller depots in Angora and Sivas, and these also fell to the Kemalists. It must be added that at the time of the demobilization of the army the soldiers and officers as a rule took with them their rifles and revolvers, with all the ammunition they could carry, while a large amount of war material was freely distributed to the peasantry to be used "should the need arise."

The Russians in their retreat from Trebizond had abandoned no less than two hundred pieces of heavy artillery, with two large dumps of ammunition. General Denikin made an attempt to get this material, but the Turks got wind of the plan and blew up one dump, keeping the other. The Kemalists also found a good deal of artillery in Kars and Batum, although in both cases the Armenians and the Georgians had appropriated the best pieces for their own armies. Finally the Kemalist Turks got their best artillery from Erzerum, because the Russian retreat there was so precipitate that the newest and largest guns were abandoned. These weapons, together with those smuggled from Constantinople, Bulgaria, Russia and certain countries of western Europe, helped arm the Kemalist troops.

Mustapha Kemal solved his financial problem partly by levying all the taxes and surtaxes previously paid to the Constantinople Government, and mostly by getting hold of all money that came in sight. The Greek and Armenian element, the backbone of the economic strength of the empire,

was stripped of its last penny, while remittances from Constantinople and Moscow and from other more opulent sympathizers of the Kemalist movement soon filled the coffers of the organization. To send troops to the assistance of Kemal was not an easy task, but monetary help was more convenient to get to him from all parts of Islam, and especially from the neighboring States.

KEMAL TAKES THE FIELD

From March, 1919, to March, 1921, Mustapha Kemal continued his preparations, entirely undisturbed by what was going on among European statesmen and the diplomats. His main idea seems to have been that success depended rather on the moral effect that his organization would have on the Entente than on an actual victory on the battlefield. He made no serious attempt to engage the Greek Army in Asia Minor during the two years following the occupation of Smyrna, because he had not the necessary forces for such an undertaking, and because he was convinced that European diplomacy could succeed in driving the Greeks out of Smyrna much better than force of arms. All the information that the Nationalist leader was getting from Paris and Rome, by way of Constantinople, was in sympathy with this view.

What Kemal aimed at was the revision of the Treaty of Sevres, and this was almost accomplished when his own representatives were accepted by the allied Governments to discuss in London the details of the Near Eastern settlement, during that memorable conference of last March, when Premier Briand of France came out openly in favor of their claims: Italy had been clamoring for the revision of the Turkish treaty ever since the day of its first inception in San Remo, a year before. Greece unanimously rejected the proposal to modify the Turkish treaty, and shortly afterward she launched her

first offensive against Eskişehir. The story of that operation is briefly as follows:

The offensive started March 23, 1921, the Greek troops of the southern group advancing toward Afioun-Karahissar, which was their objective, while the northern group advanced toward Eskişehir. Incidentally the two groups were to destroy the Turkish railroad leading from Afioun-Karahissar to Konia, and also the line that connected Eskişehir with Angora. Both groups reached their objectives, but the connecting group of Kutahia, forming the centre of the Greek advance, failed to march in connection with the others; and thus the whole operation was frustrated, the Greeks falling back on their bases of Oushak and Brusa. The Greek Army lost almost four thousand men in killed and wounded, while the Turkish losses must have been equal if not more. The railroad remained in the hands of Mustapha Kemal, as well as the moral advantage of that battle, which Turkish diplomacy endeavored to use by every means.

It has remained for a distinguished French military critic, General De Lacroix, writing in *Le Temps* of Paris, to appreciate fully the Greek military effort of that first offensive. Says the General:

For the attack on Eskişehir the Greeks assembled the equivalent of four divisions between Brusa and Ismid, while two others operated from Oushak against Afioun-Karahissar in the direction of Angora. Following the ill-success of the Greek attack against the Turkish positions of Eskişehir, the northern group returned to its starting point in the neighborhood of Brusa, followed, but not pursued, by the victorious Turkish corps, which were exhausted by the preceding struggles. At the moment of this retreat the southern Greek group, more successful than the northern, had passed beyond Afioun-Karahissar, and was too much exposed. The Turkish troops, taking advantage of this situation, left the neighborhood of Eskişehir, and by way of Kutahia attacked Guediz, northwest of Oushak. This attack the Turks made with a cavalry division, whose orders were to advance up to the railroad and cut the communication of the Greek column with Smyrna. The stub-

born resistance of the Thirty-second Greek Regiment on the heights of Mourad Dag (7,000 feet high) enabled General Contoulis to bring back his forces of the southern group very quickly and to frustrate a movement that presented a real danger. The chief of the Thirty-second Regiment had a very clear notion of the general situation, and he must be commended for this comprehension of the solidarity and the necessity of liaison. The two divisions of General Contoulis, notwithstanding their forced marches in a difficult country, not only came in time to extricate the Thirty-second Regiment, but even launched a counter-attack. A violent battle took place, lasting three days. The Turkish divisions, probably on account of their shortage of ammunition, withdrew toward Kutahia, after recalling in that region their cavalry division, which they had abandoned right in the centre of the Greek communications. This prolonged action, carried by the Greek side with great vigor and great manoeuvring ability, called attention to the ground between Kutahia-Guediz, Tulou-Bounar and Afioun-Karahissar, which dominates all the country west of the Bagdad Railway.

SECOND GREEK OFFENSIVE.

From King Constantine down, every Greek felt that it was his duty to help wipe off the memory of this first Eskişehir failure. In vain did the Entente address to Athens a solemn note offering mediation with Turkey. Greece arose with a single mind and a single resolve. Constantine soon went to Smyrna, and the flower of the Greek Army, the veterans of the Balkan wars, the classes of 1912 (which had served almost ten years under the colors) and 1913 and 1914 were recalled for the supreme effort, and the second great offensive was launched exactly three months and seventeen days after the retreat of April.

At the time of the first offensive Greece had an army of 150,000 men in the field. Three classes were added in May, bringing the effectives to 198,000 men. At the same time eleven classes were mobilized in Thrace, giving an additional force of 20,000 men. Smyrna alone gave 10,000 volunteers, and other volunteers to the number of 5,000 helped swell the total to 233,000 troops. With the calling of three more additional

classes, the grand total of the Greek Army reached close to 300,000 troops, while another hundred thousand were left in the reserve, subject to service on the first notice.

The Greek General Staff has refrained from giving a detailed statement as to the disposition of the Greek Army at the time of the launching of the second offensive; but the Turkish newspaper *Ikdam* of Constantinople, claiming to have its information from the Turkish General Staff, gave the following list, which seems to have been substantiated by events:

On the northern, or Brusa, front, the Greeks had their Second, Seventh, and Tenth Divisions with one cavalry brigade. On the southern front, known as that of Oushak, the Greek forces comprised the Third, Fourth, Fifth, First, Ninth, and Thirteenth Divisions, with one cavalry brigade. The Eleventh Division was somewhere in the neighborhood of Ismid and the Twelfth in Thrace.

The Greek offensive was launched this time from Brusa in the north and Oushak in the south, on June 10, and advanced in three directions, namely, toward Kutahia, Afium-Karahissar and Eskishehr. In addition to these forces carrying a frontal attack against the Turkish positions, a new column descended from the western slopes of Mount Olympus of Bithynia (not to be confused with the Olympus of Thessaly) and attacked the Turkish positions in Adranos, successively occupying the towns Beidjikioi, Harmanjik, and Yenikioi, which is nearly twenty miles to the east of Kutahia. At the same time the column coming from Oushak advanced successfully to Guediz, which was occupied on the third day of the offensive, and which put Kutahia between two fires.

The battle of Kutahia was the first great encounter. The Greeks surrounded the Turks from three directions, and the Turks desperately fought to escape to Eskishehr. The encircling movement was carried on by five Greek divisions, starting from

Oushak, and assisted by the troops coming down from the north. The whole attack was made with such speed that, when the Turks became aware of the magnitude of the danger threatening them, they fiercely counter-attacked the right wing of the central group of the Greek Army with the entire strength of four divisions; these the Greeks repulsed and put to rout after a most sanguinary battle before Kutahia.

The success of the Greek strategy consisted in the fact that, instead of attacking the almost impregnable positions of the Turks frontally, they outflanked them and attacked from the rear, thus rendering useless the splendidly organized position. Nevertheless, the Turks, having still at their disposal the railway to Eskishehr, succeeded in extricating themselves from Kutahia and in saving a large part of their material, thanks to a great concentration of rolling stock and engines in that city, which proved very useful to them in their hasty retreat. The battle of Kutahia lasted all day the 16th of July, and continued throughout the night up to the dawn of the 17th, when the last Turkish forces withdrew under the constant fire of the victors. Kutahia was occupied at 3 P. M. on that day.

The task now confronting the Greek troops was to pursue the beaten enemy toward Eskishehr; this was done very systematically, the Hellenic forces fighting their way on both sides of the railway and fighting continuously against six retreating enemy divisions, namely, the Third (Caucasian), Fourth, Seventh, Eighth, Twenty-third and Fifty-seventh. At the same time the northern group of the Greek armies, coming down from Brusa, was in continuous action, the greatest encounter being at Biledjik, where the Greeks routed a Turkish force of 5,000 men and captured a large number of prisoners, together with the regimental flag of a crack cavalry corps. The two Greek groups met on either side of Eskishehr on July 21, when the Turkish command, apprehensive of

the situation, counter-attacked with a total force of fourteen divisions and two cavalry brigades; this Turkish attack was of a most fierce character, seven divisions being launched against the Greek centre. It was then that Greek artillery came into play, magnificently assisting the large forces of infantry attacking the Turks from all sides. The Greeks soon afterward took the initiative, and literally stormed their way into the Turkish position. The two Greek groups joined, and General Polymenakos, commanding the northern group, entered Eskishehr on the evening of July 21, occupying the city in the name of King Constantine.

The Turkish debacle in Eskishehr eclipsed the defeat before Kutahia, and the Greeks stopped the pursuit of the fleeing enemy only after they had pushed him fully thirty miles to the east of that city.

Having consolidated their positions in Eskishehr and established their communications from Ismid clear down to Afion-Karahissar, the Greeks resumed their march toward Angora on Aug. 14, taking in succession the historic towns of Sivri-Hissar, the ancient Claudianopolis and Gordium, famous for its knot, cut by Alexander's sword. Finally, on the 25th, the Greek forces established contact with the Kemalist army on the banks of the River Sangarios, forming the last barrier before Angora, and a great battle began, which is still undecided as these lines are written.

WINNING DESPITE HANDICAPS

During this triumphal progress of their armies the Greek people at home were in a delirium of enthusiasm. Their emotion was deepened by the fact that ever since the 14th of last November, when for reasons of their own they overthrew a regime for which they had no sympathy, they had found themselves abused and boycotted in a way seldom equaled in the annals of recent European history. Why should other countries take so much to heart the Greek vote on a

Greek issue? Yet the allied Governments refused to recognize King Constantine when he was recalled by 98 per cent. of his people, and, for reasons still unexplained, even the Government of the United States joined in a policy so contrary to American ideals of popular government. In the second place, an economic boycott was declared against Greece, whose national loans could no more be floated in Europe or America. Finally the Greek people were abandoned in their struggle against the Turks, with every political and diplomatic influence in Europe working overtime for Mustapha Kemal.

In the face of such universal opposition, Greece took the field against Mustapha Kemal; she mobilized her 300,000 troops; she borrowed money from the National Bank of Greece; she appealed to the Hellenic nation for support, and thus the Greek soldier, abandoned by all, crossed himself, as he does before the charge, and with God's help dashed forth and won the greatest triumph in his history. The pride and self-reliance of a nation were never more fully vindicated. The Greek people at that moment knew they had sealed the fate of the Ottoman Empire; they knew that they were the masters of the Near East.

WHAT TURKEY HAS LOST

The old Ottoman Empire has fallen definitively; out of the twenty-odd millions of population subject to the Sultan in 1914, less than seven millions remain under Mustapha Kemal. The others are irretrievably lost, as follows: Arabia, with 3,500,000 population, is independent; Syria, with 2,000,000, is under France; Palestine, with 600,000, is under Britain, along with Mesopotamia with its 1,000,000 people. Kurdistan, with 500,000, is in open revolt against Kemal; Armenia, with 300,000—the remnants of a people massacred wholesale—is definitely separated from the Turkish State; the vilayet of Smyrna, with 2,000,000, and that of Constantinople, with another 2,000,000, are under

Greek and allied control. The killed and wounded, and those disabled during the Turkish participation in the European war, with those who left the country after the armistice, amount to more than 2,000,000 people. Kemal represents barely 7,000,000 people, and if he meets final disaster at Angora he will represent even fewer. [For later details of the month's fighting, see "Turkey" in Table of Contents.]

Turkey has lost her prestige forever, and there is no power on earth that can restore it; both as an autocratic State and as a nationalistic experiment Turkey has been a ghastly failure, because she lacks vitality and will never adapt herself to the ideals of democracy and civilization. A Turkish State in Anatolia may live and prosper in peace. No one wants to exterminate the Turkish people,

but no one will tolerate the reconstitution of the Ottoman Empire, now that its destruction is an accomplished fact.

The Greek people are today the only guarantors of law and order in what was the Ottoman Empire. More than that, they are the only ones who can revive that whole country nationally, politically, commercially, financially and socially. They are the ones who always held the keys of business, shipping and industry in the Ottoman Empire. They are the only elements in the Balkans and in the Near East who have absorbed American ideals of democracy and business efficiency. Half a million Americanized Greeks from the United States are ready to help re-establish the old Byzantine homestead; and with these Greeks risking their all to see Greece succeed in Constantinople, America should join in the enterprise.

SPAIN'S NATIONAL HERO REINTERRED

AN impressive ceremony took place in Spain on July 21, 1921, when the remains of the Cid Campeador, supreme protagonist of innumerable Spanish epics, only a few of which, notably the Poema del Cid, have survived the erosion of time, were removed from the Town Hall of Burgos to the transept in Burgos Cathedral. From 1070, when the great champion died after a noted victory over the Moors at Valencia, until 1809, when they were transferred by the French invaders to Burgos, the bones of the Cid had lain in the Convent San Pedro de Cardena. There they had been transferred to other parts of the convent, but not removed. The ceremony of July 21 was planned to reinter them in Burgos Cathedral amid scenes of deep national homage. A nineteenth century Spanish writer had said that it was time to bury the Cid and forget him. But Spain cannot forget the Cid, who bids fair to be immortal. "Long live the dead Cid!" said Cardinal

Benilech, the present Archbishop of Burgos, in his inspiring address on this occasion.

After 822 years, the remains of the great hero, together with those of his wife, Doña Jimena, whom Corneille immortalized as Chimene in his tragedy of "Le Cid," were removed from the Town Hall and carried in solemn procession to the great medieval cathedral. King Alfonso XIII. walked behind the coffin, and in the presence of the King and Queen and a brilliant throng of high officials and spectators it was lowered into the transept floor, while the great guns of Burgos thundered a last greeting of farewell. The epitaph on the coffin, in Latin, was composed by Spain's greatest modern scholar, Professor Ramon Menéndez Pidal. In thus honoring the Cid, King Alfonso has shown once more how fundamental is his Spanish national feeling. The Cid, with his deeds of prowess, his great soul and his fanatic chivalry, lives in the very heart of modern Spain.

FACTS ABOUT NAVAL DISARMAMENT

BY GRASER SCHORNSTHEIMER

A helpful analysis of the comparative sea forces of the nations that are to take part in the Washington conference—How each stands in actual fighting efficiency—Difficulty of finding a common unit of power for limitation purposes

WHAT is popularly called the "disarmament conference" is in reality to be an international conference for the reduction of naval armaments. Its scope is limited almost entirely to dealing with the sea forces of the represented powers. This was made quite clear by President Harding's note to the Imperial Japanese Government in answer to the question as to its limits. Before one can understand, therefore, what is to be accomplished at Washington in November, one must know the cards each nation has to play. The fleets of England, Japan, France and Italy and the United States will come under consideration.

In the last seven years the range of naval power has been so expanded as to require almost a complete revision of types. The battleship of today is three times as powerful as was the dreadnought of 1914. All the other types have progressed in the same manner, and entirely new forces have made themselves felt. Thus, when the war started, the British possessed a naval aviation force of only a few unarmed planes; today it consists of hundreds of armed planes, with some airships, and is supported by great aircraft carriers and large coastal establishments. In 1914 the submarine was in its infancy; today it has reached the height of its power and seems to be holding to a rather set standard.

In order to understand what each nation has in ships, a new set of definite rules has been brought forward, serving for classification. All battleships and battle cruisers are of dreadnought types; that is, their main batteries consist of at least six large guns of a single calibre. The battleship of former days, with its mixed battery of 12-inch and smaller guns, has disappeared from the lists as entirely obsolete, and the same may be said of the armored cruiser type. To a great extent the light cruiser of other days has been retained for supplementary purposes in almost every navy. True, its lack of speed and other modern features makes it impossible for line of battle purposes, but even today it remains a fairly fast ship for gunboat and auxiliary uses.

The capital ships carrying 12-inch guns are rated as third-class; those carrying less than 15-inch, but greater than 12-inch guns, are rated as second-class, and those carrying 15-inch guns or greater, as first-class. The division between the battleship and the battle cruiser is quite apparent in their respective speeds. A speed of twenty-six knots or more is necessary to obtain any real manoeuvring advantage over the modern battleship; and this excess speed can be gained only at the sacrifice of some other element, such as gun power, armor, cruising radius or some other factor. And so it is to be seen that

the battle cruiser is inferior to the battleship in the same class.

In cruisers the dividing lines are far more indistinct. The first-class cruiser may be considered one of over 8,000 tons displacement, having a speed of thirty knots or better; the second-class cruiser, a vessel of more than 3,800 tons displacement, having a speed of thirty knots or better, and the third-class cruiser, a vessel having a speed of less than thirty knots, but more than twenty-five knots on a displacement of 6,000 tons or less.

The war saw the building of about a thousand or more destroyers of types which were great improvements on the pre-war ones, rendering obsolete almost all coming before them. A third-class destroyer may be considered as one of better than 600 tons displacement, having a speed of twenty-seven knots or better. A second-class destroyer must have a displacement of from 800 to 1,100 tons, with a speed of thirty knots or better. The first-class destroyer must be of more than 1,100 tons displacement, having a speed of thirty-three knots or better.

Submarines are almost impossible to classify. They range from the small 200-ton boat to the new 2,500-ton mastodons; from the gasoline-driven boat to the steam-driven British "K" class, and back to the Diesel-driven type. In surface speed they range from twelve to twenty-five knots, and in armament from the machine to the 12-inch gun on the surface, and submerged from the 14-inch to the 23.6-inch torpedo tubes. Only the most modern boats can be considered efficient, and, as stated above, some of them have proved to be entirely unreliable.

Of course, as it has been through the centuries, the battleship is the backbone of a nation's sea defense; and the reduction of this most expensive force to its lowest degree will be attempted at the conference. Britain has ten first-class battleships in the five Queen Elizabeths and the five Royal Sovereigns. They carry a

main battery of eight 15-inch guns, but their displacements are small in comparison with the ships now building. The Queen Elizabeths, however, are the world's fastest battleships, with their speed of twenty-five knots. Neither France nor Italy possesses a first-class battleship, though Japan has two very fine vessels complete and others building. On the other hand, the United States has but one first-class battleship complete—the Maryland—and another 75 per cent. complete; the other eight, which are supposed to be building, are put down as "date of completion indefinite" in the latest report of the Bureau of Construction and Repair. The Colorado, the battleship mentioned as 75 per cent. complete, is also on this list, so it is to be seen that actually we will possess but one first-class battleship at the time of the conference.

Japan has just completed the battleships Negato and Mutsu. They are the world's most powerful warships. True, their main batteries consist of eight 16-inch guns, as does the main battery of our Maryland, but the Japanese guns fire a heavier shell than do ours, and the ships upon which they are mounted are larger, faster and probably better protected. And so it is evident that the Japanese advantage is greater than just two to one.

From an American viewpoint, the battle cruiser question hardly exists. There is not a single battle cruiser in our navy today, and the six vessels we are supposed to be building have been marked as "completion indefinite" by the Bureau of Construction and Repair. Japan has four huge battle cruisers at sea today, which are the most powerful ships of their type in the world, next to the single British Hood. Also, Japan has four battle cruisers building which will be nearly twice as powerful as the Hood when complete, and at least 25 per cent. more powerful than our battle cruisers, if ours are ever completed. In addition to these last ships Japan intends to lay down four further bat-

(From a Westinghouse Photograph)

United States superdreadnought Washington, launched Sept. 1, 1921; a sister ship of the Maryland and Colorado, and one of the mightiest sea fighters in the world. It is 624 feet long, electrically propelled, displaces 33,000 tons, and will have a speed of 21 knots

the cruisers as soon as the slips are available.

The British battle cruiser forces are led by the Hood, with its main battery of eight 15-inch guns, and followed by the Renown and the Repulse, each carrying six 15-inch guns. These ships are followed by three second-class battle cruisers, carrying eight 13.5-inch guns. Also, there are a few other old third-class

battle cruisers carrying eight 12-inch guns, which can scarcely be regarded as effective in these days of high speeds, extreme protection and great gun power. From this statement of things it is evident that the battle cruiser power of the world lies between England and Japan, and that Japan has entirely the best of the situation according to the latest figures.

United States scout cruiser Cincinnati—not yet completed—from an official naval drawing. The Omaha will be of the same size and design

America's main strength lies in her 14-inch-gun, second-class battleships. She has eleven vessels of this type. The California, the last of our 14-inch-gun ships, will hardly be complete before the conference is assembled. Japan possesses four 14-inch-gun dreadnoughts carrying twelve guns, like our California. Two further Japanese first-class battleships will be afloat by the time the conference is assembled. They are the Kaga and the Tosa, and with their ten 16-inch guns will be the most powerful warships the world has ever known. These ships, coupled with the Negato and Mutsu, will be a match for the whole ten of England's first-class battleships, as their protection is the last word and their guns are far more powerful than the British.

France possesses three second-class battleships carrying ten 13.4-inch guns, and England has twelve ships of the type carrying ten 13.5-inch guns. Italy has no second-class battleships.

What shall I say of the third-class battleship power of the nations? The 12-inch-gun battleships are out-weighted and outranged in battery power by the newer vessels. They are but poorly protected, in almost every case they are slower, and always are they the oldest ships. The British consider them to be almost entirely useless and so are scrapping them for economy's sake. As they are almost useless, would it not be possible for the conference to scrap the lot without bothering with too much detail? It would save trouble at the conference, and probably some misunderstandings. The cost of keeping these ships up is very great, and every nation would save by cutting away this accumulated deadwood exactly as England is doing without any disarmament conference. In this Japan would lose the least, as she possesses only one third-class battleship, and that one vessel, the Settsu, is of extremely doubtful value, even for a third-class ship. England and

the United States would each lose six ships, Italy five and France four.

The old-time battleship of the pre-dreadnought type could be entirely done away with. England has already scrapped her lot, and France is following her lead. In America, we are using some for test purposes. The Indiana was bombarded by aircraft a short time ago, and the Alabama was about to follow when these pages went to press. The Massachusetts was quickly sunk by the fire of our coastal fortifications recently, and the Oregon has been given to the State after which she was named, and will be used as a naval museum. The Iowa has been disarmed and converted for radio control tests, and the Kearsarge is being converted to a crane ship. The Ohio has been fitted as a wireless controlling ship and other vessels of the Maine and Illinois classes are soon to meet their fate.

Japan, on the other hand, keeps all her old battleships and cruisers in full commission. Only lately has she retired a few of the oldest of them from active service. Among them was the Iwami, formerly the Russian Orel, captured after the battle of the Sea of Japan and a fine specimen of obsolescence. However, the Japanese are keeping other vessels, almost equally useless, in full commission, and it is certain that this is not done to spend money when all the world is attempting to cut expenses. Not a single pre-dreadnought is maintained in full commission in the United States Navy.

America today is undoubtedly the third naval power, England and Japan ranking first and second respectively. While it is entirely true that we have tremendous power in the eleven second-class battleships mentioned before, we are and we will be lacking in first-class battleships, in all classes of battle cruisers and other cruisers, as well as in the new types brought about by the war. Japan is rapidly building first-class battle power, and England will begin to do so shortly, while the United

British aircraft carrier Vindictive, as seen in camouflage dress during the war. The British navy now has six of these vessels for use as airplane bases at sea, while we have none

States, because of the reduction in naval appropriations, will continue to see the ships which would give her power relegated to the realm of "indefinites" and non-entities. Under the 1916 naval program we were to build ten fine, fast cruisers, of which only one is listed for completion at present. England has about seventy such vessels, and Japan will shortly have about thirty, and, it is said, will increase this number by a dozen or fifteen in the future.

England has six aircraft carriers in commission today. Japan has one, the Hoshio, almost complete. America has not a single vessel of that type in her fleet, nor is she building any, Congress having refused the appropriations. Some critics may wish to contradict this by saying that we have two vessels under construction. We have two "vessels" under construction, but not aircraft carriers. True, they will carry planes, but they will not be available in a fleet action, because of their extremely low speed of fifteen knots. All the British and Japanese vessels mentioned have

speeds of from twenty-one to thirty-one knots, and so will be available in any action. Warships must be built to fight, and these so-called aircraft carriers of ours would never be able to fight or cruise with the fleet. The highest naval officers admit that these ships will be useful only for experimental work—yet they are all we have.

Another type, which is most conspicuous in our navy by its absence, is the destroyer flotilla leader. It was found during the war that destroyer flotillas must be led by a large destroyer, capable of forcing her way through a line of enemy destroyers. England, Japan, Italy and France have built and are building vessels of this type, but America neither has built nor is building a single one. Next to England, America possesses the greatest number of destroyers. Our destroyer service would be one of the best in the world, if not entirely the best, if it had flotilla leaders, but without them it must rank with Japan and France.

It is common knowledge that our

Official United States Navy silhouette of the Lexington class of six battle cruisers, which cannot now be completed on account of lack of appropriations

submarines are not of the best, that we haven't a single real fleet submarine in our service, and that new boats embodying the war's experience have not been provided for.

These are the cards the nations have to lay upon the conference table. America goes to conference as the third naval power, entirely lacking in the most important types of ships. The fault cannot be laid at the door of the Navy Department, for the General Board has asked for ships of proper types ever since the end of the war, only to have them refused almost point blank. Instead of being the first naval power, as the average American seems to believe, America is quite a bit behind other nations to be represented, both in actual and in future power.

Each nation will certainly demand that a unit of power be decided upon before agreeing to reduce its fleet. This will be an extremely difficult figure to arrive at. Never before has there been any attempt to establish a ratio of power. Should each nation individually arrive at a figure for its own fleet, again will there be trouble, because all the nations have different reasons and different problems to consider when building a warship of any type. Therefore, the warships of

each nation are entirely different from those of its neighbors, both in conception and in construction.

In addition to these questions, tactics and strategy will play important parts. Bases will count. Every naval advantage, geographical or otherwise, will count. As the Japanese have pointed out, if the diplomats are allowed to cloud the situation still further there is not a hope for success. Complete disarmament, of course, is not thought of by any nation; but it would seem that an entirely reasonable reduction of armaments in lesser ships could be and should be reached. Also, it may be possible to provide against future expenditures on the part of every nation. A great deal depends upon the presence of the right spirit at the conference.

The Washington conference was brought about not by moral reasons entirely, but by business reasons—armaments are costing too much, and this cost must be and can be reduced. And that will be the aim of the conference—to cut down the naval expenditures of each nation. Sea forces will continue to be necessary, but they must be maintained without competition and at the least possible expense if the world is to derive any real benefit from the conference.

“ROCK OF AGES, CLEFT FOR ME”

NO other hymn in Christendom, perhaps, has stirred the souls of believers with such power of emotion as the famous “Rock of Ages.” Wherever the English language is spoken—in England, Canada, the United States, Australia, New Zealand, South Africa—this great hymn is sung in childhood and old age, and its deep, organ-like harmonies linger on in the hearts of many whose church attendance has become a negligible quantity. Thousands of those who have sung it have given little thought to the man in whose brain the deeply stirring words, so simple, yet invested with such a universal religious appeal, first originated. On Aug. 1, 1921, an event occurred which served as a reminder. On that date thousands of English churchmen

and Non-conformists joined in a holy pilgrimage to Burrington Combe, Somersetshire. Here, before a towering cliff, fissured by a deep cleft in its centre, they stood, gazing upward, and sang fervently Toplady's “Rock of Ages.” In the minds of all was the event which led Augustus Montague Toplady, an Anglican divine, Wesleyan and Calvinist, whose life fell between the years 1740-1778, to conceive this great religious song. While wandering in the open, Toplady was caught in a storm. He reached the cliff of Burrington Combe, saw the deep cleft, and took shelter there. Standing here in its protection, the first lines of the hymn came to him:

Rock of Ages, cleft for me,
Let me hide myself in Thee.

THE TRUTH ABOUT OUR AIRPLANE RECORD

BY H. M. HICKAM
Major in the United States Air Service

An authoritative account of our achievements and failures in aircraft production during the war—Revelation of the obstacles encountered and of how most of them were overcome—Inside story of actual accomplishment

IT is doubtful if any phase of our part in the war has been more before the public than our "air program." Extravagant claims, bitter denunciations, investigations and reports of accomplishment, coming in rapid succession, have created a great confusion in the mind of the public and a general desire to know just what happened to the \$640,000,000 and subsequent sums that Congress appropriated without question.

When the United States entered the war the "supremacy of the air" had become of vital importance. France and England were in desperate need of aircraft of all kinds and of personnel for their operation and maintenance. Their confidence in our ability to meet their requirements was great and apparently well founded, and they lost little time in making known what was required of us. *Our air program was dictated by the necessity of our allies*, and that necessity was fully impressed upon us.

Before the war ended there were many programs, each dictated by changing conditions, but the only one which is generally known and the one upon which our production is judged is the program of June 1, 1917, upon which the appropriation of \$640,000,000 was based. On May 24, 1917, the French Government requested that we co-operate to form a corps equipped with 4,500 airplanes with the neces-

sary personnel for operation and maintenance. As a result of this request, and realizing its importance, the Joint Army and Navy Technical Aircraft Board met on May 25, 1917, and reported to the Secretaries of War and Navy a program for carrying it into effect. The members present were:

Major B. D. Foulois, U. S. A.
Lieutenant J. W. Towers, U. S. N.
Captain V. E. Clark, U. S. A.
Asst. Naval Constructor J. C. Hunsaker, U. S. N.
Captain E. S. Gorrell, U. S. A.

This report estimated that to meet the needs of the United States Army alone, until July 1, 1918, the following numbers of training planes would be required, and it recommended that a building program to meet these needs be started at once:

Type of Airplane	Number Required.	Type of Engine.	Number Required.
JN-4	3,500	OX-5	7,000
DH-4	1,750	R-R or equivalent	3,500
SE-5	600	H-S	1,200
Spad	600	H-S	1,200
Sopwith	600	Clerget 130	1,200
JN-4	0	Hall	1,000
(Stop gas order)		Scott A7a	
R-4	200	V-2-3	400
R-6	350	V-2-3	700
Farmas Seaplanes.	175	H-S	350

The same report also recommended that the Aircraft Production Board of the Council of National Defense take steps immediately toward obtaining from Europe—as working models—two each of the following airplanes (including engines), with

the right to manufacture them in this country:

DH-4	Martinsyde
SE-5	Sopwith 1½ Strutter
Spad	Handley-Page
Sopwith	Caproni
BE-20 Farman	Savoia
Farman Seaplane	

For the navy—in order to equip the coast stations and to train 330 pilots—the Joint Board estimated that the following would be needed, not including service airplanes:

300 School seaplanes with 100 H. P. engines.
200 Service seaplanes with 150-250 engines.
100 Speed scouts with 100-150 engines.
100 Large seaplanes with 200-400 engines.

To meet the request of France for co-operation in a flying corps of 4,500 airplanes—to be available for active service at the front during the Spring of 1918—the further needs of the United States Army were stated thus:

SERVICE AIRPLANES AND ENGINES (LATEST TYPES)

(To be produced between Jan. 1, 1918, and June 30, 1918)

Types.	Airplanes.		Engines.	
	Fighting Line.	Reserve.	Fighting Line.	Reserve.
Reconnaissance and artillery control.	3,000	1,000	6,000	2,000
Fighting	5,000	1,667	10,000	3,334
Bombing	1,500	333	2,000	666
Total	9,000	3,000	18,000	6,000
Grand total ...	12,000		24,000	

The recommendation of the Joint Army and Navy Technical Aircraft Board covering this service plane program was approved by the Secretary of War and the Secretary of the Navy about the same time as the recommendation covering training planes. The entire program then called for 8,075 training planes; 12,400 service planes, of which 300 of the training planes and 400 of the combat planes were for the navy, making the production as outlined for the army 20,475 planes in twelve months. The engine production estimate accompanying this plane program called for 41,810 engines in the year, with a maximum production of 6,150 per month.

Estimates were prepared after consultation with the French and British, and the total estimated cost for the program was \$640,000,000. In the light of recent statements of the cost of the war that sum is not so impressive as it was when its appropriation was announced in headlines of every paper in the country. No such sum had ever been appropriated for any one purpose in the history of Congress, and it is small wonder that an admiring public pictured a sky darkened by airplanes. Congress had certainly done its duty. That sum was necessary, and it was appropriated without question and with no delay. The money was available, and it remained but to turn it into airplanes and to train the personnel for their operation.

ESTIMATE OF OUR SITUATION

On May 12, 1917, the Signal Corps had on order 334 airplanes of thirty-two designs placed with sixteen firms or persons, *not more than six of which had ever manufactured more than ten planes*. There were not more than forty officers and civilians who were capable of instructing in primary flying, and none of them had ever seen a modern fighting or service type airplane. No firm had ever produced anything but an elementary training plane, and there were not more than ten men capable of designing them. The situation with respect to engines was little better, although several far-sighted automobile manufacturers had experimented with aeronautical engines with some success. Most of the instruments and accessories of aircraft had never been heard of, and it was necessary to create a new order of instrument manufacturers capable of producing in great quantity, barometers, compasses, tachometers, speed indicators, angles of incidence indicators, thermometers, synchronizing mechanism, bombing sights, bomb release mechanisms, electrical gun and clothing heaters, automatic long range cameras, special radio ap-

One hundred of these Handley-Page airplanes were produced in the United States and shipped to England for assembly before the signing of the armistice

paratus and other super-sensitive instruments, the skill to make which did not exist in this country.

The program had been approved, the money appropriated, and the crying necessity for its accomplishment was only too apparent. The best of those whose previous experience seemed to fit them for the gigantic task were assembled and the fulfillment of our promises intrusted to them. These were men accustomed to success. No proposition had ever been too big for them, and they were determined to succeed. After a careful survey of the situation they were convinced that the program, huge as

it was, was not impossible of accomplishment, and in their enthusiasm and determination they announced that they would carry it through. That announcement was transmitted through the press to every citizen of the country in such glowing terms that it can never be forgotten.

There is a popular impression that our air program was a failure, and that the money so generously and trustingly appropriated was squandered without adequate return. It is certain that if our accomplishment be measured by what we in our enthusiasm and ignorance announced we were going to do, then we failed, in-

Martin Bomber, ready for quantity production in the Fall of 1918. This plane was used by Colonel Hartz in his "Round-the-Rim" flight of 10,000 miles. It was also the bombing plane that sank the Ostfriesland in the recent naval tests

deed; but if it be measured by the accomplishment of other countries under similar conditions, then even the most critical can find much cause for satisfaction.

AS IT LOOKED IN 1917

The possible aircraft production facilities of the United States, as they appeared to thoughtful men at that time, were set forth on June 13, 1917, in a long letter written by Howard Coffin, Chairman of the Aircraft Board, to Brig. Gen. Kuhn, Chief of the War College Division. Though this letter is too long to print here in full, any one who will consult it in the War Office files will find it very illuminating. It shows that the early statements of what we could do were no vainglorious boasts, but were the result of a very careful analysis of the situation, based on all available information. Mr. Coffin outlined, item by item, how we apparently could and should go about the building of 5,000 training machines, 2,500 DH-4s for reconnaissance, 800 of each of three types of pursuit planes, and 12,000 fighting, bombing, artillery control and reconnaissance machines. He specified the airplane and automobile factories to which each type was to be assigned, and gave a complete list of thirty or forty others that could be enlisted in the work. The following passages show just how the situation looked and what was planned:

We will concentrate on the reconnaissance and artillery control types, relieving French factories of the heavy production of these types. This will permit them to concentrate on fighting types utilizing the rotary engines. In the meantime, the rotary engine production will be materially increased in this country. With the U. S. 8 A and U. S. 12 A in quantity production before Jan 1, and the Lorraine-Dietrich by March 1, 1918, we can meet the increased reconnaissance and artillery control program. With designs from Europe on or before Aug. 1, it will be possible to have planes in November from Curtiss and in December and January from sources of supply established to make training machines, but switched over to these as training orders are transferred to other new sources of supply. The output of these planes will temporarily exceed that of engines.

It is estimated that production of these types will have to reach and hold 1,800 per month by March, 1918. The Curtiss Company has estimated they can reach an output of 30 per day, or 750 per month, of pursuit or fighting machines by Jan. 1, 1918. We expect to have at least two other sources of supply equal in size and capacity to the Curtiss Company and to mobilize the productive capacities for wood working of some centres like Grand Rapids, Amesburg, Philadelphia and Camden, Cincinnati, Syracuse, Kansas City and St. Louis. * * *

The automobile industry is producing 100,000 engines per month, while the maximum required by the airplane engine program is 6,000 per month.

We firmly believe the airplane program can be met. We believe that the Aircraft Production Board can arrange for the production during the next twelve months of an engine for every plane and at least a spare engine for every five planes. The deficit in spare engines for training machines will be made up during the Spring and the deficit in engines for combat machines will be made up during the Summer of 1918.

The problem of increasing the production of French and English factories has been suggested, but there are so many questions involved in the transportation of all kinds of material, men, food, clothing, &c., that it seems best to defer an opinion on this point until our board has made an investigation of the subject abroad.

The program as submitted to the Aircraft Production Board is a gigantic one, but capable of accomplishment as outlined, provided funds are quickly appropriated and no delays permitted.

CAUSES OF PARTIAL FAILURE

Why did fulfillment in some respects fall so far short of these expectations? The reason is that, careful as was the Aircraft Board's estimate, it was based in part on premises which afterward proved to be false. Chief among these were (1) the idea that engine production was harder to build up than plane production; (2) that the quantities of raw material needed were comparatively small and would not conflict with demands in other lines, and (3) that the manufacture of airplanes presented no special difficulties which existing factories could not easily meet. The rapidity with which planes and engines were becoming obsolete on the front also was not known, nor was it realized that difficulty would be experi-

enced in getting the Allies to furnish sample planes and drawings for purposes of reproduction in this country.

The comprehensive inexperience of the United States in the manufacture of aircraft when we entered the war undoubtedly accounts for our overconfidence and for the heartbreaking delay in getting under way. The source of knowledge was 3,000 miles away, and development there was so rapid that it became necessary to go to the scene of actual conflict to gain our knowledge of what to produce. Perhaps it was fortunate that the difficulties which were soon to appear were not anticipated. Our advent into the war was at a time when the development of special types of aircraft for specific purposes was at its height. Planes which were considered adequate one month were inadequate the next, and the combatants were striving to outdo each other in design as well as quantity production.

Foreign aeronautical engines are mostly hand-made; all our engines are machine made. It is readily seen that all the advantage in changing design lies with the hand-made engine. If we were to go into quantity production it was necessary to select engines that would not become obsolete before they could be produced. The same thing applied in a lesser degree to plane manufacture. Our lack of aeronautical engineers with the necessary experience made it necessary to make "Chinese copies" of both planes and engines. Great care must be exercised, therefore, in the selection of what we were to duplicate. Early in the war the Bolling Commission was sent abroad to confer on the ground with our allies and to select and ship back the planes and engines that were to serve as patterns. This could not be done in a day. In the meantime we could not sit idle.

In the Curtiss JN-4 we had an ele-

mentary training plane which had given satisfaction, and except that many important shop practices were not of record but existed only in the minds of certain operatives of the Curtiss Company, the knowledge for production was at hand. Our program required large quantities of training planes at once, but after the initial supply had been produced only a small part of the industry would be required to replace wastage. The experience gained and the industry built up could then be turned to the production of service planes. Orders were placed with eleven different contractors, and production started.

THE LIBERTY MOTOR

Early in 1916 the Simplex Company had obtained the design and rights for manufacture of the Hispano-Suiza motor. This engine was further advanced in standardization than any other foreign motor, and the Simplex Company had the advantage of the assistance of a group of foreign experts. It was not until Feb. 6, 1917, thirteen months later, that the first motor turned over under its own power, notwithstanding the company had every inducement for rapid delivery. The General Vehicle Company had had a similar experience in the manufacture of the Gnome 110 H. P. Here were two significant examples of the time required to put standardized foreign engines into production. Both these engines were considered to be of the best when they were selected for production, but both were inadequate for anything but training before they could be got into quantity production.

With these examples before us it was evident that we could design and build an engine suitable to American manufacturing methods long before we could receive and duplicate any foreign engine. The idea of the Liberty motor was the result. Much criticism of the Liberty has been indulged in, but the wisdom of producing it is now so apparent as to make any comment unnecessary.

The Liberty motor is a combination of the best elements of American motor manufacture. Every secret of the industry was offered without reservation, and the Liberty, as its name indicates, is an enduring tribute to the patriotic spirit of American manufacturers. That everything that was offered could not be used detracts in no way from the splendid spirit that was shown.

As the development of types progressed, engines with increasing horse power were demanded. In May, 1917, our foreign advisers agreed that we should concentrate on an engine of about 225 horse power, and the Liberty-8 was designed to meet this demand. In less than three months development had been so rapid that all agreed that a horsepower of 330 at least would be required. Fortunately, the development of the Liberty-12 had kept pace with that of the 8; and as a consequence the Liberty-12 went into production. The first type developed the required power, but before quantity production had well begun this was considered inadequate, and a redesigning of parts and many improvements resulted in an increase of over 100 horse power. The Liberty-12 today develops 440 horse power, and the end is not yet in sight.

Experience has shown that at least six months' service on the front is necessary to "get the bugs out of any new engine," but the foresight of our air service in the A. E. F. in preparing for the examination and test of the first engine to reach the zone of the advance, and the promptness with which suggestions for improvement were cabled home, shortened the expected time by months. These necessary and anticipated criticisms were given undue publicity, which resulted in much loss of faith on the part of those inexperienced in gas engine development.

The difficulties encountered in going into quantity production were of a very serious nature. Existing motor building plants did not have machin-

ery of sufficient size to handle the parts of a motor as large as the Liberty, and it was necessary to build and design tools for the purpose. Some 300 jigs, tools, and fixtures are required to produce the necessary parts, and these had to be duplicated many times for quantity production. Thousands of men and women had to be trained and educated before they could be intrusted with the manufacture of parts which required a degree of skill they did not possess, and many of these were requisitioned for other necessary governmental activities as soon as they were trained.

Modern warfare demands the co-ordination of every phase of human activity, and all activities must be speeded up to the limit, notwithstanding the fact that many of the best and most efficient producers must be withdrawn for service with combatant troops. The draft, therefore, took many machinists and mechanics at a time when their services were vitally important, and fuel, transportation and materials had to be shared with those engaged in other phases of our military program.

FIRST DELIVERIES OF ENGINES

Production, however, started with the delivery, during December, 1917, of 22 engines of 330 horse power. After about 300 of these engines were in production the horse power was stepped up to 375. This required a strengthening of many parts and a change in many tools. Information from abroad indicated that if an engine of 300 horse power could be produced; the United States would lead the world in size and power of engines for 1918-19.

After changes which necessitated a redesign of many jigs, tools, &c., and metallurgical changes in some of the parts which required the development of new and better methods of making steel, the Liberty went into final production with the enormous horse power of 440. So rapidly were these changes made that by May 29, 1918; one year after the date design was be-

gun, 1,243 Liberty engines had been produced and delivered for service. Six months later the rate of production had reached the sum of 46,500 per year, and was increasing by leaps and bounds. On Oct. 30, 1918, our production rate of Liberty engines alone was far greater than England's rate of production for *all* her aeronautical engines.

Up to Nov. 29, 1918, a total of 15,572 Liberty engines had been produced, but that by no means represents the accomplishment in motor production, for the production of engines for primary and advanced training was over 16,800. In the month of October, 1918, America produced 3,878 Liberty 12s, 753 Hispano-Suizas, 309 Le Rhones, 357 other program types (OX-5, Lawrence, Gnome and Bugatti) and 32 experimental engines, a total of 5,329. The rate of production was increasing daily, and by Nov. 1, after eighteen months of war, we had reached a rate of 64,000 engines per year. A comparison with English and French production reports is illuminating. From the best available data, it is as follows:

	ENGINES PRODUCED			
	France.	Italy.	England.	U. S.
1914.....	1,065	99	11
1915.....	7,089	900	1,721	20
1916.....	16,785	2,400	5,363	134
1917.....	23,092	6,300	11,536	2,431
1918.....	44,563	15,000	22,102	34,241
1919.....	5,486
Total.....	92,594	24,300	40,821	42,323

During the years 1914-16, inclusive, the combined engine production of the Allies was only 35,122, yet they did not hesitate to demand that we produce 6,000 more than that number in one year, nor did we hesitate to promise to do so. During 1918 we actually did produce 34,241, and had we maintained the October production rate after the signing of the armistice we would have exceeded the demand made upon us. This is hardly a record of failure.

" FIGHTING PLANES "

Probably the most bitter criticism of our air program is that "not one American-made fighting plane ever

reached the front." It is small wonder that disappointment should be centred on this point. We entered the war to fight, and no small part of our effort was to be in the air. It is a fact that no American-made pursuit planes did reach the front. Acting on the advice of our allies, and finally realizing our inability to design and produce a pursuit plane capable of holding its own, we decided to leave the production of pursuit planes to the French until American engineers could master the new and intricate problems of design and production. In the meantime, we were to produce, for training purposes, American copies of the best models available anywhere.

The wisdom of this decision may be questioned by some, now that all the facts are available for study, but it is doubtful if even the most ardent critic would have decided otherwise had he been placed in the position of those who had to determine the policy.

No one except those who were actually engaged in the attempt to determine what to produce can ever realize the lack of definite information upon which to base a decision. Our source of information was 3,000 miles away, and the means of communication a cable choked with other essential business. During the six months from June to December, 1917, plans were made on information that afterward proved to be inadequate, necessitating change after change.

Signal Corps records show that from 1908 to 1916 the total number of planes delivered to the army was 54, while in 1916, due to requirements of the punitive expedition into Mexico, 366 had been ordered, of which only 64 were ever delivered. These were of the most elementary type. With this record of achievement of a starved and struggling industry, we were called upon to embark on a program calling for over 20,000 planes in a year. Of these, less than 25 per cent. were of a type then known to our industry. Of the remainder, we were without practical knowledge,

drawings or designs. *In fact, we never at any time received a complete model or set of drawings.* "Millions may be appropriated in a day, but money cannot turn back the hands of the clock and permit the gaining of the experience and ability which make aeronautical engineers competent to undertake the vitally important problems which confronted us." (Letter of Colonel Waldron to Dr. Walcott.)

It was obvious that our only hope was to select the best of each type and to produce that until something better had been developed abroad or in the United States. Development, particularly in "fighting planes" or pursuit planes, was very rapid. Even those who had all the front-line experience available could not look far enough ahead to determine future requirements. Planes representing the latest and best thought were often obsolescent before they reached the front. Confusion has resulted from the fact that planes such as the Spad, Nieuport, Sopwith and others retained their original name no matter how many changes or improvements were made in them. Critics demanded to know why we didn't select the Spad and turn it out in large quantities. It takes even a highly organized and well-trained industrial concern a long time to reproduce a perfect model, and longer to get into quantity production on it. Certainly we had no such concern available. The plane produced under conditions existing in 1917 would have been obsolete long before it left the United States.

USING FRANCE'S EXPERIENCE

The decision, therefore, was to furnish the French with raw materials and to have our pursuit aviation equipped with the latest and best plane that French engineers of long experience could produce with a highly trained, experienced and well-equipped industry behind them; an industry, by the way, that could not have continued in production without our raw materials. In no other way

could our fighting pilots have the latest and best equipment during the year 1918.

A pursuit plane is very complicated in design. It must operate at sea level or at an altitude of over 20,000 feet; it must be fast and must climb rapidly, characteristics which are opposed to each other in design. A very delicate compromise is required to give the necessary performance. It must be very manoeuvrable, have good visibility and be well armed. Even today, development continues very rapidly with no end in sight. No American engineer had ever seen one, to say nothing of having designed one. Yet there is still criticism because we turned over the production, in those early days of uncertainty and inexperience, of such planes to experts who unfortunately were French rather than American, but who, nevertheless, were allies fighting and working side by side with our pilots in a common cause.

We actually did bend every effort toward the design of an American-built pursuit plane, with the result that the first design of the MB-3, now recognized as one of the best in the world, was turned out and tested early in 1919. There were others just as promising in sight, but, while there was American ability in plenty, there was no time.

There are two general classes of planes required—elementary training planes, in which pilots are taught flying, and service planes, in which they operate over the front lines. There are, again, two general classes of service planes—air force, i. e., pursuit, bombardment and attack, which apply force from the air, and air service planes, which serve the different elements of the army by reconnaissance, liaison, spotting artillery fire, &c. The duty of the first class is to fight; the second class fights only for self-protection, to enable its mission to be carried out in spite of attack.

The Bolling commission reported that the British DH-9, which was just emerging from the experimental

stage, had reached a degree of development which would enable it to give excellent service, no matter how long the war might last. This was an air service or observation plane, which could also be used as a light day bomber. If we could produce this in large quantities, we could turn out equipment that would always be useful, even though a better plane might be developed. Here was something we could go ahead on with confidence, if we could get a model or a set of production drawings. This was, however, impossible at the time, so the determination was made to go into production on the DH-4, which was then in use by the British in the front and continued in use, by the way, until the end of the war.

SUCCESS WITH OBSERVATION PLANES

On Aug. 15 the first DH-4 arrived at Dayton. It was without engine, ordnance and many accessories for its use. A set of incomplete drawings accompanied it. The fuselage design had to be changed many times in order to accommodate the Liberty-12 and the instruments and accessories necessary for its operation. On Oct. 29 the first DH with a Liberty motor was flown successfully, and during the next four months the infinite complications of installing the equipment demanded were solved and production started with the delivery of fifteen machines in April, 1918. By October the rate of production had reached 1,097 a month. In the meantime, many changes and improvements had been made as the result of criticism and recommendations from the A. E. F.

On Nov. 11, 1918, 196 DH-4s were actually in use at the front, 667 had been received at the front, 293 were at A. E. F. training schools out of a total of 1,440 planes actually received in France, and 1,040 more were en route. A total of 4,846 had been produced. With the exception of 100 Handley-Pages shipped to England for assembly, this represents our total

production of planes for service on the front.

Our program for the production of service planes called for 12,000 of three general classes. This really meant about 18,000, for about 50 per cent. spare parts were considered necessary for maintenance. This item may represent in a small way our ignorance and inexperience in May, 1917. These planes were to be produced between Jan. 1 and June 30 if we were to fulfill our promises. Had we been informed of the maximum rate of production that France and England, with their years of experience under pressure, had been able to attain, the absurdity of such a program would have been evident. The following table, taken from published reports, gives the plane production of the Allies:

AIRPLANES PRODUCED				
	France.	Italy.	England.	U. S.
1914.....	541	245	11

During the years of 1914-16 the combined production of the Allies was only 22,585, yet we were expected to produce as much in one year, and that with practically no previous experience. During the year 1918 we actually did produce 11,916 planes—more than the entire production of either France or England up to the time we declared war.

While our production was getting under way, training and service machines were needed by the air service in the A. E. F., and it was recognized that for many months it would be impossible to meet this requirement with planes manufactured in the United States. Accordingly, orders were placed with French factories for 5,875 planes of French design, with delivery promised by July 1, 1918, and promises were made to the French industry for the delivery of great quantities of raw material. Neither the United States nor the French Government was able to fulfill its promises. How-

ever, 22,500 tons of raw materials and fabricated parts were furnished the French, and 4,791 planes were delivered to the air forces of the A. E. F. before Nov. 11, 1918.

There have been many statements to the effect that American aviators flew planes of obsolete type turned over by the French, but records of delivery show that we fared even better than the French themselves. It requires about a year before a plane which is accepted as an improvement replaces equipment on the front, and there have been many cases of planes becoming obsolescent before they ever reached quantity production. These planes were used on inactive sectors and for training, and it was only just that we take our share of such equipment. After July 1, 1918, we received nothing but planes of the most approved type.

FURNISHING RAW MATERIALS

Our accomplishments in production, however, can by no means be measured by the number of planes produced. We had to furnish all the spruce, and later much of the fabric and dope, as well as wire and steel fittings, for France, England and Italy. A preliminary survey disclosed an appalling shortage of spruce, linen, castor oil and acetate. The failure of any one of these essential raw materials could cause the collapse, not only of our own program, but of that of the Allies as well. In meeting such problems we were in our element; given a reasonable amount of time, they could all be solved, but time was the essential we lacked. *Already we were attempting to crowd the development of ten years into as many months, and any delay would be fatal.* Judged by peace-time production costs, many of the expenditures made may seem excessive, but the value of time can be measured only by the pressure of necessity, and certainly our necessity justified the expenditure of any sum required to produce results in time.

Acetone is necessary for the manufacture of cordite, an explosive upon

which the British were absolutely dependent. Our aircraft program called for 25,000 tons. Estimates showed that the total available supply would not even meet other demands. One of the essential products was totally lacking. The entire supply of acetate of lime, as well as that of other refined ingredients, was commandeered; 170,000 tons were required, and only 106,000 were available. The requirements of all the Allies were pooled, and the best chemists in the country were secured to master the intricate technical requirements of production. Many previously unconsidered sources of supply had to be discovered, and after large chemical plants had been developed by governmental support, the demand was met, and 1,324,356 gallons of dope were manufactured from original sources which proved to be more than adequate for all requirements.

As early as the Spring of 1917 a serious shortage of airplane spruce had developed, and in order to secure spruce fast enough to meet our own and allied production needs, the Spruce Production Corporation was organized in the Pacific Northwest. New and hitherto inaccessible sources were opened up in order that the flow of aircraft lumber might not stop with the exhaustion of the accessible supply. The problem of procuring spruce for aircraft presented new problems to our lumber interests and too much credit cannot be given for the manner in which they were solved. Education in new methods of logging, sawing, drying and utilization of spruce was necessary, and the knowledge gained in the solution of the many and varied problems will be of lasting benefit. As a result of improved methods the requirement per machine fell from 5,000 feet to 1,000, with a consequent reduction of expense in all departments. Over 180,000,000 feet of aircraft lumber was shipped, *of which 120,000,000 went to our allies and 60,000,000 to our own industry.*

With the collapse of the Russian

Government, one of the two great sources of linen was lost, and by December, 1917, it was realized that the air program of the Allies as well as our own would depend upon the development of a suitable substitute. England's reputation as the greatest cotton-manufacturing centre of the world is well established, but the cotton fabric used as a substitute for linen was developed in the United States by our own experts to meet the needs of our own program. The physical characteristics of our cotton fabric equal those of the best linen, and it was produced at just half the cost. Had not American genius produced a substitute superior to the original, after years of England's best effort had been unsuccessful, our program would have been brought to a full stop before it had well begun. In August, 1918, our production rate was 1,200,000 yards per month, and every yard meant a saving of 65 cents.

IMPORTANT DISCOVERIES

The castor oil situation was very similar to that of linen and acetone. Before Liberty Aero Oil was developed, castor oil was the only satisfactory lubricant for high speed motors and the quantity required for our program was enormous. The Government's country-wide round-up of castor oil robbed every small boy in the United States, but had not the Lubrication Division succeeded in developing a satisfactory mineral oil for the Liberty and other stationary engines, the supply would have been utterly inadequate.

Wherever our industry could obtain adequate knowledge of what was required, there is no record of failure. Had it been possible to make the American people acquainted with the true condition in 1917, and had they been kept informed of difficulties as they appeared and of the steps taken to overcome them, the feeling in regard to our aircraft production would be one of pride rather than of disappointment.

OUR PEACE TREATY WITH GERMANY

THE United States at last is at peace with Germany. After many parleys in Berlin between Ellis Loring Dresel, the American High Commissioner, and Dr. Friedrich Rosen, the German Foreign Minister, the treaty draft was finally agreed upon. It was signed in the German Foreign Office in the late afternoon of Aug. 25, 1921. Thereby the technical state of war, which had remained ever since the armistice, was declared at an end; the United States Government received confirmation of all its rights as one of the victorious powers, under the Versailles Treaty, at the same time repudiating all obligation under a number of sections of that treaty, especially the one comprising the Covenant of the League of Nations; the new treaty also established the consent of Germany to the *fait accompli* respecting our seizure of German ships and other property during the war.

The actual signing was attended by no pomp or ceremony. Mr. Dresel, accompanied by Chancellor of the Embassy Hugh Wilson, First Secretary Pennoyer, and Attache Norris, all dressed informally, went from the embassy to the Foreign Office, where they met Dr. Rosen, Privy Councilors Gruenewald and Kraus and Consul Gruno. Brief formal greetings were exchanged, but no speeches were made. The German Government wished as little ceremony as possible, and was desirous to avoid everything reminiscent of the Versailles Treaty. Mr. Dresel signed first at Dr. Rosen's desk, and the German Foreign Minister signed after him.

The treaty is a brief and businesslike document. Article 1 gives the United States all the rights specified in the Knox-Porter resolution, especially the right of the United

States to all German property interned after the United States declared war on Germany, and including all rights previously given this country by the Treaty of Versailles. The second clause of Article 2 repudiates adherence by the United States to all clauses of the Versailles pact which refer to the League of Nations.

Under the fourth clause of Article 2, the United States reserves its privilege to be represented in the Reparation Commission or in any other commissions established under the Versailles Treaty, but only at its own election and when it considers such participation expedient.

TEXT OF THE TREATY

The full text of the peace treaty between the United States and Germany is as follows:

Considering that the United States, acting in conjunction with its co-belligerents, entered into an armistice with Germany on Nov. 11, 1918, in order that a treaty of peace might be concluded:

Considering that the Treaty of Versailles was signed on June 28, 1919, and came into force according to the terms of its Article 440, but has not been ratified by the United States:

Considering that the Congress of the United States passed a joint resolution, approved by the President July 2, 1921, which reads in part as follows:

"Resolved, by the Senate and House of Representatives of the United States of America in Congress assembled, That the state of war declared to exist between the Imperial German Government and the United States of America by the joint resolution of Congress approved April 6, 1917, is hereby declared at an end.

"Sec. 2. That in making this declaration, and as a part of it, there are expressly reserved to the United States of America, and its nationals, any and all rights, privileges, indemnities, reparations, or advantages, together with the right to enforce the same, to which it or they have become entitled under the terms of the armistice signed Nov. 11, 1918, or any extensions or modifications thereof; or which were acquired by, or are in the possession of the United States of America, by reason of its par-

ticipation in the war, or to which its nationals have thereby become rightfully entitled; or which, under the Treaty of Versailles, have been stipulated for its or their benefit; or to which it is entitled as one of the principal allied and associated powers; or to which it is entitled by virtue of any act or acts of Congress; or otherwise. * * *

"Sec. 5. All property of the Imperial German Government, or its successor or successors, and of all German nationals which was, on April 6, 1917, in, or has since that date come into the possession or under control of, or has been the subject of a demand by the United States of America or of any of its officers, agents, or employes, from any source or by any agency whatsoever, and all property of the Imperial and Royal Austro-Hungarian Government, or its successor or successors, and of all Austro-Hungarian nationals which was on Dec. 7, 1917, in, or has since that date come into the possession or under control of, or has been the subject of a demand by the United States of America or any of its officers, agents or employes, from any source or by any agency whatsoever, shall be retained by the United States of America, and no disposition thereof made, except as shall have been heretofore or specifically hereafter shall be provided by law, until such time as the Imperial German Government and the Imperial and Royal Austro-Hungarian Government, or their successor or successors, shall have respectively made suitable provision for the satisfaction of all claims

against said Governments, respectively, of all persons, whosoever domiciled, who owe permanent allegiance to the United States of America and who have suffered, through the acts of the Imperial German Government, or its agents or the Imperial and Royal Austro-Hungarian Government, or its agents, since July 31, 1914, loss, damage, or injury to their persons or property, directly or indirectly, whether through the ownership of shares of stock in German, Austro-Hungarian, American, or other corporations, or in consequence of hostilities or of any operations of war, or otherwise; and also shall have granted to persons owing permanent allegiance to the United States of America most favored-nation treatment, whether the same be national or otherwise, in all matters affecting residence, business, profession, trade, navigation, commerce and industrial property rights and until the Imperial German Government and the Imperial and Royal Austro-Hungarian Government, or their successor or successors, shall have respectively confirmed to the United States of America all fines, forfeitures, penalties and seizures imposed or made by the United States of America during the war, whether in respect to the property of the Imperial German Government or German nationals, or the Imperial and Royal Austro-Hungarian Government or Austro-Hungarian nationals, and shall have waived any and all pecuniary claims against the United States of America."

The United States and Germany, being desirous of restoring the friendly relations existing between the two nations prior to the outbreak of war, have for that purpose appointed their plenipotentiaries—the President of the United States of America, Ellis Loring Dresel, Commissioner of the United States of America to Germany; and the President of the German Empire, Dr. Friedrich Rosen, Minister for Foreign Affairs—who, having communicated their full powers, found to be in good and due form, have agreed as follows:

ARTICLE 1.—Germany undertakes to accord to the United States, and the United States shall have and enjoy, all the rights, privileges, indemnities, reparations or advantages specified in the aforesaid joint resolution of the Congress of the United States of July 2, 1921, including all the rights and advantages stipulated for the benefit of the United States in the Treaty of Versailles, which the United States shall fully enjoy, notwithstanding the fact that such treaty has not been ratified by the United States.

ARTICLE 2.—With a view to defining more particularly the obligations of Germany under the foregoing article with respect to certain provisions in the Treaty of Versailles, it is understood and agreed between the high contracting parties:

1. That the rights and advantages stipulated in that treaty for the benefit of the United States, which it is intended the United States shall have and enjoy, are those defined in Section 1 of Part IV, and Parts V., VI., VIII., IX., X., XI., XII., XIV. and XV. The United States, in availing itself of the rights and advantages stipulated in the provisions of that treaty men-

(Photo International)

ELLIS LORING DRESEL

United States Commissioner to Germany, who negotiated the American-German Peace Treaty

tioned in this paragraph, will do so in a manner consistent with the rights accorded to Germany under such provisions.

2. That the United States shall not be bound by the provisions of Part I. of that treaty, nor by any provisions of that treaty, including those mentioned in Paragraph 1 of this article, which relate to the Covenant of the League of Nations, nor shall the United States be bound by any action taken by the League of Nations, or by the Council or by the Assembly thereof, unless the United States shall expressly give its assent to such action.

3. That the United States assumes no obligations under, or with respect to, the provisions of Part II., Part III., Sections 2-8 inclusive of Part IV., and Part XIII. of that treaty.

4. That, while the United States is privileged to participate in the Reparation Commission, according to the terms of Part VIII. of that treaty, and in any other commission established under the treaty or under any agreement supplemental thereto, the United States is not bound to participate in any such commission unless it shall elect to do so.

5. That the periods of time to which reference is made in Article 440 of the Treaty of Versailles shall run, with respect to any act or election on the part of the United States, from the date of the coming into force of the present treaty.

ARTICLE 3—The present treaty shall be ratified in accordance with the constitutional forms of the high contracting parties, and shall take effect immediately on the exchange of ratifications, which shall take place as soon as possible at Berlin.

In witness whereof, the respective plenipotentiaries have signed this treaty and have hereunto affixed their seals. Done in duplicate in Berlin, this 25th day of August, 1921.

This treaty, on the whole, was received with satisfaction by the German press. President Ebert gave official expression to the German Nation's satisfaction over the treaty in a statement issued on Aug. 26. The American President expressed confidence that the ratification would follow in both countries without any obstacle. The United States Senate, owing to the Congressional recess, could not take it up until Sept. 21. The German Reichstag, to which the treaty must also be submitted, would not meet until Sept. 20.

Although the allied powers made no protest to the way in which the United States had built upon the Versailles Treaty, and yet repudiated so many of its most important clauses,

the tone of both the British and the French press showed considerable bitterness. In both countries the general sentiment seemed to be that the United States had taken the cream of the Versailles compact, drawn with

DR. FRIEDRICH ROSEN

German Foreign Minister, who, with Mr. Dresel, negotiated the separate peace with the United States

such difficulty and at the expenditure of such long-protracted effort, and had dropped everything which it deemed to be unfavorable to specifically American interests. French comment was especially tart, and several well-known French publicists expressed regret that France could not have drawn a treaty similarly devised to protect specifically French interests.

It was announced on Aug. 26 that peace with Austria also had been signed. The text of the document had not been given out up to the time these pages went to press. A similar treaty was soon to be signed with Hungary.

THE AGE OF LAWLESSNESS

ADDRESS BY JAMES M. BECK

Solicitor General of the United States*

A masterly analysis of the spiritual malady of the time, the general revolt against authority, which threatens civilization itself—Aversion to labor, class hatred, mass morality, all symptoms of a mechanical age devoid of character and stamina

IT is my purpose to discuss the moral psychology of the present revolt against the spirit of authority. Conceding that lawlessness is not a novel phenomenon, has not the present age been characterized by an exceptional revolt against the authority of law? The statistics of our criminal courts show in recent years an unprecedented growth in crimes. Thus, in the Federal courts, pending criminal indictments have increased from 9,503 in the year 1912 to over 70,000 in the year 1921.

While this abnormal increase is, in part, due to sumptuary legislation—for approximately 30,000 cases now pending arise under the prohibition statutes—yet, eliminating these, there yet remains an increase in nine years of nearly 400 per cent. in the comparatively narrow sphere of the Federal criminal jurisdiction.

I have been unable to get the data from the State courts, but the growth of crimes can be measured by a few illustrative statistics. Thus, the losses from burglaries which have been repaid by casualty companies have grown in amount from \$886,000 in 1914 to over \$10,000,000 in 1920; and, in a like period, embezzlements have increased fivefold.

It is notorious that the thefts from the mails and express companies and other carriers have grown to enormous proportions. The hold-up of railroad trains is now of frequent occurrence, and is not confined to the unsettled sections of the country. Not only in the United States, but even

in Europe, such crimes of violence are of increasing frequency, and a recent dispatch from Berne, under date of Aug. 7, stated that the famous International Expresses of Europe were now run under a military guard.

The streets of our cities, once reasonably secure from crimes of violence, have now become the field of operations for the footpad and highwayman. The days of Dick Turpin and Jack Sheppard have returned, with this serious difference—that the Turpins and Sheppards of our day are not dependent upon the horse, but have the powerful automobile to facilitate their crimes and make sure their escape.

In Chicago alone 5,000 automobiles were stolen in a single year. Once murder was an infrequent and abnormal crime. Today in our large cities it is of almost daily occurrence. In New York, in 1917, there were 236 murders and only sixty-seven convictions; in 1918, 221, and seventy-seven convictions. In Chicago, in 1919, there were 336, and forty-four convictions.

It has been estimated that the annual profits from violations of the prohibition laws have reached \$300,000,000. Men who thus violate these laws for sordid gain are not likely to obey other laws, and the respect for law among all classes steadily diminishes as our people become familiar with and tolerant to wholesale crimi-

*Delivered before the Bar Association of the United States at Cincinnati, Ohio, on Aug. 31, 1921.

nality. Whether the moral and economic results of prohibition overbalance this rising wave of crime, time will tell.

In the recent deflation in commodity values there was widespread repudiation of contracts among business men who had theretofore been classed as reputable. Of course, I recognize that a far greater number kept their contracts, even when it brought them to the verge of ruin. But when in the history of American business was there such a volume of broken faith as a year ago?

In the greater sphere of social life we find the same revolt against the institutions which have the sanction of the past. Laws which mark the decent restraints of print, speech and dress have in recent decades been increasingly disregarded. The very foundations of the great and primitive institutions of mankind—like the family, the Church and the State—have been shaken. Nature itself is defied. Thus, the fundamental difference of sex is disregarded by social and political movements which ignore the permanent differentiation of social function ordained by God Himself.

All these are but illustrations of the general revolt against the authority of the past—a revolt that can be measured by the change in the fundamental presumption of men with regard to the value of human experience. In all former ages all that was in the past was presumptively true, and the burden was upon him who sought to change it. Today the human mind apparently regards the lessons of the past as presumptively false—and the burden is upon him who seeks to invoke them.

Lest I be accused of undue pessimism, let me cite as a witness one who of all men is probably best equipped to express an opinion upon the moral state of the world. I refer to the venerable head of that religious organization which, with its trained representatives in every part of the world, is probably better informed as

to its spiritual state than any other organization. Speaking last Christmas Eve, in an address to the College of Cardinals, the venerable Pontiff gave expression to an estimate of present conditions which should have attracted far greater attention than it apparently did.

The Pope said that five plagues were now afflicting humanity. The first was the unprecedented challenge to authority. The second, an equally unprecedented hatred between man and man. The third was the abnormal aversion to work. The fourth, the excessive thirst for pleasure as the great aim of life. And the fifth, a gross materialism which denied the reality of the spiritual in human life. The accuracy of this indictment will commend itself to men who, like myself, are not of Pope Benedict's communion.

UNIVERSAL REVOLT

I trust that I have already shown that the challenge to authority is universal and is not confined to that of the political State. Even in the narrower confines of the latter the fires of revolution are either violently burning, or, at least, smoldering.

Two of the oldest empires in the world, which, together, have more than half of its population—China and Russia—are in a welter of anarchy; while India, Egypt, Ireland and Mesopotamia are in a state of submerged revolt. If the revolt were confined to autocratic Governments we might see in it merely a reaction against tyranny; but even in the most stable of democracies and among the most enlightened peoples the underground rumblings of revolution may be heard.

The Government of Italy has been preserved from overthrow, not alone by its constituted authorities, but by a band of resolute men, called the "fascisti," who have taken the law into their own hands, as did the vigilance committees in Western mining camps, to put down worse disorders.

Even England, the mother of democ-

racies, and once the most stable of all Governments in the maintenance of law, has been shaken to its very foundations in the last three years, when powerful groups of men attempted to seize the State by the throat and compel submission to their

JAMES M. BECK

New Solicitor General of the United States

demands by threatening to starve the community. This would be serious enough if it were only the world-old struggle between capital and labor and had only involved the conditions of manual toil. But the insurrection against the political State in England was more political than it was economic. It marked, on the part of millions of men, a portentous decay of belief in representative government and its chosen organ—the ballot box.

Great and powerful groups had suddenly discovered—and it may be the most portentous political discovery of the twentieth century—that

the power involved in their control over the necessities of life, as compared with the power of the voting franchise, was as a 42-centimeter cannon to the bow and arrow.

The end sought to be attained, namely, the nationalization of the basic industries, and even the control of the foreign policy of Great Britain, vindicated the truth of the British Prime Minister's statement that these great strikes involved something more than a mere struggle over the conditions of labor, and that they were essentially seditious attempts against the life of the State.

Nor were they altogether unsuccessful; for, when the armies of Lenin and Trotzky were at the gates of Warsaw, in the Summer of 1920, the attempts of the Governments of England and Belgium to afford assistance to the embattled Poles were paralyzed by the labor groups of both countries, who threatened a general strike if those two nations joined with France in aiding Poland to resist a possibly greater menace to Western civilization than has occurred since Attila and his Huns stood on the banks of the Marne.

Of greater significance to the welfare of civilization is the complete subversion during the World War of nearly all the international laws which had been slowly built up in a thousand years. These principles, as codified by the two Hague conventions, were immediately swept aside in the fierce struggle for existence, and civilized man, with his liquid fire and poison gas and his deliberate attacks upon undefended cities and their women and children, waged war with the unrelenting ferocity of primitive times. Surely, this fierce war of extermination, which caused the loss of three hundred billion dollars in property and thirty millions of human lives, did mark the "twilight of civilization." The hands on the dial of time had been put back—temporarily, let us hope and pray—a thousand years.

Nor will many question the accu-

racy of the second count in Pope Benedict's indictment. The war to end war only ended in unprecedented hatred between nation and nation, class and class and man and man. Victors and vanquished are involved in a common ruin. And if in this deluge which has submerged the world there is a Mount Ararat, upon which the ark of a truer and better peace can find refuge, it has not yet appeared above the troubled surface of the waters.

AVERSION TO WORK

Still less can one question the closely related third and fourth counts in Pope Benedict's indictment, namely, the unprecedented aversion to work, when work is most needed to reconstruct the foundations of prosperity, or the excessive thirst for pleasure which preceded, accompanied and now has followed the most terrible tragedy in the annals of mankind. The morale of our industrial civilization has been shattered. Work for work's sake, as the most glorious privilege of human faculties, has gone, both as an ideal and as a potent spirit. The conception of work as a degrading servitude, to be done with reluctance and grudging inefficiency, seems to be the ideal of millions of men of all classes and in all countries.

The great evil of the world today is this aversion to work. As the mechanical era diminished the element of physical exertion in work, we would have supposed that man would have sought expression for his physical faculties in other ways. On the contrary, the whole history of the mechanical era is a persistent struggle for more pay and shorter hours, and today it has culminated in worldwide ruin; for there is not a nation in civilization which is not now in the throes of economic distress, and many of them are on the verge of ruin. In my judgment, the economic catastrophe of 1921 is far greater than the politico-military catastrophe of 1914.

The results of these two tendencies,

measured in the statistics of productive industry, are literally appalling. Thus, in 1920 Italy, according to statistics of her Minister of Labor, lost 55,000,000 days of work because of strikes alone. From July to September many great factories were in the hands of revolutionary communists. A full third of these strikes had for their end political and not economic purposes. In Germany the progressive revolt of labor against work is thus measured by competent authority: There were lost in strikes in 1917, 900,000 working days; in 1918 4,900,000 and in 1919 46,600,000. Even in our own favored land the same phenomena are observable. In the State of New York alone for 1920 there was a loss due to strikes of over 10,000,000 working days. In all countries the losses by such cessations from labor are little as compared with those due to the spirit which in England is called "canny," or the shirking of performance of work, and to sabotage, which means the deliberate destruction of machinery in operation.

Everywhere the phenomenon has been observed that, with the highest wages known in the history of modern times, there has been an unmistakable lessening of efficiency, and that with an increase in the number of workers there has been a decrease in output. Thus, the transportation companies in this country have seriously made a claim against the United States Government for damages to their roads amounting to \$750,000,000, claimed to be due to the inefficiency of labor during the period of Governmental operation.

Accompanying this indisposition to work efficiently has been a mad desire for pleasure such as, if it existed in like measure in preceding ages, has not been seen within the memory of living man. * * *

Of the last count in Pope Benedict's indictment I shall say but little. It is more appropriate for the members of that great and noble profession which is more intimately con-

cerned with the spiritual advance of mankind. It is enough to say that, while the Church as an institution continues to exist, the belief in the supernatural and even in the spiritual has been supplanted by a gross and widespread materialism.

CAUSES DEEPER THAN WAR

If you agree with me in my premises, then we are not likely to disagree in the conclusion that the causes of these grave symptoms are not ephemeral or superficial, but must have their origin in some deep-seated and world-wide change in human society. If there is to be a remedy, we must diagnose this malady of the human soul.

For example, let us not "lay the flattering unction to our souls" that this spirit is but the reaction of the great war. The present weariness and lassitude of human spirit and the disappointment and disillusion as to the aftermath of the harvest of blood may have aggravated, but they could not cause the symptoms of which I speak; for the very obvious reason that all these symptoms were in existence and apparent to a few discerning men for decades before the war. Indeed, it is possible that the World War, far from causing the "malaise" of the age, was, in itself, but one of its many symptoms.

A race of individuals obey reluctantly, when they obey at all, any laws which they regard as unreasonable or vexatious. This spirit has always existed, and the so-called "best people" have not been innocent. Thus, nearly all women are involuntary smugglers. They deny the authority of the State to impose a tax upon a Paquin gown. Again, our profession must sorrowfully confess that the law's delay and laxity in administration breed a spirit of contempt, and too often invite men to take the law into their own hands. These causes are so familiar that their statement is a commonplace.

Proceeding to deeper and less rec-

ognized causes, some would attribute this spirit of lawlessness to the rampant individualism which began in the eighteenth century and which has steadily and naturally grown with the advance of democratic institutions. Men talked, and still talk, loudly of their rights, but too rarely of their duties. To diagnose truly this malady we must look to some cause that is coterminous in time with the disease itself, and which has been operative throughout civilization. * * *

MACHINES AND SUPERMEN

Man has suddenly become the superman. His voice can now reach from the Atlantic to the Pacific, and, taking wings in his airplane, he can fly in one swift flight from Nova Scotia to England, or he can leave Lausanne and, resting upon the icy summit of Mont Blanc, outfly the eagles themselves.

In thus acquiring from the forces of nature almost illimitable power, he has minimized the necessity for his own physical exertion or even mental skill. The machine now not only acts for him, but almost thinks for him. This almost infinite multiplication of human power has tended to intoxicate man. The lust for power has obsessed him, without regard to whether it be constructive or destructive. He consumes the treasures of the earth faster than it produces them, deforesting its surface and disemboweling its hidden wealth.

As he feverishly multiplies the things he desires, even more feverishly he multiplies his wants. To gain these he seeks the congested centres of human life. And, while the world as a whole is not overpopulated, the leading countries of civilization are subjected to this tremendous pressure. Europe, which at the beginning of the nineteenth century barely numbered 100,000,000 people, suddenly grew nearly fivefold. Millions have left the farms to gather into the cities and exploit

their new and seemingly easy conquest over nature.

In our own country, as recently as 1880, only 15 per cent. of our people were crowded in the cities; 85 per cent. remained upon the farms and still followed that occupation, which, of all occupations, still preserves in its integrity the dominance of human labor over the machine. Today 52 per cent. of our population is in the cities, and with many of them existence is both feverish and artificial. While they have employment, many of them do not themselves work, but spend their lives in watching machines work. The result has been a minute subdivision of labor that has denied to many workers the true significance and physical benefit of labor.

The printing press has piled up great treasures of human knowledge which make this age the richest in accessible information. I am not speaking of knowledge, but rather of the current thought of the living generation. I gravely question whether it has the same clarity as the brain of the generation which fashioned the Constitution of the United States. Our fathers could not talk over the telephone for 3,000 miles, but have we surpassed them in thoughts of enduring value? Washington and Franklin could not travel sixty miles an hour in a railroad train, or twice that distance in an airplane, but does it follow that they did not travel to as good purpose as we, who scurry to and fro like the ants in a disordered ant-heap?

New York, which has fifty theatres and annually spends \$100,000,000 in the box offices of its varied amusement resorts, has never in two centuries produced a single play that has lived. Today man has a cinematographic brain. A thousand images are impressed daily upon the screen of his consciousness, and they are as fleeting as moving pictures in a cinema theatre.

The press prints every year over

29,000,000,000 issues. No one can question its educational possibilities, for the best of all colleges is the University of Gutenberg. If it printed only the truth, its value would be infinite; but who can say in what proportions of this vast volume of printed matter are the true and the false?

Before the beginning of the present mechanical age the current of living thought could be likened to a mountain stream, which, though confined within narrow banks, yet had waters of transparent clearness. May not the current of thought of our time be compared with the mighty Mississippi in the period of a Spring freshet? Its banks are wide and its current swift, but the turbid stream that flows onward is one of muddy swirls and eddies and overflows its banks to their destruction.

The great indictment, however, of the present age of mechanical power is that it has largely destroyed the spirit of work. The great enigma which it propounds to us, and which, like the riddle of the Sphinx, we will solve or be destroyed, is this: "Has the increase in the potential of human power, through thermodynamics, been accompanied by a corresponding increase in the potential of human character?"

MASS MORALITY

The specialization of our modern mechanical civilization has caused a submergence of the individual into the group or class. Man is fast ceasing to be the unit of human society; self-governing groups are becoming the new units. This is true of all classes of men, the employers as well as the employees. A mass morality has been substituted for individual morality, and, unfortunately, group morality generally intensifies the vices more than the virtues of man. What was true of Germany was true—although in lesser degree—of all civilized nations. In all of them the individual had been submerged in

formations, and the effect upon the character of man has not been beneficial.

To all this, the nineteenth century, in its exultant pride in its conquest of the invisible forces, was almost blind. It not only accepted progress as an unmistakable fact—mistaking, however, acceleration and facilitation for progress—but in its mad pride believed in an immutable law of progress which, working with the blind forces of machinery, would propel man forward. A few men, however, standing on the mountain ranges of human observation, saw the future more clearly than did the mass. Emerson, Carlyle, Ruskin, Samuel Butler and Max Nordau, in the nineteenth century, and, in our time, Ferrero, all pointed out the inevitable dangers of the excessive mechanization of human society. Their prophecies were, unhappily, little heeded. * * *

POSSIBLE REMEDIES

There are many palliatives for the evils which I have discussed. To rekindle in men the love of work for work's sake and the spirit of discipline, which the lost sense of human solidarity once inspired, would do much to solve the problem, for work is the greatest moral force in the world. If we of this generation can only recognize that the evil exists, then the situation is not past remedy.

I have faith in the inextinguishable spark of the Divine which is in the human soul and which our complex mechanical civilization has not extinguished. Of this, the World War was in itself a proof. All the horrible resources of mechanics and chemistry were utilized to coerce the human soul, and all proved ineffectual. Never did men rise to greater heights of self-sacrifice or show a greater fidelity "even unto death." Millions went to their graves, as to their beds, for an ideal; and when that is possible, this Pandora's box of modern civilization, which contained all imaginable evils, as well as benefits, also leaves hope intact. I am reminded

of a remark that the great Rumanian statesman, Take Jonescu, made during the Peace Conference at Paris. When asked his views as to the future of civilization, he replied: "Judged by the light of reason there is but little hope, but I have faith in man's inextinguishable impulse to live."

But what can the law and our profession do in this warfare against the blind forces of nature? The law can do something to protect the soul of man from destruction by the soulless machine. It can defend the spirit of individualism. We must defend the right to work against those who would either destroy or degrade it. We must defend the right of every man not only to join with others in protecting his interests, whether he is a brain worker or a hand worker—for without the right of combination the individual would often be the victim of giant forces—but we must vindicate the equal right of an individual, if he so wills, to depend upon his own strength.

BULWARK IN THE CONSTITUTION.

Of this spirit of individualism the noblest expression is the Constitution of the United States. That institution has not wholly escaped the destructive tendencies of a mechanical age. It was framed at the very end of the pastoral-agricultural age and at a time when the spirit of individualism was in full flower. The mechanical civilization has greatly modified the dual character of our Government.

If, however, in this respect, the Constitution has proved little more than a sandy beach, which the tidal waves of elemental forces have slowly eroded, yet we can proudly claim that in another and more important respect the Constitution has withstood the ceaseless washing of the waves of changing circumstances, as the Rock of Gibraltar itself.

The greatest and noblest purpose of the Constitution was not alone to hold in nicest equipoise the relative powers of the nation and the States, but also to maintain in the scales of

justice a true equilibrium between the rights of government and the rights of an individual. It does not believe that the State, much less the caprices of a fleeting majority, is omnipotent, or that it has been sanctified with any oil of anointing, such as was once assumed to give the monarch infallibility. About the individual the Constitution draws the solemn circle of its protection. It defends the integrity of the human soul.

In other Governments these fundamental decencies of liberty rest upon the conscience of the Legislature. In our country they are part of the fundamental law, and, as such, enforce-

able by Judges sworn to defend the integrity of the individual as fully as the integrity of the State. Therefore, the greatest service that the bench and bar can render in combating the evils of a mechanical age is to defend and preserve in its full integrity the Constitution of our fathers. Let us, then, as its interpreters and guardians—and as such the civilian soldiers of the State—do all that in us lies to preserve this inspired vision of the fathers, for again the solemn warning of the wise man of old recurs to us: "Where there is no vision, the people perish; but he that keepeth the law, happy is he."

WHY HELIGOLAND IS UNHAPPY

AUG. 4, 1921, was a sad day for the inhabitants of the island of Heligoland. It was the seventh anniversary of the British declaration of war on Germany, and it recalled to the Heligolandians the fact that the outcome of this war was the Versailles Treaty. The connection is as follows:

This rocky stronghold in the North Sea, lying off the mouths of the Elbe and Weser Rivers, twenty-eight miles from the mainland, had been British since 1807, when the English took it from the Danes. It was ceded by Great Britain to Germany in exchange for the German island of Zanzibar in 1890, a bargain in the making of which British diplomacy, for once, was caught napping, if not soundly asleep. Bismarck had fully realized the military value of the island, but it was his successor, Caprivi, who persuaded the Marquis of Salisbury, then British Foreign Minister, to negotiate the exchange. The statement issued by Salisbury at the time showed that he was entirely blind to the weapon he was putting into Germany's hand.

The Kaiser at once removed the old-fashioned English defenses, and replaced them with armored turrets, mounting guns of heavy calibre. As a base for Germany's growing navy, it was ideal. In 1892 the

island was incorporated formally with Prussia, when it was provided that all natives born before 1880 should have the right to choose either British or German nationality. Until 1901 no additional import duties or taxes were imposed. Since then the iron hand of Germany has been felt more and more. Customs duties have been increased; new taxes, previously unknown, now bear heavily on the inhabitants. Many rights guaranteed by the Anglo-German cession compact of 1890 have gone by the board. The Heligolandians have organized a home rule movement, and have made appeal after appeal to Great Britain. The latter country is powerless to help them—and the reason is the Treaty of Versailles. By that treaty all former treaties and agreements lapsed, including that of 1890. Under Article 115 of the Versailles pact, the only right Great Britain retains is that of compelling the dismantling of the island's fortifications. Beyond that Great Britain cannot go. Hence Aug. 4 was a day of mourning in the rocky, mist-wrapped island, which longs vainly to go back to the good old days when Heligoland was a British possession. The forlorn hope of an appeal to the League of Nations was tried by the Heligolandians in September.

SPAIN'S HOME RULE PROBLEM IN CATALONIA

BY CARLETON BEALS*

Fierce nationalism of the Catalans in the Barcelona region creating a situation like that of Ireland—Demand for autonomy with a separate Parliament—Medieval obstacles to reform in Spain

WHEN the Mayor of Cork died the windows of the British Consulate in Barcelona were smashed to the cries of "Long live the Republics of Ireland and Catalonia!" A few months later I saw the Spanish yellow and red *bandera* torn down from the Gran Via Arguelles, and in the Teatro del Liceo heard the "Royal March" drowned in hisses. Cambo, the leader of the Catalan Nationalist movement, recently declared that the *Lliga Regionalista de Catalunya*—the Home Rule League of Catalonia—constituted the only orderly governing force in a State torn by official, military and syndicalist terror. He felt himself to be speaking for more than 4,000,000 people, occupying a territory embracing not only Catalonia, but the eastern half of the adjacent provinces; the gem-like islands of the Balearic Archipelago; the quaint, dirty city of Alguër in Sardinia, the tiny, crag-perched Republic of Andorra, and Roussillon of the French Department of the Eastern Pyrenees.

This nationalism is recrudescent, not new; and though altered in spirit and purpose, its roots run deep into the soil of prehistoric Spain. The Cataláns believe themselves to be the only true descendants of the Iberians and the Romans—the Spaniards being Celts, Goths, Arabs and lesser breeds without the law. They support this contention with semi-scientific data showing that the cranial measurements of the Cataláns are, if

not superior to, at least different from, those of the Castilians. They proudly ask if it is not true that the Ebro (Iberian) River is born in the Catalán Pyrenees and dies in the Tarragonian Sea in order to divide Catalonia for all time from the rest of Spain—a postern castle-moat, as it were, to a Catalonia that should ever face toward Italy, the Mediterranean, the Orient.

Their pride in their Roman parentage is not unfounded. The Roman impress left its most indelible traces in Catalonia. The remains of the ancient walls and gates that enclosed what for a time was the greatest Roman city of the Peninsula may still be seen in Barcelona's plazas of Regomir and Angel. Did not the Romans also use the River Ebro to divide Spain into *Hispania Ulterior* and *Citerior*, the latter—the civilized portion—remaining more or less intact down to the seventeenth century? Even now the streets bear Catalán names that are reminiscent of the Roman conquest; and so strange that the bewildered Spaniards have insisted that the Castilian equivalents be placed beneath; and the foot-pilgrim in the fertile Llanos of Urgel of the Valley of the Segres, or in the mountains behind Barcelona, will be wise

*Mr. Beals, who holds degrees from Columbia and the University of California, was for a time Principal of the American High School in Mexico City and instructor in English to the staff of President Carranza. He has traveled extensively in the last three years, especially in Latin countries, and has contributed articles to Spanish as well as American publications.

if he freshens his Italian and French, for both will prove more useful than Spanish in communicating with the peasantry.

Nor is the history of Catalonia without glory. Following the early union of Aragon and Catalonia under the Barcelonian dynasty of the Berengueres, the two States were projected upon a brilliant imperial career. Alfonso V. died ruling over all Eastern Spain and the Balearic Islands; over Corsica and Sardinia, where the guttural dialect and the sallow skins of the people attest to this day those centuries of occupation; over Greece, Sicily, Naples and Milan. The Cataláns claim this glory equally with the Argonese, and point to the cultural prominence of Barcelona during this period, when that city rivaled Genoa and Venice as the great mart of the Mediterranean.

But the tide of Aragonese and Catalán supremacy turned, leaving Castile pre-eminent. Castile owed its ascendancy to fortunate marriages and a series of strong rulers. To Madrid flocked the fortune-seekers and the scribblers; even the great Catalan, Boscan deserted his native tongue for the popular Castilian. These occurrences were symptomatic of the economic decline of the Mediterranean world, resulting from the break-up of the Eastern trade routes. Castile, furthering the Westward movement of discovery, exploration and conquest, embodied the spirit of the new age.

But Castilian dominion over Catalonia was not easily maintained—the memories of old glories died hard. As late as 1640 occurred the uprising of the Catalán harvesters, who on Corpus Christi Day—known as *El Corpus de Sangre*—descended upon Barcelona to massacre all the Castilians, singing as they came the savage "Hymn of the Reapers"—"*Els Segadors*." That is still the anthem of Catalonia and "drives the people crazy with excitement." No wonder that in 1652 Felipe IV. was willing to cede Roussillon and the adjoining

Catalán districts, with half of Sardinia, to the French, in the hope of extinguishing, or at least dividing, the strong local patriotism. From that day the obliteration of that patriotism proceeded apace, until by the time of the repulse of the Napoleonic invaders, Catholic Catalonia was bitterly alienated from revolutionary, atheistic Roussillon, and had completely identified its interests with those of Spain.

REVIVAL OF NATIONALISM

Yet the last sixty years have witnessed a resurrection of *catalanismo*, heralded by the trumpet calls of the poets, who since 1849 in annual competition for a public award of flowers and the title of Master of the Gay Science have gathered at their *Jochs Florals* to declaim their patriotic odes.

We all are born of the same great height,
And drink the waters from its snow:
With equal rhythm our songs we write:
Our cries in common echoes grow.*

Thus sang Margall, the most passionate of them all; and the common echoes awoke a concerted artistic, scientific, linguistic, political and economic renaissance, which has strained at the barriers of Castilian paternalism and for two decades has threatened to sweep them away altogether.

The *Unio Catalanista* was launched upon the turbulent waters of rushing nationalism with all the enthusiasm, the bigotry and bitterness of a new-found faith. It was soon superseded by the Catalán Home Rule League, which, although backing a much more liberal and intelligent program, has had a tempestuous career. It brunted every Central aggression and headed into the violent storm of 1909, when Catalán impertinence was engulfed and annihilated in blood and iron.

Even more sanguinary were its struggles with the Republican movement, which centred in Barcelona.

*Tots devallen de la mateixa alçada
tots bevem raigua de les mateixes neus;
nostres consons tenen igual tonada
i nostres crits desperten idéntics tonaveus.

Republicanism perforce postulated a program for the whole of Spain; it could not be regional. Much of the energy of both sects was for years dissipated in bloodshed on the streets of Barcelona—a recurring spectacle relished by the aristocrats of Madrid, to judge by some of their piquant and nasty personal correspondence.

But after the bloody setback of 1909 the Nationalists, with that easy shifting of levers that makes all Latin politics so speed-burning, united with the Republicans on the sensible program of local autonomy and peninsular federation. But the Republicans, guided by the noisy Lerroux, soon betrayed the Nationalists for their own interests. Lerroux entered the Liberal Cabinet of the Conde de Romanones, the most clever scene-shifter of the Spanish political stage, on a compromise that gave the Count a free hand in twisting the neck of Catalán nationalism.

After a period of disheartening dissolution and sporadic violence, the national sentiment again flooded its banks in the violent uprisings of 1918, when secession was averted only by a clever alienation of the principal Catalán leaders with the promise of Cabinet representation and posts in the Government. Yet, in spite of such betrayals, the Home Rulers did not lose their spirit, and only await a favorable opportunity to set up an independent government. In 1919 they even expected to carry their appeal to the newly formed League of Nations, but the great powers' hasty desertion of the principle of the rights of small nations saved that august body from one more embarrassment.

WHAT CATALONIA DEMANDS

The existing program was adopted in the Congress of the League held in 1916. It was summarized in the *España* for June of that year, as follows:

1. The State of Catalonia to be autonomous, with sovereign control over its internal affairs.

2. A Parliament or Legislature to be responsible to the Catalán people.

3. An Executive Power responsible only to the Catalán Parliament.

4. The enforcement of Catalán law, the Parliament to be the instrument of its resurrection. (This refers to the old rights and privileges guaranteed to Catalonia by Aragón and later by Ferdinand and Isabella at the time of the union in 1649. These were abolished by Philip V. in the eighteenth century.)

5. A Catalán judicial power, with a Supreme Court to have final jurisdiction over all trials and suits of Catalán origin.

6. Official use of the Catalán tongue, and its unrestricted use in all private and public activities.

7. A federated union, Spanish or Iberian, directed by a central power which shall have charge of foreign relations, interstate relations, the army and navy, communications, money, weights and measures, customs, &c.

With this program Catalonia for the first time enlisted strong sympathy in other parts of Spain. Bitter experience has taught the futility of fighting Castile single-handed. Mere Catalan independence has been recognized as too narrow an aim, and by example and propaganda the Home Rulers have stimulated that disintegrating sectionalism—the love for the *patria chica*—to be found among the Basques, the Galicians, and to some extent among the Andalusians.

This program has also won the support of the Liberals. Their position is best stated by Señor Luis Arquistain in his "Spain in the Crucible" (Barcelona, 1921, Page 118):

At the same time that Catalonia demands autonomy, it expresses the desire that other districts also organize themselves in such manner as to promote their economic development, with the double objective of energetically constricting the Spanish State and of paving the way for the political reorganization of the country, perhaps of the Iberian Peninsula, on a federative basis, with Catalonia as the guide and centre. This idea of an Iberian federation, freely concerted, is not foreign to the minds of the leaders of the Catalán movement for autonomy. It is an idea so momentous that it cannot fail to preoccupy the thought of any individual in the Iberian Peninsula who has any historic understanding. Iberia, or the United States of Iberia, would then have four large capitals—four ports of

communication with the world: Lisbon, the Atlantic capital; Barcelona, the Mediterranean capital; Bilbao, the Cantabrian capital; and Cadiz, a capital destined to a great future by its maritime proximity to the future routes between America and the east coast of Africa. If in the independence movement of Catalonia there is any germ of this idea, no Spaniard wise to the future of his country will hesitate to give it his warmest support.

WARNING TO CENTRALISTS

Yet the Catalans hold the possibility of complete separation in abeyant reserve should that federalism prove tardy or impracticable and feudal exactions become too onerous. Absolute separation has been battled for with arms and ideas on many a historic occasion. Through the centuries the advocates of complete separation have spread their propaganda. One notable warning directed to the Centralists has echoed and re-echoed through Spain for twenty years. On the heels of the Spanish-American war, when the country was smarting from the loss of Cuba and the Philippines, and when serious disturbances were occurring in Catalonia, Spain's great Liberal, Pi y Margall, published in *El Nuevo Regimen* Dec. 29, 1900, a clarion call of alarm. The Catalans have never forgotten its stimulating peroration:

Ah, impenitent Centralists! Have you so soon forgotten the errors that resulted in the loss of Cuba? By the same errors you are endangering the integrity of the *patria*. By our Federal system we would guarantee integrity; with your system you are ceaselessly weakening all bonds of union. Every unwarranted attack is a destructive blow against an already crumbling wall. If the day comes that Catalonia rises against Spain, yours, mistake it not, will be the blame!

Then and since, the eyes of Catalonia have been turned toward France. French troops helped the Catalans in the seventh century, and during the recent World War the Catalans were enthusiastically pro-French in contrast to the violent pro-Germanism of Madrid. The leaders of Barcelona's economic life would

prefer a union with industrialized France to the present uncertain chaos.

The root of these difficulties is economic. Beneath an inherited Roman super-state centralism that has precluded all exercise of democracy, Spain has been riveted to intellectual and social backwardness, crushed to a condition of slothful inertia—singularly isolated from all the forward-looking movements of Western Europe. Even the Napoleonic conquest, which plowed up the dead earth of feudalism and exposed it to the sunlight of the new times, could not cut deep into the ecclesiastical power of Spain, or destroy the traditional growth of *poder* that clung to Church, State and law. The upper house is quite nonrepresentative; the elections to the lower house are effectively controlled by illiteracy and *caciquismo*—local bossism. The Government of Spain is feudal and bureaucratic. It is more.

SPAIN'S MEDIEVAL INCUBUS

Madrid is the rallying point for all feudal interests. Hence Madrid is moribund, degenerate, repulsive. The lower class, with a diet one-fourth that of the British worker, is in Madrid more brutalized and servile than in any other part of the country. The middle class, consisting largely of Government clerks and petty officials, apes the decadent vices of the aristocracy. The aristocracy is vile, diseased and vapidly ignorant. Only too clearly has Jacinto Benavente, in his "La Comida de las Férias," with bleak, cynical strokes pictured it as sucking the life-blood of a Spain whose social structure hangs on the precipice of anarchy. Many of the clergy are the nadir of indecency. Degeneracy also pervades every department of Government, so that a terrible ecclesiastical, medieval incubus weights the back of every individual in Spain.

But around the fringe, the periphery, has grown up a semi-modernized Spain. In the bustling seaports

—Corunna, Bilbao, San Sebastian, Vigo, Cadiz, Valencia, Barcelona—another type of Spaniard is encountered—aggressive, untutored, but not degenerate. The Catalans are the most alert of all; frugal and close-fisted like the French; energetic and purposeful like the Americans. Catalonia is the most vigorous of these outlying areas. Barcelona is the greatest industrial centre and mart of Spain.

Furthermore, the Mediterranean is again the courtesan of the empires. This new Cleopatra offers with herself the newly discovered oil and mineral lands of the Near East and the Caucasus regions, and the control of the Orient. In Italy the *risorgimento* was not checked by the war. The troubled, slate-cliffed Adriatic, reaching a long arm up to the heart of Europe, assumes a new economic importance in the councils of the nations. Today an industrialized Barce-

lona is prepared to dominate the Ligurian Sea and the western end of the Mediterranean. This prosperity the Catalans declare they cannot enjoy as long as they must submit to the exactions of the decadent Government of Castile. Thus feudal and industrial Spain are in open and violent opposition. Industrialized Spain wishes to secede from medieval Spain, to slough off the leadership of the inefficient, parasitical Madrilenan bureaucracy, which has no interest in modern industrial activity and watches Catalan enterprise with sullen suspicion and jealousy when it is not actually fomenting disorder and devising new and irksome restrictions upon industrial expansion.

The proof of the economic character of this split is also to be found in the fact that the supporters of the home-rule movement are restricted to the bourgeoisie and the better middle class. The labor movement of the

BLACK AREA IN THE NORTHEAST CORNER OF SPAIN REPRESENTS THE PROVINCE OF CATALONIA, AND THE SHADED SECTION ADJOINING SHOWS THE REST OF THE REGION WHICH THE CATALAN LEADERS DESIRE TO SET UP AS A SEPARATE STATE

province is bitterly aloof from both contestants. It is anarchistic and syndicalistic. Its weapons are the terror, assassination, sabotage, the general strike; its goal, the world industrial revolution. More than one factory owner, more than one State official, more than one *guardia civil* has been snuffed out by bomb, revolver or knife with the cry flung in the face of the world that "all the blood of the bourgeoisie will not satisfy us for the blood of our slaughtered comrades." The syndicalists, on the other hand, when the Centre does permit them the license to make war on the Catalan manufacturers, are shot down by hundreds, their legal advisers assassinated at their doors, and their leaders deported or flung into the holds of musty frigates to be beaten by the leaded knout and stretched on the iron wheel in queer loyalty to the memory of Torquemada and the honesty of the fantastical cartoons of Goya.

Thus Catalonia is engulfed in a constant tempest of violence, a three-cornered conflict that has blindly de-

generated into terror, riot and assassination. The syndicalists battle with the *patronos*, with the central feudalism, and with the home-rule movement. The bourgeoisie battle against the paralyzing extortion of the Centre, even in the hour that it accepts its aid against the syndicalists. The Central Government battles with syndicalist, Catalan Nationalist, and the light of modern Europe. The Centre knows no remedy except through the time-honored instrument of force; the Catalan bourgeoisie fear any revolution that will undermine the Spanish State, seeing the solution in a war of secession that they shall control; the syndicalists discountenance all government, and with the flame of Russia across the Pyrenees see the only hope in industrial revolution.

Three formless despotisms heaped together on the scales of human aspiration and selfishness! The few sane lovers of democratic processes look impotently on, praying for reason and peaceful, evolutionary processes—ere the wall completely crumble.

FRENCH JUSTICE IN CAMEROON

FRANCE, it has often been said, and with some ground of justice, is not a good colonizing nation, in contrast with Great Britain, which has been declared to be the best colonizing nation in the world. There are evidences, however, that France is seeking to emulate the example of her neighbor across the Channel. One of these evidences is a decree issued on April 13, 1921, the result of which has been only recently published. This decree concerned itself with the organization of justice in Cameroon. Its main novelty consisted in its provisions for the trying of all accused natives—not French citizens—in their own districts, and before tribunals of their own race, presided over by the head official of each district. In this way the natives are to be spared the long absences from their native villages formerly necessitated by a journey to the chief city, often situated at a considerable

distance. The rights of the accused natives are to be guaranteed in various ways and all local customs respected. The various races are to be differentiated and treated accordingly. Any penalty above three years' imprisonment is to be referred to a special tribunal sitting at Douala.

The Paris Temps in its issue of Aug. 17, 1921, stated that reports from Cameroon indicated that excellent results had already been attained from the operation of this new judicial system and that the reforms instituted bade fair to be permanent. So the world progresses and the idealistic doctrine scattered broadcast upon the waters of international polity by the United States declaring that mandates and protectorates should not be devices of arbitrary exploitation, but rather instruments of humane and enlightened administration, is bearing fruit even in what was once the Dark Continent.

ALBANIA'S FIRST YEAR OF INDEPENDENCE

BY CONSTANTINE A. CHEKREZI
Commissioner of Albania to the United States

Story of the new nation's vicissitudes during and since the Peace Conference—How the Albanians cast off the Italian military yoke and established an independent Government at Tirana—Recently recognized and admitted by the League of Nations

THE month of September, 1921, marked the completion of one year of real independence for Albania. It is quite true that she had been proclaimed independent as far back as 1912, but her autonomy was a theory rather than an actual condition. The fact is that from 1912 to 1920 Albania went through a series of tribulations and crises that were more or less incompatible with the status of national sovereignty.

Prior to the advent to her throne of the Prince of Weid (March 7, 1914), the area of free Albania was less than one-fifth of her actual territorial possessions; under his government, her lot became all the more pitiful, for the Prince soon showed himself to be a mere puppet of Austria and Italy. After his departure from the country, the Governmental authority was usurped by Essad Pasha, the Adventurer, who would have fitted into the darkest moments of the Middle Ages. And then there came the barbaric inroads of the belligerents in the World War. The Peace Conference, finally, went so far in denying the right of the Albanian Nation to independence as to partition her twice in succession, the last time in January, 1920.

When the Albanians heard of this second partition, an overwhelming wave of indignation swept through the population, and inasmuch as Italy herself had agreed to the project of

partition in violation of the most solemn pledges, the wrath of the people was turned against the Italian forces, who occupied Valona. It was then that a national convention met at Lushnja, in defiance of the armed opposition of these troops. The convention formed a new Government and informed the powers that Albania would fight to the last man in order to save the country. In an address to the Italian Parliament and Government, the convention stated emphatically that there was enough blood left in the Albanians' veins to avenge the betrayal. The whole country was in a state of feverish excitement, and bloody encounters between the Italian troops and the natives were taking place every day, duplicating the recent events in Ireland. The Albanian Government, believing that the whole question would be reconsidered by the Peace Conference, had refrained from declaring war; yet this same Government unwittingly precipitated the crisis.

THE FIGHT FOR INDEPENDENCE

It had been left to Italy to determine the extent of the hinterland of Valona, but so far the Italians had left the whole matter in the dark in the hope that some favorable turn would enable them to extend the hinterland as much as possible. Natu-

rally enough, the Albanian Government—which had already won such prestige at home that, even though the country was under the military administration of Italy, the Albanian people ignored this military authority and paid their taxes to their national authorities—had no means of knowing how far the limits on the hinterland went. In the belief that the town of Tepelen, some ninety kilometers south of Valona, was not included in the hinterland, the Government appointed a subprefect for the Province of Tepelen, in compliance with the wishes of her inhabitants. The entry of the subprefect in the town of Tepelen was to be an elaborate State affair organized by the people themselves. He was to enter the city with a troop of Albanian volunteers just arrived from America, who had brought with them their own musical band from Worcester, Mass. Tirana, where the Government was sitting, was far off and without any communications; it could not foresee that such a trivial matter as the appointment of a subprefect to a province that was not supposed to be contested by the Italians would precipitate a war.

The subprefect, the volunteers and the musical band arrived before the town on May 25 without the slightest intimation that the Italians would resist. As soon as the marching volunteers, with the band playing national airs, reached the gates of Tepelen, the forts began belching forth fire from their guns, to the utter confusion of the untrained volunteers. Little by little, however, they recovered their wits and rallied their forces. They cut the Italian communications off from the other military stations, and laid siege to the town. Ten days later the Italian garrison surrendered with arms, guns and ammunition, and everything else they possessed fell into the hands of the Albanian volunteers, who had, in the meantime, been reinforced by the native population. This was the outbreak of the war with Italy. When informed of the occurrence, the

Government of Tirana laid the blame on the Italians, rightly enough, because it was they who had opened fire on the unsuspecting Albanians.

This unexpected initial victory fired with enthusiasm the whole Albanian people. On June 5 various leaders of the Province of Valona held a secret meeting at Mavrova, ten kilometers outside of Valona, and, having been duly prepared for the emergency, sent an ultimatum to the Italian General in command of the forces of occupation, demanding that he evacuate and surrender Valona within twenty-four hours. Obviously, this was a most foolhardy action. The Italian commander prepared the city for defense. On June 6 the Albanians launched a furious attack. They fought with the bravery inspired by despair and by the grim determination to die or succeed. One by one the outer lines of defense fell into the hands of the attackers, who got over the barbed-wire entanglements by stepping on their heavy woolen coats, which they stretched over the wires. A more daring undertaking cannot be conceived. They even penetrated into the town of Valona itself, to be repulsed only by the broadside fire of the Italian warships anchored in the port.

The fighting spread now throughout Albania. At last the Italian Government dispatched Baron Carlo Aliotti to Albania to open peace negotiations, but after many days of diplomatic bickering on the one hand and successful fighting on the other he was recalled because of his intriguing actions. Count Enrico Manzoni succeeded him, and the protocol suspending hostilities and providing for the withdrawal of the Italian troops from Albania, including Valona, was signed at Tirana on the second day of August, 1920.

The conflict thus came to an end. The Italians evacuated the territories they held, and Valona was surrendered on Sept. 27 to the newly appointed Albanian Governor, Kiazim Koculi, Commander-in-Chief of the forces operating in the sector of

Valona; to his indomitable courage and ability Valona largely owes her freedom. The dream had become a reality. By the protocol of Tirana the provisions of the Secret Treaty of London, partitioning Albania, were annulled. The mandate was thrown overboard, and Italy recognized the sovereignty of Albania. In the meantime, while the conflict with the Italians was raging, another happy turn of affairs had brought about the retirement of the French troops from the Albanian territories they had been holding, and in less than nine months from the time when the powers decreed her partition, Albania found herself independent and united, instead.

WINNING RECOGNITION

Albania's triumph made a profound impression on the outside world, and the project of partition dropped out of sight. Yet insidious rumors were still spread broadcast by Albania's enemies, intimating that the people were not mature for independence; that they did not possess enough national consciousness to keep them together; that they lacked able leadership to guide them through the crises that beset the life of a nation. Even after the accomplished fact and the voluntary grouping of the people around their Government, there still lingered this hostile expectation. For that reason the powers relegated the Albanian question to the background; for a time they even appeared to have forgotten it altogether. The Supreme Council, the Ambassadorial Conference, the Premiers' Conferences met here and there from time to time; but Albania did not enter their discussions. In spite of the repeated efforts of the Albanian Government to secure recognition, the powers showed themselves non-committal in their attitude.

There was a flurry of excitement when Albania asked for admission to the League of Nations last December. The Assembly of the League referred

the request to the Committee on Admission of New Members, and the majority of the committee reported against it. Lord Robert Cecil of the minority reserved, however, the right to reopen the question in the Assembly. And then the unexpected happened. Thanks to Lord Robert's eloquent speech, which was seconded by the effective oratory of M. Rene Viviani and other delegates, especially of Mr. Fischer of Canada, Albania was admitted to full membership in the League of Nations by the unanimous vote of the Assembly. It is worthy of record that the delegate of India, Imam Ali, a Moslem, advocated the admission of Albania on the ground that she is the only country where the Cross and the Crescent live peacefully together—an allusion to the fraternal relations of the Christians and Mohammedans there. It was a dramatic session indeed, that of Dec. 17, 1920, all the more so because the Supreme Council had warned the League against the admission of Albania on the ground that she had not been recognized by the powers. Her admission by the League was the first diplomatic recognition of her efforts for independence.

THE QUESTION OF BOUNDARIES

During the discussions in the Assembly of the League it came out that the main objection was based on the fact that Albania's frontiers had not been determined. This question was a complicated one. The Secret Treaty of London had assigned to Serbia the province of Scutari and to Greece the provinces of Koritza and Arghyrocastro, as a compensation for Italy's occupation of Valona (with the undetermined hinterland), and for the Italian mandate. By the agreement of Tirana, however, Italy renounced all claims on Albania, both as to the mandate and the territorial possessions. Clearly, then, Serbia and Greece could not claim the northern and southern provinces, respectively,

on the basis of that treaty. But it is difficult for any Government to give up claims that have been somehow recognized as valid, even though the basis on which they rested no longer exists. Serbia and Greece, therefore, found a new basis for their claims: Serbia demands the province of Scutari on historical, strategical and commercial grounds. Greece, on the other hand, lays stress on the theory that the provinces of Koritza and Arghyrocastro are inhabited by members of the Greek Orthodox Church, who allegedly wished to unite with their coreligionists in the Kingdom of Constantine. That theory, if accepted, would make the author of this article a Greek, for he is a native of Koritza, and his family belong to the Greek Orthodox Church.

Albania, Serbia and Greece all presented their case before the League of Nations, which found itself unable to reach a decision. These questions have perplexed the powers greatly. I am officially informed that they have at last agreed to recognize the Albanian frontiers of 1913, as laid down by the Ambassadorial Conference of that year, which convened for the purpose of averting a European conflagration that would have been precipitated by the unsettled Albanian question. This agreement specifically provides that the province of Scutari, claimed by the Serbs, and those of Koritza and Arghyrocastro, claimed by Greece, shall be definitely assigned to Albania. Unfortunately, the agreement leaves unsettled the question as to what shall become of the 1,500,000 Albanians that are left outside of the established frontiers of 1913; those frontiers bar out the province of Chameria, held by Greece, and the still greater provinces of Kossovo and Dibra, now occupied and terrorized by the Serbians. The inhabitants of these provinces, who desire union with their mother-country, Albania, are petitioning the League of Nations to take care of them; their fate seems to stretch into an anxious future.

What was the motive of the powers in finally interesting themselves in Albania by agreeing on her frontiers? The fact is that the powers have convinced themselves that the fears referred to above are baseless. The Albanian people did not disintegrate nor did the Albanian Government collapse. On the contrary, it has been proved that the people and Government of Albania have evidenced the strongest proofs of national cohesion and loyalty.

My personal observations in Albania may be summarized as follows: In the first place, the Government has established its authority. Never before in all her thirty centuries of existence has Albania enjoyed so much order and tranquillity as at the present time, with the possible exception of the period of the Pax Romana, when Albania was a proud self-governing province of the Roman Empire, to which she contributed six Emperors, eminent among whom were Constantine the Great and Diocletian the Organizer. The habit of bearing arms and the addiction to feuds have completely disappeared. One's life is safer today in Albania, whether in a crowded town or on a lonely highway, than in any other country in the Balkans. Rapine, murders, hold-ups, are things of the past. In the second place, the Government is so secure in its support of the great majority of the people that it is not hesitating to use the rod for its recalcitrant children, spoiled by generations of misrule and favoritism. The province of Mirdita, to mention one case, thought of getting off scot free of taxes, as it did under the Turkish Government. Mirdita was subdued in less than one night. In the third place, the Government has now at its disposal regular armed forces that are in control of every district. Even the latest foreign conquerors did not attempt to extend their control so far.

The foundations of the present Government were laid down by the Convention of Lushnja, to which I

referred above. It was decided at that time that the governmental authority should be lodged in three distinct but correlative bodies. First in rank comes the Regency Council—composed of two Christians and two Moslems—which takes the place of the Chief Executive; its authority is not very wide. The second body is the Council of Ministers, or Cabinet, composed of the departmental heads of the Government; it is responsible to all intents and purposes to the third body, the Parliament. The Parliament consists of seventy-two members, forming one chamber and elected by the people. The Cabinet is in reality the body that wields the executive power, subject, of course, to the dictates of Parliament and to the exigencies of the party system. There are two well-defined parties, the Progressive and the Popular, with a third group of shifty Independents; but it may be safely said that the parties will have to undergo a new alignment in the very near future. The present Cabinet is headed by the former Premier, Ilias Vrioni, a descendant of one of the oldest families of Albania; it is a coalition Ministry, the two chief parties being almost equal in numerical strength.

As to the future form of government, there are two or three plans in the air; but if the question were put to the people, say in the form of a plebiscite, the verdict would be in favor of a limited constitutional monarchy headed by a Prince who is not a national of any Power having interests in Albania. The reason for such a regime is obvious. The country is surrounded by older States that cling

still to the monarchical system, such a system being the tradition as well as the practice of the Balkan States. Consequently, an Albanian Republic would be the constant object of insidious intrigues on the part of the more powerful monarchical neighbors. Aside from that, there are some other reasons just as important.

A word now about the economic and financial outlook of Albania. Those who hoped that her standing as a separate nation might be jeopardized by her apparent poverty have ample reason at present to be disillusioned. Albania is the only country without any national debt, and the only one that stands on a gold basis. Every business deal is transacted in gold, from those of the public treasury to those in the humblest hamlet. The people have settled down, and prosperity has set in. The long-deserted fields are being carefully cultivated. Furthermore, the country is very rich in all kinds of mineral resources. Oil is plentiful, and the Anglo-Persian Company's agents are at Tirana endeavoring to get control of the oil fields. Another British firm has obtained the tobacco concession. Yet, Albania is still waiting for American capital to develop her resources. She needs railroads, wharves, docks, piers, warehouses, to render feasible the exploitation of her coal, iron, copper and other kinds of mines. Now that order is prevailing throughout the country and the Government is strong enough to assure liberty, safety of property and the pursuit of happiness, proper means are needed to provide for inner reconstruction.

AFGHANISTAN AT THE CROSS-ROADS

BY CLAIR PRICE

Semi-independent State on the northwest frontier of India, long a bone of contention between Russia and Great Britain, is free of both for the moment—Its next moves important for the Middle East

FEW countries in the world are at once as generally unknown and as politically important as is Afghanistan today. Little heed has been paid of late—indeed, little American heed has ever been paid—to this wild, mountainous country of the northwest frontier of India; but yesterday it occasioned the hurried signature of the Anglo-Russian Trade Agreement in London, and today, by reason of the Greco-Turkish War, it constitutes an increasing embarrassment to the British Government of India. Near and Middle Eastern affairs, with their seemingly endless ramifications, are not easy to understand; but an understanding of the entirely new situation which obtains in Afghanistan as a result of the war may shed a deal of light into these dark areas of world politics. For the history of the Near and Middle East during the next few years now pivots largely upon Afghanistan.

Before the war Afghanistan was a political appendage to the Government of India, Russia having abandoned it to the British in the famous Anglo-Russian Treaty of 1907; but the new Russian Government abrogated the 1907 Treaty in 1918, and with London's concurrence in Moscow's abrogation Afghanistan automatically became "officially free and independent, both internally and externally." And on Feb. 28, 1921, the newly independent Afghan Government signed a Russo-Afghan Treaty

at Moscow providing for a Russian subsidy for its Amir, for five Russian Consulates within its frontiers, and for a number of other arrangements to Russia's advantage, of such a startling nature as before the war would have brought any dead Viceroy of India up from his grave at once. The result was that the British Government hurriedly executed an about-face in its attitude toward the Russian Trade Delegation in London, and on March 16 Sir Robert Horne finally affixed his signature to the long pending Anglo-Russian Trade Agreement, at the same time handing to Mr. Krassin a peremptory note from Lord Curzon demanding the immediate discontinuance of Russian propaganda in Afghanistan.

Having put an end to the Russo-Afghan Treaty, the Government of India now sought to elaborate an Anglo-Afghan Treaty in succession to the old arrangements with Afghanistan which had been automatically brought to an end by the abrogation of the Anglo-Russian Treaty of 1907. Accordingly, Sir Henry Dobbs, C. I. E., was dispatched to the Afghan capital of Kabul last Spring with a suitable mission to conduct negotiations with the Amir. But events elsewhere have thus far frustrated the efforts of the Dobbs Mission, and up to the middle of August its negotiations were still hanging fire, while all the fierce nationalism of Afghanistan was concentrated on the maintenance of its new independence.

These "events elsewhere" take in the entire Near and Middle East in their scope, and a brief survey of them may prove illuminating.

The various tribes which make up Afghanistan's 5,000,000 population are overwhelmingly Moslem, and are of the Sunni sect of Islam, which may be roughly likened to the Catholics of Christianity, just as the smaller Shi'ah sect may be called the Protestants of Islam. The Moslems of Bokhara and Khiva to the north of Afghanistan are likewise of the Sunni sect, and the 60,000,000 Moslems of India to the south are also Sunnis; indeed, the Moslems of India are the great driving force of Islam today. To the west of Afghanistan, the Moslems of Persia are Shi'ahs and are not the sturdy fighters their Sunni brethren are; doubtless the Afghans could overrun Persia if they cared to. Further to the west the Turks and Arabs alike are Sunnis, and both are strong fighting

forces, but at present are quite alienated from each other by the long Arab revolt against Turkish rule. The Turks, the Tartars of the Caucasus and Turkestan, the Afghans and the great Moslem community of India, then, are all of the Sunni sect, whose Caliph is the Turkish Sultan and whose sacred law provides that the Caliph shall be an independent sovereign wielding an effective guardianship over the great Moslem holy places at Mecca, Medina and Jerusalem.

The war, however, has made the Turkish Caliph virtually a prisoner of the British in Constantinople, and has taken Mecca, Medina and Jerusalem away from him, Mecca and Medina now being held by the independent King of the Hedjaz, who is subsidized by the British, and Jerusalem being held by the British themselves. This new state of affairs has been bitterly resented by all of Sunni Islam (except the

Arabs) as a destruction of its most sacred institutions, and as a result Afghanistan has been greatly inflamed against the British Government of India. The Afghan Mission which negotiated the Russo-Afghan treaty in Moscow—a Mission headed by the same Mohammed Vali Khan who recently visited Washington—had no sooner affixed its signatures to that treaty than it hastened to Angora in Turkey and last April signed a Turco-Afghan treaty of close alliance against "any alien imperialism," which presumably means the British Empire. Of this treaty only an official summary has been given out, and the essential point in the text of that summary is a recognition of the Turkish Caliphate on the part of Afghanistan.

In the meantime the Amir of Afghanistan had received

MAP OF AFGHANISTAN SHOWING THE LOCATION OF THAT MUCH-DISPUTED COUNTRY IN RELATION TO INDIA, PERSIA AND RUSSIA

at Kabul Djemal Pasha, who, with Enver Pasha and the late Talaat Pasha, was one of Turkey's ruling triumvirate during the war, and had made him Minister of War in the Afghan Cabinet. Djemal Pasha had founded an Afghan Military College at Kabul and had imported forty Turkish officers from Angora to whip the Afghan regular army into shape. The Government of India's plan to extend its military railway from Jamrud up through the famous Khyber Pass to the Afghan frontier posts was interpreted at Kabul as a menace to Afghanistan's new independence, and its announcement was followed by the erection of hill redoubts overlooking the Afghan end of the Khyber and the training of Afghan mountain batteries to man them. This brought a new unrest into the tribes along the northwest frontier of India, the control of which has long been one of the Government of India's most difficult tasks.

Into this situation along the northwest frontier news of the recent Greek advances into Asia Minor has brought further unrest, and the farther the Greeks advanced (with British aid, Islam believes) the more

turbulent the northwest frontier became. This has continued until today Afghanistan is talking openly of invading India, and Mr. Gandhi, the great Hindu leader of India's peaceful boycott of the British, has been compelled to use all his influence with his explosive Moslem minority to prevent the use of the Afghan army against the British in India and to keep the boycott in the ways of peace.

Meanwhile Afghanistan has been making use of its independence to put its own house in order, and the Amir on June 18 last proclaimed his first Code of Criminal Law, a move which constitutes Afghanistan's first step toward constitutional Government. Should it continue to adjust itself to the march of Western civilization, Afghanistan should yet prove to be one of the strongest of the smaller States in Asia. Before the war it was locked in the vise-like grip of the Anglo-Russian Treaty of 1907, but today its opportunity to work out its own destinies has come. And for the next few years the history of the great tangled area between the Bosphorus and Bengal Bay will pivot largely upon the uses that Afghanistan makes of this new opportunity.

PERSIA'S TRADE ASPIRATIONS

THE Persian Minister to the United States, Sadigh es Saltaneh, shortly before his recent transfer from Washington to Madrid, delivered before the American Manufacturers' Association an address in which he outlined the trade policy and aims of the new Persian Government. The principal exports of Persia, he explained, are carpets, shawls and other products of cotton, wool and silk; in return she desires various American manufactures, especially cottons, hardware, machinery and other things of iron and steel. "Persia," he continued, "has an area three times larger than France, yet most of the land remains

untilled. Our extensive forests in the north and west are scarcely touched. Our mines are still virgin. Our vast water power, one of the richest sources of energy, has only begun to be developed. What we need is the assistance of capital, and we will gladly welcome the enterprise of business men and the help of competent financiers. * * * We have always been in favor of the open door, and are keenly desirous of improving and establishing direct commercial relations—unalloyed by political ambitions—with all the nations of the world, and especially with wealthy, energetic and capable America."

SUICIDE A LA MODE IN JAPAN

BY NANCY VIRGINIA AUSTEN

Who has lived twelve years in Japan

An interesting account of the amazing fashion of suicide in Japan, the strange forms and places chosen for the act, and the wide difference between Oriental and Occidental ideas of death—What one devoted Japanese woman is doing to change the fashion

IN Japan the rule of doing things the opposite way to ours holds in suicide as in all things else. The Occidental punishes an enemy by stabbing him to death. A Japanese stabs himself, often killing himself at his enemy's gate for revenge. He kills himself as a protest against an injury he has suffered. He kills himself to emphasize some utterance. He kills himself to reform his superior. He kills himself to apologize for some mistake. Sometimes, in the Occident, men threaten the life of an employer in order to secure their demands. In the topsy-turvy East they threaten to take their own lives in order to bring things around their way. In our land jealous husbands or wives have been known to kill an offender. In Japan the lovers take their own lives that they may be united in the future existence. This form of double suicide is called "shinju" (love suicide).

In the Island Empire across the Pacific everything is done according to ancient rules—rules which even would-be suicides may not ignore. If a man has insulted another or caused grave injury through some stupid blunder, suicide, according to the ancient customs, is the only proper course for him; and he would "queer himself," "lose face," as we say over there, were he to neglect its observance. On the other hand, if one

wishes to make amends for some carelessness or wrong deed, one may claim the privilege of suicide.

"Hara-kiri" as a method of suicide has been in vogue since antiquity. Although the word hara-kiri may have a sound of mysterious dignity in Western ears, the meaning is very prosaic when translated into English. The literal meaning is "belly cutting." The Japanese have a fashion of using Chinese words to express rude or unpleasant things, in the same way that we use Latin and French words, so they usually refer to hara-kiri by the high-sounding Chinese name, "seppuku," as we use the word abdomen instead of the plain Anglo-Saxon word. The act consists in drawing a sharp dirk across the abdomen. In the days when hara-kiri enjoyed an official status, the head was severed immediately afterward by a friend, or, in case of political offenders, by an official.

ORIGIN OF "HARA-KIRI"

In tracing this custom of hara-kiri back to its source, we find that it gained its greatest popularity in the old days when Japan was torn by rebellions and counter-rebellions. Each territorial chief, or daimyo, entrenched himself with his retainers against invasion from a neighboring

daimyo. First one, then the other was successful. The victor always tried to insure the safety of his reign by beheading those who had fought against him, and in order to make the death of these political rivals less distasteful, the custom of *hara-kiri* was called into use.

Solemn ceremonies were devised to give a show of dignity to the condemned warriors, or Samurai, as they were called. The rules governing *hara-kiri* were both elaborate and exact, everything being done according to rigid form. Nothing new was added; nothing old was omitted. The place for the performance was prepared in the same strict way. Those of the highest rank were permitted to perform *hara-kiri* in the house; all others must use the garden. But whether the ceremony took place in the house or in the garden, it was governed by the same fixed rules. Each implement was used according to the set regulations; every step taken was according to the proper rules. The man to sever the head, the one to hand the sword to the principal, each actor in the scene was there in the proper place, according to the approved rules of *hara-kiri*.

A Japanese learns from childhood up to respect *hara-kiri*. He learns it at school in his history and ethics lessons. He learns it at home from his parents. He learns it on the streets from wandering story tellers. He learns it from the praise of *hara-kiri* which he reads in the newspapers and books. He learns it in the temples where he goes to worship Japanese heroes, some of whom have been deified because they avenged their lords through *hara-kiri*. Suicide by this method is looked upon as an honorable way to avenge one's self, to denounce an enemy, to apologize for a wrong done, or to escape difficulties in general. It is merely one way of starting out upon the long journey to the next existence. A Japanese looks upon this life as one form of his many existences; the next may be better or

worse than this one. If he deserves it he may be reborn in a much happier sphere; or if unworthy in this life, his spirit may have an unfortunate habitation in the next.

In Japan there are few lives of ease and perfect happiness. Living means struggle and sacrifice for the big majority of the common people, especially for the women, whom we have come to consider the happiest people on earth because they smile under every circumstance. Since living in Japan I have learned that a smile often covers the saddest heart. The doctrine of keeping one's troubles in the background is worthy of emulation, but when carried to the extreme, as in Japan, it causes others to say as we do of the Japanese, "They are never unhappy."

In the thickly populated little kingdom of Nippon a human life is not considered of such importance that one less is taken as sufficient cause for extensive comment in the newspapers or anywhere else. And since 1869, when a motion was introduced into the Japanese Diet to abolish *hara-kiri*, it has held its place against the new Western fashions creeping into the Japanese life. For at that time only three voted for the motion; two hundred voted against it and six did not vote; thus was it settled that *hara-kiri* was a Japanese institution reflecting great glory upon the country; that it was a custom both desirable and indispensable; that it was one of the distinctly Japanese customs not to be uprooted. So it has remained. While it does not have the same official place that it had in the days of feudalism, still it exists as a voluntary means of redress, of sacrifice, or of escape from the worries of the world.

TYPICAL INSTANCES

I remember an occasion a few years ago when a stationmaster of the Government railway committed *hara-kiri* because the Emperor's special train was delayed a few minutes by

a misunderstanding on the part of an official. There had been no accident. There had been no injury—except to the stationmaster's pride. However, the stationmaster thought the only suitable apology he could make for the slight delay to the imperial train would be to perform hara-kiri; so he did. And as far as I could discover there was not a Japanese who disagreed with that view.

Last January a Japanese sentry while on police duty in Vladivostok shot Lieutenant Warren Langdon of the United States cruiser Albany. The sentry was absolved from blame, as it was discovered that his superior officer had not been explicit in giving directions. It was reported that the superior officer had committed suicide—which would in truth have been according to Japanese etiquette. But, so far as I know, that rumor has not been confirmed. The latest news is that the sentry has taken upon his own sword the duty of making apology in the usual way. Knightly sentiments are not confined to the Samurai, but often dwell in the hearts of the lowliest. To those who know Japan, it would seem quite in keeping for one of the humblest subjects in the empire of the Sun Goddess to make atonement by the honored custom of hara-kiri.

The case of General Count Nogi and Countess Nogi, who committed hara-kiri at the time of the death of the Emperor, Meiji, in 1912, attracted world-wide attention at that time. The General could not bear to see his Emperor go to the next life with no attendant; so he made preparations and, quietly, accompanied by his faithful wife, went to his Emperor's side. The act was hailed as most beautiful and fitting. Through the breadth of the land the memory of the faithful couple is held in a reverence but little short of worship. After the passing of a few generations General Nogi's name will doubtless be numbered among the thousands of deities worshipped in Japan.

PRECEDENT AND LEGEND

The national story of the forty-seven Ronin still exercises a powerful influence upon the people of Japan. In 1701 Asano, Lord of Ako, having been insulted by a nobleman named Kira, quarreled with him in the palace court. As a private quarrel inside the precincts of the palace was a crime punishable by death, Asano was ordered to perform hara-kiri. His family was disgraced and his clan ordered to scatter. His retainers, forty-seven in number, pledged themselves to live for the sole aim of avenging their master. They waited vigilantly two years for the completion of their plans. When all was ready they entered Kira's mansion and ordered him to perform hara-kiri. Coward that he was, he refused to take the sword, so they cut his head off. They carried his head in a solemn procession across Tokio to the grave of Asano. Placing the head before the tomb of their master, they declared their vow fulfilled. That evening the forty-seven committed hara-kiri; they were buried by the side of Asano.

The plot of ground containing the graves of Asano and his forty-seven faithful retainers is a popular resort for pilgrims, who throng to the temple to worship the devoted heroes. Many times have I taken visitors to the tombs of the forty-seven Ronin on the edge of Tokio, but I have yet to see the time when the simple grave-stones had no burning incense, or no pilgrims bowing a mute tribute to "faithfulness," the virtue most exalted in Japan. The deed of these forty-seven men is one of the most popular subjects for songs, stories and plays. A theatre is always full when the play is the story of the forty-seven Ronin.

In Japan one often sees a venerable old tree enclosed by a bamboo fence and having a straw rope tied around its gnarled trunk. Such trees are sacred and are worshipped for one

reason or another. The following story shows how the worship of a fine old tree in Southern Japan originated: One day long ago a man committed suicide by hanging himself from a sturdy limb of this tree. Soon after that another man did the same thing; then another and another, until that tree became a favorite place for committing suicide. Suicide then, as now, was nothing unusual, but there was an inquiry into the reason why that one tree was the instrument selected by so many. So the sage old men of the village decided that evil spirits dwelt in the tree and lured men on to take their lives. Therefore, a meeting of all the men of the village was called to decide on some means of defense against the evil spirits.

The old men held the belief that offerings should be made to the tree spirits to placate their wrath and to gain their favor. The young men said the wiser plan would be to cut the tree down and burn it. At this suggestion the older men held up their hands in horror. "Such a course would bring calamity on the whole village," they gasped. The young men, less superstitious and less faithful to the gods, held firmly to their decision, and, perhaps because they were more numerous, carried the day.

Preparations were made to destroy the tree. But here a difficulty developed—no one could be found willing to cut the tree. Though the young men were brave enough to laugh at the evil spirits, yet when it came to taking an axe in hand and actually cutting the tree, each was loath to take upon himself the honor. Finally two of the most daring stepped out with axes and struck two resounding blows. O horror! no sooner had the axes touched the tree—so the legend goes—than blood gushed forth! The two daring young men dropped their axes and fled in terror. The whole assemblage dropped to their knees and besought the spirits to spare their lives. Ever afterward the vil-

lagers were faithful in placing their offerings before the sacred tree.

FASHIONS IN SUICIDE

This story illustrates the fact that there are fashions in Japanese suicide as in everything else. The saying that "misery loves company" holds true in Japan, even if the English proverb is unknown. When a Japanese has reached the state of despondency or some other emotion which urges suicide, he usually seeks a spot where others have taken the same step.

A few years ago the wheel of fashion in its turning rested upon the high portico of a temple in Kyoto, a temple dedicated to the goddess of mercy. This temple, called Kiyomizudera, is built upon high piles on the side of a hill, in a most beautiful setting. Cherry, maple, plum and evergreen trees almost hide it. From its portico one can see the valley below with its restless masses. The railing is very low, and it is quite easy just to step over—and know the ills of life no more.

But the wheel of fashion never remains long in one position, and in this case it shifted popularity from Kiyomizudera to the crater of the active volcano, Mt. Asama. You may be sure it takes grim determination to climb to the top of the long slope of the rumbling, smoking Asama Yama, and then to jump into its sulphurous, fiery depths. But a Japanese would not let a thing like that stand in his way once his mind is made up; so many a weary soul toiled up the ash-covered side of Mt. Asama with suicide as the only reward in view—until the considerate fashion wheel took another turn. This time it led to a more accessible place—a lake near Kobe. The authorities took a hand there; soon they had the lake drained and the would-be suicides had to seek another refuge.

This time they did not go far in their search; Suma, a beautiful suburb of Kobe, became the favorite place for this strange fad. The mag-

nificent ocean, rolling in, splashed with rainbow colors; green-clad cliffs rearing their heads far above the beating waves; giant pines throwing out their arms in a spirit of protection—these make Suma a welcome spot to the living and to the spirits of those who have lived. For awhile suicide was almost a daily occurrence at Suma.

Then fickle fashion turned and favored the north. Chuzenji is a beautiful mountain lake near the temple city Nikko-Nikko, which the Japanese say one must see before one can say "beautiful." Lake Chuzenji drains itself in a single outlet which pours over a high perpendicular cliff in an exquisitely beautiful waterfall named Kegon, falling in one magnificent sheet for 250 feet. The spray leaps up like billowy clouds of the softest chiffon. Is it any wonder that the romantic Japanese saw a fitting end to life in Kegon's whirling spray? So many of them leaped over the cliff into Kegon that the Government set a police guard at the top of the alluring falls, and thus stopped suicide there.

Since the beauty spots of their land seemed denied them, the would-be suicides turned to the prosaic trains as a last resort. The despondent one would station himself at a sharp curve in the railway track and jump in front of an express train as it flashed around the curve. Before the engineer could stop the train all would be over for one earthly life.

A sharp curve near Kobe became the scene of so many suicides that last year Mrs. Jo, a Christian woman of Kobe, devised a plan for helping her discouraged countrymen who sought an untimely end for life. She erected a huge sign at the spot which had become the one favored for the death jump. In arriving at the short curve, one is startled by the words of this immense sign, standing out in bold, black characters: "Stop a minute! If you feel that you must take your life, go to see Mrs. Jo at the

Woman's Welfare Association." Strong electric lights make the sign plainly visible at night.

A dramatic, imaginative Japanese, confronted suddenly by this spectacular sign, pauses and sits down on a stone to think things over. "Could this Mrs. Jo have any possible help for me?" he asks himself. Then with a sheepish glance at the railway track, as if to plead its silence, he turns and wanders thoughtfully to Mrs. Jo's address given on the sign. Mrs. Jo probably persuades him that he can do his duty a while longer by living. He has no fear of death, which to him is merely passing from one state of existence to another; but why pass on to the next if he can hold on to the present a little longer! If the little woman can give him a new reason for continuing the life struggle he bows low to her, touching his head to the floor, it may be, in his appreciation of her interest, and then marches out to face the world once more, victory already half won by his jaunty air of self-assurance as he takes up again the grimmest thing in Japan—life.

The newspapers gave Mrs. Jo's plan wide publicity; and in less than six months' time 160 Japanese have been saved from suicide by reading that sign. This unassuming woman has become the mother confessor for all Japan. Women discouraged and tempted to end life write to her for advice; she has helped hundreds by such letters. Word has spread that there is a woman in Kobe who can bring hope out of the darkest situation; that she can solve any problem of life, no matter how complex or impossible it may seem. And no one knows how far-reaching her work may yet become. She may yet be able to make the Japanese see that it is more glorious to live for a cause than to die for it; that suicide as an apology or as an escape from trials shows weakness, not strength. Less things than her faith have more than once changed the course of human events.

CHINA, CAPTIVE OR FREE?

[An Analysis of Gilbert Reid's Latest Work]

BY JESSE WILLIS JEFFERIS

How China's aid of the Allies in the World War has resulted in her betrayal into the grip of Japan—Internal chaos fostered by Japan to keep a vast empire in subjection—A worse oppressor than Germany

THE fact that America has refused to be bound by treaty agreements relating to the award of Shantung to Japan—a vital subject of controversy to be discussed at the Disarmament Conference—renders Gilbert Reid's "China, Captive or Free?" especially timely. This notable contribution to the literature bearing on Far Eastern questions, just issued from the press of Dodd, Mead & Co., is the most complete discussion of China's foreign entanglements and the attempts at her enslavement which has yet been published. The volume might well be used as a handbook by the representatives of the great powers at the Disarmament Conference in November, for it "divulges acts hitherto kept secret and brings more clearly to light many facts which bear on a correct understanding of the East and of the West."

That Great Britain and America are chiefly responsible for China's entrance into the war—a step which has resulted in enabling Japan to secure a stranglehold on the "Flowery Kingdom"—is the conclusion which Dr. Reid has reached and substantiated by his revelation of diplomatic dealings that are decidedly dubious and utterly unjustifiable.

The author holds that no amount of persuasion on the part of the Allies could have induced China to enter the war, as she had no more grudge against the Central Powers than that which she felt toward other imperial-

istic Governments. Trustfully she obeyed the behest of her traditional friend, America, upon whom she depended and still depends to rescue her from the encroachments of her exploiters. Little did China dream that, as a consequence of her entrance into the war, the nation would be torn by warring factions and rival capitals would be established at Peking and at Canton—the former representing militarism and autocracy; the latter the home of liberalism and democracy.

As director of the International Institute of China, Gilbert Reid has held a position unique among those who have recorded their impressions of the most densely populated and perhaps most fascinating country in the world. The object of this institute is to promote friendship and harmony in the relations between China and other countries, and also between adherents of different religions. This has enabled him to secure a comprehensive survey of China's activities. American readers are already familiar with his "Glances at China," published in 1890, and "Sources of Anti-Foreign Disturbances in China," 1893. He has also produced six books in Chinese, an achievement which demands an intimacy with the life and language of the Mongolian race both comprehensive and profound.

Even the casual reader of "China, Captive or Free?" must confess that the author is a man uncompromising-

ly true to his convictions. "Out of love for China," he writes, "I was made to suffer, not only for China, but with China; undergoing some tragic, amusing and puerile persecutions from the great diplomats of four legations—British, French, Japanese and even American—while the United States Constitution and the Sermon on the Mount both slumbered and slept. The contact of European civilization with the peoples of Asia, Africa and the American continents makes sad reading for the man of justice. As to the country of China, with a long record of civilization, statecraft, philosophy, art and religion, the question arises, Has China been blessed or cursed by Western civilization?"

Great Britain's recent attempt to gain control of South China's coal supply is exceeded, according to Dr. Reid, in shameless effrontery and greed only by Japan's daily tightening death-grip on the province of Shantung. The author contends that what Germany had in Shantung was certain "rights" which were granted to her by China and by China alone. These rights, moreover, were determined by a treaty drawn between the two Governments of China and Germany, and by the action of no other Government. According to the terms of the grant, the rights acquired by Germany were unassignable and non-transferable.

Gilbert Reid is convinced that there was no excuse whatever for extending the war to the Far East, as the German fleet had sailed from Tsing-tao, leaving only a handful of troops which were in no sense a menace to China or to any of the Allies. The calamities which the war has brought upon China, and the spoils which Japan has thereby appropriated, are the principal factors which now threaten the peace of the world, and have rendered necessary the calling of the Disarmament Conference. According to Marquis Okuma, the war afforded Japan "the one opportunity of ten thousand years."

Especially significant is the author's contention that Japan entered the war only upon the earnest request of her ally, Great Britain. In a speech before the Diet, Baron Kato, Minister of Foreign Affairs, said: "The British Government has asked the Imperial Government of Japan for assistance under the terms of the Anglo-Japanese alliance. We could not but comply to the request to do our part. The Japanese Government, therefore, resolved to open hostilities against Germany." In a truly technical sense, Japan was the only ally which Great Britain had. The relations of Great Britain to France and Russia were those of an entente cordiale.

CHINA COERCED BY JAPAN.

Japan occupied Shantung and thus held a dagger over the heart of the Chinese Nation. The Japanese Minister in Peking, only two short months later, presented to President Yuan Shih-kai an official document now notorious as "The Twenty-one Demands," which are almost a duplicate of the demand made on the Emperor of Korea prior to the absorption of that country by Japan. In order to put this deal through without molestation on the part of other Governments, the Japanese Minister insisted upon absolute secrecy. These demands confirmed Japan's claim to German rights in Shantung, enlarged and prolonged the Japanese hold on rights acquired in Southern Manchuria and Eastern Mongolia, sought control of China's greatest industrial enterprise, the Hanyehping Company, with a share in the product of mines; set forth the obligation on the part of China to lease no more harbors or islands on the Chinese coast, except to Japan; insisted on special railway concessions in the Yangtse Valley and on recognition of Japan's priority in Fukien Province, and gave Japan a degree of authority over the internal and political affairs of China, undermining her sovereignty.

The United States Government immediately challenged this piece of diplomatic effrontery by dispatching an identical note to both China and Japan, refusing to recognize any agreement which had been entered into, or which might, in the future, be entered into, between the Governments of Japan and China, impairing the treaty rights of the United States and its citizens in China, the political or territorial integrity of the Republic of China, or the international policy relative to China, commonly known as the "Open Door," a stand recently reiterated by Secretary of State Hughes.

China naturally supposed that her entrance into the war would afford her the chance, not only of terminating her treaties with Germany, but also of nullifying her agreements with Japan. She did not know that the European allies were at the same time conniving with Japan, *unknown to China or to the United States*, that what China hoped to get from her foreign exploiters would all pass to Japan, her most pestiferous neighbor, who, according to the Lansing-Ishii note, was granted special rights in China on account of propinquity.

Apologists find a reasonable explanation for Japan's conduct in the fact that the Japanese people have been Christianized for a period of only sixty years, while Europe has received Christian teaching for 2,000 years. As evidence of the very thin veneer of Christianity which covers the diplomatic relations of such a highly civilized country as Great Britain, it is interesting to note that only two years after Japan had pressed her twenty-one demands the British Government presented twelve demands, evidently fearing that in the scramble she would lose some available spoils, which would be wholly contrary to her traditional foreign policy. Great Britain secured from prostrate China the right to construct railways between India and Tibet, the privilege of making loans, thus mortgaging Chinese re-

sources; the use of British experts for industrial enterprises, the establishment of telegraph lines and postal service, and, most modest of all, a demand that *China shall not interfere with the actions of the British Government in Tibet*.

In no regard did China's entrance into the war so seriously affect her welfare as in the resulting reign of military autocracy and the almost complete overthrow of her democratic system of government. Never under the Chinese, Manchu or Mongol monarchies, where the literati ruled, was there anything like the militarism which was ushered in upon China's entrance into the war, and which has been perpetuated by the Tutchuns or Military Governors of the provinces, with the result that Dr. Sun Yat-sen, President of the Republic of South China, and most of the Chinese liberals have seceded from the Peking Government and are now bravely fighting the battle for democracy against an apparently hostile world. Unless these liberals are represented at the Disarmament Conference, the author believes, it will be far better for President Harding to call it off and continue to wink at the autocratic-militaristic Government in Peking, and also at the imperialism of both Great Britain and Japan.

JAPAN WORSE THAN GERMANY

China's need has been Japan's opportunity. For a paltry \$15,000,000 China signed away a lien on all her forests in the two northern provinces of Heilungkiang and Kirin, about equal in extent to the combined area of all the States of America along the Atlantic seaboard. To secure funds China has also been compelled to mortgage railway lines, gold, coal, antimony and iron mines. She has even mortgaged the Government Printing Office at Peking and the Hankow electric light and water works.

According to Professor John Dewey, who has recently toured Shantung Province, the Chinese would be

much happier with the Germans in control than they are at present on account of the indignities which they suffer from Japanese officials, who are extending further and further the boundaries of their political and commercial influence and control. Professor Dewey says:

The Germans employed Chinese exclusively in the railroad shops and for all minor positions. The railway guards were all Chinese, the Germans merely training them, but when Japan invaded Shantung and took over the railways Chinese workmen and Chinese military guards were at once dismissed and Japanese imported to take their places. At an hour's notice Japan could cut off communications between Southern China and the capital, and, with the aid of the Southern Manchurian railway, at the north of the capital, hold the entire coast and descend at its good pleasure upon Peking.

With this view Herbert Adams Gibbons, author of "The New Map of Asia," is in perfect accord. "The Germans," he says, "were not oppressive masters of the natives within the leased territory. Their control led to improved sanitary conditions and to economic prosperity. Germany did not follow the tactics of Russia and Japan in using the railway concession as a means of permanent military control."

F. Anderson, Chairman of the China Association, further confirms the convictions of these writers in his annual message, dated July 17, 1920. "The Japanese administration of Shantung," he says, "is worse than the German. There were only about 500 Germans resident in Tsing-tao, all of whom were officials or leaders; there are now over 35,000 Japanese residents."

An offense to Japan and, unfortunately, also to China was the rejection by the "Big Three" at Paris of the clause which the Japanese desired to have introduced, endorsing the principle of "the equality of nations and the just treatment of their nationals." Gilbert Reid explains in some detail that what Japan demanded was not a recognition of race equality, but the abolishing of the discrim-

ination provided by immigration laws or the like against any inhabitant of Japan on account of race. "This was an eminently fair proposal, prudently and moderately phrased," says Mr. Reid. "The Japanese laid great stress upon its adoption. It was heartily supported by the Chinese, for China and Japan are the only two countries of the world which are discriminated against merely because of nationality or race. Even when the principle was rejected the Japanese reserved the right to bring it up at some future time." It is within the range of possibilities that they will fight it out at the Disarmament Conference.

WHAT CHINA WANTS

China still hopes that at the Washington Conference the United States will back her in declaring that foreign powers neither legitimately possess, nor have a right to claim, spheres of influence and special interests in the "Flowery Kingdom"; also that all treaties, agreements, notes and contracts must be revised, including the right of extraterritoriality, so that the domination of Great Britain, Japan, France, Russia and other intruders may cease. America will be able to take this stand consistently, as she is the only one of the great powers, except Germany, which does not have some kind of hold on Chinese soil.

China may also insist upon the withdrawal of all foreign troops and police, the abolishment of foreign post offices, and the right to fix her own tariffs. "All these," writes Dr. Reid, "are just requests." And there is no doubt that if Great Britain, France and the United States insist upon the restoration of China's rights, Japan must yield. "The concessions made at the Peace Conference were unjust to China, and should never have been enacted," said President Wilson; "they were all exacted by duress from a great body of thoughtful, ancient and helpless people. There never was any right in any of

them. Thank God, America never asked for any, never dreamed of asking for any."

The casual student of the Far Eastern question naturally asks: "Why does not China, the most populous country in the world, arm and defend herself against foreign encroachments?" But the diplomatic policy of her oppressors has been to rule through disunion, which largely accounts for the present political cleavage between North and South China and the independence of the military Governors, rendering centralized control impossible. Also, as Gilbert Reid points out, if China should begin to spend millions on a vast army as a distinctly national movement, the Japanese, under existing conditions, would assume direction; or, in case of a navy, would wait until it became a valuable prize and then capture it. If China should join with Japan in a defensive and offensive military alliance; as is frequently urged by the Japanese Government, the development of China's military capacity under Japanese guidance would prove the menace of the future, the opening of the next world war.

Dr. Reid is also opposed to the International consortium headed by Thomas W. Lamont for financing China's resources and means of communication, on the ground that it is an exclusive scheme, Great Britain, France, Belgium, Japan and the United States being the only financial participants. In the second place it is an extraneous scheme, as China herself is not included, and thus her sovereignty is threatened. Accordingly, China prefers to form her own consortium.

The traditional policy of America is to keep hands off of China, and thus permit her to work out her own destiny. Surely the United States, which did not possess a clear title to any territory bordering on the Pacific Ocean until 1846, has no moral right to claim the supremacy of the Pacific

over nations which have occupied a vast territory on that ocean for more than 2,000 years.

THE PATH TO PEACE

We cannot claim for ourselves in Asia any social or political rights which we are unwilling to grant the Asiatics in America. As Herbert Adams Gibbons writes in his "New Map of Asia": "If we Americans and Europeans expect to keep Asiatics out of our continents and out of Africa indefinitely, and at the same time pretend to superior political and commercial rights in Asia, we shall precipitate a great struggle that may have its repercussions in our own hemisphere. The 'Yellow Peril' is far from imaginary so long as Europe asserts the right to dominate and exploit Asia. But if we reconcile ourselves to treating Asiatics equitably in their own continent (they do not ask more than that), we shall not need to prepare for 'the next war' with Japan."

In his closing pages Dr. Reid urges America to be both considerate and conciliatory in her attitude toward those powers which have conflicting interests in China, and urges the gradual elimination of racial, religious and national discords that impede the progress of the human race. This also was the keynote of the addresses recently delivered before the Institute of Politics at Williams College, where both Lord Bryce and Elihu Root championed the cause of Universal Brotherhood: "The nations must learn to have kindly consideration for one another," said Mr. Root; "they must learn the art of mutual concession; they must become internationally minded. It is not what a nation does for itself, but what it does for humanity, that entitles it to honor. We must learn that, in God's good world, the way to attain the heights of prosperity is not to pull others down and climb over them, but to help one another up."

MANGLING ASIA MINOR

BY GEORGE R. MONTGOMERY

Director of the Armenia America Society

A brief account, with maps, of ten different treaties, all secret and many of them conflicting with each other, which the Entente Powers have made with a view to dividing up Turkey among themselves—Final settlement still in the balance

THE recent success of the Greeks in Asia Minor, and the growing indications that they are planning to hold at least part of what they have captured, will force the Western European Powers to reconsider the entire matter of territorial allotments and zones of influence in the Ottoman Empire. One very suggestive bit of evidence that the Greeks are planning to hold what they have captured is found in the fact that they have restored to the City of Kutahia its ancient name of Dorylos; it is so called in the press dispatches emanating from Smyrna and Athens. Moreover, the fact that on Aug. 10, 1921, the exact anniversary of the signing of the Treaty of Sèvres, the Council of Premiers practically declared the treaty to be a dead letter, brings back out of the shadow all the previous agreements that have been made in the last seven years. These all become factors in any new deliberation as to protectorates and boundaries.

These many transient and conflicting agreements show to what an extent the present evils in Turkey are the result of rival and changing policies. The changes in European policy, due to rivalry and jealousy, have been particularly unfortunate for the native inhabitants of the country. Not the Christian populations alone but the Moslem populations also have suffered greatly, because the uncertainty permitted intrigue, and things could not settle down. Many of the

Christians and Moslems have been led to assume equivocal positions.

Had a definite policy been put into operation soon after the close of the war, all the elements would have acquiesced, nor would India have been stirred up. Possibly the uncertainty as to America's sharing in the task of reconstruction may have been a contributing cause for the delay in the adoption of a definite policy, but rivalry among the victorious Allies was the main cause. There was a period when the ambitions of Italy included even the Transcaucasus.

There is no doubt that at one time France had all her plans made to occupy Cilicia as an Armenian protectorate. Various reasons have been given for the unfortunate abandonment of that intention—lack of money and men, the objection of Italy, the desire to win the friendship of the Turks and thus head off the increasing British influence at Constantinople. As a result of negotiations between the French Government and the Armenian National Delegation in the Spring of 1918 France had promised to give autonomy to the Armenians in Cilicia; and when Georges Picot was sent out in April, 1917, to represent the French Government in its advance into Asia Minor, the following instructions were given to him: "In the coastal zone, which one day will be placed under our protectorate, your direction should have a more exclusive character, so as to give the population a clear intimation of the future

in store for them." This traditional policy of acquisition, of which the above instructions are an expression, is represented in certain of the secret international agreements. The divergence from this policy is represented in others; especially in the separate agreement proposed by France in March last and still under discussion. The vacillations must be appreciated for an understanding of the recent history of the Near East.

Mr. Picot carried out his instructions, and all the people of the coastal zone, as included in the Sykes-Picot Agreement, understood that France was to assume the protectorate over Cilicia, which was destined to be set apart for the Armenians. When, after the armistice, Picot was appointed High Commissioner at Beirut, he was named High Commissioner of Syria and Armenia. At a public banquet he offered a toast to Armenia. Colonel Bremond, who was appointed Governor of Cilicia, went from Paris as head of the Commission to Armenia. The other members of the

Commission to Armenia were distributed to executive posts in Cilicia. The baggage of the commission, when it arrived at Mersine, was marked "Armenia." The writing paper and the official blanks carried the heading "Armenia." The Armenian refugees were transported into Cilicia and even compelled to settle there. The first French army of occupation that went into Cilicia was called the Armenian Legion. The Armenian population of Aintab was forced to fight with the French against the Turks. By far the larger part of the local Moslem population of Cilicia took sides with the French against the Turks, supposing that the French were in the land to stay.

Then came the jealousy of the Greek success, the jealousy of the British, and the resulting pro-Turkish attitude, which brought about a decision to repudiate the Allies and make a secret and separate treaty with the revolutionary Turks under Mustapha Kemal. In Article 9 of the Sykes-

Map No. 1, showing details of the Italo-British convention of 1914, which gave Italy, France, Great Britain and Germany certain clearly defined railway concessions in Turkey. This was just before the war

Picot Agreement, the French had promised to make no concession of territory in the Blue Zone, which included Cilicia, without the previous consent of the British Government; but in this secret treaty with the Kemalists, France ceded an important part of the Blue Zone to the Nationalists without consulting the British.

The series of maps which accompanied the various treaties and agreements, all of them secret, will perhaps best exhibit the conflicting engagements and pledges that were made. These pledges dealt almost entirely with the Asiatic portions of the Ottoman Empire, because the priority rights of Greeks or Bulgars to the remnants of Turkey in Europe appear to have been recognized by the great powers. The claim of Russia also to Constantinople was recognized early in the war, but the defection of Russia, subsequent to the revolution there, altered that arrangement.

The first of these secret treaties

goes back to the Spring before the declaration of war and was called the Italo-British convention. We are in a position to publish details of this convention of 1914 and also the map that went with it. Nothing has been given out heretofore in any country in regard to this important agreement. It laid the foundation for many of the subsequent agreements and disagreements with respect to Near East settlements. This convention was made in the Spring of 1914 by Germany, Italy, Great Britain and Turkey. At that time Germany and Italy were allies, and Turkey was playing both ends against the middle. The negotiations were conducted in London directly with the British Foreign Office. The Ambassadors of Germany, Italy and Turkey represented their respective countries. Mr. Von Kuhlman signed the agreement for Germany, the Marquis Imperiale for Italy and Haki Pasha for Turkey.

The Italo-British Convention of

Map No. 2, showing approximately how the Turkish Empire was divided into British, French and Russian zones by the secret Sazonoff agreement of 1915, when Russia was still expected to share in the spoils of war. The arrangement as to Constantinople is conjectural

1914 shows that Italy's entrance as a claimant to privileges in Asia Minor goes back to a very different set of circumstances from that of the subsequent secret agreements, namely, to a time when Italy was the ally of Germany, and when she was brought upon the scene by Germany in an effort to check the expansion of Great Britain.

In 1913 the Ottoman-Aidin Railway, which was controlled by British capital, had asked for an extension of concessions. Map No. 1 (printed on a preceding page), which shows the details of the Italo-British Convention, indicates also the respective spheres of interest of France, Great Britain and Germany up to this time. The British railway, it will be seen, extended as far as Eghirdir. To the north was the Smyrna-Cassaba Railway, controlled by the French. To the northeast was the Bagdad Railway, controlled by the Germans. When the British asked for permission to extend their railway line, Tur-

Map No. 4 outlines the agreement of 1915 between Great Britain and King Hussein of the Hedjaz, by which the latter's four sons were to rule four States of a new Arabian empire. Later schemes of the allied nations have largely prevented the fulfillment of this promise, on the strength of which Prince Feisal and his army helped to conquer the Turks

Map No. 3 outlines the carving done by the Sykes-Picot Agreement of 1916. The Blue and Red Zones were to be ruled respectively by France and Great Britain, while the Brown Zone was to be internationalized. Zones A and B were to constitute an Arab State in which France and Great Britain respectively were to have priority in financial and commercial privileges

key was affirmatively disposed, and in order to thwart the British, Germany brought in her ally, Italy, to circumvent them.

The convention preceded the declaration of war by only a few months, and the commencement of hostilities prevented the actual granting of the concessions. The map shows the elaborate set of railway lines which Italy, supported by her ally, was to construct in the southwestern section of Asia Minor. This set of lines went far beyond any prospective likelihood of remunerative returns. That Great Britain agreed to this introduction of Italian competition into a region where the British had already invested heavily can be regarded as an indication of her good faith in the negotia-

tions. This concession to Germany's ally should go far to refute those who asserted that Britain's policy was to shut the Central Powers out. In the districts served by these projected Italian railways, the Italians had no mining concessions and no commercial interests. The British had both mining concessions and extensive commercial interests.

Map No. 1 does more than indicate the probable course of future railway development. It indicates what the Germans considered to be important production centres of the future. The

March 6, 1917. The ninth section of this secret treaty of 1915 begins as follows: "France, Great Britain and Russia recognize as an axiom the fact that Italy is interested in maintaining the political balance of power in the Mediterranean, and her right to take over, when Turkey is broken up, a portion equal to theirs in the Mediterranean—namely, in that part which borders on the Province of Adalia, where Italy has already acquired special rights and interests laid down in the *Italo-British Convention*." Italy coveted this portion of Asia Minor because of its proximity to the islands which she had seized during the Italian-Turkish War of 1913. No special map accompanied this pact.

THE SAZONOFF AGREEMENT

Preceding the Pact of London in 1915, and before the matter of Italy's participation in the war had become so prominent, there was arranged in London what may be called the Agreement of Sazonoff. Sazonoff was the Russian Ambassador at London, and this agreement, involving only the interests of Russia, Great Britain and France, established the main outlines which were adhered to in subsequent

agreements. This agreement has never been published, and it is said that Great Britain paid large sums at the time of the Russian revolution to buy up all the documents that had reference to it. The probable terms of the agreement of Sazonoff are given in Map No. 2. The boundaries in Eastern Turkey, as given in this map, can be considered as quite accurate. The boundaries with respect to Constantinople must be regarded as conjectural. There is good reason for believing that not much outside of the cities of Constantinople and Scutari was included in the territory to be administered by Russia, although possibly

Map No. 5 shows how Italy, under the agreement of St. Jean de Maurienne, was to have had a Green Zone that included Smyrna and ran almost to Adana. This was before Greece had come in for a share

termini appear to be selected not with a view to further extensions and connections, but the lines penetrate into districts from which mining or agricultural products might be foreseen as emanating. The Italo-British Convention of 1914 has, therefore, commercial as well as historic value.

THE PACT OF LONDON

There is a reference to the foregoing agreement in the secret "Pact of London" arranged between Italy and her new allies on April 26, 1915. The terms of this latter "pact" became public only when the revolutionaries in Russia published them on

there may have been an intention to consider the Black Sea littoral under Russian influence.

THE SYKES-PICOT AGREEMENT

The Sykes-Picot Agreement, often referred to, was signed in May, 1916. It is something of a mystery why the Blue Zone, granted to France by this agreement, as shown in Map No. 3, did not fill in all the territory attributed to France by the Agreement of Sazonoff. Possibly Mr. Sykes and Mr. Picot did not have before them a copy of the older agreement and outlined only the main provisions of the respective claims of Great Britain and France. In helping to draft this agreement Mr. Sykes must have comprehended only in part the pledges which the British had made through Colonel Lawrence to the Arabs; because the provisions adopted, while not in conflict with the pledges to the Arabs, were difficult to accord with these pledges. The main points in the Agreement are the following:

1. France and Great Britain will recognize and protect an independent Arab State or a confederation of Arab States in the Zones A and B, indicated on the map, under the suzerainty of an Arab chief. In Zone A France and in Zone B Great Britain shall have the right of priority in undertakings and in local loans. In Zone A France and in Zone B Great Britain will furnish counselors upon the demand of the Arab State or States.

2. In the Blue Zone France and in the Red Zone Great Britain shall be authorized to establish such an administration as it desires or as it may deem expedient after consultation with the head of the Arab State or confederation of States.

3. In the Brown Zone an international administration will be established whose form shall be determined after consultation with Russia and then in accord with the other allies and with the representative of the Shereef of Mecca.

4. To Great Britain will be granted the ports of Haifa and of Acre. Great Britain promises not to undertake any negotiations looking to the cession of the island of Cyprus without the previous consent of France.

5. Alexandretta shall be a free port for the commerce of Great Britain. Haifa shall be a free port for the commerce of France.

6. The Bagdad railway shall not be extended further east than Mosul nor further

north than Samara until a railway connecting Bagdad with Aleppo via the Euphrates Valley shall have been completed.

7. Great Britain shall have the right to construct a railway connecting Haifa with Zone B, and in case engineering difficulties arise, France will permit the line to pass through a portion of Zone A.

8. Customs regulations.

9. The French Government shall not cede its rights in the Blue Zone to any third party except the Arab State without the previous consent of Great Britain, and Great Britain makes the same agreement with respect to the Red Zone.

- 10, 11 and 12. Details with respect to the Arab State.

AGREEMENT WITH KING HUSSEIN

Map No. 4 presents the main features of the agreements between Great Britain and Hussein, Shereef of Mecca and King of Hedjaz. Although these agreements were made in July and October of 1915, they were not communicated to the French till February of 1919, that is to say, until the Peace Conference was well under way. A secret French Foreign Office report written in March, 1919, calls this "a case of flagrant bad faith." These agreements planned a great Arab Confederacy of four kingdoms, where the four sons of Hussein were each to have a throne. The oldest, Ahmed, was to be heir to his father's kingdom. The second son, Prince Feisal, was to be King of Syria with his capital at Damascus. The third son, Prince Abdullah, was to be King of Mesopotamia with his capital at Bagdad. The fourth son, Prince Zeid, a half-brother to the other Princes, was to have a kingdom in Kurdistan, with perhaps Mosul as his capital. Inspection of the provisions of this map will show how ill it accorded with the provisions of the Sykes-Picot Agreement.

The insistence of France not only that Syria be accorded to her in accordance with the Sykes-Picot Agreement, but also that her domains include Damascus and Aleppo, prevented the carrying out of the agreement with King Hussein. Prince Feisal attempted to hold his place in Damas-

Map No. 6 shows the new alignment under the Treaty of Sèvres. Greece gets Smyrna, Italy is eliminated, France abandons part of the Blue Zone, Turkey gains much, the Arabs lose out. The "Wilson boundary" of Armenia, which the Allies agreed to accept, begins west of Trebizond and runs south of Bitlis to the Persian frontier, and ought technically to be considered part of this map

cus in spite of the French, but after a brief recourse to arms was persuaded to withdraw. The British have done the best they could to satisfy King Hussein by setting apart an autonomous State of Transjordan, over which Prince Abdullah rules; and Prince Feisal has been established as King of Mesopotamia. Both of these arrangements are felt by the French to threaten their position in Syria.

AGREEMENT OF ST. JEAN DE MAURIENNE

The Agreement of St. Jean de Maurienne was negotiated on board a railway train by Lloyd George for Great Britain, by M. Ribot for France and by Baron Sonnino for Italy, and was made "subject to the consent of the Russian Government." Inasmuch as the Russian Government has never given its consent to this agreement, the British have construed it to have no binding force. The Italians have held that it would have been accepted by Russia save for the accident of the Russian revolution, and that therefore it has a moral force, at least so far as Great Britain and France are concerned. This agreement of St. Jean de Maurienne made Italy a

party to the Sykes-Picot Agreement of the year before. Map No. 5 shows how Italy was to have had allotted to her a Green Zone similar to the Blue and Red Zones previously given to France and Great Britain, respectively. There was also allotted a zone of influence, Zone C, to Italy on somewhat the same terms as Zones A and B had been previously set apart for France and Great Britain. Article 2 established Smyrna as a free port on the same terms as Haifa, Acre and Alexandretta, and in addition made Mersine a free port for Italian commerce.

The secret French Foreign Office report of March, 1919, mentioned above, refers in regretful terms to "conversations" which have modified the Sykes-Picot Agreement to the extent of abandoning Mosul and of granting to Great Britain alone the mandate for Palestine. Curiously enough, this report mentions the possibility of renouncing a part of the territories in the north and says that this would be none of Great Britain's affair, but would be a matter between France and the power which should have the mandate for Armenia. Presumably the reference here is to the United States as the probable mandatar.

THE TREATY OF SEVRES

The Turcophile influences already evident in the terms of the Armistice signed in October of 1918 found their more developed expression in the Treaty of Sevres of Aug. 10, 1920, the geographical features of which were illustrated by three maps. The third map had to do with a detail of the provisions for the internationalization of the Dardanelles and is not important for our purpose. The first and second maps, which are here reproduced as Map No. 6, show an entirely new alignment of interest. Greece appears; Italy is eliminated; and France abandons the largest part of its Blue Zone, compensation being had in the new arrangement as to Zone A. The Arabs lose out and the Turks gain. Although "His Majesty the King of the Hedjaz" is printed as one of the signatories of this treaty, there is nothing to show that any one actually signed in behalf of the Arab King. Certain it is that the Arabs have not accepted the treaty and that it went directly against the terms of the previous agreements with the Arabs.

THE TRIPARTITE AGREEMENT

Although in this Treaty of Sevres Italy and France appear to have aban-

doned some of their gains in Asia Minor, there was arranged—on the same date as that of the signing of the treaty—a Tripartite Agreement by which Italy and France obtained all the privileges contained in the agreements of 1916 and 1917, and were freed of most of the responsibilities. The evident intention of this Tripartite Agreement was to exclude other powers from sharing in the exploitation of concessions in the zones indicated. These zones are outlined in Map No. 7.

TREATIES WITH NATIONALISTS

Since this Tripartite Agreement there have been two separate agreements between the Nationalist Turks at Angora and France and Italy. Neither of these treaties has been ratified by the Government at Angora. The former provided for important modifications in the Sevres Treaty, proposed without consultation with the other signatories of the treaty. It took from the Arab State and from the Blue Zone an important slice of territory and gave it to the Turkish Nationalists. This was certainly a breach of faith with the Arabs, and directly against Article 9 of the Sykes-Picot agreement, where, as has been said, the promise was made not

Map No. 7 outlines the "spheres of influence" which the Tripartite Agreement of 1920 substituted for the zones which the earlier agreements had allotted to Italy and France

to abandon territory in the Blue Zone without the consent of Great Britain. Fortunate was it for the inhabitants of Cilicia, which constitutes the most important part of the Blue Zone, that the refusal of the Turkish Nationalists to ratify the separate treaty has held it up; for it is possible that this hostile attitude of Angora will drive the French back to their older policy, and they may decide to keep their troops in the districts of Cilicia.

If the right sort of adjustment is made in Turkey, under proper protection, if the different racial elements are granted geographical districts where they can work out their national life, there is every reason to expect that States comparable to the Balkan States in power and in prospects may be built up in the Tauro-Caucasian region. When Greece was

set free from Turkey in 1830 the Greek population was in the neighborhood of half a million. When Bulgaria was set free from Turkey the Bulgarian population was in the neighborhood of a million. Both Greece and Bulgaria have made great strides since escaping from Turkish misrule. The Balkan States sometimes have been referred to as types of perpetual ferment, but the ferment was largely supplied from outside, and, left to themselves, the Balkan States were in a fair way to establish a Balkan confederacy. There is good reason to believe that, with protection against the Turks assured, the Tauro-Caucasian races may group into, say, the following States: Georgia, Azerbaijan, Armenia, Kurdistan and Pont, which all might constitute a United States of Tauro-Caucasia.

ENGLAND'S HAND IN THE NEAR EAST

BY HENRY C. FLOWER JR.*

A clear and simple statement of the actual situation underlying all the intrigues of British, French, Italian, Greek and Arabian politics in the former Turkish Empire—Semi-official analysis

THERE is but one hand that rules in the Near East, and that is the hand of England. It may often be gloved, it may even be pocketed, but it is always there. The justice or injustice of this state of affairs is not here under question; suffice it that we know the fact.

Great Britain's control over Egypt and the Suez region is now, except for sporadic native uprisings, beyond the pale of conjecture. Even these periodic outbreaks are indications of her strength rather than her weakness, because those who clamor for Egyptian independence—the scum of her seaport populations, a coterie of political intriguers, and those among

the peasant fellaheen whom propaganda has reached—know full well that it is with a strong England they have to deal. The sympathy of France, Italy and even America is invoked, not because these countries have much influence in that region, but because the leaders of the Egyptian movement believe they are interested in preventing England from making her foothold too permanent.

*Mr. Flower, a Harvard graduate and a resident of Kansas City, was a naval aviator during the war, after which he made a tour of the world. While in Egypt he was asked by the representative of the United States to make a trip into Asia Minor and report upon conditions. His report, the release of which was sanctioned by the naval authorities, is summarized in the article herewith.

Yet Egypt knows that no matter what political terminology is adopted to cover her dependence, she is bound in every respect to the apron strings of Downing Street.

This does not imply that her condition is any less fortunate than it would be if she were the protege of some other power. Quite the contrary. I am firmly convinced that among the nations of the world England stands as the best colonizer. France is very apt to exploit the natural resources of a colony without giving anything to the indigenous population in return, in the way of education or civic improvement; and the United States would doubtless irritate dissenting multitudes by her unwillingness to compromise in the administration of strict and impartial justice. England, by long experience, has come to know that a people politically uneducated does not understand irrevocable laws and uncompromising law courts, and she has the good sense to temper her legislative enactments by cajolery and concession. But this is all another question linked too closely with that of Egyptian independence to be here discussed. To solve that problem one must first probe deeper and determine the answer to that all-important query: Can good government ever be a substitute for free government?

Palestine has lately come into prominence through the world-wide movement of Zionism. Sir Arthur Balfour, realizing early in the war that the support of the Jewish race would be of great moral value, particularly in the Near Eastern operations against the Germans and the Turks, issued his famous Declarations, in which he promised that if the land of Judea were reconquered, it should be given to the Jews for the establishment of their national home. The conference of the Allies called in May, 1920, at San Remo, gave legal sanction to these declarations, but at the same time expressly stipulated that no clause should be

so interpreted as to hamper or curtail in any way the interests of the Arabs. Now, any one who has been in Palestine during the last year cannot fail to realize that these two provisions are wholly incompatible.

In the first place, Judea is not a fertile country. There are certain valleys, to be sure, in which large crops are raised, but the deforestation of the surrounding hills in centuries past has not only deprived the country of vegetation but of the very soil that once covered the now prominent ledges of rock. The environs of Jerusalem are now waste and barren. When Omar marched triumphantly into the city in A. D. 636, he brought with him a horde of Arab settlers, and from that time on the Arabian people have eked out a meagre subsistence on this none too fertile ground. From bitter experience they have come to know that the land is not sufficiently fecund to support any large influx of outsiders.

Since the meeting of the San Remo Conference, the Jews (I should rather say the Zionists, for there are a great many Jews who do not approve of this attempt to drive out one race of people and re-create the Jewish kingdom by forcibly substituting another), have allowed themselves to be somewhat carried away by their enthusiasm. Now that their long-cherished dream is on the point of realization, they shun no step that points toward ultimate success. From the Arabs, impoverished by the ravages of war, they are buying every foot of soil that they can obtain. Where the Zionist money for these purchases comes from there can be little doubt. Prominent Jewish bankers and financiers the world over are keenly interested in this re-establishment of the nation of Israel. Nor is this buying up of the land the only way in which the Jews are seeking to gain control of Palestine. Jewish merchants are at this very moment selling their wares at just half the price of their Arab competitors, and are being repaid with unlimited subsidies

from Zionist coffers. The Arabs realize, to a man, that under such conditions they will soon be driven to the wall—driven out into the deserts on the further side of the Jordan to die. And they are too proud a race to give up without a fight. These are the causes that led directly to the Jerusalem riots of Easter week this year, and these are the causes that will continue to lead to unrest and rebellion throughout Palestine until something is done to mitigate the situation.

But this is not the point. We all know, or should know, that the power of England in the Near East is responsible for this state of affairs. The British Foreign Office has given its sanction to the principles of Zionism, and without this sanction the movement was doomed to failure. But now that the decisions of the San Remo Conference have been handed down, the Jews of the world are mustering their resources so that no consideration may stand in the way of this re-establishment of the nation of Israel. Only within the last few months General Boles, British High Commissioner for Palestine, has been removed and Herbert Samuel, a Jew, put in his place. As England decides the countries in the Near East are governed.

FRANCE AND SYRIA

Let me turn for a moment to the countries further north, to Syria and to Cilicia. France is still making more or less serious attempts to gain control over this section of the Near East. There is a small strip of Syrian coast lying north and south of Beirut, known as the Lebanon. This area has been pro-French since the time that Louis XIV. announced his protection over the people. In again sending an envoy to the Vatican, as she has very recently done, and in thus identifying herself as the champion of Catholicism, France has further strengthened her position among the indigenous Marmorites, for they, too, are orthodox Catholics.

But France's control over the rest of Syria and Cilicia amounts to practically nothing. From time to time General Gouraud sends an expedition into the hinterland to relieve some beleaguered garrison, or to effect the capture of some strategic point, but this by no means implies a domination of the country. A short week's sojourn in Damascus, the leading city of Syria, is sufficient to convince any one that the animosity against France—not only inside the walls, but throughout the surrounding country—is so bitter that the French Republic can never hope to make its control effective until it is willing to undertake an extensive expedition and subject the people by large military forces.

Though Great Britain has diplomatically remained in the background since the signing of the armistice with Turkey, nobody, even among the French, is duped as to her real power. In November, 1915, Sir Arthur MacMahon, acting in the name of the British Foreign Office, agreed to allow Hussein I., the old King of the Hedjaz, to establish the independent kingdom of Syria, including Palestine, Arabia, and parts of Mesopotamia, if through his support in the war the Allies succeeded in defeating Germany and in driving her out of the Near East. But when this end had once been accomplished, and the other secret treaties contracted during the course of the war brought to light, Hussein was shamelessly informed that the mandate over Syria had already been given to France under the provisions of the Sykes-Picot agreement drawn up in the Spring of 1916. There was nothing further to be done: England's word was law.

Emir Feisal, third son of Hussein I., who had led the Arab forces by the side of the English, and who had ostensibly been chosen as the ruler of this united Syria, made so bold as actually to declare himself King, and to attempt the establishment of a Government over the hinterland with Damascus as a capital. But the San

Remo Conference publicly confirmed the Sykes-Picot Agreement, and, although England may not have been entirely in sympathy, she was forced to give her nominal support to France in the enforcement of the mandate. Feisal abdicated at General Gouraud's dictation, and the French effected the temporary occupation of Damascus. Notwithstanding all this, and with a full realization that he had been betrayed, Feisal remained strongly pro-British. It was in his interest to be so. England has now installed him as King of Mesopotamia, much to the disgruntlement of France. And though France still has the mandate over Syria, she knows that England is at her elbow, ready to step in and take charge the moment she shows signs of weakening. If such a time should come, Feisal believes that the British Government, wishing as far as possible to make good its former promise, will call upon him to direct the Government of Syria. Then the complete realization of his nationalistic aspiration might be possible. With Great Britain in nominal and actual control of all that section of the Near East, it might not be difficult for administrative purposes to effect the unification of Syria, including Palestine, Arabia and Mesopotamia.

Most interesting is the situation whose nexus is Constantinople. Though censorship has kept a great many of the details from coming to light, it was here that one of the most heated and bitter of diplomatic battles was waged not long ago, involving the removal of the Caliphate. Throughout the Western world, and more especially in the United States, the feeling was very strong that the Turkish regime of intrigue and corruption had too long been the cause of unrest throughout the Near East. It was advocated, therefore, that Constantinople, the hotbed of illicit practices and political upheavals, should be purged of its viciousness; that the seat of the Ottoman Government should be transferred to some other city, and that the Turk should

irrevocably be driven from Europe. Those who opposed this solution argued that it was more advisable to keep the officials of the Turkish Government in some place where they could be carefully watched rather than let them retire to some city in the interior where their machinations could have free play.

It was Great Britain that was secretly advocating the removal of the Caliphate, and France was well aware of the fact. If Constantinople were no longer to be the centre of the Mohammedan religion, one of the two "holy cities," Mecca or Medina, would in all likelihood be chosen. Both these cities lie in the Kingdom of Arabia, over which the old King of the Hedjaz is supreme. Through their co-operation during the war against the Germans and the Turks in Palestine and Syria, a very firm bond of alliance has grown up between these people and the British, or rather between their respective Governments, for Hussein I. realizes that his position is wholly dependent upon the good will of Downing Street. France was also well aware of this fact, and knew that if the Caliphate were transferred to one of these two cities, England would be able to exert great influence over the Moslem world by her domination of its religious centre. Italy also was jealous of England's power, and took sides with France against her in this fight. About this time the Mohammedans in India, who number nearly 80,000,000, rose in protest and objected to the removal of the Caliphate from Constantinople, for they felt that its transference would symbolize the fall of the last kingdom in the world that followed the teachings of the Prophet. So England, with great show of magnanimity, consented to let the Caliphate remain where it had been since 1453, and allowed it to be known among her Indian subjects that her efforts had evidently brought about its retention.

Yet this did not mean that England was beaten. She had another

game to play. Since the signing of the armistice a joint control of England, France, Italy and the United States has existed over Constantinople. One morning last Spring every one in the city woke up to find that the fourteen-inch guns of the Queen Mary, the Iron Duke and the Benbow, three of the largest dreadnoughts in the British Navy, had been trained upon the War Office and other Government buildings in Constantinople, and that British "Tommies" with machine guns patrolled the streets. This accomplished, the High Commissioner for England announced to the High Commissioners of the other countries, and to the populace of the city, that Great Britain was henceforth in control of the military occupation of the city.

THE GREEKS IN SMYRNA

While England was thus engaged in Constantinople, Greece and Italy were both casting longing eyes on Smyrna, each lying in wait for the other to move. One day the Greek Government got word that an Italian squadron was steaming toward this desired seaport in Asia Minor, and she needed no further incentive. All available Greek battleships were immediately called into action and told to proceed to Smyrna with greatest possible dispatch. For a while it seemed as if the country that first effected the military occupation of the city would be the one to whom the mandate would be given, and neither Greece nor Italy was willing that the other should be thus favored. While the fleets were on their way, a violent storm broke over the Aegean Sea, and the Greek fleet was obliged to put in at one of the land-locked harbors of the coast. While waiting there, the Greek commander received a wireless message from the British Admiral in command of the Mediterranean squadron telling him to re-

main where he was and to await further orders; if he doubted the authenticity of these orders he had only to disobey, and a flotilla broadside would soon convince him that the authority was genuine. Apparently the same message was transmitted to the Italian fleet. After twenty-four hours' delay the Greek commander received another message from the British Admiral saying that he had been instructed by the Foreign Office to approve the Greek occupation, and that his forces would be allowed to proceed to Smyrna. From all indications the Italian fleet was ordered to put back, for its presence was never again heard of. And so Greece occupied the city and strengthened her claim to the mandate which the San Remo Conference was finally to award her.

Then Venizelos, Prime Minister of Greece, brought forward his demands regarding the reappropriation of the Turkish Empire. He held that Thrace, Macedonia, Smyrna and the Aegean Islands had belonged to Greece in ages past, and that they should now, in all justice, be returned to her. Those who first read his demands thought that he was asking for a very big slice, so that when it came time for compromising he would at least be sure of a few crumbs. Imagine the surprise even of the Greeks themselves when the San Remo Conference granted almost all of Venizelos's requests. And why? Because England was in a position of command at San Remo, because Greece staggered under an enormous war debt payable in a very short time to England, and because it was to their mutual advantage to stand together. England would rule in the name of another power, and Greece would attain her long-cherished commercial privileges. Here, as everywhere else in the Near East, the hand of England ruled, and rules today.

TROUBLES OF THE ZIONISTS IN PALESTINE

BY GERSHON AGRONSKY

For three years a soldier and correspondent in the
Holy Land

Analysis of causes that have fomented the Arabs' hostility to the Zionist Jews in Palestine—Chief difficulties now are lack of capital and delay of the League of Nations in approving the mandate

ZIONISTS generally concede that they have reached a searching time in their movement. The anti-Jewish riots in Jaffa on May 1, indisputably premeditated, in which forty Jews lost their lives and three times that number were wounded, have caused thinking Zionists to wonder whether there was not something wanting in their method. Suspension of Jewish immigration, ordered by the Palestine Government with the approval, no doubt, of the British Colonial Office, followed the riots. Then came Sir Herbert Samuel's speech on the occasion of the King's birthday on June 3, in which an interpretation of the Balfour declaration was given, for which, in the opinion of the member of the Zionist Commission to Palestine in charge of the political work, "there is not the slightest warrant in anything that has been said or written on the matter." Zionists are now thinking that they spent too much time in convincing the powers of the justice of their title to Palestine and far too little in proving to the Arab that the Zionists are not conspiring to evict him.

Failure to appease the Arab has led to the creation of what is commonly referred to in Palestine as the gulf between London, the centre of Zionist promises, and Jerusalem, the point of Zionist achievement. In London all public opinion, including that

of Parliament members from the Labor to the Government benches, with the one extreme and outstanding exception of The Morning Post, has enthusiastically endorsed the Zionist policy pursued first by the British Cabinet and more recently by the Colonial Office. In Jerusalem, on the other hand, some British officials even have been known to repeat the alleged Arab grievance. To be sure, these officials and others who profess sympathy for the Arab hasten to add that their being pro-Arab does not make them anti-Jew. But the fact of the matter is that the British official adapts himself to what strikes him at any given moment as the will of the majority, instead of being loyal to what is supposed to be the British policy. Last year, when the Administration believed that the so-called Haifa Congress, consisting of a small number of self-appointed Arab notables, was not a formidable force, its representatives were openly flouted and their demands rejected. Now, when the same number of Arabs meet, but with more insistent and garrulous demands, the Administration finds that it must yield to at least some of them. The suspension of Jewish immigration was by its very nature "a concession to Arab violence and prejudice," as The London Times pointed out in an editorial. So was the whole of the High Commissioner's speech,

announcing a policy of restrictive immigration for the future, and a peculiarly limited interpretation of the British Government's promise to the Zionists, as embodied in the Balfour declaration. This looks almost—in the words of the same political member of the Zionist Commission—"as if immigration were restricted as a punishment to the Jews for having been killed and wounded and robbed."

The Jaffa riots this year and the Easter outbreak in Jerusalem last year were not the result of a popular uprising. They were caused by Arab politicians who, in their campaign against the announced British Zionist policy, have used the good-natured, uneducated Arab as a dupe. These politicians, protagonists of an "Arab Homeland" or a "United Syria," are of two classes: There are the superior natives of Palestine, members of the landed class, who have had a much better time of it under the Turkish regime, and who feel that their interests are endangered by a Western Government with Western ideas of justice. They also fear Jewish immigration because of the effect of the Jew's higher standard of living upon the exploited cultivator. Foreigners who are opposed to the British because they would prefer French rule over what they choose to call Southern Syria constitute the other class. Peculiarly enough, there has been formed a loose sort of union between the representatives of the former, who are mostly Moslem, and the latter, who are Catholic. That French Syria received a very substantial piece of territory to the northwest of the Sea of Galilee, with nearly all access to the waters of the Litani River, is due to the manipulations of this combination. The ordinary native has had no hand in the matter, and it is doubtful if even now he has any knowledge of what has been done or is being done in his name.

The success of the Arab agitators is largely due to the injection of a new note in their appeal. They used

to express the fear that Jews would overrun the country and dispossess the native. When this fear was dispelled by categorical and convincing assurance from British and Zionist sources, Arab leadership adduced a new reason. The Jews, said they, even if admitted in reasonable numbers, would, by reason of their wealth, superiority in knowledge and political acumen, seize the most important places in commerce, in industry and in politics. When, after a year of Jewish immigration, Jewish capitalists failed to swarm to the country, the ten thousand or so pioneers from Eastern Europe embracing labor of the hardest kind on the roads and on the railways, the politicians raised a cry that Jewish Bolsheviki were swamping the land.

The riots and other overt acts do seem to point to hostility on the part of a section of the native population toward Zionist immigration. It is based, however, on a misconception of the Zionist aims, and could be overcome. Those who have spent any time in the country know, as the Arabs directly affected by Zionist work know, that Palestine has much to gain and nothing to lose from a large Zionist immigration. Where Arab villages cluster about Jewish colonies, said Winston Churchill, "the Arab houses are tiled instead of being built of mud, so that the culture from this centre has been spread out into the surrounding district." Low as the standard of wages is in Palestine, it is infinitely higher where Arabs are employed by Jews. Jewish labor has given an impetus to the organization of Arab labor. Arab trade unions are springing up that never would have sprung up had the country been left to Turkish ideas of economic progress and the Effendi's idea of social justice. The network of Zionist schools has prompted Arab parents to begin thinking of their children's education. The Jewish peace courts are beginning to serve as models for the Arabs, who are only now learning to settle

disputes by other means than tribal feuds resulting in mutual extermination. Had the Zionists been in a position to give free play to their powers and given a stable form of administration, there would be no more hostility against Zionists and Zionism.

Peace in Palestine will be secured when the League of Nations puts the formal stamp of approval on the mandate, and when the Zionist organization obtains the means for carrying out its program. Just now there is keen disappointment on the part of the Palestine Government with the Zionist Organization. When the Jewish National Council protested against Samuel's interpretation of the Balfour Declaration, the High Commissioner replied, with some bitterness, that he was not to blame. Where, he asked, is the Jewish capital; where the great Jewish minds that were expected to regenerate Palestine? The Jewish representatives could only point to the plight of the Jewish people. Of the 15,000,000 Jews in the world, only the Jews of America and of the British Empire are in position to make substantial financial contributions to the Zionist movement. The rest, especially those in Eastern and Central Europe, are politically incapacitated and financially ruined. It also happened that a period of decided Zionist inactivity in this country coincided with the inauguration of the civil administration in Palestine in July last year. This inactivity, following four years of splendid organization work and whole-hearted financial assistance to the World Zionist Movement, was in the main responsible for the rejection of the former American Zion-

ist leaders at the Cleveland convention. Meantime, the plans proposed by the Palestine Foundation Fund (Keren Hayesod), which contemplated considerable expenditure for immigration, for purchase of land for agricultural settlements, for afforestation and terracing of the hillsides, for drainage of marshes, sanitary service, educational facilities, co-operative and mortgage banks, and a great electrification and irrigation scheme—all had to be pigeon-holed pending the financial support from America which was not forthcoming. Zionists in this country, aware that their inactivity was at least partially responsible for the unrest in Palestine, welcomed Dr. Weizmann, the President of the World Zionist Organization, when he came to enlist the support of American Jewry.

The delay in registering the mandate because of America's refusal to participate is holding up a number of important concessions. Industrial stagnation produced in this way leads to dissatisfaction with the Palestine Government and disappointment with the Zionist Administration. It is responsible for the continuous increase in import figures and corresponding decrease in exports. It tends to scatter sparks in a country surcharged with combustible material. Those earnestly wishing to see peace in Palestine, which is becoming the pivot of the Near East, who desire to see an end to the eternal wrangling between the sects over the holy places, who wish to see the Zionist dream on its way to practical achievement, hope for three things: They want the mandate to be ratified, the Keren Hayesod to succeed, and, as a result of the two, the Arab to be reconciled.

POLAND AND THE JEWS

BY MAURICE SAMUEL

Member of the Morgenthau Mission to Poland

A reply to the article by James J. Kann in the August Current History defending the attitude of the Poles toward the Jews—Various evidences of Polish injustice and persecution cited—Why no Polish paper published General Jadwin's report

IT is impossible to reply to Mr. Kann's article, or to analyze the Polish-Jewish situation without first pointing out certain fundamental inaccuracies on which much of the argument of Mr. Kann is based. Almost at the outset we find the following passage: "Since the report of the Morgenthau Mission it is almost unnecessary to waste space with a denial of the vivid and exaggerated stories of atrocities which have been disseminated, for one reason or another, as the various allegations of this kind were fully investigated and properly disposed of by that body of men." Further in the article occurs the phrase, "the rare instances of violence to the Jew. * * *"

A dry and colorless report of bare physical facts, the Morgenthau report contains among other matters a detailed and dispassionate account of the massacre of seventy Jews in Vilna, sixty-odd in Lemberg, thirty-odd in Lida, thirty-odd in Minsk, about the same number in Pinsk; it tells coldly of the brutal deportation of hundreds of Jews, of the violation of thousands of Jewish homes. As interpreter to the mission during the investigations in Vilna and elsewhere, I heard from surviving victims of the heartless murder of defenseless men, women and children, was told by an eyewitness how Weiter, the brilliant Jewish dramatist (a pro-Polish writer, *en passant*), was dragged into the street and shot down by jeering soldiers; how a friend of

his, Mme. Sherman, who pleaded for him, was shot down by his side; how eight Jews, who were being marched to prison, were shot down on the road to Lipuwka (a suburb of Vilna) by their escort, and hastily thrust into a common grave. Does Mr. Kann know nothing of the story of Pinsk, where a Zionist meeting was interrupted by Commandant Luszinsky, and thirty-six Jews were marched out and shot down without semblance of a trial? He will find the facts set down without exaggeration in the Morgenthau report. Does he know nothing of the massacre of Lida? He will find an unimpeachable account in the same document.

But there is this further statement of Mr. Kann: "The failure of the Government to protect the Jews is not due to any predetermined policy of the officials, but rather to the general weakness of the administrative system. * * *" Permit me to quote from unpublished notes of mine, made in Poland while with the Morgenthau Mission; they will throw a curious light on the attitude of Government officials.

General Jadwin, a member of the Morgenthau Mission, went down with Captain Goodhart and another American officer, both of them members of the same mission, with the Polish troops which took Minsk from the Bolsheviki. Before General Jadwin's official report was published, there appeared in part of the Jewish press a statement that after the tak-

ing of Minsk thirty-odd Jews were killed and over three hundred Jewish stores looted. The Polish P. A. T. (Official Polish Telegraph Agency) printed a counter-report, stating that only seven Jews had been killed, and these accidentally or deservedly. Side by side with this Polish version appeared, of course, the usual editorial comment, branding the Jewish reports as wild exaggerations and intimating that the Jews were traducing Poland in the eyes of the world.

The very day that the Polish press printed the denial ("official") of the Jewish reports, it might have obtained from General Jadwin the official report of the mission on the Minsk incident, in which the General stated that thirty-odd Jews had been killed and three hundred Jewish stores looted. Not a single case of Jews shooting on the Polish soldiery from the windows (this was a favorite defense of the Polish press) had been reported or observed.

General Jadwin's report appeared, of course, in the Jewish press. *Not a single Polish organ, governmental or otherwise, reproduced General Jadwin's report.* But the crowning insult lay in the last words of the official Polish report, which, after insisting that only seven Jews had been killed, added: "*General Jadwin was a witness of the taking of the town!*"

Let it be noted that among the Polish organs referred to are several official and semi-official journals, namely, the papers of Dmowski and Niemojewski. Let it be further noted that Commandant Luscinsky, by whose orders the thirty-six Jews of Minsk were shot down without trial, was never rebuked, much less punished.

Mr. Kann's defense of Polish hatred for the Jew falls into four sections: The intense patriotism of the Poles, who, now that the opportunity is theirs, desire to see their country united and homogeneous; Jewish separatism; Jewish Bolshevism; Jewish business. It is not the first time that the last two explanations have

been offered *en bloc* without an appreciation of the fundamental contradiction contained in them. "The Jews," says Mr. Kann, "are inclined by heredity toward a mercantile life." Yet, in the same article, he speaks of the "preference of great numbers of them for the rulership of the Germans or the Bolsheviki." Now, if there is any class of society which hates Bolshevism with all its heart and soul, it is the merchant class, the distributing middleman, whom the Bolsheviki first and most rigorously suppressed. And the truth is, as Mr. Kann states, that the Jews, "forbidding the ownership of property, form the great class of merchants." To accuse them of Bolshevism, then, is the height of absurdity. And to blame them for constituting "the great class of merchants" is, in view of the fact that "they were forbidden the ownership of property," the height of injustice.

Let us turn to the accusation of Jewish separatism and its relation to the desire of the Poles for a united and homogeneous Poland. Mr. Kann says:

"The Jews who live today in Poland are mainly the immigrants of recent years, who have come westward from Russia. These late arrivals, or 'Litwacs' are as orthodox in their beliefs and customs as were their forefathers generations ago." These are two historical inaccuracies. *There were Jews in Poland before there were Poles.* The vast majority of Polish Jews have in any case been settled in the country for centuries. During the wars of Bogdan Chmelnitzky, in the seventeenth century, 300,000 Jews, we are told, were massacred in Poland. This does not sound as though the vast majority of Jews were recent arrivals. Moreover, there is not a Jew who does not know that the "Litwac" is the modernizing element in Poland. I wonder whether Mr. Kann has ever traveled from Warsaw to Vilna through the Jewish towns of Wishkow, Ostrow, Zambrow, &c., and seen the Jewish gabardine

give way gradually to modern garb as he came into "Litwac" territory. One such trip would have shown him the absurdity of his contention. Such separatism as exists among the Jews of Poland is *not* the result of foreign influence; it is the heritage of Jews whose historic claim to Polish citizenship is at least as well founded as that of the Poles. And the "separatism" of the Polish Jew is confined to utterly harmless details of dress and appearance and to the practice of a different though not inferior religion.

But the most curious accusation is that "the Jews insist on crowding together in ghettos, where filth and disease cannot possibly be prevented." I have spoken with hundreds of these unhappy Jews, who live, four, five, six, ten to a room, in the horrible Franciskana 29 of Warsaw and in the equally horrible Baluty of Lodz; I have yet to learn that there is a single one of them who "insisted" on the priceless privileges of dirt, poverty and hunger; that there is a single one of them who would not sacrifice a year of life for the opportunity of removing to the Marshalkowska or the Georgiewska, nearer to their wealthier co-religionists.

The blind demand of the Poles for a homogeneous country, excited to the point of fanaticism by sudden liberation from foreign oppression, is only the explanation of their hatred for the Jew, not an excuse for it. Nor is it a purely Polish problem. The clauses in the Polish treaty which give the Jews minority rights (there are only 5,000,000 Jews in Poland, notes Mr. Kann—rather more than there are Irish in Ireland, that is) were *not* peculiar to Poland or to the Jews. They were an answer to the ancient and bitter problem of minorities, whether of Hungarians in Rumania, of Germans in Czechoslovakia, or of Poles in Lithuania. The ancient system of repression (practiced by Germans on Poles, by

Hungarians on Czechoslovaks, by Germans on Alsatians, to quote a few historic instances) is discredited; part of the war at least was fought by the Allies for the removal of this ancient evil. Ethnic homogeneity is, of course, the dream of every country; but where populations are so mingled as in Europe, it is an impossibility, and no repression, no persecution, will achieve the disappearance of millions of human beings with powerful ethnic characteristics. Germany has learned that lesson at terrific cost; let Poland benefit by her neighbor's disasters.

The problem is not as simple as this critic would have it appear. "The Jews must be persuaded to forsake their secular peculiarities," he says. "They must be educated in the modern conception of religious practice, taught that devotion to the State is as paramount as devotion to creed." The Jew does not need or desire outside tuition as to "the modern conception of religious practice." Nor need he be taught that "devotion to the State is as paramount as devotion to creed." America has shown, by its large and generous tolerance of "secular peculiarities" of a harmless nature, that the Jew responds by instinct to love of country—witness the tens of thousands of Jews (a goodly proportion of them of Polish origin) whose names are recorded on the rosters of the American armies of the great war. The problem is a large and complex problem of education, of the evolution of tolerance and neighborliness. It is not the problem of a day. The long and vicious work of demagogues has borne fruit in the unreasoning embitterment of the whole Polish Nation against the Jews. It will need the efforts of lofty and inspired statesmen to undo that disastrous work. Perhaps the troublous times do not encourage such efforts, but sooner or later they will be made and crowned with success.

INTERNATIONAL CARTOONS OF CURRENT EVENTS

The New Czar of Russia.

—Kolokol, New York.

[American Cartoons]

Enforcing the Volstead Law

—Central Press Assn.

The difficulties of enforcing the Volstead law seem to increase, and the acquiescence of the public, which was looked for by prohibition advocates after the first protest of the "wets" had subsided, is nowhere in evidence. Bootlegging is rampant, "rum runners" with liquor from abroad are hovering about the coast, and an immense quantity of liquor is flowing over the Canadian and Mexican borders.

Another Troublesome Immigration Problem

—Dayton (O.) News.

Not only does the Government have its difficulties in excluding contraband shipments of liquors from abroad, but its efforts are hindered by a marked change in Congressional circles on the question of enforcement. Sentiment seems to be growing that prohibition agents have been too drastic in the matter of entry and search of private houses, and an amendment has been passed in the Senate which makes it a punishable offense to search premises without a warrant.

[German-Swiss Cartoon]

INTERNATIONAL DISARMAMENT

-Nebelspatter, Zurich.

(1) France, (2) England, (3) Japan, (4) Russia, (5) Poland, (6) America agree that disarmament must begin, and toward this end the first step is the total disarmament of Germany (7).

[English Cartoon]

UNANIMOUS

—The Passing Show, London.

JAPAN: "My intentions, I assure you, are entirely Pacific!"
 UNCLE SAM: "Sure—so are mine!"
 JOHN BULL: "Same here!"

[Dutch Cartoon]

THE IRISH QUESTION

—De Amsterdammer, Amsterdam.

LLOYD GEORGE (to De Valera): "Pull on the oars. We must pass through the breakers to reach the harbor!"

[American Cartoon]

"Search me, sonny."

Neptune, in the accompanying cartoon, is represented as giving up the conundrum, "What is Pacific about this ocean?" That ocean is now generally acknowledged to be one of the most dangerous political storm centres in the world. The importance of the subject is indicated by the fact that Asiatic newspapers today almost invariably refer to the coming arms-limitation conference at Washington as the "Pacific Conference."

—Detroit News.

A BULGARIAN REPLY TO SERBIAN CHARGES

To the Editor of Current History:

To my plea for justice to my unhappy country, published in the May issue of *CURRENT HISTORY*, Mr. Gordon Gordon-Smith, in the issue for July, has returned rash denials couched in vehement and abusive language. Let me point out that denial is not refutation, and that violent language can add nothing to the defense of a good cause.

I know Mr. Gordon-Smith as an old hand in the bolstering up of Serbian calumnies against Bulgaria. No Serbian could be more violent than he in his denunciations of Bulgaria and of the alleged wrongs that Bulgaria has inflicted upon Serbia. He is "more Royalist than the King." Special writers for special purposes are necessarily so. I am, however, obliged to him for the opportunity he has given me to array a further list of facts and figures in the defense of my country against unscrupulous abuse and accusations.

I stated that Bulgaria led the Balkan allies in the first Balkan war; fought the great and decisive battles, and unaided drove the Turks—the common enemy—to the walls of Constantinople and obliged them to sue for peace. I further declared that Bulgaria committed no acts of treachery against her allies or against the Entente powers, and that the conduct of those allies, on the contrary, was invariably treacherous toward Bulgaria throughout the war. I repeat those statements.

Lack of space prevents me from giving all the facts which prove that Bulgaria was the leader and main belligerent in that first war. The Serbian operations were limited to the south, in Macedonia—those of Bulgaria extended not only to Macedonia, but also to Thrace. The Turkish forces in Thrace totaled 215,000 men, as compared with only 60,000 in Macedonia. Serbia fought but one decisive battle, that of Koumanovo. She fought a secondary battle at Bitolia (Monastir), and Bulgarian forces contributed powerfully to the Turkish defeat. Bulgarian combatants were active in clearing Macedonia of the Turks. The main

Bulgarian forces, after a series of hard-fought battles, immured some of the Turks in Adrianople and drove the rest to the Chataldja positions and Boulair on the Gallipoli Peninsula.

Though the Serbians contributed 28,000 men to complete the blockade of the Adrianople fortress, not one Serbian took part in the actual storming. Not one Serbian took part in any of the operations against the Turkish main forces, Adrianople excepted. Serbia withdrew after the secondary battle of Bitolia, twenty days after the beginning of hostilities; Bulgaria fought on until war broke out between the allies, June 29, 1913. The report of the Carnegie Commission shows that Bulgaria's losses were 30,024 killed, 53,465 wounded, 3,195 missing, a total of 86,684 casualties. In contrast Serbia had 5,000 killed and 18,000 wounded. (These figures were given by the Serbian Minister of War to the Serbian Assembly. Both Serbia and Greece withheld the information demanded by the International Commission.) The data given will enable the reader to draw his own conclusions as to which of the allies was leader in the war.

Let me now dispose of the charges made against the Bulgarians of committing atrocities on Serbians and others. Mr. Gordon-Smith formed part of a self-constituted international commission of inquiry, composed of himself, his friend Professor Reiss of Lausanne—one of his main witnesses—a Belgian newspaper correspondent and a Serbian officer. Mr. Gordon-Smith rode, as he says, through Serbian Macedonia after the retreat of the Bulgarians and the conclusion of the armistice and witnessed as he progressed from village to village the "hell" work committed by the Bulgarians during their occupation.

The one-sided report of this commission has been largely exploited by all interested in its special purpose—viz, the damage of Bulgaria—especially during her long and enforced isolation from the outside world, while she has been unable to utter a word in her own defense. Mr. Gordon-Smith still

lays great stress upon this report. He totally disregards the fact that Bulgaria, after being made the victim of similar reckless charges following the second Balkan War, appealed for an impartial inquiry, and that that noble institution, the Carnegie Endowment for International Peace, heard this appeal, and appointed an international commission to ascertain the truth, and that this commission made an exhaustive report ("the report of the International Commission to Inquire Into the Causes and Conduct of the Balkan War"), the main conclusion of which was that, so far as atrocities were concerned, the conduct of the Bulgarians, as compared with that of their allies, *was the least reprehensible*.

I would further point out that this Professor Reiss who accompanied Mr. Gordon-Smith on his expedition of inquiry has been and still is a paid Serbian agent, the organizer of the secret Serbian police, and that he is one of the main propagators in the foreign press of calumnies against Serbia.

The charges that Bulgaria acted treacherously both toward her own allies and toward the Entente are absolutely unfounded; the facts, on the contrary, point wholly the other way, so far, at least, as Bulgaria's allies are concerned. The Bulgaro-Serbian Treaty of 1912 provided that the occupied Turkish territories should fall under a condominium. Serbia unblushingly violated this clause even in the districts cleared of the Turks by the Bulgarian forces. The exigencies of the war demanded that these forces proceed to join the main Bulgarian forces pitted against the main Turkish armies defending Adrianople and Constantinople. In the rear of the Bulgarian Army the Serbians closed the Bulgarian schools, expelled the Bulgarian Bishops, and administered as Serbian even the territories recognized by the treaty as incontestably Bulgarian. This treaty bears the date of Feb. 29, 1912.

The Serbian Minister of Foreign Affairs sent out a circular, dated May 23 of the same year, to the Serbian representatives abroad, in which he instructed them to bear in mind that Serbia had no intention to abide by the frontiers fixed by this treaty, and that they would have to be extended southward.

While the Bulgarian Army was exerting

all its resources to keep in check the Turkish forces—ever increasing in numbers and growing in desperation at Chataldja and Boulair, on the Gallipoli Peninsula—the Serbian Army was at complete rest. Secretly it was building and occupying fortifications with which to dispute eventually the rights the treaty gave Bulgaria. Serbia furthermore concluded a secret offensive treaty with Greece against Bulgaria on May 5, 1913.

Bulgaria did attack the Serbians on June 29. It was an attempt, after the failure of the deceitfully protracted negotiations, to occupy the territory the treaty gave her. A question, familiar to all American readers, may here be asked: Was the first shot fired in Lexington held responsible for the war which followed?

It is absurd to talk of treachery, as Mr. Gordon-Smith does, on the part of Bulgaria against the Central Powers. Bulgaria had the uncontested right of choice. She had no sympathy with the Central Powers; her sympathies were naturally with Russia and her allies. As Italy and Rumania made their bargains for joining the Entente, so Bulgaria tried to make hers. She failed, not for lack of good-will, but because the Entente diplomacy, dominated in this case by that of Russia, refused the very reasonable minimum satisfaction demanded by Bulgaria—the abrogation of the Bucharest treaty of 1913. Bulgaria blundered by taking, as she believed, the shortest cut toward securing the reunion of her race, frustrated by the treacherous coalition of her former allies and the Bucharest treaty. She joined the Central Powers solely for this purpose, moved by disappointment in the failure of her negotiations with the Entente.

Mr. Gordon-Smith stoutly asserts that Rumania, having failed in her demand for rectification of frontier, mobilized and marched against Bulgaria. Rumania demanded no rectification; what she asked was cession of Bulgarian territory, and this at the suggestion and entreaty of Serbia and Greece, already united against their leading ally, Bulgaria. Right or wrong, Rumania did receive satisfaction. The Conference of the Ambassadors in St. Petersburg awarded Rumania the fortress town of Silistria, with some territory. Rumania accepted the award, and a mixed commission was fixing the new frontiers when war

broke out between the allies. Rumania joined in it by invading undefended Bulgaria, undoubtedly encouraged by Russia, who wished to see Bulgaria defeated.

Mr. Gordon-Smith's insinuations, accusations and reckless statements against Bulgaria are too many for me to deal with in their entirety. One and all, they are of the same character. I will say a word as to Bulgaria's endeavor to elude the execution of the peace treaty of Neuilly. How can she, how dare she think of such a possibility, disarmed as she is, surrounded as she is by neighbors who are like hungry wolves, waiting to fall upon their defenseless prey? Mr. Gordon-Smith is exasperated at Bulgaria's organization of compulsory labor. Serbia—the hungry wolf at the door—wished to see in this organization military power and raised a clamor of protest. The competent in such matters, the representatives of the Powers, have not looked at this organization with the eyes of the Serbians, and have allowed the law to stand.

"The National Library of Belgrade was carried off to Sofia and its priceless volumes and manuscripts reduced to pulp," says Mr. Gordon-Smith. The statement is untrue. On the evacuation of Belgrade this library was brought to Nish, and there abandoned on the capture of the place by the Bulgarians. The Bulgarian authorities immediately took steps to store it in a safe place, out of the war zone, and transported it to Sofia. In Sofia a special building was rented, and the books taken out of their mouldy cases and arranged on shelves. After the armistice a Serbian commission of professors made inquiries as to the existence of this library; believing it to be destroyed, in whole or in part, they had already calculated the amount they would claim as compensation.

Their surprise was great to find the library in the best possible order and condition. They had counted too much upon the "lack of culture" of the Bulgarians, supposedly incapable of appreciating literary wealth.

This library has been restored to the Serbians—by a commission presided over by a superior officer of the French military mission in Sofia—complete and uninjured; 67,029 bound and unbound volumes in 159 cases. The calumny against Bulgaria, however, has been repeated ad nauseam; and never once refuted by the Serbians. Why should they attempt to do so? To refute one calumny would require the refutation of so many. Not doubting that this slander was carried also to the Carnegie Endowment Fund for Peace, I obtained, a short while ago, certified copies of the reports drawn up on the occasion of the return of the library. These documents are now lodged in the offices of the Carnegie institution.

One last word about the Bulgarian prisoners of war in Serbia, not those taken by the Serbians themselves, but the 12,000 prisoners delivered over to them by the French command as part of the common war booty. I can refer only in passing to the atrocious treatment by Serbia of these war prisoners, in complete violation of the provisions of The Hague Convention. There are still some hundreds of these men held in bondage in various places in Serbia, employed in *corvée* labor, and deprived of all communication with their native land.

Serbia is the ally of the great conquerors; Bulgaria, disarmed and humiliated, is without remedy and cannot even secure the execution of the clauses of the Versailles Treaty which are favorable to her.

P. M. MATTHEEFF.

Sofia, July 28, 1921.

DEMANDS OF THE BLACK RACE

THE Pan-African Congress held in London toward the end of August, 1921, was attended by various peoples of African descent in the United States, the West Indies, Central and South America and Africa. At the session of Aug. 29 a manifesto was read by Secretary William E. Burghardt du Bois of New York, which declared it to be "the duty of the world to assist in every way the advancement of

backward and suppressed groups of mankind," and protested against the treatment of colored people as uncivilized. It argued that the experiments at self-government attempted in Haiti and Liberia by the pure blacks, and in South America by the democracies of mixed blood, had been successful, and on this it founded a demand for general negro enfranchisement in white countries on the basis of educational qualification.

A GREEK DEMOCRAT DEFENDS CONSTANTINE

To the Editor of Current History:

After reading N. J. Cassavetes's article, "The Case of Constantine and the Allies," published in the September number of *CURRENT HISTORY*, one gains the impression that its author regards himself as being conversant with facts concealed from the average Greek. And yet the documents he invokes have been used on so many occasions that they are literally "worn out." Says he: "These facts are well known to the world. Only the Greek people have not been allowed to know them." Surely he knows that the Greek Venizelist newspapers have devoted most of their space during the last three or four years—since the first Constantine-Venizelos disagreement proper—to these so-called documents and to the inexhaustible Venizelist arguments.

I speak as an independent, non-Constantinist, non-Venizelist Greek—a democrat. One may be a democrat without denying justice to a man, even though he be a king. What should be remembered above all is that Constantine has never had a fair trial.

Constantine, appreciating Germany's military organization, predicted a long war without victory, a prediction which would very probably have been realized had America not gone to the aid of the Allies. Since no one then felt confident that America would ultimately participate, Mr. Venizelos was obviously rash in advocating Greece's entry into the conflict. Later, when Serbia was attacked by Bulgarian troops, Mr. Venizelos felt that under the Greco-Serbian treaty of alliance Greece was obliged to go to Serbia's assistance. Constantine held that the object of the treaty—common action against Bulgaria, in case of attack on either of the allies—had been attained since the second Balkan war (1913). Of course, if, in reality, the Greco-Serbian treaty placed an obligation on Greece to go to Serbia's assistance, Constantine deserves the condemnation of every moral person. The evidence presented by Mr. Cassavetes, however, has not convinced many of us Greeks of the Greek King's guilt so far as the treaty is concerned.

Mr. Cassavetes's contention that Constantine "ordered the royalist troops at Athens to open fire upon French and Italian detachments" is a bold assertion. Every Athenian knows that neither the King nor the Government of Greece was in any way responsible for the attack upon the allied troops. The free, independent, proud Greeks resented the invasion of their capital by foreign troops, as any people with a sense of pride would have resented invasion, or even the mere presence of foreign troops in their capital. An American citizen, knowing how difficult it is to control a mob, will readily understand the Greek Government's position. The fact that most of the persons involved in the conflict wore the uniform of the Greek soldier does not render Constantine responsible for their conduct.

Another charge against Constantine is that he accepted moneys from Germany. Were Mr. Cassavetes as well informed on the Greek question as the average Greek, he would not have touched upon the question of the German loan, since that has been settled satisfactorily for the then Greek Government by the Venizelist courts. After trying the Government which negotiated this loan, the court of Mr. Venizelos decided that there was nothing treasonable or even illegal in this Greco-German transaction.

But the greatest argument against Constantine is the surrender of Fort Rupel to the Bulgars, the enemies of the Allies. Indeed, this may be a proof that Constantine was pro-German. It is well, however, to remember that prior to the surrender of this Macedonian fortress Saloniki, another part of Greece, was occupied by allied troops. Among others questioned by the defense counsel was Nicholas Politis, Minister of Foreign Affairs in Mr. Venizelos's Cabinet and formerly a professor of international law in a French college. Mr. Politis was forced to admit that the landing of allied troops at Saloniki constituted a violation of Greece's neutrality. The surrender of the fortress to the Bulgars, then,

was made evidently for the purpose of neutralizing the effect of the allied landing at Saloniki.

Mr. Cassavetes is mistaken in believing that the Greek people have not been allowed to know the facts. On the contrary, it is the foreigner, not the Greek, who has been denied information. But even should we admit that Mr. Venizelos's defeat at the polls and Constantine's triumphant election were due to the ignorance of three-fourths of the Greek voters, to what should we attribute the anti-Venizelism of four-fifths of the members of the bar of Athens, the cream of the country's intellect? To what should we ascribe the anti-Venizelism of the Medical Association of Athens, manifested by their triumphant election as their President of Professor Gheroulanos, whom Mr. Venizelos had expelled from the Athenian University and exiled? How does Mr. Cassavetes explain the verdict of Greece's larger and more enlightened cities

—Athens, Saloniki, Piraeus, Patras, &c.? Mr. Cassavetes would have the allied and American Governments refrain from recognizing the present Government of Greece in order to drive the Hellenic people to overthrow it and establish a republic. He seems to forget that a form of government forced upon a people cannot be regarded as democratic, whatever it may be called. It is not the name but the substance that counts. The Greek people with Constantine in power enjoy their liberty much more than they did under the "Liberal" Party's Government.

Let me say in conclusion that my object is not to defend the King of the Hellenes, but rather the good judgment of the Hellenes themselves. It may be that Constantine was guilty of all the moral crimes ascribed to him, but the evidence presented so far surely is not conclusive.

EFTHYMIUS A. GREGORY.

Aiken, S. C., Sept. 1, 1921.

A DEFENSE OF VENIZELOS

To the Editor of Current History:

From the tone of the letter written by Efthymius Gregory, and published in your June issue, it would seem that the writer strangely misunderstands the spirit of Venizelism. He also shows a surprising lack of historical perspective. The present Greek Government is composed of all the unhealthy political elements of Greece, all striving to establish political ascendancy under the banner of a despot King who believes that he derives his prerogative not from the people, but from the Deity alone. Exercising that divinely authorized prerogative, he dismissed Venizelos early in the war and put in his place another more subservient to the royal will.

It is a well-established fact that the opponents of Venizelos exploited the ignorance of the rural population, and made an unfair use of certain cases of internal maladministration which occurred during the long and necessary absence of Venizelos abroad, when he was fighting for Greek national aspirations at the Paris Peace Conference. The Constantinists regained power regardless of the country's best interests, and they did it by means more dishonorable than

those which Cicero denounced in a letter to his friend Atticus, flagellating the political corruption of his time.

The whole conflict between the Venizelists and the Constantinists is one between democracy and monarchy. Venizelos fosters no animosity against King Constantine personally, but he stands diametrically opposed to the returned monarch's theory of the divine right of kings. Venizelos and his adherents interpret monarchy rationally as merely a civil institution established by the nation for the benefit of all its members. The Greek Tories look upon the King as the delegate of Heaven, exempt from all responsibility. The difference is radical and insurmountable. This outworn interpretation is bolstered up today in Greece by a portion of the clergy, just as Bossuet in the Grand Siècle, identified with the reign of Louis XIV., preached the divine right of kings. All serious study of history, starting from the Pharaohs, shows the fallacy of this interpretation.

This is not the first time that the Greeks have exiled their best and noblest. Heraclitus, the famous philosopher of ancient days, said of the Ephesians: "The Ephe-

sians would do well to hang themselves, every grown man of them, and leave the city to the beardless youths, for they have cast out Hermadetus, the best man among them, saying: 'We will have none who is best among us; if there be any such, let him go elsewhere, and among others.' So the Athenians exiled Aristides, solely because they were weary of hearing him called "The Just." And so, vexed at Venizelos's greatness, the modern Greeks have cast him out.

Venizelos lives in exile, and his adherents are enforcedly acquiescent, for the star of Constantine is again in the ascendant. But the Venizelists await the day of regeneration. Above the squalid details of factious strife their ideals survive. "We are all Greeks," wrote Shelley. The Venizelists, who think only of the welfare of all the Greeks, say the same today.

CONSTANTINE V. TOUNTAS.

St. Louis, Aug. 22, 1921.

WHAT MACEDONIA DESIRES

To the Editor of Current History:

Greek propaganda through the Christian Science Monitor and other periodicals continues to affirm that the Macedonians have had no national conscience and care nothing about the question of their nationality. They try to represent that Macedonian nationalism is an artificial movement and that it matters to the people there but little whether the world call them Bulgarians, Greeks or Serbians. The purpose of these writers is to lay a foundation for Greek imperialistic projects, and their statements are contrary to the proved facts. They have asserted, for instance, that Mr. Brailsford, a well-known authority, thinks the Macedonians are a mob without political aspirations or national conscience. This is an unscrupulous falsification. Witness these passages, written by Mr. Brailsford immediately after the insurrection against the Turks in 1903, when he visited Macedonia:

The first surprise was that this race revolted en masse. The second surprise, in my opinion more touching than the first, is that all the sufferings of the last Autumn did not kill its spirit and did not produce any reaction whatsoever against the committee or its leaders. More than one hundred villages, of which several were relatively rich, were reduced to ashes. Sixty thousand families lost not only their homes but all their property. I doubt whether they were able to save one-tenth of their cattle and sheep, of their plows and horses. Besides, there were murder and devastation. Neokazi, Armensco, Mokreni, Kroushevo, Smerdesh, Dambemi and Kossinetz are the names of some of the villages in which hundreds were killed, without participating in the struggle.

In many villages one may meet insane unfor-

tunates. And in spite of all this lesson before them, the villagers remain faithful to the organization which plunged them into such misery. Among the ashes of burned villages or in the rooms of hospitals where the said organization takes the wounded women and children, there were moments when one was inclined to curse the entire revolutionist idea, to think that no provocation could justify a population which exposes its breast to such a risk, to doubt whether a certain gain of freedom could compensate for the physical torture endured for its acquisition. But these can be only reflections of an outside person. Similar reflections seldom penetrate into the heads of the Macedonians themselves. One could hear no blame, no attacks against the committee, no sorrow for the evidently lost forces. Sick men, slowly recovering from sufferings, wounds, privations, spoke cheerfully of their future plans and of the struggle they looked forward to renewing as soon as their health and the Spring came. * * * *The more one studies the Macedonian Bulgarians, the more he respects their patriotism and heroism.* * * *

The Serbian movement is a purely official agitation, guided and financed in Belgrade, whereas, despite the sympathy of Sofia, the Bulgarian Revolutionary Committee is a genuine organization.

Let me cite some official Greek documents on the subject. In March, 1915, when the greater part of Macedonia had already passed under Greek rule by virtue of the treaty of Bucharest, the Commander of the Eighteenth Greek Infantry Regiment, stationed in Seres, reported to the Commander of the Sixth Greek Division that the men of which his regiment was composed were "not only Bulgarophones (Bulgarian speaking), but pure Bulgarian in their soul and conscience to such an extent that it represents a real danger."

I do not pretend to predict whether or not the great powers will correct the injustice they did at the Peace Conference in not creating an autonomous Macedonian State; I merely wish to call attention to the fact that the deep national consciousness of the Macedonians remains, and that, even in face of the brutal force of Serbian and Greek rule, they will yet have the political independence which they desire. The propagandists are representing the Macedonian people as good Serbian and Greek subjects at a time when all the Greek and Serbian papers are printing daily evidence to the contrary. The sole purpose of those who are misrepresenting the facts is to defend Greek imperialistic aspirations. Greece may truly be said to be the paramount cause of the war in Asia Minor and of the

whole dangerous situation in the Near East today.

Macedonia is determined to be an autonomous State, and will be some day, because her people are ready to make fresh sacrifices to gain their independence. Today Macedonia calls upon those who are ruling her to cease their violence against individuals, their robbery of property, their infringement of the primary rights of life and liberty; she demands that they reopen the schools and churches, fulfill the obligations of the peace treaties protecting the rights of the ethnic groups, and permit refugees to go back to their homes.

THE ANGLO-JAPANESE ALLIANCE

To the Editor of Current History:

The article by Professor Koehn in the August number of *CURRENT HISTORY*, entitled "Menace of the Anglo-Japanese Alliance," resting as it does on a plain misinterpretation of the treaty between England and Japan, ought not to be allowed to pass without correction. The text of the treaty, as quoted by Professor Koehn, states that it is "by reason of unprovoked attack or aggressive action," and when "either high contracting party is involved in war of defense of its territorial rights or special interests mentioned in the preamble of this agreement," that the other high contracting party "will at once come to the assistance of its ally." It is self-evident that in the case of an attack on the United States by Japan, England would not be bound to assist Japan, and, even if Japan were attacked by the United States, it would be for

England to decide whether the attack had been "unprovoked" or whether it involved "the defense of the territorial rights or special interests mentioned in the preamble." It is clear that the treaty does not work automatically, as Professor Koehn assumes, and that if England went to the aid of Japan when she was attacked by the United States it would be because England considered the action of the United States as "aggressive and unprovoked." To say of the treaty that "it explicitly places upon England the obligation to go to war against the United States in the event of hostilities between the United States and Japan" is an inexcusable misinterpretation of the text of the treaty.

FRED MORROW FLING,
University of Nebraska (Department of History).

IN FAVOR OF LARGE TYPE

To the Editor of Current History:

Permit me to express a hearty Amen! to the change in type introduced in the August issue of *CURRENT HISTORY*. This type can be read without magnifying glasses, and to one who takes the time and trouble to read

a considerable portion of your splendid magazine it is quite a saving to the eyes.

J. EUGENE HARLEY,
Dept. of Political Science (and International Relations), University of Southern California.
Los Angeles, Cal., Aug. 22, 1921.

JAPAN'S KOREAN POLICY DEFENDED

To the Editor of Current History:

I have read your magazine continuously for more than four years, and have appreciated its fairness, in general, in treating different countries; but lately I have seen various articles about Japan with which I disagree, especially the one in the August issue by George L. Koehn. Mr. Koehn says that Japan had long cherished designs against Korea, entirely omitting to mention the encroachment of Russia, who had just gobbled up Manchuria and the Liao-tung peninsula, with Port Arthur, and was on a fair way to take over Korea, thus becoming a deadly menace to Japan. That country, in order to exist, had to declare war. As regards Korea, with the worst burlesque Government in the world, Japan dragged her out

of the mire, washed her and literally knocked self-respect into her. Look at the enormous improvements in the country, which are rather scantily treated in your magazine; as for the alleged cruelties done to the Koreans, many of those stories are garbled, and some are just plain lies. (See the book about the Far East by Charles H. Sherrill.) I could dig up enough history of the last fifty years to fill a good-sized book, all about indignities and cruelties done by European States to the Far Eastern nations. Why is it a virtue that European nations possess enormous territories in Asia, while it is a crime for Japan to possess land contiguous to her own shore for her own safety?

BRITAIN'S WIRELESS CHAIN

AT Leafield, England, on the crown of a rolling upland, fifteen miles from Oxford, the first link of a gigantic wireless chain, reaching over many seas and even to the other side of the world, was inaugurated with appropriate ceremonies on Aug. 18, 1921, by the British Postmaster General and a selected party of officials. British-built from the boilers to the Poulsen arcs, it sends into the air-bed stretching without interruption between England and Cairo sixteen powerful alternating currents which can be picked up within a radius of 2,000 miles. The transmitting wires are hung on ten masts each 300 feet high. Two messages were sent out on the day of inauguration. The first was addressed to all British Empire wireless stations, announcing the completion "of this, the first station of the imperial wireless chain," and voicing the hope "that the station will help to knit still closer the bonds which bind together the different parts of the empire." The second message sent greetings to all European stations and other foreign stations in range,

and expressed the empire's desire that this new wireless link should strengthen the ties of international friendship.

The first replies began to come in only a few minutes after the messages were sent out. Acknowledgments were flashed from the French Under Secretary of Posts and Telegraphs and from Malta. The German Reichspostminister sent friendly congratulations from Berlin. Answers came from Posen, Budapest, Christiania and other stations.

The Leafield station is the first of four; the second is to be at Abu Zabal, Cairo; a third in East Africa, and a fourth in South Africa. Two other twin stations are to be erected in England and Egypt, and through arrangement with the Imperial Wireless Telegraphy Committee are to be continued to Mesopotamia, India, Singapore, Australia and Hongkong. Soon it will be possible to broadside large volumes of news to India. The commercial value of the wireless system also is considered as an asset of high importance.

ITALY'S ANTI-HAPSBURG PACT WITH JUGOSLAVIA

Text of the treaty binding the two nations to oppose armed force to any Hapsburg who tries to regain the throne—Document that defeated ex-Emperor Charles

THE treaty of peace and reconciliation between Italy and the new State of Jugoslavia was signed at Rapallo, Italy, on Nov. 12, 1920. By this compact the long and dangerous dispute over Fiume and a part of the Adriatic coast was brought to an end by setting up Fiume as a free State; the whole boundary between Italy and Jugoslavia was fixed, and the relations between the two countries were established on an amicable and sound basis.

Not until the end of June did Italy decide to publish the negotiations which led to the signing of this treaty. This publication revealed that at the time the Rapallo compact was signed there was also signed a separate and supplementary treaty whose object it was to supervise the strict execution of the Treaty of Saint Germain (with Austria) and the Treaty of Trianon (with Hungary), to maintain the present status quo in Central Europe, and to combine against any future attempts of the Hapsburgs to effect their own restoration to the thrones of Austria and Hungary. The compact declares that the contracting parties will watch every activity directed against their common security either on Austrian or on Hungarian territory, and that this agreement shall be communicated to Czechoslovakia, between which country and Jugoslavia a similar compact had already been signed.

The efficacy of the compact was seen at the time of ex-Emperor Charles's recent attempt to seize the Hungarian throne. It is generally understood that it would be invoked again in case Austria should insist on union with Germany in defiance of the prohibition of the Treaty of Saint Germain. The text of this specific anti-Hapsburg agreement reads as follows:

In order to secure the blessings of peace, obtained at the price of such great sacrifices through victory over the Austro-Hungarian Monarchy, the Government of his Majesty the King of Italy and the Government of his Majesty the King of the Serbs, Croats and

Slovenes have determined to agree to the present convention and to this end have delegated:

On behalf of the Italian Government, the Cavaliere Giovanni Giolitti, President of the Council of Ministers; Count Carlo Sforza, Minister of Foreign Affairs, and Professor Ivanoe Bonomi, Minister of War;

On behalf of the Serb-Croat-Slovene Government, M. Milenko R. Vesnitch, President of the Council of Ministers; Dr. Ante Trumbitch, Minister of Foreign Affairs, and M. Costa Stojanovitch, Minister of Finance, who have agreed as follows:

Article 1—The two contracting Governments mutually engage to keep a watch over the strict execution of the Peace Treaties of Saint Germain and Trianon. In particular they will adopt all measures of policy by common agreement calculated to prevent the restoration of the House of Hapsburg to the throne of Austria and Hungary.

Article 2—The two contracting Governments engage to give one another such mutual diplomatic support as they judge to be best adapted to this end.

Article 3—In accordance with the spirit of the present convention the two contracting Governments engage at the same time to keep a watch upon all activities directed against their mutual security, both on Austrian and on Hungarian territory, and to keep in close touch by means of the exchange of information.

Article 4—The Italian Government (which has learned with satisfaction of the agreement established between the Serb-Croat-Slovene Government and the Czechoslovak Government, the aims of which are exclusively those of the present convention) and the Serb-Croat-Slovene Government will communicate the present convention to the Czechoslovak Government.

If fresh agreements of the same kind are concluded, the two Governments will confer before ratifying them.

Article 5—The present convention shall remain in force for two years after the exchange of ratifications. It shall be renewed for the same period if it has not been denounced six months before its expiration.

Article 6—The present convention shall be ratified as soon as possible and the ratifications shall be exchanged in Rome.

POLAND'S MILITARY ALLIANCE WITH RUMANIA

Text of the treaty signed at Bucharest on March 3, 1921, by the terms of which the two nations pledge help to each other in defending their present boundaries

THE Polish Diet, on July 1, 1921, ratified the defensive and offensive military alliance with Rumania, signed at Bucharest on March 3. By this agreement, each of the two contracting nations pledged itself to come to the aid of the other in case of any attack from a third nation on its eastern frontier. Though not specifically stated, this alliance was directed against the possibility of any sudden onslaught from Bolshevik Russia, on the one hand, and from Bulgaria, on the other. All alliances with other nations, excluding those signed by either nation for the execution of the peace treaties, must previously be submitted to the other contracting party. Poland expressed her cognizance and approval of Rumania's previous agreements to secure the execution of the Treaty of Trianon (with Hungary) and Neuilly (with Bulgaria), Rumania of Poland's compact with France. The terms of the Rumano-Polish alliance were placed before the Diet, and went through the usual three readings, after which, despite the opposition of the Socialist members, the treaty was approved and ratified. The text is as follows:

The Chief of the Polish State, and His Majesty the King of Rumania, have resolved to safeguard and confirm the peace which has been won through such great sacrifices, and have agreed to conclude a convention regarding a defensive alliance.

For this purpose plenipotentiaries were appointed by the Chief of the Polish State, his Minister of Foreign Affairs, Prince Eustace Sapieha, and by His Majesty the King of Rumania, his Minister of Foreign Affairs, Take Jonescu, who, after reciprocally communicating their full powers in the prescribed manner, have determined on the following convention:

Article 1.—Poland and Rumania engage to give one another mutual support if either Power should be attacked on its present eastern frontier without provocation. If, accordingly, either of the two Powers should be attacked without provocation on its flank, the other will declare

war and give armed assistance to the Power attacked.

Article 2.—In order thus to facilitate their peaceful efforts both Governments engage to act in concert in those questions of foreign policy which concern their neighbors on the east.

Article 3.—The manner of giving assistance in case of need shall be agreed upon in a military convention. The said military convention shall be agreed upon subject to the same conditions regarding duration and denunciation as the present alliance.

Article 4.—If, in spite of their efforts, both Powers should find themselves in a position of armed defense, as anticipated in Article 1, they engage mutually that neither will enter into negotiations, or sign an armistice or peace, without the other.

Article 5.—The anticipated duration of this convention shall be five years from the date of signature, but either of the two Powers shall have the right to denounce it after two years if an agreement shall be reached between the parties to that effect six months previously.

Article 6.—Neither party will conclude an alliance with a third Power without having previously reached an understanding in the matter with the other party. The only case in which this condition shall not hold good is in connection with any alliance that serves the purpose of maintaining the peace treaties which both Poland and Rumania have signed. Such alliances, nevertheless, shall be reciprocally communicated.

The Polish Government hereby declares that it has been informed of the conventions which Rumania has concluded with other Powers to guarantee the Peace Treaties of Trianon and Neuilly, and that these conventions may be transformed into formal alliances. The Rumanian Government declares that it has been informed of the convention between Poland and the French Republic.

Article 7.—The present convention shall be communicated to the League of Nations, in accordance with the Peace Treaty of Versailles.

Article 8.—This convention shall be ratified and the instruments of ratification shall be exchanged in Bucharest as soon as possible. To this end the plenipotentiaries have signed this convention and enclosed the authentication of their plenary powers.

(For Poland) E. SAPIEHA.

Bucharest, March 3, 1921.

THE TERRIBLE FAMINE IN RUSSIA

Fifteen million people threatened by death, which the aid of the whole world can avert only in part—Tales of horror officially confirmed by Moscow—America the only country to which the Soviet leaders have given a free hand

ALL rhetoric pales before the grim realities of the famine that is ravaging Russia. Competent American observers now admit that the situation, far from being exaggerated, is even more terrible than was at first reported. The new official famine paper, *Pomoshch (Help)*, published in Moscow, printed reports at the end of August from the Volga provinces giving a picture of human suffering almost too horrible to contemplate. The entire lower Volga basin, the region through which flows the Don River, and the districts along the lower courses of the Dnieper and Bug Rivers, were all stricken. Men, women and children were dying by thousands in Astrakhan, Samara, Saratov, Kazan, Ufa, the Don Cossack region, Kuban, Taurida, Kherson, Ekaterinoslav, and parts of Voronezh, Tambov, Penza and Kharkov—a region representing a total area of 600,000 square versts, a population of 13,000,000 peasants and 2,000,000 townspeople.

The conditions in Saratov, and especially in Samara, are appalling. Horrible descriptions of people dying like flies from the eating of offal, grass, wood bark, melon rinds, clay and other substitutes for food would seem incredible were they not officially confirmed by the Soviet Government reports. Cholera is raging; there are no hospital facilities, no medicines, no food relief in sight for weeks, perhaps even months, to come. Some Russian and international authorities estimate that, even allowing for outside succor, 1,000,000 people are doomed to perish. Others estimate the probable deaths at twice that number. Thousands are passively awaiting death. Others, panic-stricken, are fleeing they know not whither, vainly seeking relief. Many who had thus trekked to the east and southwest, have returned, despairing, to die in their own homes. Words fail to describe the gigantic nature of the Russian catastrophe.

The Soviet Government has issued proclamation after proclamation seeking to lay the fundamental blame for this vast national calamity on the seven years of war forced on Russia by the capitalist nations. Compelled to call on those nations for help, they have not failed to voice deep suspicion of the motives of the bourgeois world in offering such aid. The voicing of distrust has been frequent in the Soviet press since the despairing cry of Maxim Gorky and the appeal of Archbishop Tikhon echoed around the world. Of the Allied Council's proposal to send an investigating committee made up of allied experts into Russia to ascertain how great the disaster was, what the Government itself was doing to alleviate it, and what additional help would

(Harris & Ewing)

COLONEL WILLIAM N. HASKELL

Appointed to supervise the famine work of the American Relief Administration in Russia

be required, the Soviet leaders were especially suspicious. Charges that the Allies, especially "imperialistic" France, were hatching new counter-revolutionary plots to overthrow the Bolshevik rule were repeated ad nauseam. When Maxim Gorky's non-partisan relief committee was formed, the Bolsheviks boasted that, out of regard for the welfare of Russia, they had accepted even the assistance of their factional enemies. Early in September, however, the Moscow dictators dismissed this committee, on the ground that its members were seeking to go abroad, and that the Soviet enemies outside the Russian boundaries were striving to use it as a political lever to oust the Soviet from power.

The international scheme sponsored by Dr. Nansen, who has long headed the activities of the League of Nations to repatriate war prisoners from Russia, to bring strictly European aid to the starving Russian people, was received by the Soviet with less suspicion, but, despite his best efforts, Dr. Nansen was unable to gain the consent of the dictators to autonomous distribution of the supplies contemplated. All the international Red Cross and relief committees centred in Switzerland, under this scheme, were to distribute supplies for the immediate present, and also to send to Russia the seed necessary before the end of September if a like calamity were to be avoided at the next harvest. Though the Soviet leaders welcomed this offer, they returned to Nansen's pleas for a free hand an unshakable "No!"

The eyes of the Bolshevik Government were turned most hopefully toward the United States. When, in answer to Gorky's despairing appeal, Secretary Hoover pledged the support of the vast relief organization with which his name has long been identified in Europe, a flame of joy ran through political and what remains of intellectual Russia. The Soviet leaders consented in advance to the conditions which Mr. Hoover, backed by President Harding and Secretary Hughes, imposed. The American political prisoners were freed. The American organization was pledged full co-operation by the Soviet authorities, and was promised unreservedly the free hand in distributing food on which Hoover insisted.

The formal agreement between Walter

Lyman Brown, the American representative, and M. Litvinov, a high Soviet functionary, was reached at Riga after some considerable discussion, on Aug. 19. All Litvinov's attempts to force the United States to give up its insistence on independent distribution proved fruitless. Cables sent from Washington in reply to Mr. Brown's messages showed that the Harding Administration was adamant in this regard. The United States would help, help powerfully, but it had no intention to be made a catspaw or a point of leverage to bolster up the tottering Soviet régime. Whatever food supplies it sent it would see personally delivered to the suffering victims. Confronted by this unshakable determination, Litvinov yielded. When the agreement was concluded he voiced tentative hopes that this would lead to other agreements with the United States. Mr. Brown, in replying, was careful to emphasize the fact that the relief measures to be carried out would be strictly activities of a private, non-governmental organization.

Ships were chartered, food trains from Riga were put in motion, the American relief organization was perfected. Mr. Brown estimated that 8,000 tons of food could be secured by the organization in Europe. Colonel Haskell, the American officer who headed Armenian relief in 1919-20, sailed from New York with a considerable staff on Sept. 3. It soon became clear that the United States had no intention of wasting time in talk. The invitation of the allied organizations to participate in a conference to be held at Geneva on Aug. 15 to discuss the whole situation, and decide how co-ordination could best be obtained, was virtually declined by Secretary Hoover in a note sent on Aug. 10 to the former President of Switzerland, M. Ador. The gist of Mr. Hoover's argument was contained in the closing words of this note: "Generally it appears to me that co-ordination of distribution can be practical only after actual contact with the situation in Russia, and that this step cannot be taken to any purpose without a prior and immediate knowledge of what resources can be relied upon."

This sentiment, of course, was that which prompted the allied council to send its wireless message to Moscow proposing the dis-

patch of a committee of investigation, the main difference being that relief would wait on a protracted report, while Hoover was getting his relief machinery into immediate action. For investigating committees, as such, the Soviet leaders have long shown a very particular aversion. Although Secretary Hoover understood clearly that co-operation with the relief organizations of Europe was desirable, he was hampered by the fact that Nansen had not been able to gain the free hand in delivery and movement which the Moscow leaders had accorded to the American organization. Dr. Nansen's whole arrangement with the Soviet authorities brought on his head much criticism, and he was accused of playing into the hands of the Red leaders.

In order to lightning-rod home criticism from its own head, the Soviet Government, through its leaders, asserted that in accepting foreign aid it had no intention of yielding any of its rights of sovereignty. Litvinov had tried strenuously to put through a proviso maintaining the Soviet's right to expel any member of the American organization caught in any political, anti-Bolshevist activities. The American Commissioner had declined to consider this. Colonel Haskell, however, just before sailing from New York, declared that the object of the American Relief Administration was purely humanitarian, and that he would rigorously control the actions of his personnel. He himself, he stated emphatically, would expel any member who sought to supplement this humanitarian work by political activities.

Meanwhile 20,000 tons of food had been ordered in the United States. President Harding and his Secretaries held an official conference in Washington to discuss the energetic launching of the American campaign. In a letter sent out by the President co-ordinated effort through a single organization was urged. Food was already moving from Hamburg, and over eighty carloads had been sent into Russia. Soup kitchens had been established in Moscow. The Soviet, on its part, published a detailed account of its own efforts to alleviate the distressing situation (Aug. 11). A Central Soviet Famine Relief Commission had been created to direct all relief activities. (The

non-political famine commission, headed by Gorky, of which this proclamation boasted, has since been dissolved, as related above, and some of its members arrested.) The Volga area had been freed from the food tax on an estimated total of 1,000,000 tons, which was being diverted to feeding the urban population. A special committee to care for the famishing, sick and dying children had been established. Special measures had been taken for the evacuation of "fugitives"—meaning the former inhabitants of Western Russia, who had fled before the Germans to the Volga district, and who were now frenziedly trying to return to their original homes.

The Soviet report did not mention the evacuation of many Letts, who reached Latvia in a deplorable state of hunger, disease and sorrow, owing to the fact that a considerable number of the men had been left behind to perish. Nor did it mention the former prosperous German settlers in the Volga region, who, like many refugees from Turkestan and other Eastern Russian districts, had fled before the grim horseman trampling all before him. In rags and filth, these refugees huddled in the stations, waiting for relief or death.

The problem is a formidable one. As Lloyd George pointed out in the Paris conference at the end of August, the whole disaster is almost too gigantic to control without a very great international effort. According to reliable British advices, no fewer than 35,000,000 people are stalked by the grim spectre of famine and pestilence. In the House of Commons the British Premier pointed out the danger that epidemics beginning in Russia might sweep all Western Europe, decimating populations too exhausted by war to resist them. The seriousness of the situation could not, he declared, be overestimated. The British, French and Italian representatives had all agreed upon this, and had appointed an international, not an interallied, commission to study the best methods of alleviation. But for this the co-operation of the Soviet authorities was necessary. Up to the time when these pages went to press, there was little probability that the Moscow dictators would consent to the admission of any such commission on the terms which the interallied Ministers demanded.

POLAND AND THE VILNA SETTLEMENT

Poles and Lithuanians agree on the administration of the former Lithuanian capital—Warsaw's anxious waiting for the decision of the League of Nations on Upper Silesia—Danzg Treaty and pacts with Rumania and Czechoslovakia

[PERIOD ENDED SEPT. 12, 1921]

VILNA, the former capital of Lithuania, over which the Poles and the Lithuanians have come to blows repeatedly since 1919, has now ceased to be an object of strife between the two peoples. The settlement of this dangerous problem was effected at Geneva, where Polish and Lithuanian representatives had met in one last, almost despairing effort to find a solution, on the morning of Sept. 1. The decision represented also a triumph for the League of Nations, under whose auspices the negotiations had been dragging on since September, 1920.

The dispute arose out of a declaration of the Supreme Council on Dec. 8, 1919, provisionally establishing the frontier between Northeastern Poland and Lithuania. After the armistice with Germany, the Lithuanian Government had established itself at Kovno. The Russian Bolsheviki, however, still retained and occupied Vilna. From the former Lithuanian capital the Bolsheviki were later driven out by the warring Poles. In July, 1920, Poland recognized the Statehood of Lithuania, but in the same month the Poles were driven out of Vilna by the returning Reds. The latter permitted the dispossessed Lithuanians to re-establish their Government in Vilna. Furthermore, the Russians concluded a treaty of peace giving Lithuania part of the territory accorded to Poland by the Allies on Dec. 8, 1920.

Serious armed clashes occurred in the following month, when the Poles tried to drive the Lithuanians back of this line and out of Vilna. In September the dispute was taken up by the League of Nations, which decreed that the 1920 line must be observed—but only provisionally—by the Lithuanians. These proposals were accepted, and a commission was assigned by the Allies to put

them in force. In November, 1920, however, General Zeligowski, at the head of an army of Polish insurgents, occupied Vilna and set up there a Provisional Government to make Polish possession permanent.

Several attempts to patch up a working agreement failed, Lithuania obstinately refusing to give up Vilna, and Poland as obstinately refusing to yield this predominantly Polish territory to Lithuania. Zeligowski remained in Vilna and refused to evacuate, in defiance of the Lithuanians, the Entente and even Poland herself. The Lithuanians openly charged the Polish Government with aiding and abetting Zeligowski in this d'Annunzio-esque adventure, and Lloyd George, the British Premier, at the time of his outburst in Parliament over the Korfanty uprising in Upper Silesia, said virtually in plain words that he believed this. The Polish Government has systematically denied its responsibility either for Zeligowski or for Korfanty. Be that as it may, Poland has long been anxious to regularize the status of Vilna, and for this reason she gladly accepted new offers of mediation by the League. This mediation, however, was not offered until it had been plainly shown that the holding of a plebiscite was impossible, for the simple reason that neither the Poles nor the Lithuanians wanted the issue decided on this basis. The League then proposed a settlement by direct negotiation. Representatives of the two nations met in Brussels under the Presidency of M. Paul Hymans, a prominent member of the Council of the League, to find a *modus vivendi*. The opposing views, however, proved to be irreconcilable, and the negotiations were again broken off. The success of the new discussions in September, 1921, was joyously hailed by both

countries, each of which has made sacrifices for the sake of ending the long turmoil between their respective peoples.

It was later stated (Sept. 12) that both Lithuania and Poland had accepted the new League plan under reservations. There was some obscurity as to the exact terms of the agreement. The decision that Zeligowski must evacuate was definite. A local militia was to be created for police purposes; whether this force was to be of Polish, Lithuanian or mixed composition was not stated; but the implication was that the Lithuanians would retain nominal sovereignty, while granting the Polish majority equal rights.

The former East Prussian Port of Memel was delivered outright to the Lithuanians, though the Poles were given access to the sea in this direction. Lithuania's foreign policy was to be independent, but she was to sign no foreign treaty harmful to Polish interests. A defensive military convention was to be negotiated.

With this important question of boundaries settled Poland continued to look hopefully to the League Plebiscite Commission and the Entente leaders for a settlement of the still more dangerous dispute with Germany over Upper Silesia. At Paris the entente cordiale between France and Great Britain had almost been shattered by this question. The British Premier, supported by Italy's representative, favored the allocation of most of the rich mining area in the southeast to Germany; France urged the claims of her protégé, Poland. Wholly unable to agree, Lloyd George, facing a rupture, suggested that the dispute be referred to the League of Nations; thus it came about that the League Council, when it met again in September, faced this new problem. At the present writing it is still unsettled and threatening. The Germans contend that possession of the Upper Silesian mines is absolutely essential to their national existence. The Poles say the same regarding their nation. Ethnical statistics are wielded by both sides with patriotic fervor. The plebiscite vote is a tangled affair. If the League unravels that, it will do more than the Entente Premiers could compass.

The Poles meanwhile reached an agreement with the Free City of Danzig; save

for two or three points to be referred to the League of Nations, this agreement establishes friendly relations between Poland and the city republic. The negotiations at Danzig were completed by Aug. 15. M. Plucinski, the Polish commissary, arrived in Warsaw a few days later, accompanied by Senator Jewelowski, a member of the Danzig Diet. Both negotiators explained to the Polish press the difficulties that had been facing them for many months. The only points left outstanding were the administration of railways, the legal status of Polish officials on Danzig territory, the status of the Polish merchant marine in Danzig, and the reimbursement of moneys expended by the Free City.

Poland's foreign relations, taken as a whole, are developing satisfactorily. The foundation of a commercial rapprochement with Czechoslovakia had been laid before the departure from Warsaw, toward the middle of August, of M. Hotowetz, Minister of Commerce for the neighboring republic. Both Poland and Rumania looked with satisfaction on the offensive and defensive treaty which linked the two countries. Rumania through this entente gains security for her eastern frontier. Statements made by M. Take Jonescu, the Rumanian Foreign Minister, indicate that Poland contemplates entering the so-called Little Entente, composed at present of Rumania, Yugoslavia and Czechoslovakia.

Though technically Poland is at peace with Soviet Russia, the Warsaw leaders are still hostile to the Russian dictators. Causes of friction still exist, especially due to Poland's harboring of organizations hostile to the Soviet Government. Poland, however, is showing deep sympathy for the famine sufferers of Russia. The Pilsudski Government has voted to extend to the Russian Government, purely from humanitarian motives, all the aid that it can offer, and has pledged itself to transport relief supplies coming from the west over the Polish railway lines free of all costs or charges.

The Witos Cabinet collapsed Sept. 12. Stanislaw Glabinski, Professor of Political Economy in the University of Lemberg, was named as the new Premier. The Witos Cabinet fell because of dissatisfaction with foreign conditions and with the home economic situation.

EMIR FEISAL CROWNED KING OF IRAK

Enthronement of King Hussein's son at Bagdad the occasion of rich Oriental ceremonies—Reward of the Arab chief who helped the British armies against the Turks

[PERIOD ENDED SEPT. 12, 1921]

EMIR FEISAL, third son of the aged King of Hedjaz, was crowned King of Irak at 6 A. M. on Aug. 23, in the great court of the Serai in Bagdad. After his nomination by Lord Allenby at the Cairo conference, the strong recommendation given him by the British Colonial Secretary in the House of Commons, and finally the referendum vote of the people of that region of Mesopotamia round about Bagdad (called by the Arabs "Irak"), the Emir's elevation to the throne had become one of the few certainties in the Near East. The coronation took place before a large assembly, and was made the occasion of elaborate ceremony.

Shortly before the appointed time the Emir left his residence, accompanied by Sir Percy Cox, the British High Commissioner for Mesopotamia; the General Officer Commanding in Chief, Sayid Mahmud, eldest son and representative of his Highness, and the Naqid, President of the Provisional Council of State, who had been Feisal's chief unsuccessful rival for the throne.

As the Emir mounted the dais the immense throng rose to acclaim him, the First Battalion, Royal Berkshire Regiment, presented arms, while brass instruments, both English and Arab, raised a musical din. Then the High Commissioner took his seat at the Emir's right hand, with the British General on his left and Sayid Mahmud next to him. The Secretary of the Council of State read in Arabic the proclamation of the High Commissioner announcing the election of the Emir Feisal by the people of Irak and ending with the phrase: "Long live the King!" Then there was more shouting, with blasts from trumpets and a long roll on the drums of the English battalion; the national flag was broken out over the dais and a royal salute given by the military present and a salute of

twenty-one guns by the British artillery. Simultaneously royal salutes were fired at Mosul and Basra, and the national flag was displayed on all public buildings and over camps and garrisons.

Sayid Mahmud read an address of loyalty from the Council of State and the Naqid swore his loyalty. At the end of the ceremony, which lasted scarcely half an hour, the High Commissioner handed the new King the following personal message from King George:

I offer your Majesty my sincere congratulations on this historic and moving occasion, when by an overwhelming vote of the people of Irak the ancient city of Bagdad has again become the seat of an Arab Kingdom. It is a source of deep gratification to myself and my people that the combined military effort of the British and Arab forces and those of their allies has culminated in this memorable event. The treaty which will shortly be concluded between us to consecrate the alliance into which we entered during the dark days of war will, I am confident, enable me to fulfill my solemn obligations by inaugurating an era of peace and renewed prosperity for Irak.

GEORGE R. I.

The new kingdom embraces the former Turkish vilayets of Basra and Bagdad, together with part of Mosul on the north. It has an area of 140,000 square miles, with a population of nearly 2,000,000.

According to the same official sources which designate the new King as the third son of King Hussein, his age is given as 36 years 4 months. He was born in Hedjaz while his father was assistant to his uncle, who was then Grand Shereef. His youth was passed at Hedjaz and with the Arabs of the desert, imbibing from them that knowledge of tribal lore which has helped him to gain and keep the good-will of the tribes. When still a boy he went to Constantinople and there pursued his general education. When his father, Hussein, succeeded his uncle on the latter's death,

Feisal went with him to Hedjaz and gained an insight into tribal administration both in peace and war.

Elected to sit in the Turkish Chamber of Deputies, he became the leader of the Arab Nationalist Party, which then had its headquarters at Damascus. When Djemal Pasha was appointed Governor of Syria in 1914 he practically forced Feisal to accompany him and used him for his influence over the Arabs. He was practically a prisoner, and having learned that Turkey intended to side with Germany in the war and also that an order of execution had been issued against himself, he managed to escape in disguise and returned to his father at Mecca. The information he brought decided his father to declare his independence of Turkey and greatly strengthened the cause of the Allies among the Arabs.

Colonel Lawrence, who was then negotiating with Hussein, soon recognized Feisal's abilities, while on his side Feisal gave his entire confidence to Colonel Lawrence, and it was principally due to the alliance of the two that the Arab Army was able to play so brilliant a part in the Palestine-Syrian campaign. At the end of the war, when the various Entente powers received their mandates under the Treaty of Sèvres, the Arab Congress at Damascus elected Feisal King of Syria. From this position he was soon after ejected by General Gouraud, the French High Commissioner. He then placed his case before the chancelleries of Rome and London, and at the latter, where he sojourned from December until last April, he so impressed every one with his statesmanlike views that he finally secured the support of the British Government.

Considering the parlous times which then prevailed throughout Mesopotamia, it was fortunate for the British Government that Feisal was willing to support it. What the French did not care for the British were glad to possess. Too late the former regard the accession of Feisal as a great loss of prestige by France. Some Paris papers, in commenting upon the coronation at Bagdad, regard it as a distinct menace to French interests in the Near East, contrived for that purpose by Downing Street, overlooking the fact that many statesmen believe that England is merely making a merit of a stern necessity.

Feisal, who had been told at Downing Street to make his claim good by quieting the Arabs in Mesopotamia, reached Basra on June 23, and opened the political campaign which has now turned out so successfully for him. This campaign, the story of which is still the chief piece of news in the papers of the Levant, and even of Moslem India, forms a curious contrast to a Presidential campaign in the United States; in the East ceremonials, a display of

EMIR FEISAL

Arab Prince who has been crowned King of Mesopotamia

wealth and debates on erudition take the place of talks on political expediency.

At Basra Feisal's reception was not enthusiastic, and so, after a few tactful speeches, calculated to provoke favorable discussion, he went on to Bagdad via the Euphrates Railway, visiting Hallas, Nejef and Kerbala en route. At the Holy Places he aroused some quiet enthusiasm.

At Bagdad the British High Commissioner prepared great festivities. There were three days of rejoicing; banquets followed banquets, with diplomatic receptions attended by all foreign representatives; only France was conspicuous by her absence.

Meanwhile, through the skillful work of the High Commissioner and his able corps of Moslem assistants, municipal delegations began to arrive in Bagdad, the most important being from Mosul and Dulaim. These were followed by the Sheiks of the tribes. Soon Feisal began to be acclaimed as King, an honor he quietly accepted, stating, however, that the voice of the people had not yet been fully heard. So they began to acclaim him with more noise. At Dulaim Liwah, at Fahad Bey Al Had Hadhdhal, at Ramadi and at the Oases of the Fallujah Desert there were strange festivals in

which automobiles and Arabian chargers were curiously mingled, as was the powder play of the ancient flintlocks and magazine rifles.

The greatest festival of all was toward the end of July at Ramadi, where Feisal was received by Mutesarrif and Sheik Ali Sulaiman, with the local forces drawn up in modern style to do honor. Here there was a great durbar tent on the banks of the Euphrates, and here Feisal made his most effective speech, punctuating his logic, which was wholly practical, with beautiful figures of speech. He represented himself as merely the messenger of the British Government, whose power was infinite on earth. In that character all the notables paid him homage. According to native accounts, the light, color and beauty of the festival, which was carried on throughout the night under the bright stars of the desert, could be likened only to the scenes pictured in the "Arabian Nights." Then Feisal returned to Bagdad, where the voting of the Council of State and then the referendum, which ratified the vote, took place. The coronation is said to have surpassed even the splendors of the days of Haroun Al-Raschid.

PERSIA'S RAGE AGAINST ENGLAND

[PERIOD ENDED SEPT. 12, 1921]

THE pessimistic speech on Persia made by Marquis Curzon, the British Foreign Minister, in the House of Lords on July 26 (quoted in September CURRENT HISTORY, Page 1069), aroused a storm in the press of Teheran. The reaction of the Iran and the Star of Persia was especially violent. Earl Curzon, in this statement, had intimated that, since the new Teheran Government had denounced the Anglo-Persian Treaty, and had, furthermore, allied itself with Moscow, Great Britain would henceforth wash its hands of Persia. The Teheran press was exasperated that Lord Curzon should describe himself as an old friend of Persia, declaring that he opposed Lord Grey's policy toward Persia merely because he coveted the latter's portfolio of

Foreign Affairs, and gave vent to a bitter attack on Lord Curzon's own policy, initiated as soon as he gained possession of

A part of this attack embraced the administration of the British financial adviser appointed by Lord Curzon—Mr. Armitage-Smith—whom the Star of Persia compared with his American predecessor, W. Morgan Shuster, much to the disadvantage of the former. Mr. Shuster, the paper declared, was a servant of the Mejliss (the elected National Assembly), honored and trusted by all Persians, and expelled in 1911 by a harsh ultimatum, which was the joint work of England and Czarist Russia. The Star of Persia continued thus:

Lord Curzon himself admits that the Anglo-Persian convention is invalid with-

out ratification of the Mejliss. Why, then, did he send a financial adviser without this ratification, and send him back when he returned to England, and still urges him upon Persia, when Persia does not desire him?

The Star of Persia is incensed that Lord Curzon should pretend that England saved Persia in the great war, when the British attempted to use Persia as a battleground, after Persia had declared her neutrality, just as Germany had used Belgium. And as to the Soviet danger, everybody knew that the troops of Lenin would never have invaded the country had it not been occupied by British troops. The writer adds:

Lord Curzon thinks we are the tool of an alien because the Cossack division is now officered by Persians, whereas if it had British officers he would call it a national force. We are not such fools that we do not know our friends and cannot tell the difference between a treaty signed with Russia, from which, Lord Curzon threatens us, we shall ultimately suffer, and the English treaty, which was an instrument of English colonial policy, and would have destroyed our independence forthwith.

Many Americans sympathize with Persia and still deplore the methods used by the British Foreign Minister, then Sir Edward Grey, in 1911, to get rid of the efficient Mr. Shuster. The latter had done economic wonders in Persia and was so beloved by the Persians that they were willing to die for him. A further statement of the Persian reaction to British methods may prove interesting. First, because the Wilson Administration was opposed to the Anglo-Persian Treaty (when Lord Grey came here in 1919 as British Ambassador he was not received at the White House), and, second, because this is the first time that the Persian case has been so fully set forth. The Star of Persia says:

England, by the Convention of 1907, the ultimatum of 1911 [ousting Mr. Shuster], the Convention of 1919 [the Anglo-Persian Treaty], the formation of the South Persian

Rifles [a corps organized in direct opposition to the Constitution], the dispatch of Mr. Armitage-Smith, the covering of Persian with Indian troops, the obstruction of reforms and foreign loans, and by the action of the British authorities in Persia, made the Persian Nation understand that the English Government is not interested in promoting Persia's greatness and strength, and wants to make Persia a second Egypt for the development of its colonial policy.

The English Government wants Persia to have an organized army, but under British officers, like the South Persian Rifles, and subject to the commands of the Government of India.

It wants Persia to have sound finances, but, like Egypt, under English Government supervision and with English advisers as administrators.

It wants Persia to have railways, but will not permit a concession to any foreign company except the English, or to any international association.

It wants Persia's mines developed, but, like the Ahwaz oil, this must be done only by English companies, so that it may keep control over the Persian Government's expenditures. And it welcomes a revision of customs tariff, provided this favors British imperial trade.

These are the views of the English Government, whose Secretary of State says no Western power has worked so disinterestedly to revive the life and greatness of any Oriental country. The Persian Nation, with cordial thanks, declines this disinterestedness, these efforts for such a revival and such a life. It desires to maintain friendly relations with the Durbar of London, and not be the dangerous tool of Britain's enemies, but it will not pledge all its economic resources to Britain. It desires that the doors of its riches shall be open to all nations, and wishes to interest the commerce of all in its economic development.

It is only necessary to add that, by the genius of Mr. Shuster, Persia was in a fair way to realize all the advantages enumerated above, by her own efforts, when in January, 1912, she was obliged to choose between his going and war with Great Britain, and Persia was even hesitating over the alternative when Mr. Shuster decided for her by going.

THE GREAT BATTLE FOR ANGORA

Victorious advance of the Greek armies against the Turks, culminating in the battle of the Sakaria River—Lloyd George's frank explanation regarding the attitude of the Allies toward the two combatants

[PERIOD ENDED SEPT. 12, 1921]

THE Greeks and Kemalists by Sept. 10 had apparently fought each other to a standstill within fifty miles of Angora, with the possibility of a limited Greek retirement without any Turkish pursuit. In the first week of August the Greeks had regained all the positions they had been obliged to abandon in April, and had inflicted severe injuries upon the army of Mustapha Kemal, which was then rapidly retreating, having lost in various ways, permanently or for the time being, fully 60 per cent. of its effectives. From Aug. 6 to 15 the Greeks had consolidated their positions and brought up supplies. They then moved in the direction the enemy had taken.

Meanwhile the main body of Kemal's army had concentrated over the line of mountain summits and valleys from a point behind Sivrihisar to Berbazar, on the upper Sakaria River. Thus the enemy had not only strong mountain positions, but also the curves of the Sakaria River as far as its confluence with the Pursak, as his defense. His positions were impregnable, except for one vital circumstance—some of his detachments had retreated along roads which had no communication with the base of supplies at Angora. [For map see Page 33.]

On Aug. 15 the Greeks were occupying the line Mandra (on the Sakaria River)-Kaimaz-Ak Küprü (on the Pursak Su River, seventy miles east of Eskishehr, which is also situated on the Pursak Su, a branch of the Sakaria). Within the next few days three columns of Greeks were on the march, although strong detachments had preceded them. The first followed the line of the Angora Railway; the second moved toward the Sakaria River from Said Ghazl; the third was moving across the salt desert which lies northeast of Afium Karahissar.

In order to understand what took place when these columns came in contact with the Kemalist lines of defense, it is neces-

sary to know the course of the Sakaria River, for its varying path caused many false deductions to be made from the cable dispatches. This river rises in the Emir Dag, about forty miles south of Eskishehr; it flows in a general easterly direction until it reaches a point southwest from Angora and about ninety miles from that city; it then flows north under the Angora Railway and then northwesterly to a point east of Biledjik; and thence in a general north-easterly direction, emptying into the Black Sea, eighty miles east of Constantinople.

The great battle was begun at Gordion, at the confluence of the Sakaria and the Pursak Su, forty-three miles southwest of Angora, on Aug. 18. In the two days that followed, the Turks were driven from their positions. Conflicting reports placed the Turkish loss in prisoners at 4,000 men and 170 officers and the Greek losses at exactly the same figures, but the news, common to both sources of information, that the Turkish cavalry had been annihilated by the column of Greeks which had emerged from the salt desert, seemed to confirm a Greek victory.

From Aug. 21 until the Greeks reached the second line of the enemy's defense on Aug. 23, and then on for eight days, during which there was severe fighting, the only reason for supposing that the Greeks were advancing and the Turks retreating was that with the news of each day's Turkish "victory" there was indicated a place further east than the scene of the "victory" of the day before. No news came from the Greek front, just as no news came from the front of the Allies for long periods during October, 1918, when the pursuit of the Germans was so rapid. From Aug. 23 to 31 the Greeks drove the Turks from their second line and almost succeeded in isolating their left wing.

On Aug. 26 there was a report from Constantinople that the Turkish centre had

been reinforced by two divisions from the Caucasus, making eight in all facing the Greeks on the railway, and that each wing of the Turks, both on the left bank of the Sakaria River, on its northerly course, had four divisions. While the Greeks rested on Aug. 31 for their transport service to reach them on a line forty miles long lying across the Sakaria southeast from Sivri-Hissar, the Turks, in spite of the reinforcements they had received, resumed their retreat and actually succeeded in removing their heavy artillery behind their second line, which had already been occupied by the Greeks.

Fighting was then resumed on the fortified heights north of the Rivers Gheuk and Katranji, on a line deployed by the Turks to between sixty and seventy miles. From these positions the Turks again slowly retired until, in the first three days in September, they were occupying the line Gordium—Polatli—Sarighiol—Karahodja, only fifty miles from Angora.

Then there were rumors of a Turkish flight from the Nationalist capital, but up to the time when these pages went to press the movement for the envelopment of Angora had been held up, as the Greeks were temporarily unable to proceed further, on account of their long and hazardous lines of communication, constantly interrupted by troops of bandits.

In the British House of Commons, on Aug. 16, the Prime Minister made a long statement in regard to the Turko-Grecian problem and the Treaty of Sèvres. He said that when the Kemalist insurrection arose, Venizelos, then Premier of Greece, was for dealing with it at once, but was held back by the Allies. Subsequent events had proved that Venizelos was right. He then explained why the Allies could not "force" both the Nationalist Turks and the Greeks to come to terms, and added, explaining many things of which the world had been ignorant or which it had misconstrued:

There is only one other alternative, and that is to leave both of them to fight it out. Some say we might have referred the matter to the League of Nations. That would have been an unkindness to the League of Nations. How could they have dealt with it? They would only have had the means which the Allies could have placed at their disposal, and there was no allied power which would have sent an army for the purpose of enforce-

ing a decision. Therefore you had to leave both to fight it out. We have not given arms to either of them—not a single gun, rifle or shell. These battles have been fought without any assistance from us either way.

Not only do I think that that was the only course, but I am afraid it is the best course. I will tell the House quite frankly why I think so. One is a reason that applies to the Turks and the other a reason that applies to the Greeks. The Mustapha Kemal Turks undoubtedly had an exaggerated idea of their own prowess. They conquered Asia Minor very easily. They gained some very easy victories in Cilicia, and they had a very exaggerated view of their own prowess and a contemptuous estimate of the Greeks' military capacity. Their realization that they were wrong in both those instances will make them none the worse neighbors for Greeks or Italians or Frenchmen or British. The Turk accepts a fact in the end when it is really driven into his mind. There are Greek enthusiasts, on the other hand, who, I have no doubt, will realize soon that there are limits to what Greek resources, valor and skill can accomplish in the fastnesses of Asia Minor. War has one merit, in that it does in the end teach a respect for facts. I think both these races will be easier to deal with when their own limitations have been brought thoroughly clearly to their minds.

The British Admiralty has officially announced that from Oct. 15 Rear Admiral Aubrey Clare Hugh Smith, C. B., M. V. O., will be lent to the Greek Navy as chief naval adviser. Before the war he was attached to the Admiralty and to various embassies abroad; during the war he served first in command of the cruiser Drake and then as Commodore on the South American and Pacific Station.

There are increasing signs that all is not well diplomatically between Moscow and Angora. The Turks, according to complaints of the Russian Foreign Commissioner to Ali Fuad, Turkish Ambassador at Moscow, have been ill treating communists, have even executed some. An authentic copy of Ali Fuad's explanation to the Commissioner, dated Moscow, June 22, 1921, has come to hand. In it is the following passage:

The official reports which I have from my Government state that the communists are constantly committing serious tactical errors, weakening the Turkish front by attempting a premature social revolution which at the moment the Turkish people do not at all desire, and openly and directly opposing the laws and regulations of the Great National Assembly of Turkey. In view of such action,

I do not see how the action of the Turkish officials who apply the law against all trouble makers in Turkey can be misinterpreted. As to the suggestion that the Turkish army was the cause and author of the bloody events at Alexandropol or of the tragic end of some of the inhabitants of that city, it is at least astonishing that officers of the Red army, allied with the Turkish army, should be victims of such inventions and should accept without proof such unfounded stories. It is clear from documents and copies of documents at the headquarters of our eastern army, some of which come from

the communist organizations of Alexandropol and some from neutral institutions such as the American institutions, that all the victims referred to were sacrificed by the counter-revolutionaries when they refused to obey while the Turkish army was still far from those regions. As to the incidents at Kars and at Artvin, the data furnished by the Turkish Government indicated that they amount merely to a few perfectly legal arrests of persons who made themselves agents of our enemies by seeking to stir up discord between the two peoples of Turkey and of Russia.

ENGLAND'S UNEMPLOYMENT CRISIS

Great industrial depression weighs upon the nation—Borough Councilors go to jail to save money for the local poor—Greatest airship disaster in history—Forty-four men killed by collapse of the giant American dirigible, ZR-2

[PERIOD ENDED SEPT. 12, 1921]

IN checking up the British industrial depletion through sickness and disablement, as covered by the eight-year period 1913-1920, since the National Insurance act went into effect, a recent Government report showed that on the average there were at least 14,065,941 working weeks lost every year. This total was made up of men, 8,916,000 weeks, and women, 5,149,941 weeks. During the year before last the Government paid out to sick and disabled persons £7,089,784. As pointed out by a medical expert, the foregoing figures signify that there is a constant loss of work in Great Britain of 270,000 persons. That, however, is but an item in the larger bill. For not only does the employer lose in the sickness itself; he loses on the sick man. At present this loss may not be computed, because there is no means of estimating it.

Upon this point, however, the medical expert goes on to say in effect that if firms would observe the fluctuations of their output in relation to the sick-absence of their work people, information of a most valuable kind would be available. In one instance in which an attempt was made to keep figures it was found that the absence of a good worker cost a definite sum each week. This was accounted for in part by the diminished skill of the man replacing him and in part

by the general disorganization resulting from his absence. Thus, even if we put the cost so low as one shilling a worker per annum—an absurd underestimate—we have to add almost a million pounds to the general bill of costs for sickness. The probability is that twice this figure is too small a reckoning. The medical writer expresses the belief that the dead loss to the employers thus amounted to £2,000,000 a year. He therefore urges, in the interest of both employers and workers, that instead of letting the worker go to the physician when sickness falls upon him, as at present, the employers should invite local physicians to inspect their workers periodically, inasmuch as the great mass of disease which cripples industry is preventable.

In the field of labor a downward revision of wages from the high peak ran between 12½ and 15 per cent., according to figures presented by Trade Commissioner Hugh D. Butler, stationed in London. Where the earnings of the workers had not been reduced by at least such amounts, further cuts at some specified date were generally in prospect, or there was an agreement to reconsider the matter soon or later. The shipyard joiners were reported to be an almost solitary exception to the disposition of all trades to accept wage reductions by

agreement with employers, thus terminating the disastrous strike period through which the country had recently passed.

A serious condition of unemployment, however, continued to prove its existence by startling incidents. For instance, the response of 5,000 unemployed men to an advertisement in the newspapers for help in a lumber yard resulted in a furious riot when it was discovered there were only fifty jobs vacant. The mob of disappointed applicants wrecked the company's office and sheds, and in some manner the whole yard caught fire. Mounted and foot police finally drove the idle men out of the yard, but the best efforts of the firemen were powerless to save a loss which ran into millions of pounds.

Connected with the unemployment problem also was the decision on Aug. 31 of thirty labor members of Poplar Borough Council of London to go to prison rather than obey an order of the High Court requiring them to raise rates to pay the call of the London County Council dealing with education, drainage of roads and other services for the whole of London. Their decision was based on the ground that they were heavily burdened with the maintenance of the poor and unemployed in this, one of London's poorest districts, and they declined to saddle the borough with anything further until the laws were reformed which compelled each borough to provide for its own poor, a burden which the rich districts escaped.

On Sept. 3 and 4 considerable excitement attended the arrest of nineteen refractory Councilors, among whom was George Lansbury, editor of *The Daily Herald*, the national labor organ. On the 5th a great demonstration was staged in support of five women Councilors who elected to follow their male colleagues to jail rather than impose more taxation on the borough for money due the London County Council. Immense crowds accompanied the arrested women Councilors to the doors of Brixton Prison.

Decontrol of the railways of Great Britain and Ireland took place on Aug. 15 after seven years of administration and operation by the companies under the control of the State. So vast are the administrative and financial changes that have

taken place in those seven years that it is certain under the present cost of operation there can be no return to the pre-war level of rates, either as to passenger or goods traffic, if there is to be any margin of income for their owners. Decontrol of the consumption of beer, wines and spirits in Great Britain was scheduled for the end of the month by the passage of the Licensing bill through the House of Lords on Aug. 17. Regulation will again be by act of Parliament, not by the unpopular Orders in Council.

A preliminary report on the census of 1921 gave the population of Great Britain on June 19 as 42,767,530, an increase of 1,936,134, or 4.7 per cent., over the figures of 1911. This was the smallest increase recorded in any decade for 100 years. One legacy of the war is the preponderance of females over males. For England the figures showed 16,984,987 males and 18,694,443 females; Wales, 1,098,133 males and 1,108,579 females; Scotland has a surplus of more than 180,000 females. In all there are 1,906,000 more women than men in the United Kingdom. No Irish census was taken in 1921. London remains the largest city in the world, with a population of 7,476,168. Birmingham is second in the British Isles with 919,438 persons, Liverpool third and Manchester fourth.

GREAT AIRSHIP DISASTER

An airship disaster of unparalleled magnitude occurred over the City of Hull on Aug. 24, at 5:45 P. M., when the giant dirigible ZR-2, purchased by the American Government, suddenly collapsed high in the air. The vessel was on a final test trip before being delivered to her American crew for navigation to the United States, when she was seen from below to break in two. This appalling spectacle was followed almost instantly by explosions and the bursting of the airship into flames.

As the vessel began a nose dive, watchers fled in panic to the shelter of the houses, fearing the burning airship would plunge into the centre of the business district. But by an act of heroism on the part of her commander, Captain A. A. Wann, this additional disaster was avoided, and the airship was steered so that it fell into the Humber River. Three members of the

crew, who had descended by a parachute, made a safe landing, and two others, including Captain Wann, were subsequently taken off the wreck. These were found to comprise all the survivors from a crew of 32 British and 17 Americans—49 in all. None of the Americans was saved.

Among the British officers who lost their lives, General E. M. Maitland was regarded as a leader in aviation. The names of the American officers on the ill-fated ZR-2, as officially given out in Washington on Aug. 25, were Commander Louis H. Maxfield, Lieut. Commander Valentine N. Beig, Lieut. Commander Emery Coil, Lieutenant Charles

G. Little, Lieutenant Marcus H. Esterly and Lieutenant Henry W. Hoyt. The cause of the disaster was said to have been a structural weakness.

The ZR-2, the greatest of airships, was 695 feet long, 85 feet in diameter and had engines of 2,100 horsepower and a cubic capacity of 2,700,000 feet. The cruising radius, at fifty miles an hour, was 9,000 miles. The vessel was originally known as the R-38, but her name was changed by the American Navy Department when the purchase was agreed upon at \$2,000,000. The ZR-2 was to have been housed at Lakewood, N. J., in the largest hangar ever built.

FEELING THE WAY TOWARD IRISH PEACE

Gradual progress toward agreement between Lloyd George and Eamon de Valera through the exchange of many notes—New negotiations at Inverness—Ulster refuses to be bound by any decisions made by the other two parties in the controversy

[PERIOD ENDED SEPT. 12, 1921]

PUBLIC attention in Ireland was almost wholly centred upon the peace negotiations, which mainly took the form of a lengthy exchange of notes between Eamon de Valera, the Irish Republican leader, and Premier Lloyd George. A reading of this correspondence showed not only that each note was written with extreme care but also that more than one betokened the united effort of several minds. Again, while both sides found themselves in positions of determined opposition, at the outset both appeared equally averse to making an impassable barrier to a final settlement. But in the background of this controversy there was always the determination of the Northern Parliament of Ulster to stand upon its newly acquired rights as independent of whatever agreement might be reached between the Dail Eireann and the British Government. In other words, Ulster flatly refused to be drawn into any present plan to satisfy Sinn Fein aspirations for a United Ireland.

This peace correspondence, of undoubted-

ly great historic importance, properly began with a long letter from General Jan C. Smuts, Premier of South Africa. It was dated Aug. 4 and indicated that the former South African rebel, and the elected President of "the Irish Republic," to whom the letter was addressed, were upon terms of personal friendship. General Smuts was about to sail for South Africa, and he began by expressing his regret that he could do no more to remove the impasse which had been reached by Mr. de Valera and Sir James Craig, the Ulster Premier. He found that the question of Ulster's coming into a United Ireland Constitution was as firmly insisted upon by Mr. de Valera as it was rejected by Sir James Craig. While General Smuts believed that it was to the interest of Ulster to come in, yet such was her opposition that he advised leaving her alone for the present, and to concentrate upon a free Constitution for the remaining twenty-six counties. Once this was successfully established, he thought economic and other forces would eventually pull Ulster into

that State. The remainder of General Smuts's letter was indeed an eloquent plea for the Irish leaders to be guided by that same political light which had brought South Africa from out her period of national stress to become "a happy, contented, united and completely free country."

On Aug. 14 three notes were given to the public, disclosing the positions taken up by Mr. de Valera and Premier Lloyd George at the outset of the negotiations. First, the original British proposal for a settlement, dated July 26. It began with the declaration of an earnest desire "to end the unhappy divisions which have produced so many conflicts," and expressed the belief that "the Irish people may find as worthy and as complete an expression of their political and spiritual ideals within the empire as any of the varied, numerous nations united in allegiance to his Majesty's throne." Such consummation was desired not only for the welfare of Great Britain and Ireland, but for peace throughout the world. To this end it was proposed that Ireland assume forthwith the status of a dominion, with all the powers and privileges as herewith set forth. Briefly, in addition to dominion status, Ireland should have autonomy in taxation and finance, with her own courts of law and Judges, army for home defense, constabulary and police, postal services and all matters concerning education, agriculture, mines, forestry, labor, transport, trade, public health, insurance and liquor trade. Only the British Government laid down these conditions: The Royal Navy alone would control the seas around Ireland, and Great Britain would raise Irish Territorials to conform numerically to the military establishments of other parts of these islands. Voluntary recruiting would be allowed in Ireland for the Imperial Army, Navy and Air Services. No protective duties would be adopted, and Ireland would be responsible for her share of the United Kingdom's debt.

To these proposals Mr. de Valera replied on Aug. 10, after consulting with his colleagues. He reminded the British Premier that at their London conference he had expressed the conviction that the Dail Eireann could not and would not accept the foregoing proposals. He was now compelled to confirm that opinion. He complained that the principle of the pact was not easy to de-

termine, for while Ireland's separate nationhood and right to self-determination were implied, there were stipulations and conditions at variance with the vital principle of independence—"absolute separation." He pointed out that dominion status was an illusory term, since the freedom which the British Dominions enjoyed was not so much the result of legal enactments as of the immense distances which separated them from Great Britain. Regarding the question of the independence of Ulster, Mr. de Valera contended that Great Britain must stand aside in a matter which concerned only the Irish, though if impossible of solution from that point of view he was willing to submit it to extend arbitration. On the whole, therefore, the proposals were rejected, but not without concluding words by way of illumination to the final sentence: "The road to peace and understanding lies open."

Premier Lloyd George's answer to the foregoing was dated Aug. 13. After calling attention to the fundamental differences which had arisen, and the decision "to leave you in no doubt of our meaning," Mr. Lloyd George declared emphatically that no British Government could compromise on the right of Ireland to secede. "No such right can ever be acknowledged by us," he went on. "The geographical propinquity of Ireland to the British Isles is a fundamental fact. The history of the two islands for many centuries, however it is read, is sufficient proof that their destinies are indissolubly linked."

At this point Mr. de Valera was reminded that when he came to see Mr. Lloyd George only one condition was stated, viz.: "That Ireland should recognize the force of geographical and historical facts." Regarding the suggestion that existing differences between the two parts of Ireland might be submitted to foreign arbitration, that was squarely rejected. In conclusion Mr. Lloyd George said: "Our proposals present to the Irish people an opportunity such as has never dawned in their history before. We have made these in a sincere desire to achieve peace, but beyond that we cannot go."

The position of Ulster at this time was disclosed in a letter from Sir James Craig to Premier Lloyd George, after a copy of the British Southern Irish proposals had been forwarded to the Ulster Premier.

After calling to mind the sacrifices made in agreeing to self-government and consenting to the establishment of a Parliament for Northern Ireland, much against their wishes but in the interests of peace, they were now busily engaged in ratifying their part of that solemn bargain. This, "while Irishmen outside the Northern area," who in the past struggled for that Home Rule the people of Ulster did not want, "have chosen to repudiate the Government of Ireland act and to press Great Britain for wider powers. To join in such pressure is repugnant to the people of Northern Ireland." Therefore they respectfully declined to determine or interfere with the terms of settlement between Great Britain and Southern Ireland. He contended Ulster did not block the way to peace. What she could not permit was interference with her Parliament and rights. Consequently no meeting between himself and Mr. de Valera could take place until the latter recognized that Northern Ireland would not submit to any authority other than His Majesty the King and the Parliament of the United Kingdom, and admitted the sanctity of the existing powers and privileges of the Northern Irish Parliament.

On Aug. 16 the Dail Eireann, Irish Republican Parliament, was formally opened in the Assembly Hall of the Mansion House, Dublin. At 11:15 A. M. Mr. de Valera, accompanied by his Cabinet Ministers, the Lord Mayor of Dublin and Frank P. Walsh, entered the densely thronged chamber. Several notable figures were present. The proceedings then went forward with remarkable order and discipline. After a short prayer in Gaelic by Father O'Elanagan, the signing of the roll took place. The oath administered to members read as follows:

I do solemnly swear or affirm that I do not and shall not yield voluntary support to any pretended government, authority or power within Ireland hostile and inimical thereto, and I do further swear or affirm that to the best of my knowledge and ability I will support and defend the Irish Republic and the Government of the Irish Republic, which is the Dail Eireann, against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same, and that I take this obligation freely, without any mental reservation or purpose of evasion. So help me God.

After Professor John MacNeill had been elected Speaker, Eamon de Valera, in an address to the House, declared for Ireland that he and his colleagues stood for the ideals embodied in the American Declaration of Independence. He reiterated Ireland's claim to separation from the British Empire, and asserted that the Cabinet of the Republican Parliament was the sole Government the Irish people recognized. Regarding the peace negotiations he said: "The trouble in the present negotiations was the lack of principle on the part of Great Britain to stand for principle, and we mean to die for it, if necessary."

After organization meetings the Dail Eireann went into secret session on Aug. 23 to consider its reply to the British Government's proposals.

Meantime, on Aug. 19, Premier Lloyd George, in speaking before the House of Commons, said:

There is one thing that has been achieved—the issues have been defined more clearly than they have ever been before, and their rejection would be an unmistakable challenge to the authority of the Crown and the unity of the empire. Here we are in the very heart of the empire, and no party in the State could possibly pass that over without notice.

But he protested against using language of menace, for that would be folly, as aggravating the old difficulty. In another place the Premier said: "We have put all our cards on the table. The outline of our offer cannot be altered nor the basis changed."

The first result of the deliberations of the Dail Eireann took the form of a letter signed by Eamon de Valera as a reply to Lloyd George's note of Aug. 13, and sent by a special courier to the British Premier in London on Aug. 25. It was in effect a vigorous repudiation of the British argument of "geographical propinquity" and of the British right that Ireland must subordinate herself to Britain's "strategic interests." The note said in part:

We cannot believe that your Government intended to commit itself to the principle of sheer militarism, destructive of international morality and fatal to the world's peace. * * * If nations that have been forcibly annexed to an empire lose thereby their title to independence there can be for them no rebirth of freedom. * * * If our refusal to betray our nation's honor * * * be made an

issue of war * * * we deplore it. * * * We have not sought war, nor do we seek war, but if war be made upon us we must defend ourselves. * * * If your Government be determined to impose its will upon us by force and, antecedent to negotiations, to insist upon conditions that involve a surrender of our whole national position and make negotiations a mockery, the responsibility for the continuance of the conflict rests upon you.

The note concluded by suggesting that on the basis of the broad guiding principle of government by the consent of the governed, peace could be secured. Dail Eireann was ready to appoint its plenipotentiaries to secure such a peace.

In a prompt reply to this missive on Aug. 26, Lloyd George expressed himself as "profoundly disappointed" by the Irish reply. He categorically denied the Irish contention that the British proposals "involve the surrender of Ireland's whole national tradition, and reduce her to subservience," and declared that under these proposals, on the contrary, "Ireland would control every nerve and fibre of her national existence"—language, religious life, taxation, finance, education, land and agriculture, labor and industry, national health and homes, the maintenance of law and order. Ireland would, in other words, within her own shores, "be free in every respect of national activity, national expression and national development. The States of the American Union, sovereign though they be, enjoy no such range of rights." Great Britain, however, if the Irish insisted on absolute independence and sovereignty, would answer with an emphatic "No!" The conditions were the same as those prevailing at the time of the Civil War in the United States, and the words of Abraham Lincoln, "Physically speaking, we cannot separate. We cannot remove our respective sections from each other now and build an impassable wall between them," were equally applicable to the relation between Great Britain and Ireland.

In conclusion, he expressed willingness to continue negotiations in an attempt to find a basis of agreement, but warned against delay as playing into the hands of the extremists anxious to wreck the negotiations and terminate the truce.

To this letter the Irish Republic Parliament replied by a communication given out

from 10 Downing Street on Sept. 2. Mr. de Valera and the Dail Eireann had not receded in the slightest from the position formerly adopted. They declared that the Government proposals were not an invitation to enter into a free-willing partnership with the nations of the British Commonwealth, but that, on the contrary, the conditions Mr. Lloyd George sought to impose would divide Ireland into two artificial and mutually destructive States. The position of Ulster was thus brought to the forefront. Further, insistence was laid on the entry of plenipotentiaries into a conference untrammelled by any conditions.

The gravity of the resulting situation moved Mr. Lloyd George, taking a vacation in Scotland, to summon a meeting of the British Cabinet at Inverness on Sept. 7. It was recalled that never before had the Ministers been called upon to take such a journey to attend a council in circumstances so unusual.

With unlooked-for celerity the British Cabinet completed its discussions. By 4 o'clock on the afternoon of Sept. 7 the British reply had been handed to Commandant Barton, the Irish courier, and was on its way to Dublin. Couched in earnest, even solemn, tone, the text of the note read as follows:

Government by consent of the governed is the basic principle of the British Constitution, but we cannot accept as the basis of a practical conference an interpretation thereof which would commit us to any demands you might present, even to the extent of setting up a republic and repudiating the Crown.

You must be aware that a conference on such a basis is impossible. So applied, the principle of government by consent of the governed would undermine the fabric of every democratic State and drive the civilized world back into tribalism.

On the other hand, we have invited you to discuss our proposals on their merits, in order that you may have no doubt as to the scope and sincerity of our intentions.

It would be open to you in such a conference to raise the subject of guarantees on any point in which you may consider Irish freedom prejudiced by these proposals. His Majesty's Government are loath to believe that you will insist upon rejection of their proposals without examining them in a conference.

To decline to discuss a settlement which would bestow upon the Irish people the fullest freedom for national development with the empire can only mean that you repudi-

ate all allegiance to the Crown and all membership in the British Commonwealth.

If we are to draw this inference from your letter, then further discussions between us could serve no useful purpose and all conferences would be in vain. If, however, we are mistaken in this inference, as we still hope, and if your real objection to our proposals is that they offer Ireland less than the liberty we have described, that objection can be explored at a conference.

You will agree that this correspondence has lasted long enough. His Majesty's Government must therefore ask for a definite reply as to whether you are prepared to enter a conference to ascertain how the association of Ireland with the community of nations known as the British Empire can best be reconciled with Irish national aspirations.

If, as we hope, your answer is in the affirmative, I suggest that the conference should meet at Inverness on the 20th inst.

The Irish answer to this had been delivered by Sept. 12. Though its text was not officially published, it was understood that de Valera and his associates had accepted the invitation to the proposed conference at Inverness. A new courier was sent from Dublin to Lloyd George at Inverness on this date. The Dail Eireann was already selecting its plenipotentiaries for this all-important conference. Prominent Irish personages mentioned as likely to be selected were Arthur Griffith, Foreign Minister of the Dail Eireann Cabinet, Professor John MacNeill, Speaker of the Irish Parliament, and Commandant Barton, the

former Irish special courier to Lloyd George and a cousin of Erskine Childers, who is a nephew of one of Gladstone's Chancellors. The name of Austin Stack, the Dail Minister of Home Affairs, was mentioned as a fourth possibility.

A strong and emphatic warning was issued by Ulster at this time through Hugh O'Neill, Speaker of the Ulster Parliament, at an address at Ballymena. Mr. O'Neill said in part:

Any diminution of the rights and privileges of the new Ulster Parliament as a result of the projected negotiations, would lead to a bitter civil war in Ireland which would become world-wide. * * * There would be in Ireland a war which would embroil Great Britain and the United States and would spread horror over the earth.

While the long and anxious negotiations were being carried on, the truce which made them possible was being faithfully observed throughout the greater part of Ireland. Factional strife, however, again flamed up in Belfast during the last week of August. Serious rioting occurred on Aug. 21, and again on Aug. 29. On the 31st, with a list of fifteen persons killed and thirty-four seriously wounded and with all signs pointing to a widespread increase of the disturbance, the authorities appealed to the military to take charge of the city. Action by the Crown forces restored outwardly normal conditions by Sept. 1.

CANADA AND OTHER BRITISH DOMINIONS

[PERIOD ENDED SEPT. 12, 1921]

A GENERAL election is to be held in Canada before the New Year. Right Hon. Arthur Meighen, the Prime Minister, made this announcement in an address at London, Ontario, on Sept. 1. The exact date has not yet been stated. In effect the Premier declared that the continuance or rejection of a protective tariff was the issue. He considered the farmers' political movement to be the real challenge to the Government, arguing that the Liberal Party could not be regarded as a serious contender.

The Premier's announcement was somewhat of a surprise to the general public. A census of Canada had been taken in June, and no general election had been expected pending a redistribution bill based upon this census. As matters now stand, the election will be contested on the census of 1911. That the Premier recognized that the question of redistribution was likely to be used in strong criticism of the Government, was indicated in his speech. He said that the rural portion of western prairie Canada would gain by redistribution, but

the Government would lose more in the East than they could possibly gain in the West. The advantage was now with them. He also said that there was no means of redistribution except at the price of holding the country in suspense through very difficult times for eighteen months or so on an issue (protection) that was formidably challenged. It was his contention that the rigors of an election campaign in January or February should be avoided.

At the present time there are seven vacancies in the House of Commons. To fill these, by-elections would have to be held with the knowledge that the life of Parliament automatically expires next year, and a general election would then have to be held. No doubt the Government's decision to hold a general election this Fall was to some extent based on the hope that further losses in by-elections might result in a defeat on a vote in the Commons, thus forcing them into an appeal to the people, instead of giving them the prestige of a voluntary appeal.

The last general election in Canada was held in December, 1917, when a union Government was voted into office by an overwhelming majority. The previous Government, under Sir Robert Borden—since retired from the Premiership—was Conservative. Union Government was effected by the coalition of a number of leading Conservatives and Liberals for the express purpose of putting conscription into effect. Since the end of the war a number of the Liberals have left the Cabinet, which now largely consists of Conservatives. Premier Meighen intends to reorganize the Cabinet before the elections.

Since the coalition, or union, of 1917, two important new parties have made their appearance—the Farmers' Party and the Independent Labor Party. These have a coalition of their own. In constituencies where the rural element is preponderant, the laborites support farmer candidates; in urban centres it works the other way. In the Canadian or Federal field the Farmers' Party is known as the National Progressive Party. In the provinces it goes under the name of the United Farmers of Ontario—or whatever the name of the province is. The farmers have come into power, with the aid of the Labor Party, in Ontario. They

have a strong position in Manitoba, and they have swept Alberta. In all these provinces, and wherever else they are organized, they will turn their votes and influence to the aid of the National Progressive Party in the federal campaign.

The general election will therefore witness an alignment of three parties, counting the farmer and labor organizations as one, namely, the Government Party, largely conservative and led by Premier Meighen; the Liberal Party, led by Hon. William Lyon Mackenzie King, and the National Progressive Party, led by Hon. T. A. Crerar. It will be the first general election in Canada in which parties other than the traditional Liberal and Conservative parties, or a coalition of these two, have been serious elements. The Conservative Party, generally speaking, stands for a high protective tariff; the Liberal Party for "tariff for revenue," or a more moderate tariff than that advocated by the Conservatives, while the National Progressive Party is practically for free trade.

AUSTRALIA—Great Britain and her dominions stand before the world as one great Commonwealth as a result of the deliberations of the Imperial Conference, according to an address by Premier William M. Hughes of Australia at a farewell banquet given in his honor in London on Aug. 22. He advocated a protective tariff, so that high wages might be maintained in the British dominions.

Premier Hughes at Amiens on Aug. 25 unveiled a "cross of sacrifice" erected in Bonny cemetery, where thousands of Australian and British soldiers are buried. Later he presented to the city of Amiens a flag sent by Australian mothers in memory of the part played by the Commonwealth's armies in the defense of that city.

An electric line bringing high-tension power from Victoria Falls to Melbourne, a distance of 112 miles, is about to be constructed by the State, the power to be sold for manufacturing purposes. There will be 634 steel towers to carry a current of 132,000 volts. The contract was awarded to a New York firm by the Electricity Commissioners of Melbourne.

Australia has offered a reward of \$125,000 and the State of New South Wales has offered \$50,000 to any one who discovers

petroleum in paying quantities. Thus far the discoveries have been practically negligible.

NEW ZEALAND—An imperial constitution which should include within its scope the United Kingdom and all British dominions was advocated by Lord Milner on Aug. 23 at a farewell dinner given in honor of Premier W. F. Massey of New Zealand, who left England on Aug. 25 on his return home by way of Canada. At Cobalt, Ontario, on Sept. 6, he predicted that the "next war" would be fought with the Pacific as the centre of activities. He favored a renewal of the Anglo-Japanese Alliance.

Sentiment in New Zealand is against the granting of favorable tariff terms to countries such as the United States which impose prohibitive duties on the products of New Zealand; this statement was made in a cable dispatch from Wellington to The London Times on Aug. 18. The question of revising the tariff will come before the next session of the New Zealand Parliament and local secondary industries are pressing for greater protection.

EGYPT—An Egyptian delegation headed by Adly Pasha was in London several weeks, conducting negotiations with Lord Curzon, the Foreign Minister, regarding the political claims of the nation. The conferences were adjourned in August to Sept. 24, when they were resumed. The recent rioting in Alexandria and Cairo was instigated by a lawless element of the lowest classes in those cities and is not regarded seriously. The Egyptians are demanding broadened autonomy and independence. One of the chief obstacles to an agreement is the insistent demand of the Egyptians that the British troops be withdrawn from the country.

BRITISH EAST AFRICA—Deep depression is felt in British East Africa—now known as Kenya Colony—as well as in the adjoining British territory of Nyassaland. The last budget of Kenya showed a deficit of \$800,000. It is now proposed to float a

loan of \$45,000,000, to be spread over three years, for development works. This will be expended chiefly in harbor developments and railroads. The principal exports are coffee, flax, copra and hides. There are 26,000 acres of coffee and 33,000 acres of flax under cultivation. In Nyassaland a railroad is now being built across Zambesi. This road may eventually be extended to link up the great lakes to the waters of the Upper Nile, thus carrying out the design of Cecil Rhodes. The low prices of tobacco and cotton produced a gloomy situation in the colony.

TANGANYIKA TERRITORY (formerly German East Africa)—Work has been begun on the bridge that is to span the Zambesi River at Chinde, the British concession in Portuguese East Africa, which is to open trade with Lake Nyassa and Tanganyika Territory and form a link of the Cape-to-Cairo railroad. This road is finished as far as Salisbury in Rhodesia and the northern end is completed as far as Sennar on the Blue Nile. From Salisbury a branch runs to Beira on the coast, which it follows northeast to the Zambesi. Crossing the river here, it will again strike inland to Fort Johnston, at the southern end of Lake Nyassa, by way of Blantyre. The Zambesi bridge will be the longest in Africa.

UGANDA—One of the pioneers of missionary work in Uganda, Mother Mary Paul of the Franciscan Order, died at Kampala in August, aged 64 years. She had labored there fourteen years. She was Miss Mary Murphy and was born in New York City. She was the first white woman to go to Uganda. Colonel Theodore Roosevelt in his book on his African hunting trip pays a warm tribute to her and describes the mission, which he visited and of which she was Superior.

GOLD COAST—A surprising increase of trade of the Gold Coast is noted in the returns for 1920, the biggest in the history of this British colony, totaling £26,000,000, or £8,500,000 more than in 1919. The chief gain was in imports, which increased 77 per cent.

HOW GERMANY WILL PAY FRANCE

Payment in kind agreed upon in the new Reparations Agreement concluded at Wiesbaden—France to obtain materials for reconstruction on easy terms, and Germany to be relieved of difficult cash payments—Visit of the American Legion to France

[PERIOD ENDED SEPT. 12, 1921]

AT last France has gained assurance that she will receive her reparations due from Germany, and, what is more, that they will be made according to a plan of the most practical character that could be found. By the special agreement with Germany signed at the end of August, Germany bound herself to pay France in kind. The importance of this to France is that the materials to be furnished her by Germany within the next four or five years will enable her to rebuild her devastated provinces in the quickest, least expensive and easiest way possible.

This new compact, which was negotiated by M. Loucheur, French Minister for Reconstruction, and Herr Walther Rathenau, the German Minister of Reconstruction, at Wiesbaden on Aug. 27, brought new hope to the French people, and exorcised the depressing effect of the financial agreements reached by the allied Finance Ministers and experts in Paris on Aug. 17. Under these agreements, to which M. Doumer, the French Finance Minister, subscribed with the utmost reluctance, France received no part of the first \$250,000,000 to be paid by Germany on reparations during the current year. The ground for this apparent discrimination against Germany's greatest creditor was a simple one—both France and Belgium had already received in payments in kind a value considerably in excess of the costs of their occupation forces on the Rhine, while Great Britain had received less than her disbursements. The British deficit, in fact, reached a total of from £25,000,000 to £30,000,000. The French, however, sought to have coal deliveries excepted from the payments in kind, on the ground that the yield of the Sarre coalfields was not immediately realizable, and pointed out that if such exception were made the French themselves would have a deficit to show of some 150,000,000 gold marks, in contrast with the

300,000,000 excess which the Reparations Commission had charged up against her.

Under the Versailles Treaty there was no special provision that coal deliveries should be charged against the first \$250,000,000 payment to be made by Germany. The allied financial experts, however, pointed to the Spa agreement, under which coal was to be charged against this initial payment. They further pointed out that France was exporting and re-exporting coal, and that notes of small denominations were being circulated in Paris bearing the inscription "*Mines de la Sarre.*" All in all, the French Financial Minister got the worst of the argument, and the allied distribution agreed upon by the experts held in France's despite.

The Loucheur-Rathenau agreement, consequently, came as a welcome relief to the French Government, for it embodied a definite and satisfactory solution of virtually the whole reparations issue, so far as France was concerned. It was noteworthy as being in effect a separate treaty with Germany, the first that France has concluded with her former enemy since the end of the war. The meeting at Wiesbaden (Aug. 25-27) between the French and German negotiators was the second held by them within several months. The preliminary basis for this treaty was reached in the first interview. For many weeks M. Loucheur and Herr Rathenau have been working out the details. The draft of the whole compact was submitted to the Reparations Commission early in August, and although it was understood that there was considerable objection from the British side, the commission approved it. With this approved draft scheme in hand, M. Loucheur and Dr. Rathenau made quick work in concluding it. The treaty was signed on Aug. 27. Though a number of details still remained to be finally settled, the main provisions were incorporated.

Under the plan agreed to, France will receive in the next few years materials for reconstruction far surpassing what she would get as the recipient of 52 per cent. of cash, her originally allotted share of German reparations payments. In return for these materials she will be allowed to pay back over a number of years the cash which she is scheduled to receive under these payments. This main project is full of common sense, as it supplies France immediately with supplies which she cannot wait for, and gives Germany a much-needed outlet for her products. The specific terms of the agreement are briefly as follows:

France is given the right to demand up to May 1, 1926, deliveries of material by Germany up to a total value not to exceed 7,000,000,000 gold marks. This sum will be paid back to Germany as follows: Up to 1933, the sum which France must pay in any one year, inclusive of 5 per cent. interest, shall not exceed 1,000,000,000 gold marks. In 1933 and 1936 the balance is to be paid in four semi-annual instalments, payments to be made in any one year not to exceed what France receives as her 52 per cent. of German reparations payments. The agreement further settles a number of other points. The coal price to be credited to Germany is to be that paid by the big German consumers. Any excess materials over that which France finds she needs is to be used by Germany for her own export trade, and the value will be paid by her to France in other deliveries. France agrees not to continue her search in Germany for the cattle driven out of France by the German Army, and accepts in final settlement a delivery of 62,000 horses, 25,000 cows, 25,000 sheep and 20,000 hives of bees. A similar arrangement is to obtain respecting the industrial material stolen from France by the German invaders; Germany is to restore 120,000 tons of machinery as demanded by France, and to pay the latter country 158,000,000 marks in gold. To take the place of French rolling stock removed from France, Germany is to send her former enemy 6,000 railway cars.

The importance of this agreement to France, and also to Germany, is very great. It will eliminate many causes of friction still existing between the two nations. It gives France assurance of payment in the most useful way, and it admits that Germany must pay France in kind, and not in cash—an arrangement highly appreciated by struggling Germany. It does not replace the allied reparations terms, but it makes it far easier for Germany to pay them.

Hailed by both the French and German Governments with a sigh of relief, the

agreement still runs the risk of rejection by both the French Chamber and the German Reichstag. The French leaders expected trouble in the Chamber, but believed that it would pass by a small majority. The Germans also foresaw difficulties with the Reichstag delegates, but the German Government leaders were prepared to present such strong arguments of the advantage which it would bring to Germany that it would be put through. The falling value of the mark, said Herr Rathenau, was so serious as to make it increasingly difficult for Germany to obtain cash abroad, and she would probably be forced to default in her cash payments by next Spring. He expected this consideration would insure the treaty's acceptance.

France still remained highly displeased with the trials of German war criminals before the Leipzig tribunal. This dissatisfaction was voiced at the meeting of the Supreme Council in Paris on Aug. 13. After full discussion, the Council decided to carry out its previously formed intention, announced to Germany in a note of May 7, 1920, of naming a commission to report to the Council the results of these trials and to express its official opinion of the way in which they were carried out; also to present suggestions for future guidance under the articles of the Versailles Treaty referring to war criminals (Articles 228-230.) It was agreed that this commission should be composed of representatives of France, Great Britain, Italy and Belgium, each of these countries to be empowered to send two delegates.

The visit of a delegation of the American Legion to France was made the occasion of many signal honors, dinners and animated speeches on both sides. The primary object of the visit was to present formally to France the statue of Jeanne d'Arc at Blois, donated by Mr. Sanford Saltus, and also to visit the devastated districts, and to make a holy pilgrimage to the cemeteries where America's fallen heroes lie. All Paris turned out to do the Legion delegates honor on Aug. 13. The first thing the Legionaries did was to march to the Arc de Triomphe to pay homage to France's unknown soldier who rests in the shadow of the mighty arch. This act went to the heart of the Parisians, who cheered the Americans with delirious enthusiasm as they marched through the

streets upon this pious mission. The ceremonies at Blois were solemn and impressive. The departure of the Legion from Paris on Aug. 27 was marked by a review of a large parade of the Republican Guard and the Paris police. Major Barney Flood of the New York Police Department presented an American flag from the New York police force to the Prefect of Police. Decorations were conferred on the Legion delegates by President Millerand, who received the American visitors subsequently at his country home in Rambouillet. The delegates left for Belgium the following day.

At a luncheon given the Legion representatives before their departure, Premier Briand announced that the American Gov-

ernment had sent a formal invitation to Marshal Foch to visit the United States in October, and that the Marshal had accepted this invitation, as well as that given by the Legion to attend its annual session in Kansas. This news was confirmed by Marshal Foch in person, in a special visit paid by him to Mr. Myron T. Herrick, the American Ambassador. The Marshal explained that he wished to give this confirmation "by word of mouth," and to express "how deeply touched I have been by this invitation and by the echoes from America of my projected visit." He further said that the visit of the Legion had brought France in closer touch with America than at any time since the conclusion of the war.

GERMANY SUPPRESSES MONARCHISM

Murder of Erzberger unites discordant forces of Republicanism to quell reaction and lay the ghost of Kaiserism—The Government completes payment of 1,000,000,000 gold marks on reparations—Continued business revival

[PERIOD ENDED SEPT. 12, 1921]

SHOT to death in the Black Forest on Aug. 26 by two men, presumably inspired by the campaign of vilification carried on by the German reactionaries, Matthias Erzberger, leader of the progressive elements of the Centrist (Clerical) Party, may go down in history as a martyr whose blood cemented the discordant forces of German Republicanism into a body solid enough to resist the attacks of the Monarchist reaction and lay the ghost of Kaiserism once for all.

The news of Erzberger's murder was the signal for a fierce outburst of partisan political strife, the Socialist, Democratic and Centrist press calling for suppression of the Junker and reactionary Big Business papers, which had been busy stirring up civic strife for many months preceding the crime. The latter defended themselves by reiterating their charges that Erzberger had betrayed the Fatherland, and by pointing to the alleged danger of a communist revolt.

Chancellor Wirth had counted upon the slain Deputy's active support in the coming battle in the Reichstag over the taxation

program, and was one of Erzberger's closest friends and disciples. The Chancellor quickly took advantage of the opportunity to try to line up all the Liberal elements of the nation for the fight for which the reactionaries had evidently been longing. Apparently determined to show the people that the Government could be as firm in putting down the Junkers as it had been in suppressing communist revolts, an order was issued prohibiting a meeting scheduled for Sunday, Aug. 28, in Potsdam, in commemoration of the battle of Tannenberg, won by Von Hindenburg over the Russians early in the World War. The Junkers did not hold the meeting, but there was a clash between the police and a crowd of communists and Socialists who had taken possession of the Lustgarten to see to it that there would be no Tannenberg celebration. Two Socialists were killed. The day before a Tannenberg parade had been broken up by radical workingmen.

Following a meeting of the Cabinet on Aug. 29 President Ebert issued a decree prohibiting meetings, demonstrations, pro-

cessions and the publication of periodicals, if, in the opinion of the authorities, they were calculated to promote the violent change or abolition of the Constitution of the Republic. Fines up to 500,000 marks and jail sentences were fixed as the penalties for violations of the order. A proclamation to the people signed by Chancellor Wirth stated that:

The Government is determined to do what the circumstances of the time and the menace to the Constitution imperatively demand, and to employ the most drastic means to check the anti-Republican movement in the German Commonwealth.

This was followed by an order from Minister of the Interior Gradenauer suspending the publication of several rabid Nationalist newspapers, including the *Deutsche Zeitung*, the *Lokal-Anzeiger* and *Der Tag*. They were permitted to resume publication after a few days. When some members of the People's Party (the Big Business group) attempted to hold Sedan Day meetings in Berlin and Chemnitz on Sept. 2, despite police orders to the contrary, crowds of workmen raided the halls and broke up the celebrations. There were similar happenings all over Germany, with the exception of Bavaria, and in nearly all cases the reactionaries were put to flight.

President Ebert also issued an order forbidding the wearing of army uniforms by persons not in active military service. This was intended to put an end to the frequent displays of war trappings by Generals Ludendorf, Hindenburg et al. at monarchist demonstrations and to make it easier to enforce an order prohibiting members of the regular army and the security police from taking part in Nationalist demonstrations. The uniform order was subsequently modified so as to allow the wearing of army regalia by ex-soldiers at funerals of their comrades and upon other occasions to be determined by the authorities. Both Admiral von Scheer, last chief of the German High Seas Fleet, and General von Lettow-Vorbeck, the German commander in East Africa, were forbidden to make speeches in public.

The Wirth Government was strengthened in its determination to squelch the reaction by the appearance before the Chancellor of delegations representing some 11,000,000 German union men and the Majority and

Independent Socialists, with the assurance that the organizations they spoke for were ready to go to the limit in backing the authorities in their war upon the monarchists and reactionary business leaders. Then, on Aug. 31, while Chancellor Wirth was attending the funeral of Erzberger in Biberach in Württemberg, some 100,000 Berliners quit work at the call of the two Socialist Parties and paraded through the streets to the Lustgarten. There, with 100,000 others, they listened to scores of orators who denounced the reaction and all its works. Red flags were mingled with the black, red and gold colors of the republic. Good order was maintained, largely due to the fact that the reactionaries were too thoroughly cowed to attempt any counter-demonstration. Although the communists had not been particularly invited to participate in the pro-republic demonstration, thousands of them were on hand, and their speakers joined the Socialists in asserting that the republic must be maintained, despite its faults.

On the other hand, the reactionaries of the Nationalist Party, at a convention opened in Munich on Sept. 1, voiced open defiance of the Government and, through the mouths of Karl von Helfferich, ex-Minister of Finance, and Dr. Hergt, an ex-Prussian Minister, warned Chancellor Wirth against sowing the wind which might result in a Nationalist whirlwind. Hergt declared his party would eventually change the Constitution so as to effect the restoration of the monarchy.

A meeting held Sept. 2 of the Reichstag Committee of Eight, which keeps an eye on the Government's actions during Parliamentary recesses, voted unanimous approval of the Chancellor's acts. Even Dr. von Kahr, the reactionary Bavarian Premier and a leader of the People's Party, said he and his party would stand by the Republican Constitution. Dr. Stresemann, chief of the People's Party, made the same statement. Both these men, however, are avowed believers in monarchism. Chancellor Wirth was quoted as having said to the committee:

There is danger that the German Nation may fall apart into socialistic and bourgeois halves, which must inevitably lead to civil war. We must counteract this danger. But I want to leave no doubt in any one's mind. If, despite all my efforts, this break-

up comes to pass, then I shall stand on the side of the working class.

In Bavaria the reaction believed itself strong enough to defy the orders from Berlin suppressing two anti-Republican newspapers and prohibiting the wearing of army uniforms; but when the various Socialist and labor union groups served notice upon Premier von Kahr that they would back up Chancellor Wirth with the general strike if need be, a committee representing the Bavarian Government was sent to Berlin to try to patch up a truce.

Apparently impressed by the firmness of the Wirth Government in insisting upon the extension of national control to Bavaria, the delegation yielded to most of the Government's demands. This decision was rejected by the Nationalist and People's Party members of the Munich Cabinet, and on Sept. 12 Dr. von Kahr and the whole Cabinet resigned. This was expected to result in the formation of a more liberal Government in Bavaria.

Matthias Erzberger was born at Buttenhausen, Württemberg, Sept. 20, 1875, in humble circumstances. His brightness as a boy caused a wealthy landowner to pay for his elementary education, but aside from this he was a self-made man. He soon got into politics as a progressive Clerical, and his home district of Biberach-Leuthkirch kept him in the Reichstag from 1903 to the day of his death. Erzberger was the object of violent attacks from both sides of the House, both during and after the war. His Pan-German professions when it looked as if Germany were sure to win drew the fire of the Socialists and Moderates, while his work for a compromise peace later, and his drastic plan of taxation while Minister of Finance in 1919, aroused the anger of the Junkers and capitalists. Early in 1920 an attempt was made on Erzberger's life, for which his assailant was sentenced to serve eighteen months in jail. It was Erzberger who, as chief of the German peace delegation, signed the armistice terms laid down by Marshal Foch on Nov. 10, 1918, which ended the World War. Erzberger is survived by a widow and two daughters. His only son was killed in the war.

On Sept. 13 the Baden police announced that the murderers of Erzberger had been

identified as ex-officers and former members of the notorious Ehrhart Marine brigade which captured Berlin for the Kapp reactionaries in March, 1920. A reward of 100,000 marks was offered for their capture.

Through heavy purchases of bills of exchange, and by taking some 68,000,000 marks from the gold reserves of the Reichsbank, the German Government managed to complete the payment of the twenty \$10,000,000 three-month notes due on Aug. 31 under the terms covering the payment of the 1,000,000,000 gold marks provided for in the final reparation plan agreed upon last May. On Sept. 6 the Reparation Commission in Paris issued the following statement:

On May 31 Germany had paid the Reparation Commission 160,400,000 gold marks and had supplied drafts at three months on the German Treasury for the remainder of the 1,000,000,000 gold marks. The Reparation Commission has now received in approved foreign currency from the German Government 770,000,000 gold marks in redemption of these drafts. Moreover, the German Government has shipped gold to New York to make up the balance of the 1,000,000,000 marks. Subject to final adjustment of accounts, the payment due under Article 5 of the schedule of payments has been effected.

Under a reparation plan signed by Dr. Walter Rathenau, German Minister of Reconstruction, and Louis Loucheur, French Minister for the Devastated Regions, on Aug. 27 in Wiesbaden [details of which are given in the article on France in this issue of CURRENT HISTORY], material to the value of 7,000,000,000 gold marks is to be furnished to France during the next five years. This agreement must be ratified by the French Chamber of Deputies and the Reichstag.

Coincident with the return from Paris to Berlin on Aug. 19 of General Nollet, chief of the Interallied Military Control Commission, it was reported that the commission intended to prolong its supervision of German armaments, as the Germans were refusing to furnish an inventory of the arms on hand, thus making it impossible to estimate accurately the potential strength of armed German forces. A Berlin report of Sept. 8 said that large numbers of the formally disbanded Bavarian Home Guards had been organized into an "emergency

force," led by the old commanders of the Guards and presumably ready to put down communist uprisings or to support a monarchist revolt, if need be.

Another step toward the final settlement of the problem of Upper Silesia was taken on Sept. 1, in Geneva, when the Council of the League of Nations appointed a commission composed of Paul Hymans, Belgium; Dr. V. K. Wellington Koo, China; Count Quinones de Leon, Spain, and Dr. Castoa de Cunha, Brazil, to hear all experts, except those Germans and Poles already involved in the controversy, and to submit a plan for the approval of the League. The Allies informed Germany that they intended to send more troops into the disputed plebiscite territory to make sure that the decision of the League of Nations would be respected.

Prompt ratification of the Treaty of Peace between Germany and the United States, signed on Aug. 25 in Berlin by Dr. Friedrich Rosen, German Minister of Foreign Affairs, and Ellis Loring Dresel, American Commissioner to Germany, was expected in Germany on the Reichstag's re-assembling Sept. 27. [For text of treaty see Page 58.]

The general business revival continued

during the month, and was accompanied by wild speculation in German industrial stocks. The Berlin Bourse was compelled to suspend operations several times in order to catch up with the volume of trading. To some extent this speculation was due to the drop in the exchange value of the mark. This fell on Sept. 12 in New York to .91 cent, the lowest on record. An official report by the Prussian Ministry of Trade received in London on Sept. 8 stated that the German manufacturing boom was still on. The clothing and millinery producers had sold their entire 1922 output in advance, while the demand for cotton goods and for iron and steel products and automobiles could not be met.

An echo of the communist "putsch" of last March was heard in Berlin when Minister of Justice Schiffer announced that the last of the extraordinary courts set up to try the leaders of the rioters had been abolished on Aug. 15. Four days later President Ebert freed forty-two of the imprisoned communists and reduced the jail sentences of several hundred others. None of the eight death sentences pronounced by the extraordinary courts has been reported as carried out.

POLITICAL FEUDS IN HUNGARY

Enemies of Count Karolyi get a tart answer from Clemenceau—New attacks on the Horthy regime by the Hapsburg partisans—Trouble over cession of Burgenland to Austria

[PERIOD ENDED SEPT. 12, 1921]

THE campaign conducted by Prince Louis Windischgraetz against Count Michael Karolyi, former leader of the anti-German party and ex-President of the Hungarian People's Republic, took an unpleasant turn for the Prince himself. He had accused Karolyi of having communicated Austro-German war secrets to the French Government and of having received a subsidy from Soviet Russia. To substantiate these charges, the Prince quoted verbatim a speech of M. Clemenceau, made in the French Chamber of Deputies on Dec. 18, 1918. Count Theodore Batthyany, a former Cabinet Minister and now prominent

in the Opposition, doubting the authenticity of this revelation, telegraphed to Clemenceau himself for confirmation and received the following answer: "I have not said a single word of what Prince Windischgraetz attributes to me." Count Batthyany's publication of the telegram created consternation among the enemies of Count Karolyi, who is now an exile in Jugoslavia.

The feud between the "Legitimists," or partisans of Hapsburg restoration, and "Free Electionists," who maintain that the Hungarian throne is vacant and should be filled by popular election, continues with unabated bitterness. A Legitimist leader,

Edmund Beniczky, one of the closest friends of Charles IV., aroused a series of storms in Parliament by his continued disclosures of horrors perpetrated by officers of the Horthy army. He described the massacre at Orgovany in the Winter of 1919, where the so-called Hejjas detachment murdered with unspeakable tortures a batch of communist suspects; he also referred to the assassination of numerous Jews by Horthy's officers. These outrages had been denied officially, and reports concerning them were attributed to a Bolshevistic campaign of slander. Now, however, some of the prominent Conservative leaders, members of the aristocracy, come forward with charges about a White Terror in order to discredit the Horthy régime and increase sympathy for the Hapsburg King, who, they say, would punish the terrorists and restore law and order. One of the results of these disclosures was that Lieut. Col. Pronay, most dreaded of the terrorist chieftains, addressed a threatening letter to Stephen Rakovsky, Speaker of the House and prominent Legitimist, for having dared to criticise the activities of Pronay and his officers. Rakovsky resigned, saying that if army officers who attempt intimidation of representatives are not immediately removed parliamentarism itself becomes a farce.

Contingent upon the ratification of the Peace of Trianon by the Hungarian Parliament, two of its territorial clauses were to be executed in August. One of them returns to Hungary the city of Baja and the county of Baranya, since 1918 occupied by Yugoslavia. The Magyar inhabitants of this region protested against being incorporated in Horthy's Hungary, and organized an autonomous administration under Yugoslav protection. They declared that they were eager to rejoin a democratic Hungarian Republic, but that they preferred Yugoslav occupation to the White Terror of Horthy's army. Their protests, however,

though supported by the Yugoslav Government, were overruled, and on Aug. 22 Horthy's troops entered the territory, the Yugoslav troops having left the night before. Several thousand Hungarians, opposed to the Horthy régime, fled to Yugoslav territory in order to escape persecution.

The other territorial clause to be put into effect—as stipulated also in the Treaty of St. Germain—was the cession of Burgenland, or the three westernmost counties of Hungary, inhabited by Germans, to the Austrian Republic. This should have taken place on Aug. 22, but when, after several postponements, an Austrian force entered the district, on Aug. 28, it was met with violent resistance by armed bands of Hungarians. Skirmishing continued for several days; the Hungarian irregulars, besides fighting the Austrian gendarmerie, committed a series of atrocities against the peaceable German population. This led to energetic protests on the part of the Austrian Government, which accused the Magyar Government of bad faith, and demanded that the transfer be enforced and Burgenland cleared of Magyar soldiers by Entente troops, as Austria had fulfilled her obligations under the treaty of peace and disarmed, whereas Hungary still maintains a large army. The situation was rendered more serious on Sept. 11, when Burgenland was occupied, not by Entente troops, but by a detachment of the regular Hungarian Army.

The territory in dispute has an area of 1,700 square miles and a population under 350,000. The proximity of Burgenland to Vienna, with the remarkable productivity of this small strip in respect to milk, fruit, vegetables, poultry, eggs, cereals, potatoes, sugar and wine, gives it especial importance to the Viennese, and, as it now belongs to the Austrians by treaty rights, they are determined to hold it at all hazards.

HARMONY IN THE BALKANS

Bulgaria not to be disarmed by the Interallied Commission, lest it render her helpless—Passing of King Peter of Serbia simplifies the situation in Jugoslavia—Czechoslovakia signs a military alliance with the Jugoslavs

[PERIOD ENDED SEPT. 12, 1921]

WITH the problems of a defeated or a victorious Greece still undefined by the Supreme Council, and with the problems of Albania, Bulgaria and Jugoslavia intricately interwoven with the doings of the Council of Ambassadors at Paris or the League of Nations at Geneva, Rumania seems to be about the only Balkan State which has not faced serious questions since the middle of August. In the last week of August Také Jonescu, the President of the Rumanian Council of Ministers, was caught by Paris reporters at the Hôtel Maurice. He was on his way to take the cure at Vichy. On the length of that cure, he smilingly intimated, would depend the date of the coronation of King Ferdinand at Belgrade. He said:

We Rumanians work hard. Our country is calm and free from agitation of all sorts. Yet we are not unfashionable, for we have had a drought. That has reduced our crop of Indian corn. But our crop of wheat will be enormous and we shall export large quantities. We have alliances with our neighbors—that is, with three of them, and with Bulgaria our relations are sympathetically friendly. There is the Little Entente, which protects us from the Magyars on one side and Bolshevism on the other. The world is buying our exchange as fast as it can. What more can we desire?

ALBANIA—On Aug. 30 the Albanian delegation at the League of Nations was vainly trying to have the Assembly of the League rescind the decree of the League's Council referring Albanian complaints against Greece and Jugoslavia to the Council of Ambassadors. At both the Assembly and the Council Italy backed up Albania, partly to oppose the aspirations of Greece and Jugoslavia, and partly in her own interests. Denied a military pied-à-terre at Valona, Italy wishes to have her title cleared to the island-rock of Saseno, which lies at the mouth of Valona Bay and commands, with Brindisi on the Italian side, the

Strait of Otranto, and hence the entrance to the Adriatic. According to a dispatch from Geneva published Sept. 6 in the *Idea Nazionale* of Rome, the Albanian delegates make no objection to Italy's having a clear title to Saseno.

The Jugoslav and Greek claims, however, form a problem not so easily adjusted, for these claims strike at the territorial entity of Albania. Meanwhile, the Council of Ambassadors has settled the Albanian-Grecian frontier question, quite contrary to the numerous interallied agreements and memoranda exchanged in the days of Wilson and Venizelos. These agreements are still opposed by Italy, although at the time of the Peace Conference Italy reluctantly gave way and allocated to Greece the districts of Korytza and Argyrocastro. On the present occasion Italy, backed by France, has had her way, and British support of the Greek claims, then decided purely on ethnic grounds, has not been in evidence. But the northeast frontier, the Serb-Albanian boundary, is a much more delicate question. Here the Serbians are actually administering Albanian communities, although with less rigor than they did some months ago, just as they have now changed their policy in Montenegro.

BULGARIA—Neither the Bulgarian Government nor the Interallied Military Commission of Control at Sofia expects the military clauses in the Treaty of Neuilly to be executed by Oct. 1, as was decreed by the commission on Aug. 6. It is now known that the commission is not in sympathy with the decree, does not see how it can be carried out, and issued it only under pressure from the Council of Ambassadors and under a misapprehension. This last phase of the question caused the Sofia Government to issue the following démenti on Aug. 21:

Some foreign agents have furnished to the Interallied Military Commission of Control in Sofia certain apocryphal letters relating to some imaginary secret orders of the Bulgarian authorities about concealing war material, &c., with the obviously sole object of discrediting Bulgaria before the Allies. The Bulgarian Government has pointed out that these documents are forged, and has demanded that an inquiry shall be made on the subject by the commission itself with a view to finding the malefactors.

Aside from the specific trouble, which will presently be dealt with, Bulgaria, in spite of her seemingly correct attitude toward the Treaty of Neuilly, in all its reasonable demands, in spite of the high esteem in which Premier Stambolisky is held in the chancelleries of the Entente, appears to be the victim of malicious propaganda of various sorts. There are about as many Bulgars outside of Bulgaria as there are within; that is to say, 5,000,000. Some of those outside have affiliations with the Turkish Nationalists, some with the pro-Teutonic plots of those, within and without the Kingdom, who desire the return of "Czar" Ferdinand. Added to all this is the heritage of hate and suspicion entertained for the Bulgars as a people, not as a constituted nation, by the Greeks and Serbs, and the belief of their Governments, either well or ill based, that the Bulgars have not been sufficiently bled.

Then there is the specific problem of disarmament. Under the Treaty of Neuilly Bulgaria was obliged to abolish compulsory service and reduce her army to 20,000 men, including officers and dépôt troops, while the maximum of police was to be 10,000 and of frontier guards 3,000.

Such a force, military authorities of the Entente agree, would be quite adequate for Bulgaria as a member of the League of Nations; but this force means a volunteer force adequately paid by the State. Volunteers have not been forthcoming and there would have been no money to pay them had they been enrolled. Pay varies according to the civil status of the volunteers—that is to say, whether they are married men or bachelors, or whether they have to support families. A minimum of 700 leva (\$35) per month has been fixed for privates and 1,200 for non-commissioned officers. They will, moreover, be housed, fed and clothed, and will receive three or four months' holiday every year. Meanwhile,

the Interallied Military Control Commission, through arrangements with the General Staff, has been discharging the old conscript army. So, by Oct. 1, there will be none left. Bulgaria will have no army to speak of, and a diminished police and frontier guard corps. If this should occur Bulgaria might become a prey to the worst conflicts within and to attacks from without. None realizes this better than the commission.

At Belgrade and Athens, however, they tell a different story. There they say that the Sofia Government has concealed large amounts of war material secured from Germany during the war. With this material, including large and mid-calibre guns and nearly 1,000,000 rifles (which, however, the keenest agents of the commission have failed to uncover), Bulgaria has 856,000 veterans ready with very little training to take the field.

How can that be possible, and if possible, what could be done without a reserve? They answer in Belgrade and Athens that the Bulgarian law on the organization of the army and the guard of the frontiers, promulgated on May 27, taken in connection with the law of enforced labor, would sufficiently supply recruits for a reserve force, while the military instruction under the guise of gymnastics, which is being introduced into the schools, would do the rest.

M. A. Dimitroff, the Minister of War, has declared to General de Fourton, the French officer at the head of the mission, that if the decree be executed Bulgaria will be entirely helpless, and that this situation would make possible the revival of the comitajis on the Greek, Serbian and even Rumanian frontiers. For their acts the Sofia Government, reduced to helplessness, could not rightly be held responsible.

General de Fourton sympathizes with M. Dimitroff, but he believes that Bulgaria may count on the League of Nations in case trouble arises through an inadequate military, police and frontier force. He also believes that Bulgaria can raise by the volunteer system from 3,000 to 4,000 men a year, should the Government take steps to make the service popular, as it has not done hitherto. On his own initiative he sent a scheme to the Council of Ambassadors by which each year's quota might be made up by ballot, but this the council promptly re-

fused. M. Dimitroff has also pointed out to him that the idea that the Bulgars are a nation of warriors is a pure delusion based on the fact that they have always given a good account of themselves when fighting for their country. "The truth is," he says, "we are a peaceful nation, who have learned by experience to abhor war—one who would volunteer only if our independence were endangered." In proof of this he quoted the drastic conscription rules for the old army, whose peace footing, in spite of popular clamor, was kept at 80,000.

JUGOSLAVIA—While the Prince Regent Alexander, who was also the heir presumptive to the throne of Yugoslavia, was incognito at a Paris hospital suffering from appendicitis, his father, King Peter, died in the lonely palace at Belgrade on Aug. 16. The third member of the Karageorgevitch dynasty to reign, he had succeeded when King Alexander of the Obrenovitch line was assassinated in 1903. Peter was born in 1844, and had lived in exile since his father's banishment in 1868. He received his military education at the French military school of Saint-Cyr, where he translated John Stuart Mill's reflections on "Liberty." With the French Foreign Legion, in which he was first a Lieutenant, then a Captain, and finally a Major, he fought against Germany in 1870. He was living among his books in Switzerland when called to the throne in 1903. His great military achievement was driving the Austrians across the Danube in December, 1915, with an army one-tenth the size of the enemy's. In the following Autumn he shared the privations of the great retreat with his men.

But the new King, Alexander, has an elder brother, George, who resigned all rights to the throne in 1909, when he came under suspicion of having slain a servant. Late in August there were rumors from Paris that George, urged on by Croat and Slovene factions, had denounced his renunciation and would claim the throne.

MONTENEGRO—With the death of King Nicholas of Montenegro the question of that State's independence became quiescent. With the death of King Peter, who had married one of Nicholas's daughters, it has probably ceased to be of grave import. It had been kept alive principally by the Italians as a propagandist instrument against Yugoslavia, although shortly after

the armistice the Montenegrin National Council had voted to become a part of Yugoslavia and had denounced and dethroned King Nicholas for his alleged treasonable relations with Austria. His personal following, inspired and paid by Italy, continued to keep the question of independence alive. It was even favorably reported on by Count de Salis in the Spring of 1919, and given to the Peace Conference for settlement; then the Supreme Council, which inherited most of the unsettled questions of the Conference, took the matter up, but failed to act upon it, owing to Italian opposition to incorporation in Yugoslavia.

Now, since the death of Peter, Italy has assumed a different attitude, partly due to the desire of more friendly relations with Yugoslavia. Italy had been supporting a Montenegrin Consulate at Rome at a cost of 20,000,000 lire a year. It was discovered that some of this money had been used in anti-Yugoslav propaganda. On Aug. 23 the Rome police visited the "Consulate" and secured, it is said, incriminating evidence against the occupants. At about the same time, Signor Magrini reported on Montenegro in a manner favorable to the Yugoslav administration. He discovered no atrocities, no cruelties, no sufferings inflicted on the ancient population. On the contrary, the Serbians have wisely respected the "vested interests" by allowing many Montenegrin officials to retain their posts, and by giving to Montenegrin officers the same rank in the Yugoslav army which they held in that of old King Nicholas. They have also, declares Signor Magrini, humored the very national Montenegrin sentiment for local administration of Montenegro by Montenegrins, in other words, administrative autonomy. Thus, "all the prefects, functionaries, and officials of Montenegro are Montenegrins," and Cetinje, the capital, is no mere prefecture of Belgrade. Moreover, Montenegrin students, who may desire to attend Yugoslav universities, are furnished with scholarships for so doing by the Belgrade Government. Finally, the Italian investigator emphasizes the fact that the chief argument for Montenegro's being a part of Serbia is economic, for Montenegro, during the last two-and-a-half years, has received, in the form of public works, pensions and subsidies, from Yugoslavia

93½ million dinars (about \$5,000,000), and has paid, in the shape of taxes, only five million.

In these circumstances, which seem to indicate the removal of all Italian opposition to the incorporation of Montenegro in Yugoslavia, it is expected that the Supreme Council will at least refer the problem to the League of Nations, if it does not, indeed, solve it itself.

CZECHOSLOVAKIA — Yugoslavia and Czechoslovakia signed at Prague late in August a military compact which gives the two countries the means to execute and defend their treaty of alliance. The compact places at the disposition of the two States sufficient forces for their security, with provisions for a mutual organization and unified command. On Oct. 1 Czechoslovakia will take possession—at Budapest, Vienna and Ratisbon—of the Danube steamboats allocated to her under the treaty. These boats will ply the Danube chiefly in the transportation of cereals.

An unpleasant incident occurred at Prague following the decree against the display of German colors at the Richenberg Fair. Several German Deputies and Sen-

ators protested and made impassioned addresses advocating revolt. The Senators from Slovakia joined in a protest against the propaganda industriously conducted abroad to convey the impression that Slovakia was dissatisfied with the union and wished separate existence; they denounced these sentiments as false, and warmly asserted that their people are loyal to the Czechoslovak State. On the other hand, the American and European newspapers are flooded with leaflets—issued at Budapest—indicating widespread dissatisfaction among the Slovaks. The chief grievance of the Slovaks, according to Hungarian reports, is against the schools and the alleged inferiority of the teachers assigned to them by the Czech authorities. The Hungarian press announces that a Slovak National Council has been organized with 100 members. Dr. Francis Jehlicksa, a Deputy of the Prague National Assembly, was elected President. The purpose of this body is to advocate secession from the Czech Republic. The Hungarian politicians are industriously engaged in stirring up strife among the Slovaks against the Czechs and do not disguise their motives.

NORWAY'S PROHIBITION DILEMMA

If absolute prohibition is adopted the wine-producing countries threaten to put on the Norwegian fish trade a tariff that would mean bankruptcy and famine

[PERIOD ENDED SEPT. 12, 1921]

WITH Norway's vast fishing industry already threatened with ruin through the high tariffs that wine-growing Spain and Portugal have imposed in retaliation for Norway's limited prohibition, and with the "drys" as well organized and active in Norway as in the United States, the present Norwegian Government is struggling for life between counter-currents. The fishing population, in despair over the loss of their chief markets, threaten to go over to Bolshevism unless the Government does something at once for their relief. The pressure of the prohibitionists keeps the Government afraid to rescind its ban on the stronger Spanish and Portuguese wines.

This complication creates one of the leading political issues of the day in Norway. The outcome of the campaign for absolute prohibition before the October elections to the Storting is uncertain. Meanwhile, negotiations are being conducted in order to reach an agreement with the wine-producing countries and to forestall further retaliatory measures on their part against the Norwegian export trade in fish.

The Cabinet that has to steer the ship of State through these uncertainties was organized by Premier Blehr last June. The complete list of its Ministers is now available. The distribution of portfolios was as follows:

Premier and Minister of Finance, M. Blehr.
 Foreign Minister, Dr. Raestad.
 Minister of Cults and Education, Olsen
 Nalum.
 Minister of Justice, O. Amundsen.
 Minister of Public Works, M. Mjelde.
 Minister of Commerce, M. Mowinkel.
 Minister of Social Welfare, M. Ostedahl.
 Minister of Agriculture, M. Fivet.
 Minister of War, General Aavatsmark.

Premier Blehr is 74 years old and has held many important posts in various Norwegian Government. His Cabinet is classified as bourgeois radical.

The Odelsting (lower house) of the Storting adopted on Sept. 8 a bill forbidding importation of liquors or wines containing more than 14 per cent. of alcohol, thus confirming the status quo of prohibition in Norway. It was expected that the Lagthing (Senate) would approve this measure. The incorrectness of a statement, "the Lefts favor the present system of absolute prohibition," in the September CURRENT HISTORY, has been pointed out. There has never been absolute prohibition in Norway, though the "bone-drys" there have hopes, regardless of any afterclap. During the war Norway put a ban on all wines and liquors containing more than 12 per cent. of alcohol. Lately, however, following urgent representations from France, this maximum was raised to 14 per cent. in order to obtain the recently concluded commercial agreement with that country.

By the terms of this commercial treaty, after France had threatened retaliation similar to that which Spain and Portugal carried out, Norway agreed to unlimited importation of wines containing up to 14 per cent. of alcohol, and to a certain minimum amount of strong wines and brandies for medicinal and technical purposes which would be commercially satisfactory to France. Negotiations with Portugal and Spain have met with greater difficulties. When Norway barred the stronger Spanish beverages from importation, Spain added 50 per cent. to its import duty on Norwegian *klippfisk* (dried cod and other stockfish). Portugal passed a law which raised considerably the harbor dues of ships belonging to countries which restricted the importation of Portuguese products and also the import duty on goods from such countries.

Already these actions are causing dis-

tress in the Norwegian fishing population, which for many years has depended on the shipment of vast amounts of cod and other stockfish to Spain and Portugal. Codfish forms one of the main staples of diet of the Spanish and Portuguese people, especially the poorer classes; nevertheless, these two Latin countries threaten, if Norway adopts absolute prohibition, to put a complete embargo on the Norwegian fish trade and to import all their codfish from Newfoundland. Such a change would mean widespread bankruptcy and famine in Norway, where fishing is one of the largest industries.

The Prohibition Party is strong and not inclined to make concessions. A plebiscite taken in Norway about two years ago showed a large majority in favor of prohibition. Many Norwegian fishermen who then voted for the present system of limited prohibition are now bemoaning its afterclap in the depression of their industry. The prohibitionists may yet have to accommodate their demands to the pressure of economic necessity.

Meanwhile the labyrinthine fjords that indent the coast of Norway and the multitudinous islands and skerries that fringe it afford unparalleled advantages for smuggling. Large numbers of Norse seafaring folk have taken to rum-running. They bring their stocks of "drinkware" (*drikkevarer*) from Sweden, Denmark and Germany, in which countries there is nothing to limit the supply but the length of the buyer's purse. As it is impossible to employ a revenue patrol sufficient to catch or even to discover many of these smugglers, almost every cargo is disposed of at wholesale or retail, either within the three-mile limit or beyond it. Moonshining flourishes also, and the production of home brew. The usual complaint is that, although there is plenty of the legalized 12 to 14 per cent. wines, these are obtainable only at prices prohibitive to people of moderate means, who are therefore impelled to undergo the dynamic effects of "home brew" and "moonshine."

Norwegian commercial representatives were officially in Stockholm all through August while two dramatically contrasted events were taking place in the Swedish capital—the secret trial of those involved in the Bolshevik conspiracy in Northern

Sweden and Norway, and the commercial conference between delegates from Norway and Sweden and representatives from Soviet Russia. After prolonged negotiations the Norwegians made a commercial agreement with Russia, but it was criticised severely by the conservative press of Christiania. *Aftenposten* published an assertion that this commercial agreement implied *de facto* recognition of the Soviet Government, and deplored the circumstance that the Norwegian Government had not obtained recognition of compensation claims for Norwegian property seized in Russia by the Bolsheviks. These claims amounted to about 300,000,000 kroner.

The continued sinking in value of the Norwegian krone caused the prices of goods to rise all over Norway. Taking the lowest prices of 1913 as 100 per cent., the rise for the month of July was 292.5 per cent.

Captain Roald Amundsen's power-schooner, the *Maud*, is undergoing repairs at Seattle, preparatory to recommencing the quest for the North Pole early next May, with the present native crew, besides Drs. Sverdrup, Olonkin and Wisting. Captain Amundsen is to have two new men from Norway, aviators and machinists. One of these is to be the Norwegian aviator, Odd Dahl, between whom and the American aviator, Naulty, there will probably be a race for the North Pole, in the opinion of *Aftenposten*. Besides the new appropriation granted to Amundsen by the Storting, new provisions are being collected in Norway under the direction of Professor Torup, the noted scientist. The relief expedition sent out to look for Tessem and Knudsen, the two men missing from the *Maud* in Siberia, returned to Christiania on the power-cutter *Heimen* about the middle of August, without news of the men. The expedition had sought in vain for them from the middle of August, 1920.

DENMARK—Depression from the great slump in values caused by German competition in the Danish markets has reached a critical stage, according to a long editorial in *Dagens Nyheder*, Copenhagen, on the Industrial Council's report to the Ministry of Commerce presented late in August. The amount of unemployment is startling. The comparatively few industries that keep in operation retain only from three-fourths

down to one-sixth of their normal working forces. In speeches made throughout the country, the Commerce Ministry repeatedly attributed the depression to the public's withholding its purchasing power. This view the editor of *Dagens Nyheder* belittled, declaring that the importation of German goods while Danish industries lie idle is patently to blame. Conditions in the tinware industry are cited as typical. Tinware has been bought extensively because it has to be used. But while the Danish tinplate factories are depopulated, the imports from Germany have mounted to 450 per cent. Other industries are in propor-

Since the return of the Danish sovereigns from their visit to the Faroe Islands, Iceland, and Greenland, the Faroese Senate has been debating vehemently the proposal of the Faroe Islands Government to alter the islands' status in the Danish Kingdom. This is the only essential question that separates the two Faroese political parties. The Union (*Samband*) Party wishes to keep the communal county (*amtskommunal*) position now in force, while the Autonomous (*Selvstyre*) Party works for a separation, so that the Faroe Islands shall occupy a relation to Denmark equal to that which Iceland has.

SWEDEN—While the trial of the Bolshevik conspirators has progressed in Stockholm, Soviet agents have been going about all over Sweden buying up grain. The authorities have kept a sharp watch on this traffic, with a view to forbidding grain export on a large scale. The harvest of beet-root, rye and wheat promises an unusually good yield.

Hugo Stinnes, the German financier, arrived in Sweden early in September and went to his estate in Smaland. Although he is said to be seeking recreation after a recent automobile accident, the Swedish papers insist that his visit has to do with the Swedish-Russian trade negotiations.

Sweden is not feeling as severe a business depression as Denmark, but German competition here also is making itself disagreeably felt. Decline in most industries was gradual, but the 70,000 to 80,000 unemployed workmen were the greatest number yet recorded in Swedish labor history. Bankruptcies increased in the last fiscal year.

ITALY OUT OF HER QUANDARY

The Bonomi Government suppresses the Arditi del Popolo without reprisals from the Fascisti, who remain quiescent—Widespread denunciation of extremists in other parties, and subsidence of militant communism—Winding up the Fiume affair

[PERIOD ENDED SEPT. 12, 1921]

THE Parliamentary recess which began Aug. 6 is expected to last into October. There is comparative tranquillity in political circles, for, where now the parties are trying to put their houses in order and little is heard about members of the Cabinet except their *villeggiatura*, two years ago Nitti was demoralizing the country by trying to govern by decrees, and a year ago Giolitti seemed powerless against the red flags bobbing up every day in the metallurgic region of the north.

The attempt of the militant communists to develop an organization to wipe out the Fascisti, calling it the Arditi del Popolo, proved a flash in the pan. The carabinieri, who for months had reflected the growing authority of the Ministry of the Interior and its firm directions to the Prefects, kept things well in hand; so the Fascisti had no excuse for reprisals.

The Partita Popolare, or Catholic Party, has recognized more and more the leadership of intelligent Catholics and has denounced those extremists who wished to make common cause with the Socialists. The liberal views of the Vatican, recently expressed on several occasions through both the Princes of the Church and the Osservatore Romano, have tended to close its ranks and to pledge its support to the Government as long as the Government will insist on law and order. The Congress of Catholic Young Men of Italy (Il Congresso della Gioventù Cattolica Italiana), which closed in Rome on Sept. 6, had a strong moral effect on the party and on the country at large; for, when the Catholic associations entered the Vatican to receive the Apostolic blessing from the Holy Father, they bore at their head the *Tricolore* of the Italian monarchy with the emblems of the house of Savoy—possibly a significant oriflamme of peace between Vatican and Quirinal.

Deputy Acero of the Parliamentary Fascisti (Gruppo Fascista), who was instrumental in aiding the President of the Chamber in bringing about a truce between the Fascisti and the United Socialists in the last days of the session, made an important declaration on Sept. 1. While he deplored the disrapture wrought among the Fascisti, mainly because of misconstruing the attitude of their leaders in regard to socialism, monarchism and republicanism, and the withdrawal of Benito Mussolino from among them, yet all that was needed to unite them, Acero declared, was a political program with definite and easily comprehended political ideals. On Sept. 9 Signor Mussolino announced the formation of such a party as an accomplished fact.

While the Communist Deputy from Trieste, Nocila Bombacci, continued to make speeches eulogizing the twenty-one points of Lenin and the Third International, he was periodically "shown up" by his erstwhile "comrade," Giacinto Menotti Serrati, in the columns of the *Avanti*. Other Socialist leaders, Turati and Treves, were trying to bring order out of chaos in order to present a respectable front at the Milan Socialist Congress, which meets in October.

At Turin, where the communist dictatorship has kept 70,000 out of work, the Socialists, in trying to break the power which held the men in bondage, came to blows with the communist leaders and vanquished them, while groups of Fascisti looked on smiling. On Aug. 20 a communist manifesto was issued calling a general strike. Thereupon the Labor Confederation, which a year ago was actively leading the demand of the workers for the control of the factories, issued a counter-manifesto, saying, among other things:

It is time to do away with this mad policy of communism, which threatens to ruin the

proletariat, especially during the present unemployment crisis.

Just what the Socialists look for at the Milan congress in October has been imparted by the Socialist Deputy Morgari in an interview printed in the *Messaggero*. He was noncommittal as to whether the intranees would secure a majority, but added:

If they do a scission in the party will be inevitable. If Signor Turati's party is successful the congress will not adhere to the Moscow or Amsterdam International but to the International which has already received adhesion of the German Independent Socialists, the British Independent Labor Party and the Austrian Socialists.

Italian and Yugoslav commissions continued at various places to settle the problems presented by the Treaty of Rapallo—from fishery rights off the Dalmatian coast to the most important question of the Porto Baros. That the latter shall become Yugoslav is said to have been conceded, but the terms which were being arranged toward the middle of September, it is learned, would not deprive Fiume of the use of the harbor for commercial purposes. On Sept. 7 the Legionaries of Gabriele d'Annunzio quit both the harbor and Fiume, and the Italian General Amantea assumed military command. All other powers were taken over by the special Italian Commissioner, Commandant Castelli, who will attempt to organize the Government of Fiume. It is believed that matters will now make rapid progress, for the present situation of civic and industrial inactivity is costing Italy some millions of lire a month, which the Fiumese were content to have spent on them so long as nothing more was required of them than to cry "Viva l'Italia!" The real situation was brought home to Commandant Castelli when the Italian and Yugoslav delegates arranged how the Zagreb railway should be operated and the delegates of Fiume arose in opposition. With no railway or shipping movement, of course there is no commerce, and for this

stagnation Italy has been paying, while Jugoslavia has no returns.

On Aug. 31 the new Italo-German commercial treaty became operative for nine months. After this period it will be automatically renewable, unless denounced on a month's notice by either of the contracting parties. Its chief feature is to facilitate the import and export of food, clothing, and manufacturing necessities. On the same day the Italo-Russian trade agreement was signed. It is similar to the Anglo-Russian pact—a mere basis for further negotiations while removing all obstacles to a renewal of commercial and consular relations.

On Aug. 23 a decree of the Treasury announced that in the future the United States dollar and not the English pound would be the standard of international payments. This was done on account of the stability of the dollar as the practical exchange unit.

The cost of replacing the war ruin wrought in the Asiago and Trentino regions has been placed at 3,000,000,000 lire at the present rate of exchange. Over 130,000 homes were destroyed. Of these 50,000 have been rebuilt. It is estimated that in two years the task will be completed. In the historical Magistrato alle Acque of Venice more than 1,500 engineers are at work. Here 600 co-operative societies, varying in politics from Socialists to Catholics and Fascisti, have taken matters into their own hands and are rebuilding much more quickly than the Government could do. At the same time they are learning to appreciate one another's good qualities.

In the north amid the mountain torrents the electrification of water-power (Italy's white coal) has made great strides during the Summer. The Lake of Santa Croce has been turned into a reservoir containing 120,000,000 cubic meters of water, which will shortly produce 250,000 horsepower. Even the Piave has been harnessed and its wires from Pola to Ancona will next Winter save the consumption of 1,000,000 tons of coal.

SPAIN'S COSTLY ADVENTURE IN MOROCCO

[PERIOD ENDED SEPT. 12, 1921]

THE Spaniards launched an offensive on Sept. 10 against the insurgent Berber tribes from Melilla and other selected tactical points on the Mediterranean coast of Morocco. According to report from the Headquarters Staff at Melilla, the object of the offensive is to raise the siege of that city, recover as quickly as possible the lost Spanish posts in the interior, and drive the tribes into the mountains before the rainy season sets in, which will be in the first week in October.

The force operating from Melilla is said to consist of 45,000 men; that distributed at other points, of 20,000. Before the revolt the Commandant General at Melilla had at his disposal (on paper) 25,000 men, of whom 5,000 were native troops. At the various posts there were 18,000 'white' troops and an unknown number of native.

In Paris it is stated that the operations of Spain are merely intended to re-establish Spanish honor. In Madrid the press and public are opposed to a costly punitive expedition, devised to establish Spanish authority solely by force of arms. In both Paris and Madrid it is believed that the Spanish offensive, although brief, will be of such a character as to open the way to an armistice; this is thought to be all the more certain since many of the more intelligent of the tribal chiefs have already withdrawn from the conflict. They have become disgusted, it is said, with the atrocities committed by their less civilized colleagues and have appealed to Marshal Lyautey, the French High Commissioner, to mediate between them and the Spanish High Commissioner, General Domaso Berenguer, who has planned the present offensive. Indeed the leader of the insurgents, Abd-el-Krin, has already sent a mission to Marshal Lyautey defining the grievances of the Moors and stipulating the conditions of peace. All the same, the French have disarmed the natives in their zone and have concentrated 6,000 Senegalese on the frontier.

On Sept. 9 the Spanish losses, according

to official reports, were set at 20,000 men and 200 guns, 30,000 rifles, 500 machine guns, and an immense amount of war material.

All signs at Madrid point to the unpopularity of a war in Morocco. A credit of only 19,000,000 pesetas was decreed by the Government and ratified by Parliament with some hesitation. The Spanish Consulates at London, Paris, New York and other cities opened their books to recruits for the Foreign Legion. Nearly 500, mostly war veterans, were enrolled in New York, but it has not been learned that any have been embarked. On Sept. 12, Spaniards of the 1920 class were called to the colors.

Meanwhile, between Aug. 15 and Sept. 10 there were a number of operations, usually favorable to the Spaniards. On Aug. 16, Sidi Amaran, which commands the approach to the Tres Forcas peninsula, on which Melilla is situated, was captured by troops under General Sanjurjo; from Aug. 20 to the 27th Spanish warships bombarded Moorish gatherings on the coast between Alhucemas and Cape Tres Forcas; the Spaniards also raised the siege of Mezquita, on Sept. 4. On the other hand, Sheshuan, seventy-five miles south of Ceuta, in the western part of the zone, fell to the enemy on Aug. 19; as did Peñón de Valez, an island eight miles east of Ceuta, held by the Spaniards since 1664, on Aug. 20; also, a few days later, Tefer, thirty miles from Alkazar Bekir.

The political situation at Madrid is most complicated. King Alfonso has presented flags and has made speeches to departing regiments, but what little news of these things the censor has allowed to transpire does not reveal any great amount of enthusiasm. The Liberals under the Conde de Romanones will place no obstacles in the way of the new National Ministry under Don Antonio Maura, provided the Government does not attempt to conduct military operations on a large scale—which, however, seems most unlikely.

In the crisis brought about by the revolt

of the Moors there are beneath the surface social forces at work which make the position of the Government most hazardous. The question asked by the press of Madrid is: Will Maura have the influence and

power to restore the authority of the State which has recently been little more than a shuttlecock between rival greed and ambition, and bankrupt in a rich country? He has a great task; also a great opportunity.

SETTLEMENT OF THE MEXICAN OIL QUESTION

Conference between oil producers and Mexican officials ends in an understanding apparently satisfactory to both sides—American Government still refuses to recognize Obregon unless a treaty is signed

[PERIOD ENDED SEPT. 12, 1921]

PRODUCTION of oil in Mexico, which had been suspended by the American companies owing to the export tax, was resumed on Sept. 5 and the taxes on oil held in storage were paid by a majority of the companies the same day. This was the result of an agreement reached between large American companies and the Mexican Government. These companies, seeing that the demand of the Washington Administration on a neighboring State to rewrite its Constitution to suit them was aggravating rather than calming the situation, decided to take the matter out of the hands of the State Department.

This was all the more imperative, as the British companies, recognizing the right of Mexico to manage its own affairs, had paid the tax and continued to export oil right along. Therefore, Walter C. Teagle, President of the Standard Oil Company of New Jersey; J. W. Van Dyke, President of the Atlantic Refining Company; Harry F. Sinclair, Chairman of the Sinclair Consolidated Corporation, and Amos L. Beatty, President of the Texas Company, left New York on Aug. 24 for Mexico City, being joined en route by E. L. Doheny, President of the Mexican Petroleum Company, to confer directly with the Mexican authorities, having previously ascertained that opportunity for such a conference would be granted. President Obregon, when asked for his opinion regarding the visit of the five company executives, said: "I believe this is

the first step they have taken over the shortest road."

The American Association of Mexico, an organization formed to represent the interests of landowners and other Americans who formerly lived in Mexico, sent a protest to Secretary Hughes and Secretary Fall against the trip of the oil men, saying: "An adjustment of the present controversy over taxes would be far from a settlement of the oil question in Mexico and much less a settlement of the attitude of the Mexican Government with regard to property rights and the interests in general of Americans in Mexico." But the great oil companies having decided, the State Department acquiesced.

The oil men were met on Aug. 28 at San Luis Potosi by representatives from Mexico City and Tampico, with whom they conferred on their way to the capital, which they reached the next day. They lost no time in formalities and began their conferences with Adolfo de la Huerta, Secretary of the Treasury, on the afternoon of Aug. 29, and saw President Obregon the next day. Six days were devoted to conferences and by Sept. 3 all difficulties had been settled and the oil men signed an agreement arranging the oil taxes. They were photographed in a group with Secretary de la Huerta, who then took the agreement to President Obregon at Chapultepec to sign. The latter described it as "a happy and satisfactory solution to all concerned."

Meanwhile a decision involving the famous Article 27 was rendered by the Supreme Court of Mexico on Aug. 30, in a suit brought by the Texas Oil Company in 1919 against the Mexican Department of Commerce and Industry. The decision upholds the contention of the American oil operators that Article 27, which vests in the nation the ownership of subsurface mineral wealth, cannot affect private titles validly acquired before May 1, 1917, when the new Constitution went into effect. By a unanimous vote the Court decided in favor of the Texas Company and enjoined the Department of Commerce and Industry from denouncing rights to lands held by the company before that date.

Justice Adolfo Arias, who prepared the decision, argued that such a denouncement would be in direct violation of Article 14 of the same Constitution, which states that "no law shall be given retroactive effect to the prejudice of any person whatsoever." He was emphatic in declaring that the nationalization of petroleum deposits under Article 27 of the Constitution must not be made retroactive and applicable to lands legally acquired under the mining law as it stood prior to May 1, 1917. The decision sets a precedent, according to Benito Flores, one of the Justices, for the Court's action in dealing with nearly 150 other cases.

Mexican opinion regarding the effect of the decision on the question of recognition was that the American State Department probably would maintain its insistence that President Obregon sign a treaty first, inasmuch as the Supreme Court's action or even a Congressional enactment might be subject to revision or modification by any succeeding administration. It was pointed out that the Supreme Court two years ago declared Article 27 retroactive, and the Mexican Foreign Office is reported to have similarly informed the American Embassy six months ago. In Washington it was said if careful study of the decision convinces the State Department that Article 27 must be held non-retroactive it would go further toward settling pending controversies with Mexico than any other step.

Mexican taxes on American oil held in storage amounted to a levy on some 30,000,000 barrels, and under the arrangement

with the companies production taxes will be paid every three months, instead of monthly. The Government is studying a new sliding scale of oil prices, taking the English and American markets as the base on which the present export tax may be reduced. In commenting on the Supreme Court decision, Herbert G. Wiley, Vice President of the Mexican Petroleum Company, said that if the taxes were reduced to suit the oil companies the State Department's objection to recognizing Mexico would be waived.

"No special privileges" was the keynote of President Obregon's message delivered in person on the opening of the Mexican Congress on Sept. 1. He declared that the signing of a treaty with the United States was "neither possible, convenient nor necessary" and was contrary to Mexican ideas, inasmuch as it would create special privileges for Americans. Mexico asked for recognition only on the ground of her legal and governmental ability to fulfill her international obligations. Making it dependent upon conditions, as the United States demanded, he said, was unjustified.

Three questions in dispute had been placed in the way of settlement—Article 27, claims for damages and the foreign debt. There were 1,440 damage claims, aggregating 221,331,891 pesos, of which claims for 93,965,045 were by foreigners. Mexico's invitation to form an international commission to adjust claims for damages during the last ten years of revolution had been accepted by China, Spain and Holland.

Twenty-four nations, President Obregon said, had recognized Mexico, and he enumerated them as follows: Argentina, Austria, Bolivia, Brazil, Chile, China, Colombia, Costa Rica, Ecuador, Germany, Guatemala, Holland, Honduras, Italy, Japan, Nicaragua, Panama, Paraguay, Peru, Salvador, Spain, Sweden, Uruguay, and Venezuela. Cordial messages had been received from France and Switzerland.

Reports submitted by members of the Cabinet were unanimously optimistic.

The army has been reduced by 30,000 men and the War Department budget has been decreased 26,000,000 pesos. All groups which were in arms against the Government had been exterminated or had surrendered. Scattered uprisings, the

Secretary declared, were not due to popular desire, but represented personal ambitions.

Twenty-one banks which were closed during Carranza's administration, had been reopened and only three remained for final adjudication. More than 8,000,000 pesos had been spent for the rehabilitation of the railroads, and several more millions to improve port conditions. The credit of \$2,500,000 extended by the Baldwin Locomotive Company is to be used to purchase rolling stock and construction material for the national railways. Ramon P. Denegei, who is President Obregon's personal representative on the Board of Directors, says that the railroads have lost more than \$300,000,000 by graft, and as a result have become lamentably inefficient. Vera Cruz, Tampico and Laredo have been congested, but the situation is gradually clearing.

Henry P. Fletcher, Under Secretary of State, in an interview on Aug. 11 with Señor Ugarte, Director of the Universal of Mexico City, showed that the Harding Administration had no intention of recognizing the Obregon Government in advance of the signing of a treaty. A translation of this interview was given out by the State Department on Aug. 20. In it Mr. Fletcher said: "It is absolutely untrue that oil influences are determining the action of the American Government."

Senator King of Utah on Aug. 15 denounced President Obregon, saying that his policy was to confiscate American property and divide it among Mexicans without giving any return. In defense of Obregon, Senator Ashurst of Arizona asserted that his State had suffered more than any other, nevertheless had unanimously petitioned Washington for recognition of Mexico. The State Legislatures of Michigan, Illinois, Oklahoma, California and Texas had taken similar action. President Obregon, he de-

clared, was a man of integrity and high impulses.

Celebration of the centenary of Mexican independence on Sept. 12 precedes by one month Spain's celebration of the 400th anniversary of the conquest of Mexico, postponed from Aug. 13 to Oct. 12 on account of the Spanish reverses in Morocco. The Mexican celebration is marked by a brilliant season of opera, which began on Sept. 3. The company includes singers from the Metropolitan Opera, New York, the Chicago Grand Opera Company and notable opera companies of Europe. Latin America is to be represented in force at the celebration, many States sending official delegations. Passport requirements for Americans were waived and railroad fares to Mexico City were reduced 20 per cent. for the occasion.

A campaign of economy in expenditure and expansion in production has been inaugurated by the Obregon Administration. It includes the abolition of petty graft in the use of Government automobiles, discontinuance of supplying gorgeous gala uniforms to officers gratis, and a reduction of ten per cent. in the wages of all Federal employes. A tax is placed on all lottery winnings running from 2½ per cent. to 10 per cent. on prizes above \$5,000.

To encourage the production of homes and offices in Mexico City, all buildings for residence or business purposes, construction of which is begun within six months, will be exempt from taxation until June 30, 1926. National lands in the territory of Quintana, which have stood idle since 1909, are to be divided into small tracts and sold on easy terms to farmers. The export duty on sisal has been reduced from 6 to 2 cents in an effort to revive the industry in Yucatan. Import duties on automobiles and flour have been removed. The Government is sending a party of agricultural experts through Western Canada to study the workings of agricultural colleges.

CENTRAL AMERICAN UNION

Constitution of the new Federation signed at Tegucigalpa—It grants woman suffrage—Settlement of the Panama-Costa Rica dispute enforced

[PERIOD ENDED SEPT. 12, 1921]

THE Constitution of the Federation of Central American Republics was signed at Tegucigalpa, Honduras, on Sept. 10, by representatives of Guatemala, Honduras and Salvador, and it was announced that on Oct. 15 elections would be held in the three States for members of the Federal Council. Tegucigalpa is to be the Federal capital. The Constitution grants woman suffrage. Nicaragua, it was thought, would join the union if the Constitution would permit any member State not only to live up to any treaty obligations already incurred, but also to negotiate and carry out any future treaty agreements that might be necessary. Nicaragua had in mind the treaty with the United States granting permission to build an interoceanic canal across her territory. As this treaty is only general, a more definite agreement as to details will be needed when the time comes to build the canal, and Nicaragua wants her liberty of action assured. Costa Rica and Panama have made no move to join the union.

NICARAGUA—A state of war was proclaimed in the northern part of Nicaragua on Aug. 23 against armed bands which invaded the country from Honduras and captured the villeges of Limay and Somoto, near the Pacific Coast. Three thousand troops were sent to the scene and forced the bands to flee to Honduras, where they were captured and disarmed. They numbered 1,208 soldiers and 103 officers.

GUATEMALA—An uprising of Indians in the Department of Zacapa, Guatemala, near the Honduran border, occurred in August. Two chieftains, Urango and Zula, as the result of a dispute concerning the possession of lands, joined forces, entered a village, killed the commandante and held up the day train on its way to the plantations. A trainload of soldiers from Guatemala City quelled the disturbance.

PANAMA—Costa Rica has sent troops to occupy the Coto region in dispute with

Panama and the incident is closed, although President Porras, in a manifesto issued on Aug. 24, protesting against the occupation, said:

Panama reserves the right to occupy, whenever opportunity offers, the territory adjudicated to her by the Loubet award and also to make effective all rights originating from an unprecedented act by which Costa Rica violated the existing status quo between the two nations.

Secretary Hughes on Aug. 18 sent a note to Panama saying there was no reason why the United States should suggest to Costa Rica

that it delay longer taking jurisdiction over the territory which is now occupied by Panama and which was adjudged to belong to Costa Rica by the terms of the Loubet award.

Costa Rica meanwhile had notified the United States that it was ready to assume immediately jurisdiction over the territory referred to.

At Secretary Hughes' request, a battalion of marines, consisting of 18 officers and 388 men, was sent to the Canal Zone, leaving Philadelphia on board the battleship Pennsylvania on Aug. 21. At the Canal Zone the men were to be transferred to a gunboat and sent to the Coto region on the Pacific. It should be remembered there never was any question that Coto belonged to Costa Rica, but Panama had been occupying it to force boundary concessions from Costa Rica on the Atlantic side.

Panama, yielding to force, ordered Coto evacuated by civilian authorities so that Costa Ricans on their arrival would find no Panama Government representatives there. Narciso Garay, Panama's Foreign Minister, who was in Washington endeavoring to present Panama's side of the dispute, on Aug. 23 was ordered to leave after filing a protest at Washington. Secretary Hughes on the previous day notified Panama that "because of its special treaty relations to Panama" the United States Government could not permit Panama to renew hostili-

ties against Costa Rica when the latter proceeded to occupy the territory.

Chief Justice Taft, on Aug. 24, appointed Professor John F. Hayford, dean of the College of Engineering, Northwestern University, and Professor Ora Miner Leland of Cornell University to delimit the boundary in co-operation with one engineer named by Costa Rica and one by Panama, in accordance with the Porras-Anderson Treaty. These are the same two professors who were selected by Chief Justice White some years ago.

Panama refused to name any commissioner or to recognize those appointed by Chief Justice Taft. Dr. Garay left Washington for Panama on Aug. 24, after filing a protest stating that the action of the United States shows that "force still rules" the relations between nations and that the rights of people are esteemed only in proportion to the rifles, machine guns and cannon they can employ to enforce those rights. He asserted that the United States had assumed powers which were not conferred on it by the Canal Treaty or the Panama Constitution. Panama, he said, "cries to Heaven against the injustice" and "will look to the future to see that redeeming justice comes some day by the inexorable design of God." In reply, Secre-

tary Hughes said he was "unable to find that any of the statements made by your Excellency require further comment from me."

Panama evacuated the disputed territory on Sept. 5, and on Sept. 9 the State Department announced that Costa Rica had taken peaceful possession.

PANAMA CANAL ZONE—It had been agreed (Aug. 15) to take a final vote Oct. 10 on Senator Borah's bill providing exemption from tolls by American coastwise vessels passing through the Panama Canal, but it was later said that it would be postponed until after the Disarmament Conference at the urgent solicitation of President Harding. As Great Britain is to be the principal foreign power at the Disarmament Conference, it was not thought politic to offend her by previously passing a bill in violation of what the late Ambassador Walter Hines Page described as the "specific and solemn agreement of the Hay-Pauncefote Treaty," the former attempt at which so "amazed" the British. Moreover, the British Government had indicated that it did not regard with favor the proposal to exempt American coastwise shipping from paying Canal tolls, according to an Associated Press dispatch from Washington dated Aug. 12.

BRITISH WEST INDIES DEMAND SELF-RULE

[PERIOD ENDED SEPT. 12, 1921]

B RITISH colonies in the West Indies are demanding of the home Government a larger measure of self-rule. The Windward Islands, with headquarters in Grenada, hitherto administered by officials and members of a Legislative Council nominated by the Crown, are to have four elected members in the Council, according to a decision by the Secretary of the Colonies. Trinidad also is out for representative government, a public meeting in Port of Spain on Aug. 11 having unanimously voted that "the time has come when the inhabitants of the colony should have a voice in the government thereof."

BAHAMAS—Never since the days of piracy has such an opportunity for gain come to the inhabitants of the Bahamas. Money is circulating in Nassau in quantities undreamed of, and all other business has been practically abandoned for that of supplying American customers with liquor. Care is taken to restrict their trade to their own island, the goods being delivered only to the nearest wharf. Some vessels under the British flag engage in supplying Americans beyond the three-mile limit. The United States Treasury's contention of the right to seize British ships twelve miles from shore is not conceded, and Great Brit-

ain has protested against any overhauling of foreign vessels outside the three-mile limit.

CUBA—Havana newspapers have been attacking Major General Crowder for his prolonged stay in Cuba, calling it a "potential menace." The State Department, in view of these criticisms, made it plain that the Administration is satisfied with the work of General Crowder and has no intention of recalling him.

American marines sent to Camaguey at the beginning of the World War were still there in August. This was revealed by an attack on Major Leroy Foster on Aug. 6 by two Cubans, who injured him so seriously that he was still in the hospital on Sept. 5, when his father, George Foster, of Scribner, Neb., asked for a Government investigation, saying that the two assailants were permitted to go free.

Cuban loans are proposed in bills passed and laid before President Zayas in August. One is for \$50,000,000 to be negotiated in the United States, and another is for an internal loan of \$45,000,000. As the Platt amendment forbids any loan, external or internal, unless revenues of the republic are sufficient to meet expenditures, including amortization and interest, a new tax bill was passed raising revenue sufficient to meet those items. Approval was sought at Washington by the Cuban commercial mission, headed by Sebastian Gelabert, the Finance Minister.

Señor Cespedes, Cuban Minister at Wash-

ington, on Aug. 30 formally protested against the Fordney tariff bill as ruinous to Cuba's trade. The emergency tariff bill, he declared, had already caused an "overnight loss of \$32,000,000" to Cuba. The proposed duties would seriously impair American investments in Cuba and injure exports from the United States amounting to \$515,000,000.

PORTO RICO—Governor E. Mont Reily, by a rather brusque letter to Antonio Barcelo, President of the Porto Rican Senate, on Aug. 17, has aroused a storm of indignation. Señor Barcelo had recommended three persons for local offices, and Governor Reily replied: "I want you fully to understand that I shall never appoint any man to any office who is an advocate of independence. When you publicly renounce independence and break loose from some of your pernicious and un-American associates, then I will be glad to have your recommendations." Governor Reily, who was the Harding pre-convention Western campaign manager, also wants Spanish eliminated in favor of English in the curriculum of the public schools. Members of the Porto Rican colony in New York on Sept. 4 adopted resolutions calling upon President Harding to remove Governor Reily.

Pope Benedict has appointed the Rev. George C. Caruana, secretary to Cardinal Dougherty of Philadelphia, to be Bishop of Porto Rico, succeeding the late Bishop Jones. Father Caruana is a native of Malta and was educated by English Jesuits.

LOSING OUR TRADE IN SOUTH AMERICA

MOST Argentine firms have only a small stock of American goods left and when that is gone no more will be ordered," said W. K. Ackley, head of the American Foreign Banking Corporation at Buenos Aires, to an interviewer on Aug. 12. "During the war, while the European nations were helpless to defend their commerce in South America, the United States secured a brilliant and imposing position. Americans are now losing it through laxity, and it is returning to the hands of British,

French, Germans, and Italians." The Epoca of Buenos Aires says North American investors have shown little inclination to put their money into South American enterprises or to consult Latin-American tastes. While praising the "open door" policy which is to eliminate unjust privileges, the American Government adopts an emergency tariff in protection of its own producers which constitutes a severe blow to Argentine exportation.

ARGENTINA—Although the first oil

well in Argentina was drilled thirteen years ago, the fields are only now beginning to attract attention from foreign capital. English, Dutch, French and German interests are competing for concessions and have obtained comparatively large areas. Swiss and Belgian capital is also interested. * * * Bids opened for bridge work disclosed German offers at one-third American costs. German deliveries are prompt and ample and American articles are being ousted from the market, but the Germans are less effective in selling heavy machinery, locomotives, rails and other large steel products. * * * Germany is awaiting the return of the Argentine Minister to his post to perform at Kiel the ceremony of atonement which she has agreed to make for the sinking of the steamers *Monte Protegido* and *Toro* during the war. * * * Traffic between Argentina and Russia was resumed on Sept. 2, when a Norwegian steamship left Buenos Aires for Petrograd with a cargo of flour purchased by the Soviet Government. A Spanish mission arrived in Buenos Aires on Aug. 24 to study a plan to establish airship communication between Spain and Argentina. On the ocean a record voyage was made by the *Vestris* of the Lamport & Holt Line, from Buenos Aires to New York in 16 days 11 hours and 54 minutes.

BOLIVIA—A request was forwarded by Bolivia to the League of Nations Secretary to present one phase of the Tacna-Arica dispute between Chile, Peru and Bolivia to the Assembly of the League at Geneva for adjudication. Consideration was set for Sept. 6, but the Chilean delegation threatened to withdraw if it came up. Bolivia asked the League to revise the Treaty of 1904 with Chile, in which Chile's authority was recognized in Antofagasta, while Chile gave custom houses to Bolivia there and at Arica, besides promising to build a railway from Arica to La Paz, the Bolivian capital—a railway which has been in operation since 1913. Augustin Edwards, head of the Chilean delegation, argued that the League cannot revise peace treaties, otherwise it must concede the right to Germany, Austria and Turkey. Finally, at the suggestion of Mr. Karnebeek, who presided over the Assembly, discussion of the sub-

ject was postponed. Chile, on Sept. 11, consented to refer to a commission of three jurists her dispute with Bolivia over the Treaty of 1904. * * * Bolivia has a minor dispute with Chile regarding the use of the waters of the Mauri River, which starts in Peru, crosses the Tacna district, and enters Bolivia. Chile proposed to use the river to irrigate part of the Tacna region, but Bolivia opposes it.

BRAZIL—An American engineering firm has received a contract to supervise the reclamation of Brazil's semi-arid States. Five large dams are to be constructed in Ceara and Parahyba, turning several valleys into reservoirs to store up the water of the rainy season from January to April and distribute it during the dry season from May to December, when scarcely any rain falls. * * * The second half of an issue of \$50,000,000 in twenty-year 8 per cent. gold bonds of Brazil was offered for sale in New York on Aug. 30 and oversubscribed within an hour. * * * One thousand German emigrants left Hamburg for Rio Janeiro on Aug. 23, completing the contingent of 3,000 to whom the Brazilian Government offered free passage.

CHILE—A general lockout at the Port of Valparaiso was begun on Aug. 18 by direction of the Commercial Association. Non-union workmen were hired to unload foreign vessels. The new Premier, Hector Laso, declared that the Government would protect any one who wished to work. On Aug. 29 the maritime workers who had been locked out declared themselves ready to work under the old conditions.

COLOMBIA—The Colombian Cabinet resigned on Sept. 4, announcing that the step was taken to promote harmony between the Executive and the legislative body. * * * The National City Bank of New York on Aug. 19 announced that its branches at Barranquilla, Bogota and Medellin, Colombia, had been closed owing to unprofitable business and slow collections.

PERU—A dispatch from Lima on Sept. 6 announced that a group of American farmers, comprising the advance guard of a colonization scheme involving 200 farmers from the West, had arrived on its way to the Pampa del Sacramento Valley, along the headwaters of the Amazon River in

Northern Peru, where the colony is to be established. The party was in charge of J. B. Schoenfelt of Okmulgee, Okla., formerly United States Indian Agent for Oklahoma Territory, who obtained for colonization purposes a grant of 650,000 acres of agricultural and forest lands from the Peruvian Government in October, 1920.

URUGUAY—President Brum has sent to the Uruguayan Congress a bill providing suffrage for women and all other legal rights held by men.

VENEZUELA — General Jose Manuel Hernandez, at one time one of the most spectacular figures in Latin-American history, died in New York on Aug. 25, at the age of 68. He was the leader of many revolutions in Venezuela, generally known by the nickname of El Mocho, "the crippled," because he had lost some of the fingers of his right hand in a battle. In 1914 he made his last revolutionary effort, but found little support and later lived in Havana.

STORM CLOUDS IN INDIA

IN the face of things, all is well in India, from the viewpoint of the British *raj*. So at least the India Office officials in London declare to the British people in the public press. The reform measures initiated by Lord Chelmsford, the former Viceroy, and Mr. Montagu, the British Secretary for India, it is declared, have begun to give the Indian people that for which they have longed—representative Government. The work of the new Assembly Council at Delhi, it is asserted, has been such as to inspire great confidence that it will ultimately prepare India for the consummation of her national desires—independence as an integral member of the empire with Dominion status. Mr. Gandhi's movement of non-co-operation is proving itself impotent. Lord Reading, the new Viceroy, and one of the most brilliant judicial minds of Great Britain, has taken hold of the Indian situation with a strong hand. From his first encounter with Mr. Gandhi the Viceroy has come out triumphant, and Mr. Gandhi, under the threat of prosecution, was forced to exact a signed retraction from his Mohammedan allies—the Ali brothers—of violent statements made by them in public addresses inciting to rebellion. Free speech is allowed short of direct subversive propaganda. The population is generally peaceful. The Malabar uprisings in Southern India, which occurred in August and which cost hundreds of lives, were staged not by native Indians, but by a fanatic sect—the Moplahs—the descendants of Arab Mohammendans who emigrated to India long ago, and who have

never lost their warlike proclivities and their hatred of Hindus and Europeans alike. The status of Indian citizenship outside of India has been raised by the Imperial Conference. The political development of India is progressing favorably, and there is every ground of hope for the future of India within the empire.

Such is the rosy-tinted picture limned by the India Office. How far do the British people accept it as a true depiction of affairs in the mighty Indian empire whose population totals 300,000,000 souls, one-fifth of the world's entire population? Numerous letters of protest against this roseate view have been printed of late in the English press, emanating from men whose knowledge of India is first-hand and intimate. The most striking contradiction thus far published was an impressive article contributed by Sir Michael O'Dwyer, late Lieutenant Governor of India's stormiest and most disaffected province, the Punjab, in the August number of *The Fortnightly Review*, under the title "Present Conditions in India." This article is devoted in the main to an analysis of the working of the Chelmsford-Montagu "Reforms." Sir Michael, it should be remembered, was in control of affairs in the Punjab when the Amritsar massacres occurred, the responsibility for which was thrown on General Dyer, who was subsequently reprimanded severely by the Government and dismissed from Indian service. What the late Lieutenant Governor says has weight, both because of his former high official rank and because of his long and close contact with

conditions in India. Briefly summarized, his conclusions regarding the reforms are these:

The so-called democratic régime now established in India is a mockery. The members of the Provincial Councils represent the voices of less than 1 per cent., and those of the Central Assembly at Delhi less than one-tenth of 1 per cent., of the population. The great masses are debarred, and will be debarred for many years to come, from the electoral franchise. Realization of this fact makes them easy victims of the Gandhi-Ali anti-English propaganda. The Indian members of the Councils and the Central Assembly are drawn exclusively from the English-educated lawyer class. Indians who are not afraid to speak their mind have long leveled against the British Indian Government the reproach that it has imposed on India a "*Vakil Raj*," or lawyers' rule. The lawyer, the journalist and the professional politician, many of whom are secretly disloyal and of a trouble-making tendency, have been selected for the Government of the empire which the rural classes, the Indian aristocracy, the landowners and industrialists maintain by their labor and loyalty. All these have no representation in the Government of India. This augurs ill, not well, of the future. Gandhi has not failed to use it as a new argument to prove the futility of trusting the British rulers to give India any effective form of popular government.

It is, however, Sir Michael's picture of the mood of the people as a whole, and their attitude to the British political officers and their families, which gives most food for thought. The situation he sets forth is little less than alarming, as may be gathered from a passage such as this:

The officers of Government, from the highest down, are regularly obstructed and insulted in public; the masses, hitherto loyal and courteous, are being embittered against the hated foreigner, whether official or non-official; shops are shut in protest when they appear on tour, supplies refused, transport facilities withheld. In many parts of India the district officer, on whose vigilant watch over his subordinates, maintained by constant touring, the efficiency of the Administration largely turns, is unable to move outside headquarters. Isolated Europeans in remote stations are living in constant fear of attack; their servants are intimidated into deserting them, their property is raided or burned.

Various writers of the British press declare that the situation in India is ominous, that the British are living there in a virtual state of isolation and constant apprehension. Gandhi, the most formidable enemy England has ever had in India, is unremitting in his activities. The "victory" won by Lord Reading was an empty one, consisting merely in the pledge to tone down the violent utterances of the brothers Ali to a point just short of liability to prosecution. It is essential that these powerful allies to the Gandhi cause should conserve their liberty of action. The latest advices indicate that though they are observing more caution, they are showing no decline in anti-English bitterness.

Other propagandists of less luminance are daily transgressing the limits prescribed and are being arrested and tried for sedition. And Mr. Gandhi marches on. His latest demonstration was one in favor of the public burning of all cloth of British manufacture, the example for which he set himself. Many of his fanatic followers are consigning to the flames all the foreign cloth they possess. The first two stages of the Mahatma's program—refusal to accept Government titles and honors and refusal to attend Government schools—have been executed with a much wider success than is generally believed. The next two stages, refusal to serve in the Government police or the Indian army and refusal to pay Government taxes, loom in the future. What cares Gandhi—this dark little wisp of a man, who lives like a Hindu monk and fanatically believes that India can be saved only by a return to the teachings of the ancient Vedas and to a primitive state of society—for the public renunciation of his movement by Indians of lofty intellectual rank such as Rabindranath Tagore? Tagore is a poet. England, the national enemy, must be dispossessed. And so powerful is Gandhi that the Government of India is afraid to arrest him, and Gandhi and the people of India know that the Government is afraid to arrest him. Wherever he goes he is treated with love and veneration. The people bow down before him at railway stations and kiss the hem of his garment. Lord Reading has yet to show that he can keep this situation from developing into another Indian mutiny.

THE RIGHT ROAD TO BUSINESS RECOVERY

Foundations for a new era of prosperity indicated by Otto H. Kahn and other financial leaders—Prices now the crux of the whole problem—Adoption of a monetary policy that will give producers an opening for activity without inflating prices again

TO turn for encouragement and testimony of forthcoming improvement in world affairs, toward a land of utter misery, of starvation and pestilence, of political misrule and social ignorance, a land which seems to have exhausted the range of human distress, has in it something of the grotesque. Yet it is toward Russia, the unfortunate, that the eyes of Europe are turning and toward which the eyes of America should turn. For there can be seen the earnest of better times which are to come over the whole world, if only the nations of the world grasp the opportunity which is offered.

In Russia lies the salvation of war-exhausted Europe. The acreage of a continent, its fields, its forests, the minerals that lie beneath the ground, could supply the wants of practically all the transatlantic nations, could they be worked scientifically under a stable and wise Government. And therein is the hope which may be a recompense for the agony which has come upon Russia.

Under the Bolsheviki the land was truly the dark continent which it has been called, as dark as Darkest Africa in the days before exploration. Today famine has broken the grip of the rulers whose own crazed ideas brought it on. The Russia which Hoover and the relief workers of Europe leave will be a different Russia from the Russia they entered. The change cannot come abruptly and at once—at least, it probably will not—but come it must, and it is possible now for those who are trying to guide Europe through a period of reconstruction to see ahead a Russia which, economically, shall somewhat resemble the Russia of the Czars, and shall differ from

it not in any lessened, but probably in a wider, field of usefulness.

Otto H. Kahn is among those who have seen these possibilities. Upon his recent return from Europe he cited the Russian situation as one of the most significant developments he had noted in comparing his impressions recently formed with those with which he returned to the United States a year ago.

First in importance he put the fact that the theories of Bolshevism have been wholly discredited and have ceased to be a contagious influence and an article of faith with all but a small fraction of the bonafide working people of Europe. Second, he found that the eyes of the industrial nations of Europe were on Russia, as the new land of unlimited possibilities, and, third, that there seemed to be almost universal recognition, even in strongly antagonistic quarters, that for the commercial penetration and the proper economic ordering and development of a regenerated or to-be-regenerated Russia, the active co-operation of Germany was requisite and essential, owing to her contiguity and her knowledge of Russian ways and qualities and conditions.

"England and France," said Mr. Kahn, "are alive to that situation, and their financial and industrial leaders are astir, especially those of England, with traditional enterprise, skill and foresight. American co-operation would be welcome at this time. It would appear to me that this situation should receive the careful and prompt attention of American industry and finance, lest by standing aloof too long we may find ourselves foreclosed from desirable opportunities when the proper time arrives. This suggestion is, of course, entirely apart from

the political or moral question of according any recognition to the Soviet Government until and unless it be sanctioned by unmistakable action through the free vote of the Russian people."

America, Mr. Kahn pointed out, looms so large as an actual, and still more a potential, factor in world affairs that our domestic affairs formed an appropriate subject for discussion in even so cursory a survey of world matters as his trip abroad had enabled him to make.

"It was inevitable," Mr. Kahn asserted, "that the artificially stimulated boom period of the war years and the period immediately following should be succeeded by a drastic and painful process of readjustment to normal conditions, though it need not have been as drastic and painful as it was and, indeed, still is. At any rate, it seems to me the time has come when we should rouse ourselves out of the slough of industrial despond. And I believe we can do so if we make a determined effort and pull together and follow that road which is marked by the signposts of economic soundness."

GUIDE TO THE RIGHT ROAD

What are these signposts? Mr. Kahn has summarized them so well that his words may be used:

First, a wise taxation policy. After all, the total sum required to be raised by taxation for our Governmental needs, while vast in comparison with ante-war years, is relatively light in comparison with what it is in the principal countries of Europe, as proportionate to our wealth and population and theirs. The burden of taxation, direct and indirect, resting on the man of small or moderate means in America is many times lighter than it is in any of the leading countries of Europe. That is as it should be, and no revision of taxation would or should be considered by Congress which would relieve the well-to-do at the expense of the masses of the people. If our system of taxation has been, as undoubtedly it has been, a strongly intensifying factor in bringing about the present situation in business collapse and unemployment and in retarding recovery, the reason is not so much the total size of our tax bill—though that, of course, was extravagantly swollen and must and will be greatly reduced—but the fact that

taxation was dumped on the back of business and capital most clumsily and crudely. We cannot have a return to normal business conditions, we cannot have vigorous enterprise, until we shall have corrected the most glaring, at least, among the faults of our present system of raising revenue.

Second, a wise credit and loan policy. There has been too much willingness in certain quarters to promote enterprises, to float securities for public sale and to facilitate business expansion when prices were abnormally high and a policy of caution and restriction was indicated. The concomitant of that attitude was insufficient willingness or ability to grant loans and credits when the danger flag of unduly swollen prices had disappeared. In times like the present, the attitude of those who are in charge of the business of loans and credits should be one of active encouragement and of a ready willingness, within the limits of prudence and capacity, to extend adequate facilities to borrowers for legitimate needs at home and abroad.

Third, a wise tariff policy. Our Government, during the war and for some time after, extended huge loans to European Governments—I venture to think with undue and unnecessary lavishness. Private loans and credits have likewise been extended to foreign applicants to a very large aggregate, and perhaps not always with sufficient discrimination. Whatever may be the merit of suggestions put forward for dealing with this question, it appears manifest that public opinion and Congress are unwilling at this time to consider any disposition of the loans owing us by foreign nations except their refunding. But we cannot eat our cake and have it. There are only a very few ways in which foreign nations can discharge the interest on the debts owing us, let alone the principal, and of these ways the most available is to furnish us with goods and services. Furthermore, if we want the foreigner to buy from us, we must be willing that he should sell to us. Trade, in the long run, cannot be a one-sided matter of sensational export balances. I am in favor of the principle of a protective tariff for America to the extent that its application is necessary to preserve our industries and the American standard of wages and living. But that principle can no longer be applied, with safety and ad-

vantage to the country and with fairness to the consumer, in the old-fashioned, somewhat haphazard and sometimes extreme way. New factors have entered into the problem which must be carefully studied and taken into account. And the American standard of wages and living does not and can not and should not mean that extravagant and wholly fortuitous standard which resulted from the war and from its after effects. In order to use the capacity of our industrial plants and to give full employment to our workers we must make every effort to hold our own in the markets of the world. And that is possible only if the cost of production can be brought into line with existing conditions. To that end the prerequisites are that waste and slipshod methods in business be eliminated, costs brought down, the "get-rich-quick-and-easy" period considered definitely at an end, and that both capital and labor recognize the need of adjusting their respective compensations to the circumstances which the country has to meet. All of us, including labor, will be better off in the long run by getting away from an artificial level, which has been of genuine benefit to no one and of considerable charm to a large fraction of our population.

FARMING AND EXPORT

Fourth, sound and effective measures to aid the farming industry. The vital importance of that industry and the critical situation of the farmer who, for some time past, has been receiving pre-war prices for his product while paying inflated prices for his needs, and who, moreover, has been laboring under inadequate credit and distribution facilities, are so manifest that it seems needless to put forth any arguments on that score. Second only to agriculture in national importance is the railroad industry, affecting, as it does, the public at large, the shipper, the investor and many industrial and commercial activities dependent on it to a considerable degree. It is greatly to be hoped that the long-pending settlement between the Government and the railroads will at last be consummated without further delay.

Fifth, cultivation of our export trade. That is a difficult task at best, in the face of depreciated currencies, cheap labor and

other stimulating factors operative in foreign countries. It requires, first of all, careful study of that field on the part of our merchants and bankers, and the setting up of organizations and machinery to be as effective, and the training of men to be as competent and expert, as those that have been developed by our competitors. It requires us to project our thoughts and plans internationally and to establish serviceable affiliations and appropriate co-operation abroad. It requires co-operation and comparison of views and experiences between exporters and bankers among each other and between them and the proper departments of the Government. The somewhat costly mistakes which have been made within the past few years ought to be turned to account as lessons for the future. In connection with this problem, the question of what, if anything, can be done to "stabilize the exchanges" ought to receive the close attention of the Government, and might profitably form the subject of an international comparison of views or of a conference in which the American representative should be more than a mere observer.

These are the views of Mr. Kahn, and the number of those who think like him is legion. A sound tax and tariff policy, wise handling of loans and credit, proper handling of the agricultural and railroad problems and the cultivation of an export trade are certainly chief among the essentials of prosperity for this country. But what constitute sound policies, proper handling and wise cultivation are open to argument. Were there accord on these subjects it would certainly be possible to record greater strides along the road marked by these economic signposts than can be done now. Tariff and tax are still unsettled by Congress, farm and railroad problems are problems still, and the cultivation of export trade is notable chiefly for its absence. Even our banking situation has its critics who complain loudly of the very deflation which others contend has not extended far enough. But there is satisfaction to be had in the knowledge that conditions are improving with steadiness, even if with slowness. We are better off today than we were a month ago, and better off than the month preceding. We are making progress.

MOSTLY A PROBLEM OF PRICES

Business is beginning to pick up in many lines, though the improvement is slight, except in the cotton field, where something resembling a real boom has recently developed. There is a little more activity in iron and steel, and there was surely room for it. Other textiles besides cotton have improved their position somewhat.

We are still far from what we are pleased to call normal, however, and the problem of reaching this desired end seems tremendous, when examined with an eye which takes in its most remote ramifications. A broader view of the question makes it less puzzling, however. After all, prosperity is simply a matter of production, trade and consumption. All other problems fall under these heads. If goods can be produced at a price which will find a ready market and still yield a fair profit to the maker, conditions will rapidly become as normal as conditions ever are, for every producer is also a consumer, and the whole problem is really one of balance—to find the point of greatest volume at which supply and demand will offset each other.

From the consumer's viewpoint the matter is largely one of price. Much of the readjustment which has already taken place in industry has failed to reach the retail markets. The merchants who bought at inflated prices are still hopeful of passing these high-priced goods along to their customers and of restocking their shelves with the lower-priced goods which the jobbers and manufacturers are offering. Consumers are reluctant to buy while they feel that this desire exists, and injury is done even to the man who is offering his goods at a fair price, because the buying public is still suspicious of all prices.

It is a question of finding the right price, and the right price may be said to be the one which will move goods. Dr. Benjamin M. Anderson Jr., Ph. D., economist of the Chase National Bank of New York, expressed this thought succinctly before a recent meeting of the West Virginia Bankers' Association. He called attention to the fact that there was too much discussion of right prices, as if the matter were a moral question, and asserted that the idea that prices are morally right or wrong, just or unjust, was an idea which had real meaning only in

the case of a very narrow market, where one party to a buying and selling contract is pretty much at the mercy of the other. In the great markets, where there are many buyers and sellers, questions of moral right and wrong have little to do with the matter. The question is an economic one. Those prices are right from the economic standpoint which keep the industrial machinery moving. Right prices are prices which will move goods, and the way to find out what are right prices is to have a flexible, competitive, two-sided market, and to let prices go up or down in such a market until the supply and demand become equalized.

OBSTACLES TO RECOVERY

In such a situation, Dr. Anderson pointed out, goods will move and the markets will be cleared, new supplies will be called for and business activity will go on. If prices are held above the point which open, two-sided competition would bring about, the tendency is for consumption to fall off and for stocks to accumulate, causing a glut. If prices are artificially set below the level which open market conditions would bring about, the tendency is for consumption to go too fast and for production to be checked, leading to a scarcity. If prices are left free from artificial control, however, and if sellers, as well as buyers, really compete vigorously and effectively with one another in the price-making process, right prices can be reached and business revival can come. Dr. Anderson listed under six heads the main classes of resistance points which were preventing the establishment of right prices. These, he said, were:

1. The prices of finished manufactures are still much too high as compared with farm products and raw materials.
2. Retail prices have not yielded adequately.
3. Wages are still too high by and large, though scaling down of agricultural wages in the South has gone very far, and agricultural wages have yielded greatly in some parts of the country. But wages in manufacturing industries generally, and very especially wages on the railroads, in the bituminous coal fields, and in the building trades are still much too high.
4. Building materials are too high.
5. Steel has not yielded adequately.
6. Railway rates on steel, building materials, and other bulky goods are much too high, though some readjustment has been made.

Right railroad rates, from the standpoint of the railroad company itself, said Dr. Anderson, are rates which will move traffic, rather than rates which stop traffic. The old-fashioned railway rate-makers knew this. They made their rates, not wholesale, but piecemeal, with reference to "what the traffic would bear," and found it best for the railroads themselves to charge low rates on bulky stuff, which would cover the direct costs of moving the bulky goods, together with some contribution to the overhead expenses of the railroads, rather than to charge much higher rates at which the bulky goods could not move in volume. Right wages are wages at which full employment can be brought about. It is far better that labor should have full employment than that a part of the labor force should be employed part of the time at very high wage rates. We cannot banish moral principles from the determination of wages, as we can from the determination of market prices of goods. But the very best friends of labor must appreciate that wages which are so high as to make it impossible for employers to produce goods at prices which the market will pay are of no advantage to labor. The far-sighted business man will not be eager to reduce wages more than is necessary. The far-sighted union leader will seek to reconcile his followers to such wage readjustment as is necessary to facilitate business revival, knowing well that greatly prolonged depression would lead to disastrous breaks in wage standards.

BRITISH FINANCIAL RECOVERY

Perusal of the British economic and financial magazines discloses that Great Britain and the Continent are going through much the same phase of perplexity that we are. The problems of readjustment to the post-war situation are much the same in all countries and differ practically only in degree, with the distinction, of course, that the United States is solvent beyond all question, while the European countries, none of them firmly on a gold basis, are struggling to return there. The London Economist, commenting upon some cheerful signs of recovery in industry, gives this advice:

On the other hand, there is no need to be too complacent. We have a long row to hoe

before we can get back to anything like our old prosperity, and the position is still full of difficulties and anxieties. What we need most now is neither exaggerated depression nor headlong gaiety, but calm, determined confidence, hard work, all together, and sensible spending.

It is interesting to note that the monetary policy—and by this is meant the credit situation as well—is a chief topic of concern in England, even as it is here. The Economist calls attention to the fact that the currency and financial policy are only machinery designed to help production and asserts: "If we do not get the goods that are real wealth, the most perfect currency system will not fill our cupboards; but the use or misuse of the machine is of the greatest importance, second only to the most serious question of all, the need for inducing the manual workers to work well and contentedly and heartily."

The United States has been held up as a "horrible example" by at least one critic of the British financial policy, Arthur Kitson, who, The Economist says, "has long been well known as a critic of our system, and he now, with that fearless frankness which leads him so straight along the path of what he believes to be the truth, says that deflation has caused the United States greater losses than the whole of their war expenditure; that we are suffering from the same 'lunatic policy,' and that Germany, having reduced her mark to the lowest point in her history, is purposely keeping it low by issuing fresh notes, and that she has only to continue this policy for the next five years and the 'bulk of the world's trade will be in her control.'"

THE INFLATION FALLACY

This is the inflationist case carried to its logical conclusion, and the comment of the editor of The Economist so amply answers the position that it will serve here as well as in England. Says he:

If these things are so, the way to prosperity is easy. We have only to stop all this talk of economy, encourage our wasters to waste as much as possible, print notes and expand credit in the process, and the world's trade is ours, as long as other people do not seize this bright idea and put it into practice still more effectively. Ultimately, it would seem, the fight for the world's trade will resolve itself into the question which nation can get paper and

print notes fastest, and the control of the paper supply will be the real key to industrial victory. It is easy to reduce this extreme view, as expressed by Mr. Kitson, to absurdity. It was prettily done by a letter signed "Economist in Wonderland," and published in our issue of Aug. 6.

Mr. D. M. Mason, of the Sound Currency Association, also suggested that, on Mr. Kitson's theory, Poland and Russia would be our most formidable competitors, and Mr. Kitson says that this is not argument, and that if Poland could add to her cheap currency an unlimited supply of labor, raw material, and capital, then she would be a dangerous competitor. Thereby he dispels the whole sweet vision, and tells us not only to print, but also to work and save. If we worked as hard as Germany—and in this connection we must remember that the number of hours worked per day are not the only test—it is possible that if we succeeded in depreciating our currency in the same way as hers, we might get a temporary advantage in export. If we depreciate all around, so that our currency loses buying power at home as much as abroad, we shall surely be just as we were. Germany's currency is worth more at home than it is abroad, and this gives an advantage to her exporters and foreign customers at the expense of the home consumer. The question is whether this advantage will last. It seems to be artificially promoted and preserved by Germany's need to pay reparation, and those who believe that reparation will seriously damage our trade, point to it as one of the means by which Germany will undo us. She has to make this compulsory payment, and to that extent cannot import, and so the demand for her currency abroad is lessened and it remains depreciated in foreign centres more than at home.

But many nations have in the past made compulsory payments in the shape of interest without producing this effect. They were, of course, smaller, and the remedy in Germany's case seems to be to encourage her export trade to grow instead of employing stupid measure to restrict it, so that the relation between the reparation payment and her total exports may be reduced. In any case, if we take Mr. Kitson's advice and inflate for the good of industry, it seems that

we must be careful to depreciate sterling abroad more than we do at home, and it is rather hard to see how to do this. On the other hand, there is something to be said for the view that America and we have been a little too hasty in deflation, or rather, in producing the fear of deflation, for we, at least, have so far produced little or no reductions in credit, though a considerable decline in currency circulation.

America is deliberately sitting on her "mountain of gold" and not allowing it to produce its natural effect of currency expansion, which would have tended to depreciate the dollar. In the Chase Economic Bulletin of July 20, Messrs. A. B. Hepburn and B. M. Anderson argue that "we must recognize that we hold much of our gold in trust against the time when Europe will need it to restore sound currency. We must not let it depreciate on our hands or tie it up in illiquid credits." But if the gold is thus to be cherished it cannot work the cure that expansion based on it might produce, though it is natural enough for the Federal Reserve Banks to check the expansion in view of other consequences that might ensue from it.

Here we have had a policy of dear money, through advances in bank rate and Treasury bill rates, which was questioned from its outset, and is now abandoned by some of its most distinguished supporters; and there are some interesting passages in the recently issued report of the Netherlands Bank which show that in Holland the rationing policy has succeeded without any increase in the discount rate. What we want is a monetary policy which will give genuine producers a chance without setting us off again around the vicious circle of rising prices. If a new currency committee demanded by the Federation of British Industries can produce it, by all means let us have one.

American business will endorse the wish: a monetary policy which will give genuine producers a chance without setting us off again around the vicious circle of rising prices. That is what business everywhere desires, and, in the United States, it should get it first.

PERSONNEL OF THE ARMS CONFERENCE

BY RICHARD V. OULAHAN

Characteristics of the chief delegates who have been intrusted with the task of limiting the nations' armaments and removing the dangerous elements from problems of the Pacific—A glance at the agenda and the larger obstacles to be overcome

FROM the viewpoint of American internal politics the Conference for the Limitation of Armaments has an importance which cannot be ignored by those who are concerned over its chances of success and are seeking material with which to counteract a prevailing pessimism. The element of doubt has entered largely into the discussion of possible accomplishments of the conference. Recent efforts toward harmonizing international differences have exemplified the fact that the burnt child dreads the fire—with the peoples of the world visualizing themselves as burnt children. They have lost faith in international statesmen, whom they regard as actuated by motives too selfishly sordid to permit of sympathy with the great mass of humanity, which hates wars and hopes for an international application of the Golden Rule.

American internal politics affects the situation vitally, for upon the success or failure of the objects sought by the conference may depend the success or failure of the party in power in Washington. If we are willing to concede that the outcome of President Wilson's experiences in Paris had a marked influence in causing the defeat of the Democratic Party at the polls last November, an inkling may be obtained of the vital interest the present Republican Administration has in seeing the conference succeed. Leaving aside the con-

sideration that President Harding was actuated by the highest motives in calling the conference, and coming down to a hard, practical fact, an abortive ending of the Washington gathering would bring an outcry of resentment which the Administration would find it difficult to combat.

In these circumstances there is an added incentive to translate into deeds the slogan, "It shall not fail!" Fortunately, the Washington conference has been kept free from domestic influences purely partisan. Behind it is the fervent desire of the generality of American people whose attitude is shown in their prayers for its success. There were no party lines drawn in the overwhelming vote by which Congress declared for a conference between the leading naval powers to discuss the limitation of armament, and since the purpose underlying that declaration was amplified to include problems of the Far East and the Pacific which appeared to menace world stability, there has been a ready and enthusiastic acceptance of the wider application of the business the statesmen of many nations will be called upon to adjust.

It was a triumph of no mean character that came to Secretary Hughes in the endorsement he obtained of the purposes for which the conference was called. But the difficulties overcome are as nothing compared with the obstacles to success which will confront the conferees. A maze of

problems, intricate in ramifications and interlocking significance, is to be penetrated. National ambition and inspiration, patriotic attachment to certain political ideals, insistence upon commercial extension, territorial valuation, national security, the wish to hold, will each play a part in the great game in Washington.

Paris taught the world, and particularly trustful America, that every nation is so imbued with the justice of its own nationalistic aspirations as to fail to see the justice of antagonistic causes involving other nations. One's mind here instantly reverts to the unhappy outcome of President Wilson's earnest endeavor to bring the nations into an association designed to keep peace in the world. The Senate's rejection of the League Covenant, with the overwhelming defeat of the Democratic Party in the next ensuing Presidential and Congressional elections, is construed in Europe as an example of national selfishness run mad, whereas those who voted for Republican candidates in order to swat the League regard themselves as having done a highly patriotic duty. If it may be said that Mr. Wilson thought in terms international, it may be advanced also that the American people, generally speaking, think in terms national.

HOW AMERICANS FEEL

Perhaps, after all, this lack of close interest in international goings-on may have an important favorable bearing on the things President Harding seeks to accomplish at the Washington conference. Most Americans are not greatly worried over whether Japan extends or retains her "spheres of influence" in China. They have a hazy knowledge of what "spheres of influence" means. Their sympathies go out to China because they believe China to be the under dog; but China, as far as they can see, does not touch their lives. They do not like the Anglo-Japanese alliance because they think it is inimical to America. They may believe that the Philippines

are a liability, but they would be ready to fight to the end if any nation attempted to take them from us. They have been indignant over Shantung, but it is an academic indignation. They have no racial antipathy to the Japanese, but they think the Californians have the right to object to them as neighbors. Shantung and other incidents have made them forget that their sympathy was with Japan in her war with Russia, and have caused them to classify Japan in their minds along with other great powers which they regard, almost indiscriminately, as a parcel of land grabbers. They dislike monopolistic tendencies and think most big nations are monopolistic. The quarrels and little wars of nations make them laugh, but excite their interest merely casually or not at all. Railroad concessions in China, electrical communications in the Pacific, the separation of South China from North China, the twenty-one points, the occupation of Saghalien, the Far Eastern Republic, extraterritoriality, the British at Wei-hai-wei, secret treaties, financial consortiums, four-power, five-power or six-power loans, preferential economic privileges, preferential railway rates on "spheres of influence" railways, administrative integrity—these and many other questions present vague and indefinite and rather uninteresting possibilities which they are inclined to dismiss with an indifferent "I should worry!"

If they are not bothered about knowing the details, the American people have, however, a deep interest in some general aspects of the conference. For, other than the purely material influence of the taxation which comes from heavy armaments, they are keenly sympathetic toward the desire to place a limitation on great fleets and armies, because they believe these things breed wars. Above all else they desire the conference to succeed, because success, they feel, means the assurance of a long peace.

With that state of popular feeling to sustain them, President Harding

and the American delegates to the Washington conference are placed in a favorable position. They are cheered also by the conviction that world sympathy is behind the effort to bring about a limitation of armaments. There is a little fly in the ointment of optimism in a strong American tendency to believe that complete disarmament must be arranged to make the conference a success. President Harding and his advisers have been concerned over this tendency, and the President has taken occasion in a letter furnished to the press to make known that no expectation existed of "universal disarmament," which, he declared, "will be beyond hope of realization." What he hoped for was "reasonable limitation," which the President defined as "something practical that there is a chance to accomplish, rather than an ideal that there would be no chance to realize."

OBSTACLES TO SUCCESS

What are the currents and cross-currents which those who desire the conference to be a success will have to combat with determined vigor in order to accomplish that end? In the optimistic sense we have the knowledge that the sympathy of a large portion of the world goes out to the objects of the conference. On the pessimistic side we find national aspirations and ambitions which seem hopeless of harmonizing with the purpose of the conference. But the problems they present will not appear so insurmountable when they are viewed in the light of the earnest effort which, from present prospects, is to dominate the conference proceedings. If we start with the premise that Japan's desire to expand is not justified, an important, even vital, element of discord, which might spell failure, is injected. There is no justification, however, for any such assumption. On the contrary, it is certain that the conference will be so ready to recognize that Japan is entitled to her aspirations to find new fields for her

rapidly growing population, where that expansion does not trespass on the sovereignty of other people, that the principle will never be brought into question, except, possibly, by China. If Japan, for her part, should insist upon excluding from discussion her existing arrangements with China, which give her great advantages in that vast country, minds would come into play to find a way out of the apparent impasse. Failure is possible, some think likely. If such should be the outcome the United States Government, charged with the responsibility of making the conference a success, could furnish its defense only by attempting to place the responsibility for failure.

With the Paris Peace Conference we learned that agenda meant "things to be done." The agenda of the Washington conference is broad and elastic enough to be almost a catch-all of problems affecting the nations concerned. Under the heading, "Questions Relating to China," we find listed territorial integrity, administrative integrity, the open door, concessions, monopolies and preferential economic privileges, development of railways, "including plans relating to the Chinese Eastern Railway," preferential railroad rates and "status of existing commitments." The whole "Chinese question" seems embodied in these topics. Though Russia will not participate in the conference, "Siberia" is found in the agenda, and "Mandated Islands" suggests a comprehensive discussion of matters growing out of the peace treaties arranged at Paris.

ATTITUDE OF MR. HUGHES

Before he became President, Mr. Harding began to preach his "gospel of understanding," and his delegates will go into the conference imbued with the spirit of that gospel. In liking men he has learned to know them, and he attaches importance to the personal side. When he chose Mr. Hughes to be Secretary of State, his old friends of the Senate were up in

arms. But the apprehension of Senators that Mr. Hughes would present a repelling demeanor to them was not realized. On the contrary, he has shown himself to be possessed of a charming personality, which some describe as fascinating, and it is certain to be a tower of strength to the American cause at the conference table. Mr. Hughes supplements Mr. Harding's "gospel of understanding" by "the gospel of facts." He lives and dreams facts, and it is to be expected that the presentation of facts will be the *motif*, so to speak, of the American procedure. In all things he is practical. He digs below the surface to find a firm foundation and builds his facts upon it. With that enthusiastic vigor of which he is capable he sought to adjust the Yap controversy before the conference assembled, because adjustment would mean the removal of a trouble-breeder; and he exercised a sympathetic if indirect influence over the negotiations between Japan and China for an amicable settlement of the Shantung issue, which might cause an awkward situation at the conference table. Like President Harding, he has striven to counteract efforts to create prejudice against Japan, and by patience and diplomacy has shown the participating nations that the American Government will enter the conference actuated by a spirit of fair play and square dealing, with an earnest desire to achieve results beneficial to the world.

MESSRS. ROOT AND LODGE

Those agreeable personal qualities displayed by Mr. Hughes, which may have such an important influence on the temper of the conferees, have their counterpart in his American associates. Any impression that Mr. Elihu Root was a cold, hard, mental machine, interested in little save the laws affecting corporations, was dispelled years ago when he came to Washington to be Secretary of War. Colonel Roosevelt delighted in Mr. Root's sense of humor, and his genial

qualities made him popular among his associates in the Senate. Like Mr. Hughes, he has a passion for facts, and, like Mr. Hughes, an ability to present them in the most telling way. Each has the ability, too, of absorbing information—a valuable asset. Root likes diplomacy, and his experience in it as Secretary of State was considerable. He and Hughes have another common bond, for when Hughes's chances of being elected Governor of New York were in danger in 1906 it was Root who came to his rescue with his remarkable speech at Utica. That speech was generally considered to have turned the tide for Hughes, and his victory was all the more striking because his running mates on the Republican State ticket went down in defeat.

When Mr. Root was a Senator he and Senator Lodge were in the habit of walking home together from the Capitol nearly every afternoon. Their intimacy was obvious. Lodge, now 71, is five years younger than Root. One was a scholar, the other a lawyer, but both were interested and concerned in public affairs and they had a bond in their close friendship with Roosevelt. Whether recent events made any difference in their relationship has not appeared. The Senate, of which Mr. Lodge was so conspicuous a part, did not want Mr. Root to be Secretary of State in President Harding's Cabinet. Root was too sympathetic toward the principle of the League of Nations. But as between Root and Hughes it preferred Root. Now Hughes and Root and Lodge find themselves touching elbows at the conference table. The chances are that they will find it most agreeable association.

As there are misconceptions as to the personal qualities of Root and Hughes, so are there concerning those of Lodge. A tradition exists that he holds himself aloof from those who cannot boast lineage equal to his own; that he is a pedigreed and mental "aristocrat." The tradition is not reflected in the election returns, when the common people vote

on Mr. Lodge's candidacy for office, and it has no standing among the many who have been thrown in personal contact with him in Washington. If "the Cabots speak only to God," as a satirical rhyme goes, Henry Cabot Lodge has not lived up to this restrictive rule. His knowledge of international affairs is far-reaching, and in conversation with his friends and associates he expresses himself on foreign questions with a freedom and frankness quite in harmony with the desire that freedom and frankness shall exist at the Washington conference.

STATUS OF MR. UNDERWOOD

Senator Underwood's appointment as a member of the American delegation exemplifies President Harding's scrupulous care to take every means of making the conference a success. Treaties or a treaty may emerge from the conference, and President Wilson's bitter experience showed that the Senate must be reckoned with in making a treaty effective. Senator Underwood is the Democratic leader of the Senate, as Senator Lodge is the Republican leader of that body. Mr. Wilson's failure to have a Senator on the American Peace Commission at Paris irritated the Senate, while its Republican members were doubly displeased in the designation of Mr. Henry White in recognition of the Republican Party. Mr. White was well-liked personally, but it was said with sarcastic humor that he did not know he was a Republican until his appointment as a Commissioner was made. Senator Harding knew the feeling in the Senate, and President Harding determined to profit by it. He did not appoint one Senator, but two, to represent the United States in the Washington conference.

Senator Lodge was a natural selection, because he is not only the Chairman of the Committee on Foreign Relations, but the chosen leader of the dominant party in the upper house. As the leader of the Democratic minority in that body, Senator

Underwood's choice gave full recognition to the opposing party.

But Mr. Underwood's selection had other reasons behind it. He has a full share of common sense, his courage is unquestioned and his ability has a monument in the Underwood tariff law, with its application of the untried income tax and other provisions for direct taxation new to the American people. Besides these qualifications, he has a charming personality, a way of getting along with men, a willingness to see the justice of the contentions of his opponents, and, if this may be regarded as one of the reasons for his designation, a very warm place in President Harding's heart. So the American delegation appears to have the qualities which will count tremendously in the delicate exchanges across the conference table.

The agenda agreed upon tentatively in advance of the conference place "limitation of armament" at the head of the list of "things to be done." It is well understood, however, that this important topic will be deferred until there has been an earnest effort to adjust the causes of international worry embodied under the heading "Pacific and Far Eastern Questions." The agenda provide that the armament problem shall be discussed in three groupings, the first of which embraces "Basis of Limitation, Extent and Fulfillment"; second, "Rules for Control of New Agencies of Warfare," and the third, "Limitation of Land Armament."

If the participating nations are to recognize Japan's claims to the necessity of finding outlets for her surplus population it is equally likely that the conference will recognize the peculiar dependence of Great Britain upon her fleet. The United Kingdom is a manufacturing nation, which produces little in the way of food and raw materials to sustain its population. Britain's far-flung empire requires the protection of trade routes between the mother country and her dominions, and that fact will be taken into con-

sideration in devising a formula of armament restriction.

LLOYD GEORGE'S PERSONALITY

It is to be expected that this topic of the agenda will bring the British delegates on tiptoe. Colonel E. M. House used to say during the Paris Peace Conference that if you wanted to give an Englishman a ship and opened the subject delicately he became excited when the word "ship" was mentioned, evidently thinking you were actuated by selfish motives and wanted to take something away from him. Mr. Lloyd George was not different from the other British delegates in Paris in this regard. His strong personality as a negotiator is too well known to the world to need further explanation. Full of the fire of the Celt, quick and resourceful, ready to change his line of attack if he sees an impregnable barrier before him, adroit, eloquent, with a sense of humor that has relieved tense situations, he presents a picturesque figure whenever he pleads the cause of his Government. He eagerly welcomes the opinions of his associates, and, while always a leader, is prepared to follow where popular sentiment points the way.

In the British delegation will be found representatives of the empire's overseas dominions, and they are certain to play an important part. The invitation to a conference on Pacific and Far Eastern questions came at an opportune time for Britain. It came at a moment when the statesmen of the Imperial Government and the dominions were engaged at London in the endeavor to harmonize sentiments in regard to renewing the expiring Anglo-Japanese alliance. That this agreement was inimical to America was believed by a large number of the British people; and the opposition which this condition produced was accentuated by the unwillingness of some of the dominion statesmen to maintain further close partnership with Japan. The Anglo-Japanese alliance continued, but it

was not formally renewed. Out of the discussion in the imperial conference came a suggestion to the United States of a conference, either in England or America, preliminary to the conference which President Harding had proposed, the object being to effect "some larger understanding" as a substitute for the Anglo-Japanese alliance. This suggestion was not accepted, for reasons which the United States believed to be imperative, but the sentiment developed in the imperial conference has indicated the important part the British dominions will play in the Washington gathering.

The picturesque W. M. Hughes, Prime Minister of the Australian Commonwealth, who crossed swords with Woodrow Wilson at Paris, is sending as his substitute at Washington a man of quiet demeanor with none of the surface qualities which we associate with political leadership. George Foster Pearce, Minister of Defense and Senator for Western Australia, has the appearance of a scholar and the methods of a business man. He has the reputation of being a deep thinker whose judgment is good. Mr. Pearce is no orator. He is not ready in the give-and-take of parliamentary debate. But he is accounted a shrewd politician, with a thorough understanding of Australia's problems and an ability to make them clear at the conference table.

TWO ORATORS FROM FRANCE

France has great possessions in the Far East, but, while she is not indifferent to the bearing the Washington conference may have upon them, her main interest lies in limitation of land armament. As at Paris in 1919, her question at Washington will be, What guarantees can you give us against German aggression if we are to reduce our armies? The Franco-American treaty of defense has been ignored by the United States Senate. France and all Europe know that an alliance with this country is out of the question. It is significant, how-

ever, that hope is entertained that a formula will be adopted which, while embodying no offensive or defensive undertaking, will afford France the guarantee she demands and enable her to reduce the heavy burden she is carrying through the maintenance of a great standing military force. If that can be accomplished it will be a great triumph of statesmanship, and the character of men France sends to the conference will have an important bearing in connection with it.

When Rene Viviani came to America with the picturesque Joffre as his associate to bring the greetings of France on America's entry into the World War, he delivered an address before the Senate of the United States of which men talk today in terms of wonderment. He spoke in French. It is doubtful if more than a handful of that considerable assemblage had any familiarity with his language. His remarks were punctuated by frequent general applause. It was not mere politeness which actuated his auditors, most of them knowing no language except their own, in showing their appreciation. Some of them have explained their attitude in the statement that the man's oratorical fervor was so vivid, his gestures so illuminating, his enunciation so clear, that perforce they caught his meaning even if they did not understand his words.

Such a situation is difficult to comprehend. Yet there is the testimony of those who, confessing their ignorance of the world's polite language, insist with evident sincerity that Viviani's utterances were clear to them. Senator Medill McCormick, whose French came to him in the days when his father was Ambassador in Paris found, when he offered to assist the official reporters in smoothing out the English translation furnished them, that the French words had burned so deeply into their minds that the translation merely confirmed their unconscious interpretation of what the statesman had said in his native tongue.

Aristide Briand is an orator, too, but of a different sort. Like Viviani, he is brilliant in expressing his thoughts, but he does not attempt to clothe them in those beautiful figures which mark Viviani's declamation. His method is more direct. His oratory is of the kind described as "native." He speaks to the point, and so convincingly that his hearers are charmed by the very simplicity of his logic. Persuasive, he turns men from the inclinations of their minds. He carries forward conviction of his sincerity. It is a trait that has stood him in good stead in many an awkward political crisis.

Briand is to remain only a short time in Washington, but long enough, it is supposed, to impress his personality on the conference. A man who has been seven times Premier of France must have qualities that command attention. His career is a succession of surprises, of being out and being in. Originally combative, aggressive and uncompromising, in later years he has become conciliatory, and so remarkable has been his metamorphosis that the Catholics, who hated him for his separation and congregation laws, and the methods he followed in carrying them out, have shown a disposition to meet him half way in his efforts to show moderation toward them. The enemies he made in his days of radical socialism were many, but it is now said that he is on good terms with all the political parties in France.

Viviani, who will succeed Briand as head of the French delegation in Washington, is well known in America through his tour of the country with Joffre in 1917 and his visit to New York and Washington last Spring. Unlike Briand, he has not succeeded in overcoming the hostility of the Catholics on account of the part he took in enforcing the separation and congregation measures of the French Government. When he appeared at Kansas City after America's entrance into the World War the Catholic Bishop of that dio-

cese refused to appear on the platform with him. Viviani was a busy man when he came to America last Spring, and he made acquaintance with Senator Lodge and others with whom he will be closely associated in connection with the armament conference.

THE JAPANESE DELEGATES

Prince Iyesato Tokugawa, who will head the Japanese delegation, is President of the House of Peers in the Japanese Parliament. Educated in England, he speaks English fluently. When he visited the United States years ago he was so well received and so cordially treated that he has never ceased to express kindly feelings for America and Americans. A picturesque atmosphere surrounds his personality in that he is "the last of the Shoguns," who gave up their feudal lordship at the Japanese restoration. With him will be associated Admiral Tomosaburo Kato, one of Japan's naval heroes. He is a sailor, not a politician, and has no known political affiliations. Baron Kijuro Shidehara, another Japanese delegate, is the Ambassador to the United States, a man of poise and high attainments, whose capacity for writing strong diplomatic notes has given him a high standing among diplomats the world over.

Washington will be glad to welcome Masanao Hanihara, the general secretary of the Japanese delegation. He served in this country for many years with the Japanese Embassy, and it is said of him that he was the most popular Oriental who ever lived in the American capital. "Honey," his friends in Washington called him in his younger days, and they will find it hard to realize that the dignified Vice Minister of Foreign Affairs—his present official title—is the boyish, enthusiastic young Japanese with whom they used to frolic.

THE CHINESE DELEGATES.

Three young Lochinvars are coming out of the East to represent China in the conference. All of them know America, all of them speak English, and if you would better understand their occidentalism it is necessary only to look at their names. W. W. Yen, Wellington Koo and S. Alfred Sze hardly suggest the bequeathed and silken Orientals whom one would expect to bring the case of China—even the New China—before an international body. They are redolent of the spirit of republicanism; there is little about them of that which we associate with the Flowery Kingdom. Would you have evidence of this in a nutshell? Then let it sink into your mind that Dr. Yen was editor-in-chief of the English and Chinese Standard Dictionary, that Dr. Koo was an editor of the school newspaper at Columbia University, and that Mr. Sze was a captain of the Washington High School Cadets.

The occidentalism of their front names is born of the new spirit of China. In his native land Dr. Yen is Yen Hui-ching, Mr. Sze is Shih Chao-chi, and Mr. Koo is Yen Kung-ch'o. But for all essential purposes the new names serve and are a constant reminder that the old order passeth in China to a gradual replacement of what is new.

Dr. Yen received the finishing touches to his education at Columbia University and holds the degree of B. A. from that institution. He is also a member of Phi Beta Kappa. In a measure Dr. Yen is a connecting link between the old and the new China, for he was an officer of the late dynasty. Adopting diplomacy as his profession, he was Third Secretary of the Chinese Legation in Washington and Junior Secretary of the Ministry of Foreign Affairs under the dynasty, and became Vice Minister of Foreign Affairs on the establishment of the Chinese Republic in 1912. Dr. Yen has served as Minister to Denmark and Minister to Germany, and was a plenipoten-

tiary to the Opium Conference at The Hague in 1913.

China best remembers Wellington Koo as one of that group which battled in the Paris Peace Conference against the transfer of Shantung to Japan and refused to sign the Treaty of Versailles because the principal allied and associated powers denied China's claim. His is an attractive personality. His years in America enabled him to catch the American spirit of humor, and his after-dinner speeches have charm and a witty naïvete. Dr. Koo is 41, but nobody would suspect it. He is active physically, with a buoyant temperament and a quick mind.

Dr. Koo topped off his education at the Government University at Peking by taking a law course at Columbia University. He, too, is a member of Phi Beta Kappa. Under the Chinese Republic he has been an active figure with a wide experience of service to his credit. Joining the Ministry of Communications at Peking, he became Vice Minister, then Minister to Washington, Vice Minister of Finance, Minister of Communications, and lately was appointed

Minister to Great Britain. In the Paris Peace Conference he was nominally an adviser on communications to the Chinese delegation, but actually took an important part in the effort to make the Big Five see the justice of China's case. His work there brought him appointment as China's representative on the Council of the League of Nations. Everybody admits that he is clever and certain to take a prominent part in the deliberations at Washington.

Mr. Sze has been Minister to Great Britain and is now Minister to the United States. He is considered very pro-American. Educated at Cornell, he took up a political career in his own country and served in the Cabinet.

Upon the demeanor of these and other notable personalities in the conference—statesmen of Italy, Belgium, the Netherlands and Portugal—much will depend. It may not be going too far to say that the character of the men who will participate in this great international gathering has raised high hopes of a successful outcome.

DOES THE MELTING POT MELT?

AN answer to the foregoing question was sought by eminent students of ethnology and biology at the Second International Eugenics Congress held at the American Museum of Natural History, New York, in September. According to some of the speakers, notably Dr. Charles B. Davenport, Director of the Eugenics Record Office, and Professor Henry Fairfield Osborn, President of the Congress and an authority on evolution, the melting-pot theory is fundamentally false. "In the matter of racial virtues," he said, "my opinion is that from biological principles there is little promise in the melting-pot theory. Put

three races together, and you are as likely to unite the vices of all three as the virtues." Professor Osborn pointed out the danger of the fallacy to the United States, and put himself on record, with a number of others, in favor of a restriction of immigration, adding: "In the United States we are slowly awakening to the consciousness that education and environment do not fundamentally alter racial values. We are engaged in a serious struggle to maintain our historic republican institutions through barring the entrance of those who are unfit to share the duties and responsibilities of our well-founded Government."

CHINA'S DILEMMA AND AMERICA'S DUTY

BY STEPHEN BONSALE

Japan's unrivaled opportunity, by wise action regarding China, to maintain the peace of the world—A brief statement of the danger points of the situation that confronts the Disarmament Conference—Momentous words of Dr. Schurman, United States Minister to China

IN view of the approaching Pacific conference, I shall endeavor to state fairly the facts of China's present dilemma, of Japan's great responsibility and unrivaled opportunity to maintain the peace of the world and of the duty of the United States in the disturbing premises.

In the list of commitments which, as the provisional agenda of the conference indicate, will be taken up seriatim, our pledged support to China and our guarantee of her territorial and administrative integrity, now greatly menaced, will bulk large. Our pledge to support China against outside aggression goes back to the Treaty of 1858 and is only reaffirmed in the Open Door Agreement of more recent date. In the Treaty of 1858 we pledged ourselves to use our good offices in case any nation acted unjustly toward China. Today that pledge is China's main hope of salvation from the many dangers by which she is threatened. Should we be blind to our own interests, which are only a degree less menaced than are those of China by the recent course of events in the Far East, when China presents her case to the world court of public opinion which will shortly be convened in the capital of our country, the appeal to our national honor, implicit in it, will not be made in vain or go unheeded.

To minimize our treaty obligations

and to befog the issue, friends of Japan—who in my judgment are doing her a great disservice which she will seek an early opportunity to disavow—urge that conditions in Asia are greatly changed, and that our policy should change with them. It is stated by these advocates of might and militarism that China, divided up into innumerable factions, has ceased to exist as a nation, and that our traditional and treaty-covenanted attitude toward China was abandoned by the Ishii-Lansing Agreement. The second of these claims can be shortly dismissed. The agreement referred to binds Japan, in words at least, more firmly to the promise of the Open Door and the policy of mutuality and equal opportunity in China than do any of the other special agreements dealing with this world question since the proclamation of the Hay Doctrine. The negotiations which terminated in this agreement were entered upon at a time when the French and English Foreign Offices were seriously alarmed by the attitude, if not of the Japanese Government, at least of the Japanese people, toward Germany, then still in the plenitude of her great military strength. It was, of course, at the urgent request of these powers, with whom we had become associated in the battle to save civilization, that Japan was given such nosegays as

she could garner about the undeniable geographical propinquity of Japan to China, and Mr. Ishii went upon his way outwardly rejoicing, it is true, but, as the Tokio Foreign Office well knew, Japan was pledged more firmly than before to support the American policy in the great republic that had arisen so recently across the Yellow Sea.

FACTIONAL DIVISION

As to the other question, to what extent the civic disorders and the factional fighting until recently in progress in China change the situation and the obligations previously entered upon, Japan will come to the conference well primed and will be heard at great length. This, of course, is a factor in the situation that cannot be dismissed lightly or in a few words. The suggestion, however, heard in some quarters, that because civil strife is in progress the outside powers should take sides for or against one of the belligerents, will prove unwelcome to the ears of those who still recall the heritage of ill feeling which Gladstone's dallying with the Southern Confederacy left in many sections of our own country.

As a matter of fact, the complicated internal affairs of China are no concern of ours except in so far as we are bound to the established government until and when it should be disestablished. The South China group declares that it is the legal Government of the Chinese Republic, because it was created in pursuance of the government-making power vested by the Chinese Constitution in the Parliament in session at Canton. Another advantage attributed to the South China group is the fact that it has not, as has the Central Government, ever been forced by duress imposed by an outside power to make wholly illegal and most unpopular concessions.

It would, of course, be unwise to minimize the importance and the effect of this division in council and in forces that still obtain in a measure

in China today. True, China would present a stronger front to the world if she could appear at Washington, as she did at Paris, with a delegation representative of the whole country. But, as a matter of fact, there is much misrepresentation as to the prevailing want of harmony. The aroused people of many of the Chinese provinces, greater in population and larger in area than most of the European countries, after the experiences to which they have been subjected in the last ten years, are now exceedingly chary of conferring full powers upon a central or federal government, however representative and trustworthy it may at first sight seem to be.

Experiences in this direction, both North and South, among the young Republicans have been bitter and disillusioning. It took years for a Federal Government to develop in the United States after independence was gained, and we should not expect the Chinese to surpass us in the quick accomplishment of a task for which by our historic and ethnic antecedents we were better prepared.

NEW SPIRIT IN CHINA

There is no doubt much brotherly conduct going on today in the divided States of China, but we should not lose sight of the main fact of the situation, and that is that today, as of old, "between the four seas all men are brothers," at least as far as Japan is concerned, or any other power that may show an inclination to fall back at the expense of China into the predatory practices which so many of the European powers indulged in a short twenty years ago. Brushing aside the superficial criticism which is made upon this subject, let us emphasize the words of a man who has enjoyed an intimate acquaintance with the Far East for many years. "Today," says Doctor Schurman, our new Envoy in China, "despite serious division, a strong national consciousness is in existence and ag-

gressive patriotism is actuating the leaders of China and the rising generation." These words were carefully weighed, for the man who spoke them knew better than any one else that the success or failure of the great mission intrusted to him by

J. G. SCHURMAN
United States Minister to China

President Harding depends upon his correct diagnosis of the situation.

If these Chinese are determined to help themselves—and they are to a man, 400,000,000 strong—our pledged word and our interests demand that we help them help themselves. Very curious and interesting revelations as to the causation and the real instigation of the little revolutions and the sporadic factional fights which have harassed China for several years past will be made at the conference. We shall have very circumstantial accounts of Japanese adventurers—it is to be hoped, wholly without the support of their Government—who have started several of these movements, if for no more tangible and immediately profitable pur-

pose than to bring the Chinese Government into disrepute; and we shall hear of little revolutions that have been started by patriotic Chinese in the belief that there is safety in numbers, and that with so many parties and factions in the field Japan will not have sufficient capacity to swallow them all; we shall hear something, too, of that Day of Remembrance with which a patriotic people 400,000,000 strong commemorates with annually increasing fervor the anniversary of the day when the Shantung and other Japanese demands were forced upon a people who are as liberty loving and as resentful of foreign aggression and interference as we are ourselves.

But, of course, the great outstanding fact of the situation, as it will be revealed at the Disarmament Conference, is contained in the statement easily substantiated that beyond the Yellow Sea there are under arms at least a million and a half men trained to fighting. Some of the things they seem to be fighting for may appear trivial, but as a matter of fact they are training—consciously and with a fixed purpose—for the battle for the possession of an undiminished fatherland—a battle that is coming, unless wiser counsels than have been until recently dominant in Japan prevail.

CHINA AS A MARKET

There is a striking phase of the transpacific situation which should not be lost sight of at a moment when, according to economists, who for once are unanimous, the impoverished and indebted world is entering upon a stern international struggle for existence. China is a market which at this critical juncture of world affairs we cannot afford to lose. Many of those stately buildings of Columbia University which today crown the heights of "mast-hemmed and water-laved Manhattan" through the benefactions of the Lows, the Greens, the Olyphants and the Griswolds testify to the profits of

the China trade in the past, and the fact that Alfred Sze, Wellington Koo and many scores of the leaders of young China today studied with great advantage in these halls of learning indicates in a direct personal way how mutually profitable these past exchanges have been and how necessary and valuable they will prove to be to both countries in the future.

When I say that China was our great market I merely state what most people will admit; but when I add that China, far away and disturbed, today the Cinderella of world politics, is a market opening of almost limitless possibilities I shall be thought to indulge in a figure of speech or at best to be merely expressing a pious wish. Nevertheless, it is a fact that cannot be successfully controverted. For proof of my assertion let us look at the carefully compiled figures of our export trade for the first six months of the current year as furnished by the matter-of-fact statisticians of the Department of Commerce. These figures reveal that Russia is off the commercial map and that our German trade, naturally enough, is greatly reduced. In fact, in every column radical reductions are revealed, not merely from the figures of the boom years, but also by comparison with what were our exports in normal times. It is only when we come to China, in part famine stricken and with her trade and transportation disturbed and even crippled by unfavorable internal and external problems, that anything like a basis for optimism is noticeable. Now, these figures show that, in spite of all these unfavorable conditions and heavy handicaps that await adjustment at the Pacific conference, our exports to China for the first six months of 1921 have increased 12 per cent.! This fact is intrinsically important, but it also possesses a psychological value of great importance, for it gives the first indication of a favorable change in the commercial chart of our world trade,

upon the maintenance and growth of which depends, among other things, the high living standard of American labor.

Indeed, orders are coming in from China which promise a still greater increase of profitable trade for the closing months of the year, and today, as the vigilant look-outs of many chambers of commerce and boards of trade report, a number of American industries are reviving and a number of factories that were closed down are being opened up to execute orders from China. Here plainly, then, across the Pacific, with its hundreds of millions to be clothed and fed, is the cure for present unemployment and an available and most opportune substitute for European markets, which will be disturbed and may prove unprofitable for years, long lean years, to come.

ANGLO-JAPANESE ALLIANCE

It is a matter of regret to Americans, and apparently to all British Colonials, that England enters the disarmament conference with the Japanese alliance, although not renewed, in full present strength and vigor. It must not be lost sight of for a moment that, sustained by this agreement, the rape of Korea has been accomplished, the absorption of Manchuria is being attempted, the Shantung grab is persisted in, and Eastern Siberia is still under Japanese occupation. Many of our British friends point out that Japan might well have advanced more disturbing policies and indulged in even more unruly practices but for the fact that her demands were restrained by British calmness and phlegm. Perhaps this delusion is sincere, but it leads us into the realm of pure guessing, where it is bootless to follow. If I did, I would certainly hazard the guess that none of these disturbing things would have been attempted, much less achieved, but for the assistance and the outspoken or tacit support of the Anglo-Japanese pact.

Of course, while engaged as she is in endeavoring to secure a monopoly of the coal of Kwantung, which would be so helpful to Hongkong and insure the dominant position of British shipping in the China trade, England feels hampered in any attempts she may be urged to make toward getting Japan to let go her hold of Shantung coal and iron. During the Peace Conference in Paris, General Smuts, the distinguished South African Prime Minister, said on several occasions: "The only path of safety for the British Empire is the path on which she can walk with America." It is deplorable that apparently the great South African is not to be with us in Washington. Perhaps he is detained by the duties of his high office. Perhaps his selection is obstructed by petty jealousies. But for the benefit of those who may be chosen for the difficult task of filling his boots and taking the place of Jan Christian Smuts at the Washington conference, it should be frankly stated that the devious paths that England is following in China indicates a course of action in which America can never be associated.

In Shantung England is the effective if silent partner of Japan. By treaty arrangements, open as well as secret, she has hitherto backed Japan's indefensible aggression in that cradle of the Chinese race. It is true that England is also a guarantor of the Open Door in China and shares with us full responsibility for the maintenance of China's territorial and administrative integrity. The English Chambers of Commerce and Boards of Trade interested in China have recently sent a strong pro-Chinese memorial to the Foreign Office—with what effect we shall perhaps see in Washington. British diplomacy is apparently in a dilemma that will try even the Persia-trained abilities of Lord Curzon. Either the burglary of Shantung or the Open Door in China will have to be disavowed, and in a last resort it would be well for Downing Street to remember that when Mr. Hughes said

"there would be no valid or effective disposition of the overseas possessions of Germany now under consideration without the assent of the United States" he included Shantung as well as the Yap cable reservation.

OPEN DOOR IN CHINA

Last month, in the pages of this magazine—after stating that China's perplexity and weakness and Japan's unbridled strength were the fundamentals of a Far Eastern situation which, as President Harding well said and has since insisted upon, "should be discussed at the Pacific conference for the limitation of armament"—I, in common with many others, asked the following questions and proposed a silent plebiscite upon them: "Are we prepared to safeguard China in its present great extremity? Are we resolutely determined to keep open the greatest market in the world for our merchants, our manufacturers, our wares," which today are accumulating on the docks and in the warehouses with the resulting increase in unemployment?

Before my question was published it had been answered on the other side of the world by Dr. Jacob Gould Schurman, that distinguished American diplomatist and educator, who has been selected by the President for the most difficult mission ever intrusted to an American envoy. Upon landing in Shanghai, Dr. Schurman was welcomed by the long-perplexed American Association of China and the American Chamber of Commerce in a joint reception, and from unofficial but absolutely reliable sources I am able to repeat here what were the Minister's words on this occasion, momentous for China and for the United States. These words were spoken by a Minister who had just concluded his period of instruction in Washington, where he had conferred at length with the President and the Secretary of State upon the disturbed conditions in the East and upon the details of the approaching confer-

ence called to adjust and to compose them.

You ask me [began the new envoy], What is the policy of the United States toward China? I answer in a word: We stand for the integrity of China and for the Open Door. We want China to remain in possession and control of her own territory and to be mistress in her own house. And we want in China the Open Door to the trade and commerce of all nations upon equal terms.

In regard to disarmament Dr. Schurman's language was equally frank and to the point. "Every one knows," he said, "that it is Oriental questions which today menace the peace of the world. We cannot lay down the tools of war until we have removed the causes of war." With reference to the thorny questions of spheres of influence and railway zones claimed by foreign powers, the new envoy was, if possible, even more explicit.

The question is [he stated], How may China get back her territory unencumbered and be reinstated in her sovereignty unimpaired? I note that eminent publicists in China are not agreed on the solution of this problem * * *. But the end aimed at by both schools is the safeguarding of China against foreign aggression and the restoration to China of her full sovereign rights, making China absolute mistress in her own unabridged domain; and what I am especially concerned to emphasize is that this object coincides with the standing American policy of the territorial integrity and unimpaired sovereignty of China.

In conclusion Dr. Schurman said:

It is my hope to see the dawn of this brighter day for China. I should count it the supreme joy and honor of my life if, even in the most insignificant degree, as American Minister, I might be of service in ushering it in. And it is not incredible that the dream, though without merit of mine, may be fulfilled; for, just in proportion as American policy, which I have the honor to represent and uphold, actually prevails in China, this great and venerable nation, with territory intact and sovereignty unimpaired, will march steadily forward to the glorious future.

In a word, then, the cards are on the table. The present Administration accepts the responsibility which Hay, McKinley and Roosevelt as-

sumed with good reason, and which Chief Justice Taft in his famous Shanghai speech on Oct. 10, 1908, re-affirmed in the winged words which flew from Siberia to Sumatra.

The United States has [he said] a fundamental interest in the Far Eastern situation, particularly in the fate and welfare of China, and the United States expects that her views shall be taken into consideration in any action affecting the future of China or the control of the Pacific.

PREMIER HARA'S ATTITUDE

Though it is pleasant to see how universally the justice of the claims with which China appeals to the conference is recognized by our press and by our public men, I should like to sound a note of caution. Let us be politic and achieve our end by the easiest path and by giving as little umbrage as possible. After all, what we want Prime Minister Hara to do is practically little more than to transmute into action the resolution of censure which, as leader of the opposition on June 3, 1915, he moved in the Imperial Japanese Diet against the Government of the day headed by Okuma and Kato. If, in power, Prime Minister Hara would only act as he talked when in opposition and secure support from the powers that be, or at least have been for so long in Japan, he would insure peace in the Far East for years to come and start a race for disarmament among the Pacific powers that would cover with imperishable honor all who contribute to its glorious realization. To illustrate my point, I find a number of leading American papers comparing the action of Japan in China to the behavior of the semi-barbarous powers of the thirteenth century. This may be correct, but to those of us who lived in the Far East at the time it seems more pertinent and perhaps more helpful to say that Japan's action in China of which the civilized world complains, and which is unsettling the world peace for which all the powers involved fought as allies, is almost slavishly fashioned and pat-

terned after the behavior of Imperial Russia and Imperial Germany in the days twenty-five years ago when they had their passing moment of supreme power, and strutted with the big stick across the Chinese stage. That, we should remember, was the formative period of Japan's foreign policy. This was the time when the Island Empire was plastic to receive impressions, and by belaboring her now we may only make her marble to retain them.

In his resolution of censure, which was supported by 133 votes of the Seiyu-kai and the Kokumin-to—parties now in power—Hara, then leader of the opposition, stated that the Chinese negotiations "had been conducted in a mistaken manner, had damaged the cordial relations between the two countries (China and Japan), had aroused suspicion in the minds of the foreign powers and had sown seeds of future trouble." We should be able to do business with a man who

talks in this way. If Mr. Hara or his delegates stand on the platform which was outlined in this resolution of censure, the greater part of our problems will not prove difficult of solution. In the meantime it is the part of wisdom and a requisite of courtesy that we cease belaboring the Japanese Government of today and eschew criticism which rasps the Japanese sensitiveness, which is acute. After all, our period of restraint will not be prolonged. In six weeks we shall know the kind of Japan with which we are confronted, and also whether Prime Minister Hara has abandoned his former policy of friendly helpfulness to China, which six years ago was shared by many of his associates in the liberal and progressive groups of the Diet, and which at times, at least, the present Premier of Japan, be it said in his honor, has held in solid phalanx against the dictation of the War Office.

THE CZAR, ENGLAND AND KERENSKY

INTEREST in the tragic fate of the late Czar of Russia has recently been revived by a controversy between Kerensky, the Premier of the first Provisional Government, and Kerensky's Russian enemies. The latter assert that Kerensky is primarily responsible for the Czar's terrible end, and their charge has recently been reflected by the European press. To this attempt to put the responsibility on his shoulders, Kerensky has replied in the *Volia Rossii*, a Russian newspaper published by émigrés at Prague, Czechoslovakia. In a vigorous article on Aug. 28 he declared that the Governments of the Entente Powers, and especially the royal family of England, were ultimately responsible for the ex-Czar's fate, inasmuch as they refused to give the Czar sanctuary in the day of his extreme peril.

After describing the attempt of the Bolsheviks to get at the Czar at Tsarskoe Selo, and the subsequent action of the Provisional Government in taking the safety of the Czar and his family out of the jurisdiction of the Minister of War and the commander of the troops—General Kornilov—

and intrusting it to Kerensky, the latter declares that preparations were made to send the royal prisoners abroad, and that to this end he began diplomatic negotiations with the London Cabinet. His specific charge against England is contained in the following passage:

But already in Summer, when the prolongation of the sojourn of the imperial family at Tsarskoe Selo had become absolutely impossible, we * * * received a categorical official declaration that until the end of the war the journey of the former monarch and his family to the British Empire was impossible. I maintain that but for that refusal the Provisional Government would have successfully conveyed Nicholas II. beyond the frontiers of Russia, just as we conveyed them within Russia to what was then a safe place—Tobolsk. [From Tobolsk the Czar and his family were removed for greater safety to Ekaterinoslav, in the Urals, where they were slaughtered in an underground cellar.]

Kerensky's defense is contradicted by a series of articles written by one M. Fenner and published by a German review, the *Nachrichten über Ostfragen* ("The Diplomatic Relations between the Entente and the Russian Government in 1917").

PERIL TO THE OPEN DOOR

BY OWEN STREET

Origin and development of the American policy which demands equal trade opportunities for all nations—John Hay's achievement imperiled by recent allied acts under the mandate system—The Open Door potent for peace

AT the conclusion of the Chinese Opium War in 1842, the British officials who negotiated the treaty of peace obtained from the Chinese Commissioners certain trade concessions and privileges for English merchants and their merchandise. Admiral Kearny, who was in command of the American naval vessels lying in the Canton River, had maintained an unobtrusive but observant attitude during the hostilities. On hearing of the commercial pact made by the British, he lost no time in opening negotiations with the Chinese Commissioners, and exacted from them a promise that the same trade concessions which had been granted to the English should be extended equally to the United States. This promise was ratified a few months later in the form of a commercial treaty negotiated by Caleb Cushing, who went as a special envoy from the President of the United States to the Emperor of China. Thus was the policy of the Open Door first given practical expression in American foreign relations.

This principle of equal opportunity in commerce was again brought forward in 1898, when the United States made peace with Spain in Paris. A clause was inserted in the treaty which accorded to Spain, for the space of ten years, the same rights of entry into the ports of the Philippine Islands for Spanish ships and Spanish goods as those enjoyed by the ships and goods of the United States.

It was not, however, until the year

following, when the Secretary of State, John Hay, sent his famous circular note on China to the great powers, that the Open Door as an American policy was brought to the attention of the world. Great Britain, Russia, France, Germany and Japan had forced China to lease to them large tracts of her territory which had come to be considered as "spheres of influence." Although these "spheres" were still under the nominal sovereignty of China, the actual administrative control rested in the hands of the foreign lessees. The United States viewed with alarm this wholesale acquisition of the territory of an independent nation, and, although we had no desire for Chinese territory, we did have a desire for Chinese trade. It was felt that inasmuch as the United States was in direct communication with China across the Pacific, our right to unhindered commercial intercourse with a free and sovereign nation should be respected. With this purpose in mind, Mr. Hay sent his note to the great powers, putting forth the doctrine that China, being a free nation, should be open on an equal basis to the commerce and industry of all the nations of the world. Assisted by the mutual fears and suspicions of the powers, Mr. Hay was able to get each one to subscribe to this doctrine, on the understanding that all the other interested powers would likewise subscribe. These events put the policy of the Open Door on a world basis.

Russia had long had envious eyes

on Manchuria, and in 1902 she managed, by manipulating corrupt officials in Peking, to induce the Chinese Government to accord exclusive railway privileges to her in that province. On the eve of the signature of this agreement between Russia and China, the United States protested in a note sent by Secretary Hay on Feb. 1 of that year to Austria, Belgium, China, France, Germany, Great Britain, Italy, Japan, the Netherlands, Russia and Spain. This note read in part as follows:

An agreement by which China cedes to any corporation or company the exclusive right and privilege of opening mines, establishing railroads, or in any other way industrially developing Manchuria, can but be viewed with the gravest concern by the Government of the United States. It constitutes a monopoly, which is a distinct breach of the stipulations of treaties concluded between China and foreign powers, and thereby seriously affects the rights of American citizens; it restricts their rightful trade and exposes it to being discriminated against, interfered with, or otherwise jeopardized. * * * It is for this reason that the Government of the United States, animated now, as in the past, with the sincerest desire of insuring to the whole world the benefits of full and fair intercourse between China and the nations on a footing of equal rights and advantage to all, submits the above to the earnest consideration of the Imperial Governments of China and Russia.

The principle of the Open Door, so lucidly enunciated by Mr. Hay, had three main effects:

1. It gave all nations an equal opportunity in developing the trade of China.
2. It checked the great powers from partitioning China to their exclusive advantage.
3. It diminished the likelihood of those jealous quarrels which lead to war.

THE POST-WAR MANDATES

Thus stood China, a vast territory containing untold natural wealth, a nation huge and unconscious of itself, needing the energy, the capital and the goods of the other nations of the world. These other nations, recognizing the farsightedness and practicality of the Open Door policy, subscribed to it in 1899. In 1918, the war left vast territories of great

natural wealth, great nations unconscious of themselves and needing the energy, the capital and the goods of the other nations of the world. The allied and associated powers recognizing that these territories, which had been thrown on their hands by the fortunes of war, were in the nature of a public trust, have expressed themselves to this effect in the covenant of the League of Nations, Article 22, which says in part:

To those colonies and territories which as a consequence of the late war have ceased to be under the sovereignty of the States which formerly governed them, and which are inhabited by peoples not yet able to stand by themselves under the strenuous condition of the modern world, there should be applied the principle that the well-being and development of such peoples form a sacred trust of civilization, and that securities for the performance of this trust should be embodied in this covenant.

The best method of giving practical effect to this principle is that the tutelage of such peoples should be intrusted to advanced nations who by reason of their resources, their experience, or their geographical position can best undertake this responsibility, and who are willing to accept it, and that this tutelage should be exercised by them as mandatories on behalf of the League.

The character of the mandate must differ according to the state of the development of the territory, its economic conditions and other similar circumstances.

Certain communities formerly belonging to the Turkish Empire have reached a stage of development where their existence as independent nations can be provisionally recognized, subject to the rendering of administrative advice and assistance by a mandatory.

Other peoples, especially those of Central Africa, are at such a stage that the mandatory must be responsible for the administration of the territory under conditions which will guarantee freedom of conscience, &c., * * * and will also secure equal opportunities for the trade and commerce of other members of the League.

It should be observed that although the covenant of the League upholds the principle of the Open Door for mandated territories, the door is to be held open only for those nations which are members of the League. This exclusiveness is further set forth in Article 23, which says in part:

The members of the League will make

provision to secure and maintain freedom of communication and of transit and of equitable treatment for the commerce of all *members of the League*.

STEP IN WRONG DIRECTION

It was doubtless with a deep consciousness of their "sacred trust" that Lloyd George on behalf of Great Britain, and Millerand on behalf of France, signed an agreement at San Remo with respect to the oil resources of Mesopotamia, a British mandate. According to the text which appeared in *The Manchester Guardian* of July 24, 1920, this agreement provided that:

The British Government undertakes to grant to the French Government or its nominee 25 per cent. of the net output of crude oil at current market rates which his Majesty's Government may secure from the Mesopotamian oil fields in the event of their being developed by Government action; or in the event of a private petroleum company being used to develop the Mesopotamian oil fields the British Government will place at the disposal of the French Government a share of 25 per cent. in such company. * * * It is understood that the said petroleum company shall be under permanent British control.

The significance of all this is that Great Britain, the mandatary of Mesopotamia, takes to herself three-quarters of the entire oil output of this territory held in "sacred trust," and for political reasons accords to France the remaining one-quarter. Both nations are signatories of the covenant, and yet they do not even grant equal opportunity to the other members of the League, as provided in Article 22 and 23, much less to all the nations of the world. The practical result of this agreement is that foreign—and especially American—petroleum geologists are, at the present time, excluded from Mesopotamia.

The United States, not being a member of the League, could not protest against the San Remo agreement under the provisions of Article 22, but it could and did protest on another ground, the ground that having helped to win the war, it has a right to expect the principle of equal

opportunity to be administered in those territories which have come into the trusteeship of the victorious nation. This protest is set forth in Secretary of State Colby's note of Nov. 20, 1920, in which he said:

I need hardly refer again to the fact that the Government of the United States has consistently urged that it is of the utmost importance to the future peace of the world that alien territory transferred as a result of the war with the Central Powers should be held and administered in such a way as to assure equal treatment to the commerce and to the citizens of *all nations*. Indeed, it was in reliance upon an understanding to this effect, and expressly in contemplation thereof, that the United States was persuaded that the acquisition under mandate of certain enemy territory by the victorious powers would be consistent with the best interests of the world. * * *

The United States as a participant in that conflict and as a contributor to its successful issue, cannot consider any of the associated powers, the smallest not less than itself, debarred from the discussion of any of its consequences, or from participation in the rights and privileges secured under the mandates provided for in the treaties of peace.

PEACE AND THE OPEN DOOR

A vital blow would be struck at the roots of war if an international agreement could be made and abided by which would insure the policy of the Open Door in the development of those countries which, either because of inefficient Governments, lack of national consciousness, or native backwardness, need the assistance and energy of the advanced nations. Such an agreement should be international in the largest sense, in that it should comprise all the nations of the world who conduct themselves according to the dictates of international comity and international law. In the light of such an agreement, mandates would indeed be regarded as sacred trusts, not only for members of a League of Nations, but for all the nations of the world. The spirit of such trusteeships is well defined by General Jan Christian Smuts in his proposals for a League of Nations published in *The Nation* for Feb. 8, 1919. With regard to mandataries he says:

The mandatory State should look on its position as a great trust and honor, not as an office of profit or a position of private advantage for it or its nationals—no pegging out of claims should be allowed under the guise of the mandate.

It must be part of this suggested scheme of mandatory control that the mandatory shall in no case adopt an economic or military policy which will lead to its special advantage. In fact, for all territories which are not completely independent States, the policy of the Open Door, or equal economic opportunity for all, must be laid down. In this way a fruitful source of rivalry and friction between the powers will be removed * * * I sum up as follows: * * * That the mandatory State shall in each case be bound to maintain the policy of the Open Door, or equal economic opportunity for all.

The applying of these principles as set forth by General Smuts would strengthen the confidence of the world in a system of mandates, and would constitute a very definite advance toward the avoidance of war. It is possible, however, to go a step further. Leaving to the mandatory States the political and administrative functions of the territories which they hold in trust, the development of the trade and resources of these territories could be put in the hands of an international syndicate, an organization based on the same principles of equal participation as those proclaimed for the consortium of international banking interests organized for the purpose of financing China; all nations to be allowed equal representation on the syndicate, regardless of size, population or wealth.

The prime function of the syndicate would consist in apportioning to each State an equal share in the development of the trade and natural resources under its jurisdiction, such as coal, iron, petroleum, railways, telegraphs, &c. It might seem that in giving a small State an equal share with a wealthy and populous one, an injustice would be done; this, however, would not be the case, as the matter would adjust itself according to economic laws, the small State being limited in its participation according to its resources. By carefully defining the administrative functions and responsibilities of mandatories, conflicts of authority with the syndicate would be avoided or would be justiciable before a tribunal of arbitration. The intent of this suggested plan is that it should apply not only to nations under mandate, but also to backward nations, such as China and Persia.

The United States is today better able to advocate the principle of the Open Door than any other nation in the world. She is not bound by treaty to carry out the precepts of a League of Nations based on the force of the few great powers; she is stronger physically, economically, financially and governmentally than any other country. Let her, therefore, continue to press forward the doctrine of equal opportunity, as she has so ably done in the past, and make the Open Door America's great policy for peace.

DISTINGUISHING THE VARIOUS COUNCILS

SINCE the close of the Paris Peace Conference, with its Supreme Council, it has been rather difficult to keep track of the various other councils that have figured in the European news. The Supreme Council, which had consisted of the two ranking delegates from each of the five chief powers, bequeathed its functions to a Council of Premiers and a Council of Ambassadors (Jan. 21, 1920), the former to deal with all large issues of international policy, and the latter to handle routine matters concerning the execution of the peace treaties.

The Council of Ambassadors, quietly pursuing its labors at Paris, has figured but little in the news headlines; but the Council of Premiers, which has met at irregular intervals and in many places, has continued to hold the centre of the stage and is still almost invariably called the Supreme Council. Meanwhile, with the creation of the League of Nations (Jan. 16, 1920), the League Council began functioning at regular intervals. The four different councils, three of which are still in active existence, require some watching to avoid confusion.

MILITARISIM IN JAPAN

BY RAYMOND LESLIE BUELL, M. A.*

A striking analysis of the hidden forces that nullify the popular will in Japan, defying the wishes of the Government itself with impunity—Delay in evacuating Shantung and Siberia cited as examples—How our exclusion policy aids the Japanese militarists

WHEN the leader of the Japanese parliamentary party declared at a banquet in Los Angeles last June that the militarists no longer control the Government of Japan, he voiced a sentiment loudly applauded by many Americans. Even those who hesitate to believe in the reality of such a statement must hope that eventually it will prove true. For militarism in Japan is the very crux of the Oriental problem, as it affects not only China and Siberia, but America as well. In fact, it is the determinant factor in the future peace of the world.

And yet an unfounded optimism which lulls a critical opinion into somnolence is worse than unwarranted suspicion. For if the liberal movement in Japan is nothing more than a screen behind which the well-disguised activities of an irresponsible bureaucracy are hidden, America and the world are being duped, indeed. Copied as it was after the newly framed Constitution of the German Empire, the Japanese Constitution of 1889 in theory elevated the Mikado to a position paralleling in power that held by the German Kaiser. He has practically all his prerogatives: he can forestall the attempts of the Diet to pass laws over his head by his right of sanction and promulgation; he can declare war and make peace; he may dissolve the Diet,

which meets but three months out of the year; he appoints the Ministers and he dismisses them. They are responsible only to him.

Despite these sweeping powers, however, the Mikado has little more real authority than King George of England. At the same time the policies of the Imperial Government are seldom moved by the rise and fall of majorities in the Diet, or by the destruction of one Ministry and the elevation of another. How may this strange inconsistency of a Government in which neither Emperor nor Parliament steers the Ship of State be explained? The answer may be found in the existence of bodies unknown to the Constitution, and yet possessed of more power because unrestrained by written law.

Feudalism was not an institution indigenous solely in Europe. On the contrary, it was the basis of Japanese society as early as the seventh century, if not before. Just as it reduced the power of the Capets in France by its complicated system of subinfeudation and local allegiances, so in Japan feudalism reduced the power of the Emperor until he was little more than a Pope uninspired even with hopes of temporal ascendancy. The actual power was held by a Shogunate, the successful leader of one of the dozen or so feudal clans who were territorial lords of the empire. Up to the seventeenth century each one of these clans had a chance to dispossess the ruling Shogun and itself take over the Government. But with the rise to power of the

*The author of this article was Assistant Professor of History and Economics in Occidental College, Los Angeles, and holds a degree from Princeton University, where he is now Procter Fellow in Politics. He has long made a special study of Japanese politics and social conditions.

Togugawa clan, its position became so firmly entrenched that the other clans individually had little chance of overturning it. Moved by jealousy, the western clans united to overthrow the Tokugawa rule in the Revolution of 1867. But though the Emperor was restored to the divine place which he occupied in Shinto mythology, and though feudalism was destroyed in so far as the system of land tenure and local Government was concerned, the actual control of affairs remained vested in the clans that drove out the Shogun usurpers. And in one form or another these clans have continued to control the important branches of the Japanese Government down to the present day.

CLAN RULE AND THE GENRO

Naturally, since these clans had restored the Emperor to power, they were given the most important places in the new Government. Even before 1853 the Satsuma and Choshu clans had begun the manufacture of arms and the practice of gunnery; and when the Department of War was organized, with its two offices of the army and the navy, these two clans logically assumed control. Satsuma took over the navy, while Choshu undertook to manage the army. In fact in 1876 it was said that four-fifths of all the Government offices were occupied by clansmen of Satsuma, Tosa and Choshu.

Despite the institution of a civil service régime and despite the fact that occasionally an outsider becomes the head of these offices, the policy of the army and navy has been virtually dictated by these two clans, who, when acting together, have withstood every assault. In 1894 their control was actually strengthened. Frightened lest the Diet might bring about the appointment of civilian ministers to these offices, the Privy Council passed an ordinance which declared that the two Cabinet positions of War and Navy should never be held by any but active officers of the rank of at least Lieutenant General or Vice Admiral. Ac-

tually, therefore, these two ministers can control the Cabinet. If they resign, and if other officers, controlled by a military esprit de corps, refuse to take their places, the whole Cabinet must fall. The Diet cannot even control their pursestrings, for if it refuses to vote a new budget the previous years' appropriations are automatically continued.

In addition to the control of the Army and Navy, the clans have entrenched themselves in the Upper House of the Diet. This body is composed of princes of the blood, peers created by the Emperor, and representatives of wealth. Since the Japanese peerage is hereditary, and since the Upper House, unlike the British House of Lords, is a powerful body, the clans also perpetuate their influence through this branch of the Government.

Besides the clans, another powerful body exists, called the Genro, or Elder Statesmen. This body is composed of the venerated group of men who framed the Constitution of 1889 and guided the new Government through the stormy days which first beset its voyage. Esteemed for this great service by a people steeped in centuries of ancestor worship, the Genro have since that time virtually dictated the policies of the Japanese Government. This tacit rule has been facilitated by the fact that practically all the Elder Statesmen are clansmen. Thus the Genro decided whether Japan should form an alliance with England rather than with Russia in 1902; and also that the war with Russia should be ended when it was in 1905. In fact, the three remaining Elder Statesmen, Prince Yamagata, and the Marquises Matsukata and Saionji, in addition to the semi-outsider, Marquis Okuma, were responsible for the elevation of the Hara ministry to power in 1918. The Genro's intrigues have frequently been responsible for the fall of ministries. The continual conferences which Premier Hara holds with Prince Yamagata are added evidence of the fact that a Japanese ministry exists at the sufferance of the Genro.

MILITARY DICTATION

A government of this character certainly does not represent the people of Japan, even if its Diet were representative. As a matter of fact, even under the new Election law passed by the 1918-19 Diet, the great masses of the laboring population cannot vote, since they do not pay the annual tax of three yen required. Of more importance to America, however, is this duality of power whereby a civilian member of a Cabinet, placed in office by public opinion, may sign a treaty or make a promise which the military party or the clansmen may totally disregard. For example, Viscount Ishii may promise the League of Nations by all that is holy in the Land of Great Gentleness that Japan will immediately evacuate Shantung, yet General Yamanashi of the War Department may refuse absolutely to have the troops withdrawn. And there is very little that the Foreign Office or the Diet can do.

At the present time the clans are doubtless strong enough to control the appointment even of civil officers; thus Baron Makino, one of the Peace Envoys to the Paris Conference, is a prominent member of the Satsuma clan. That misunderstandings, repudiations and bad faith have arisen over this emphatic division of authority can, nevertheless, be shown by several examples from contemporary Japanese politics.

Periodically since the joint occupation of Siberia, the Japanese Government has given out intimations that Japan's troops would be withdrawn as soon as the objects of the occupation had been accomplished. Now that the war has come to an end and the Czechoslovak troops are repatriated, it seems that the civilian members of the Hara ministry have been persuaded that because of the pressure of world opinion—likewise of the great financial expense required—the troops should be withdrawn. But the military party will not have it so. For the evacuation of Siberia will bring to an end their

most cherished dream—a Japanese hegemony over Asia. Despite repeated pronouncements of Japanese ministers, General Tachibana, the commander of the Siberian troops, saw fit to give an interview to the Tokio paper *Asahi*, in which he declared that, although the opinion was growing that the Japanese should evacuate Siberia, the policy was unwise and imprudent. Very naïvely he states: "It is strange that the false impression should now prevail among some Japanese that the Empire's diplomacy has been transferred to the military from the Foreign Office authorities." Yet in the same breath he proves what he denies by saying: "If the military men ever played the part of diplomats in Siberia, certainly that was only because the Foreign Office failed to take the necessary steps for the maintenance of national prestige as well as of national interest." Thus the War Office does not interfere with Japanese diplomacy as long as it conducts itself in a manner pleasing to the militarists—an astounding admission indeed.

After the Colonial Conference held in Tokio last May to discuss the foreign and colonial policies of the empire, the American press proclaimed the welcome news that Japan was now to evacuate Siberia and to return Shantung to China. As a matter of fact, this conference did decide to evacuate Siberia, but only upon the following conditions: that the newly organized government of the Far Eastern Republic at Chita should (1) maintain order in the three eastern provinces of Siberia, (2) desist from all communistic policies, and (3) facilitate the economic development of Japanese resources in Siberia.

Illiberal as these conditions were, they angered the military men, who returned to Siberia resolved that they should never be carried out. Within ten days after this announcement, which the well-wishers of Japan had expectantly awaited, a revolt broke out in Vladivostok and Nikolsk which

drove the local Governments out of power. The Japanese Army had made these revolts possible by disarming the Government forces, under the pretense of maintaining a strict neutrality; but at the same time they permitted the Kappelite and Kolchak remnants secretly to store up ammunition. Just before the coup occurred the Vladivostok authorities attempted to search a house occupied by Japanese under the suspicion that it harbored insurgents and contraband. They were summarily ordered out by a Japanese Colonel after they discovered a couple of dozen White Guards and a number of hand grenades in the outer rooms. The next day, after the Japanese had had time to clear up the premises, notice was sent to the Russians that they might search the house!

This constant intriguing with the Russian emigres has not been so much inspired by a fear of Bolshevism as by the desire to keep Siberia seething with disorder. If the Colonial Conference had not decided to evacuate Siberia as soon as order was assured, the Vladivostok revolution would quite probably never have occurred. Instead of bringing about peace, the Japanese occupation makes certain the persistence of anarchy.

AGGRESSION IN CHINA

In the Fall of 1920 the military party, under the pretense of punishing fugitive Korean malcontents for burning a Japanese consulate, launched a now-famous expedition against the Manchurian city of Chientao. The statement was publicly made in the Japanese Diet (March 1, 1921) that the Japanese troops while in Chientao burned a church merely because a newspaper pasted to its wall contained the word "independence." Dwelling places were also destroyed and a large number of Koreans killed. On top of this defilement of Chinese sovereignty, Colonel Mizumachi, in a communication to British missionaries, publicly charged them with being the cause

of the tragedy, since they had given assistance to the Korean independence movement. He went further and declared that if they did not desist from their treasonable activities, the Japanese would find a "legal cause" for encouraging the non-cooperative movement in India! The fact that the Japanese Minister of Foreign Affairs disavowed this brazen statement still more clearly illustrates the disaster which may result from an irresponsible military bureaucracy. As long as the actual administration of Japan's foreign policy remains in the hands of parties uncontrolled by those who ostensibly frame that policy, nothing but international ill-will can result.

The present Japanese Cabinet, however, cannot shift the responsibility for all its imperialism to the military party, for the Cabinet also has been frequently inspired by the Chauvinism apparently inherent in the upper strata of Japanese society. Despite the fact that T. Hara is the first commoner ever to hold the office of Prime Minister, and that his Ministry has been pledged to a policy of "non-interference" in China, the encroachments of Japan on China's sovereignty have continued unabated. Hara's Ministry has brought about the confirmation of Japan's hold on Shantung. It has indirectly set up financial control in Manchuria by driving out the unstable Chinese silver standard and replacing it with the gold currency of Japan, issued in the Liaotung Peninsula and along the Railway Zone. Actually this currency consists of paper backed by a gold reserve, which remains in Japan.

By her lease of the Kwantung Province, Japan controls the principal outlet for Manchurian exports, which makes her economic control still more secure. During the campaign in Siberia, the Chinese Eastern Railway was compelled to carry allied troops, but compensation has not yet been forthcoming. The Czechoslovaks are charged up with a bill of \$12,000,000, which Mr. H. Nagao of the Inter-allied Railway Commission admits

will never be paid. He goes on to say that the railroad is being run at a hopeless deficit, which he attributes partly to political disturbances! After having forced the road into near-bankruptcy, it is now rumored that Japan is magnanimously negotiating a loan—which means that the control of the road will pass into its hands. According to a dispatch to the Asahi, in "some quarters" a demand is being made that the road be garrisoned by Russian and Japanese troops, since the Chinese are so "unreliable." As this railway is the chief road in Northern Manchuria, the implications of the article are obvious.

VICIOUS CIRCLE OF "INTERESTS"

No doctrine can be more dangerous to the peace of the Orient than the doctrine of "special interests," which the United States, in an evil hour, recognized through the Ishii-Lansing agreement. Korea was annexed in order to defend these special interests of Japan; but now Korea has itself become an object of concern. In order to protect "interests" there, Japan is contemplating the dispatch of another cavalry brigade, and justifies the invasion of Chinese territory (Manchuria) to punish offenders. Meanwhile the Japanese forces remain in Siberia to cover Japan's interests in Manchuria. The last step taken was in the Pacific. Although it may not be true that Japan is fortifying the islands mandated by the League of Nations, the Mainichi declares that "the national defense program in the Pacific is steadily in process of materialization." The navy has already fortified the Bonin Islands and the Luchus, and a port of call and a watch-tower are to be established on other Japanese islands, located between the mandates and Japan. As a result of the system supposedly designed to minimize militarism, Japan has found an excuse to extend her fortifications in the neighborhood of territory bequeathed in trust to her by the Peace Conference.

Militarism rotates in a vicious circle. The ends it is designed to achieve constantly elude its grasp; to protect Japan, Korea is annexed; to protect Korea, Manchuria is invaded; to protect Manchuria, Siberia is occupied; to protect the whole nexus, the Japanese islands in the Pacific are fortified. And so it goes. The more territory Japan occupies, the larger becomes the population which will chafe against its rule. The upshot of this policy can only result in disaster to Japan. This is the paradox of imperialism.

Nothing could be more indicative of the real spirit which animates Japan's foreign policy than the replies which Foreign Minister Uchida recently made to questions submitted to him by the Kenseikai, or opposition party. Especially significant was the discussion of the Chinese consortium. It will be remembered that throughout 1920 negotiations were carried on for the joint financing of Chinese enterprises by a "full and equal partnership" of the powers. It was hoped that by this means future spheres of influence would be eliminated, as well as the political advantages which had gone with national loans. Japan originally had demanded that Manchuria and Mongolia be expressly removed from the operation of the consortium because of her "special interests" there. But in May, 1920, it was announced that Japan had agreed to withdraw this reservation on the understanding that the powers contemplated no acts "inimical to her vital interests," and that they were ready to give assurances safeguarding them. The Kenseikai, at this interview, wanted to know what these "vital interests" were, if they were limited to Manchuria and Mongolia, and if the consortium nullified the grants gained in the treaties with China of 1915. To these questions M. Uchida replied that he agreed that Japan's special interests were by no means limited to these two provinces; that they could not be defined except as they "may arise in the future," and (most significant of all) that "I

cannot believe that Britain and America will take exception to any proposal by Japan which she brings forward as a necessary step for ensuring the safety of her national defense and economic existence." Finally, he declared that the consortium did not nullify the rights granted to Japan by China after yielding to the Twenty-one Demands.

Mr. Thomas Lamont may justify this tacit understanding—in reality another "Gentlemen's Agreement"—on the ground that it was necessary to safeguard Japan's food supply. But the whole attitude of Japan toward the consortium has a very ancient smell, which, in fact, is made more "fishlike" by the suggestion of Viscount Takahashi, the Japanese Minister of Finance, that a Sino-Japanese economic alliance be negotiated. He says that Japan should abandon her policy of "non-interference" in China, and loan "ungrudgingly" to this sister nation in view of the latter's deplorable financial condition. His suggestion, which the Elder Statesmen are understood to approve, may have been made with all due sincerity. But when he goes on to say that if the other powers are hostile to the independent action of Japan in this regard Japan can secede from the consortium, the real purpose of his suggestion is immediately revealed. For the *raison d'être* of the consortium was to prevent any one power from securing monopolies or political advantages to the detriment of China. And yet M. Takahashi, a public official, is advocating the very policy the consortium is designed to avoid.

JAPANESE LOANS TO CHINA

During the Terauchi Ministry the Japanese Government unofficially followed this policy of loans toward China. Through the medium of a mysterious Mr. Nishihara, it lent its support to the Northern Government by lending it some 220,000,000 yen. Up to the present time even the in-

terest on these loans has not been paid since their principal was recklessly dissipated among Chinese Tutchuns, into whose hands the money ultimately fell. But the Japanese banks which, with shocking credulity, helped to float the loan are demanding that action be taken. No more striking warning of the danger of such a policy can be found than in the Nishihara loans. It affords the Japanese Government an opportunity to play one government in China against the other; it gives it an excuse for intervention which is in thorough accord with its conception of an Asiatic Monroe Doctrine. To cap the climax, some Japanese papers now suggest that these loans, advanced to Chinese renegades and spent in personal dissipation, should constitute Japan's contribution to the consortium!

It is no difficult task, however, for Japanese apologists to vindicate their attempts to buttress a *Pax Japonica* in the Orient. Certainly the annexation of Korea rests upon as specious grounds as the annexation of the Philippines. If France should insist so vigorously upon maintaining her protectorate over all Catholics in China, why should not Japan, as she did at the recent Communications Conference, refuse to surrender her Post Offices there? As long as England imports ten boxes of opium monthly into Hongkong, it is not strange that Japan should overlook the smuggling of morphia into China—at a reported profit of \$400 a pound. One need not accept the naive excuse which Marquis Okuma once gave for a large navy—that it was to be used against the Chinese pirates—to pardon Japan's readiness to carry out her plans for an Eight-Eight Navy (which means eight battleships and eight battle cruisers, to be replaced every eight years). It is quite probable that the Diet never would have voted the necessary appropriations if the American Congress had not insisted on carrying out its 1916 building program, de-

signed to make the American Navy equal to any other in the world. Japan may deserve all the epithets heaped upon her because of the tenacity with which she holds to Shantung. Yet Russia did the same thing to Port Arthur; Germany to Tsing-tao; England to Wei-hai-wei, not to mention Hongkong; France to Indo-China. As for Japan's policy in Siberia, it may find a counterpart in France's support of Kolchak, Denikin and Wrangel. Both have had the same excuse: the fear of Bolshevism.

BEGINNINGS OF DEMOCRACY

Despite the sluggish consent which the people of Japan have given to militarism in the past, it is meeting with obstacles at home which, if encouraged, may result in its downfall. Naturally the reduction in number of the Genro—today there are only three—will be accompanied by a diminution of their influence. The past year has witnessed a violent quarrel between the Elder Statesmen and the Emperor over a certain "serious affair" which the press is sternly inhibited from mentioning. The Emperor violated an established precedent when he permitted Crown Prince Hirohito to become betrothed to a young lady who was not a member of the clans. Furthermore, the journey of the Prince to Europe, in violation of a tradition which had lasted for twenty centuries, outraged the Shinto proclivities of these Grand Old Men. Whatever the issue, Prince Yamagata and Marquis Matsukata tendered their resignations; and it was only after the earnest entreaties of the Emperor that they decided to remain.

Furthermore, the growth of the democratic movement, which resulted in an overwhelming demand for universal suffrage and the emancipation of woman from 1918 on, is eating into the moats of militarist control. The rice riots of 1918 for the first time in the history of Japan aroused a feeling of class consciousness among the

laboring people. Living in one of the most heavily taxed countries in the world, the tenant farmers of Japan are beginning to wonder for whose profit they are being ground down. The labor movement—represented by the Socialists, headed by T. Sakai, and the Japanese Federation of Labor, headed by B. Susuki—condemns militarism out of hand.

Nor is labor alone in its denunciations. The disarmament campaign which Y. Ozaki launched last February has met with gratifying response, especially from the business men. Employing the novel device of charging an admission fee to his meetings, Ozaki explained to thousands the benefits of disarmament; and the Ozaka and the Yokohama Chambers of Commerce have gone on record in support of his views.

A new sect of Shintoism has also arisen, called the Omoto-kyo, which has aroused the wrath of the Government because it is bold enough to declare that "those who are above (the governing class) in this world are doing nothing really good," and that "henceforth things will be entirely changed * * * so that those who have so far been above will have a fairly bad time of it!" When it is remembered that Shintoism was the instrument which elevated Emperor worship to renewed heights in Japan, the pronouncements of this new sect are doubly significant. Little wonder that the Government is prosecuting its leaders for "dangerous thought"!

MILITARISM'S WEAPON

Unfortunately, the western world has done much to offset the influences of these forces of liberalism. Whenever Japanese immigrants abroad are singled out for treatment which is not accorded to immigrants of other countries, militarism is fortified in Japan. The militarists can readily convince a peculiarly sensitive people that such action on the part of western countries is due merely to racial prejudice. The exclusion of the Japanese from America is an

economic necessity. But the Japanese people will never be convinced that such a policy is based on economics as long as California, for example, adopts a land law which applies to them alone and not also to other aliens. Because of this discriminatory treatment, the accusations made against the activities of the United States in the Orient are strengthened. Thus the charge is repeatedly made in Japan that the United States has instigated the Chinese boycott of Japanese goods and has fostered the independence movement in Korea, in order to increase America's trade and to reduce Japan's position in Asia. These charges are false enough; but they are the more readily believed by the Japanese people when western countries deny to Japanese abroad rights accorded to other aliens. Convinced of the reality of the White Peril in the Orient, the Diet can be persuaded to vote huge budgets, the people can be convinced that western liberalism is blatant hypocrisy, and that Japan's existence rests on force alone. Thus enlightened, they will continue to venerate the wisdom of the Genro and to leave the control of the army and the navy in the parasitic hands of the Western Clans, still animated by the philosophy of a bygone age. As long as the United States discriminates against the Japanese, after their admission to this country, and as long as Europe still steeps in Briand-ism, the Japanese militarists will find a prop which the beardless forces of liberalism will find difficult, if not impossible, to shake.

ANTI-AMERICAN PROPAGANDA

The ambitions and tactics of Japanese militarism have been recently displayed, with uncommon boldness, by Lieut. Gen. Kojiro Sato, known as the "Japanese Bernhardt," in a book called "If Japan and America Fight." In his pompous words, "It is the duty of the Yamato race, who have at their head the gracious Imperial family of unbroken lineage, to undertake to

spread the benefits of the unbounding Imperial virtues to rescue the 600,000,000 people of East Asia." The real reason, however, for attempting such a "rescue" is not so much sentimental as it is military and economic. "We are firmly resolved," Sato says, "that in order to satisfy the demands for wartime materials and provisions, we should plan for the industrial development of the continent." By this a Japanese militarist can only mean the Closed Door—the development of exclusive sources of supply which in time of war will make Japan independent of the United States and Europe.

With Bismarckian duplicity, the militarists are hiding their real designs by inciting public opinion to believe that the very existence of Japan is being threatened by America. Once this belief becomes general, public endorsement of imperialism is readily given, because the people believe it is "defensive." Consequently, General Sato, among others, bases his whole case for Japanese militarism on the impure motives of America, which "haughtily insults our empire and is endangering our existence." He declares that Japan has passed through two great national crises, the first of which was the Mongolian invasion of the thirteenth century, and the second, the Asiatic expansion of Russia ending in the war of 1904-05. In both of these crises Japan has been confronted with supposedly superior foes. But each time she has been victorious because "the Japanese in those days were not weak-kneed men such as the present day Japanese are!" The third national crisis is at hand. America has taken the place of Russia. "America's insolence is far worse than Russia's before the Russo-Japanese war"—the menace is far greater. The World War made the United States tremendously rich; its people are "drunk with gold." It is the intention of American capitalists "to carry out a gigantic economic development in the Asiatic continent, and to fulfill her

(America's) capitalistic imperialism on a large scale in China and Siberia." The General asserts that the "Republicans are mostly tools of the capitalist classes," and "if Japan and America should fight it will be because America was moved by the advocates of war of the Republican Party." Consequently, he appeals to the "masterful spirit" of the Japanese and to an increased "moral education" to arouse the nation to the imminence of the white peril.

It should be needless to point out that the success of Japanese militarism depends upon the support it receives from the Japanese people. If the militarists can convince the super-sensitive and racially self-conscious millions of Japan that the United States is animated solely by prejudice and capitalism in its Far Eastern policy, they will remain indefinitely in power. As General Sato points out, it is geographically and strategically impossible for the United States to fight a successful war (to overcome Japanese militarism) in Asiatic waters. Conse-

quently, Japanese imperialism will be defeated by the Japanese people only when they are convinced that its immoralities exceed its supposed benefits. But the Japanese people will never be convinced of this as long as they fear the "designs" of this country.

It seems foolish that any one familiar with the Far Eastern policy of the United States should harbor such suspicions. Yet the discriminatory treatment of Japanese residents in the United States; the biennial "anti-Japanese" campaigns on the Pacific Coast; the attempt of Americans to obtain exclusive concessions in Asia, such as Washington Vanderlip believes he has secured in Kamchatka, and the efforts of others to impose a tariff which will kill Japanese trade with America—all are used by the militarists to convince their people of the impurity of America's motives and to make them believe that if Japan does not dominate Asia the United States will. America must, therefore, keep her own skirts clean.

TRANSFER OF TWO HISTORIC DOCUMENTS

ON the recommendation of Secretary of State Hughes, President Harding has signed an executive order for the transfer of the original Declaration of Independence and the original Constitution of the United States from the Department of State to the Library of Congress. The explanation was given by the President in the concluding paragraph of the order:

This order is issued at the request of the Secretary of State, who has no suitable place for the exhibition of these monuments, and whose building is believed not to be as safe a depository for them as the Library of Congress, and for the additional reason that it is desired to satisfy the laudable wish of patriotic Americans to have opportunity to see the original fundamental documents upon which rest their Independence and their Government.

The department building has always

been subject to fire risk, and Secretary Hughes has been impressed by this, as well as by the fact that nearly all visitors to Washington desire to see the great charters, while the State Department had no exhibition room at its disposal. The Library of Congress is the most suitable place both for the preservation and for the exhibition of the charters, for it is of modern fireproof construction and possesses appropriate exhibition halls, together with expert archivists in charge of all manuscripts of value.

Soon, therefore, the citizens of this country will be able to look upon the original Declaration of Independence and Constitution of the nation, just as all visitors to the British Museum today can look upon Magna Charta.

IS JAPAN HOSTILE TO FOREIGNERS?

BY T. IYENAGA

Formerly Professional Lecturer in the University of Chicago
and Lecturer at Columbia University

A Japanese publicist's categorical answers to a dozen different charges made against his country in regard to the treatment of aliens—Japan makes no discrimination between races—Farming and ownership of land by foreigners permitted

FROM every quarter of the globe, from every stratum of the world community, there arises the fervent wish for the noblest success to the Washington conference. Whether this earnest wish of a large portion of mankind be fulfilled or not will depend largely upon the temper, the psychological mood, of the delegates to the conference and of the peoples who have sent them. That there will exist the most genial atmosphere around the council table—"an atmosphere of mutual trust and confidence"—can easily be imagined when we think of the high gifts, largeness of heart, wide experience, and long philosophic training of the distinguished personages who are to grace the seats. These delegates are, however, under commission, and their action is naturally circumscribed. What is not certain is the psychological mood of the peoples, especially the American and Japanese, and what effect it will have upon their representatives.

Inasmuch as the principal naval powers have expressed their genuine wish for a curtailment of naval equipments, the question of limitation of naval armament will not be a difficult issue. If the delegates of those powers proceed boldly in the same determined fashion as Czar Alexander III. ordered, as the story goes, the building of the Transsiberian Railroad by drawing on the map in

the presence of his engineers a straight line from Petersburg to Vladivostok, ignoring the thousand difficulties in the way, the navy experts will succeed, we sincerely hope, in evolving a naval scheme whereby the defense and vital interests of the powers will be safeguarded, on the one hand, and a decided reduction of naval armaments made on the other, to the untold blessings of the peoples concerned and to the lasting peace of the world.

Solution of the Pacific and Far Eastern problems may not be so easy, for they involve many vast and complicated subjects whose subtle threads are intricately interwoven by the hands of history. Moreover, the question touches the most vital interests of one of the invited nations, to whom the Far East is the only possible field of development, being barred under the present circumstances from other favored spots of the earth. Whatever may be the attitude of the American and Japanese Governments on the problem, it would be insincere to deny, so far as the present indication goes, that the disparity between the views entertained in America concerning those subjects, as reflected in the press, and the views held in Japan, is too great to justify much hope of smooth sailing with regard to these matters. When one of the invited nations is depicted, not infrequently, in the

American press as playing the devil in the Far East at every turn it makes, with a deep plot in its sleeves to hold China down in its present weak, distracted, disunited state, and as harboring an intensely hostile feeling toward all foreigners, especially Americans; and when, further, it is remembered that these absurd representations are complacently believed by not a small portion of the American public, it is rather difficult to see how a sane and thorough understanding with regard to the vast problem of China could be arrived at and a new constructive policy be formulated which would receive the endorsement of the peoples of America and Japan.

The New York Times was right when, in an editorial of Oct. 2, it gave a solemn warning to Japan, advising her to make a radical change in her attitude of mind; but it forgot to counsel its own countrymen also to give a thorough overhauling to their frame of mind when they study Japan's history and policies. For the difficulty lies not solely in the peculiar, stereotyped, bureaucratic mind, which time has evolved in Japan, but also in the sentimental, unscientific, unhistorical way of the Americans when they tackle the Chinese problem. To bridge the gap between these two schools of thought is the most difficult task—likewise the most important and urgent—confronting those who have at heart the best interests of the two countries and the complete success of the Washington conference.

CHARGES AGAINST JAPAN

The psychological factor plays a very important rôle in the relationship of peoples; we should do well, therefore, to scrutinize closely any allegations tending to create suspicion and ill-feeling in one nation against another nation. It is with this conviction that I propose in this article to examine the status of foreigners in Japan and to see whether the charge that Japan is hostile to foreigners is well founded.

Readers of CURRENT HISTORY will recall that in the September issue a summary is given of Major Battine's contribution to The Fortnightly Review of London. In that abstract, entitled "Japan's Hostility to Foreigners," we find a list of Japanese discriminations against foreigners, with the assertion that "intense hostility to all foreigners is now evident everywhere in Japan." Major Battine is, however, not the real author of those charges; he borrowed them from other sources. We find the same charges in Bywater's "Sea Power in the Pacific," and similar charges in Pooley's "Japan's Foreign Policies," and other works. In fact, the real source of these aspersions is found in the Anglo-American residents in the Far East who are temperamentally and incorrigibly hostile to Japan. Unfortunately, the story thus concocted is not only believed by the uninitiated, but even cautious writers, such as Stephen Bonsal, who is far from being an ungenerous critic of Japan, accept some of those "charges" as gospel truths.*

Let us enumerate the main points:

1. Japan does not allow foreigners to become the owners of land.
2. Foreign labor immigration into Japan is prohibited.
3. Foreign doctors of medicine cannot engage in the practice of their profession unless they pass a medical examination in the Japanese language.
4. Foreigners cannot become shareholders in Japanese national banks, the Bank of Japan, the Agricultural and Industrial banks.
5. Foreigners as individuals cannot engage in mining.
6. Foreigners cannot engage in agriculture in Japan.
7. Foreigners cannot become members, shareholders or brokers of various Exchanges, nor members of Japanese Chambers of Commerce.
8. Foreigners cannot hold any public office, nor can they become members of the Japanese Bar.
9. Foreigners do not enjoy the franchise.
10. Foreign life insurance companies cannot write insurance in Japan unless a large percentage of the money collected is left in the country.
11. The laws of Japan permit rebates

*See Page 3, October number of CURRENT HISTORY.

being given by Japanese steamship companies on all goods imported and exported by Japanese merchants.

12. The administration of justice in the courts of Japan discriminates against foreigners.

Before taking up these points in detail, a few things should be made clear. In the first place, it is well to remember that Japan is quite different from other, and especially Occidental, nations. For a long time she remained a hermit nation. In the meantime she developed a system of national life peculiar to herself, and many distinctive traits of that period still adhere to the present reorganized status in the form of customs, traditions, statutes, etc. It takes more than half a century to complete the rebirth of a nation. Again, Japan is an Island Empire, with a very limited area and meagre natural resources; and yet she must sustain her population of sixty millions, which is increasing fast. In a word, Japan's is a very poor household with a big family. As a consequence she cannot extend comforts and luxuries to her guests, however much she tries to be a hospitable hostess.

The Japanese people, again, when suddenly confronted by the aggressive Occidental civilization half a century ago, were simply astounded, and found themselves helpless; not until recent years have they become equipped with the necessary weapons to cope with Western capitalism and industrialism.

In the foregoing are found the causes which gave rise to the paternalism, officiousness and omnipotence of the Japanese Government, which strike a queer note in the minds of foreigners, especially Anglo-Saxons, some of whom, because of dislike, lose their mental balance and fail to view things Japanese in the proper light.

ANSWERS TO CHARGES.

So much for the preliminary considerations. Now, as to the first charge—that Japan does not allow foreigners to own land—the charge

is true in a theoretical sense, but in that sense only. That Japan still has no explicit provision for the ownership of land by foreign residents, although a law to that effect was once passed by the Diet, is a clear illustration of the survival of the medieval closed-door policy and of the intense paternalism of the Japanese Government. In practice, however, land in Japan can be possessed by foreigners as easily as in any other enlightened country. Briefly, there are three ways in which foreigners may come into actual possession of land in Japan: First, by ordinary lease, running for any convenient term and renewable at the will of the lessee; second, so-called superficies title may be secured by foreigners in almost all parts of Japan, which runs as long as 999 years, and which gives as complete control over the surface of the land as a fee-simple would give; third, foreigners may form joint-stock companies, and through such hold land. Such companies are deemed juridical persons, and are endowed with the same rights as natives.*

The following record proves better than any argument that *in practice* foreigners can and do own land in Japan: There are 169 corporations organized exclusively by foreigners owning 656 acres of land, of which about 164 acres are farm land; 335 foreigners, including fifty-five Americans, hold perpetual leases on 430 acres of city lots, and 335 foreigners, including 100 Americans, hold superficies on 547 acres of land, of which fifty-two acres are farm land. The total amount possessed is small, but it is not due to the difficulty of acquisition; it is due rather to the lack of demand on the part of foreigners for Japanese soil.

The second charge—that foreign labor immigration into Japan is prohibited—is a false one. There is an Imperial Ordinance (No. 352), promulgated in 1899, which reads:

*For detailed explanation see "Japan and the California Problem," by T. Iyenaga and K. Sato. Putnam's Sons.

Article I.—Foreigners who either by virtue of treaty or of custom have not freedom may hereafter reside, remove, carry on trade, and do other acts outside the former settlements and mixed residential districts. Provided that in the case of laborers they cannot reside or carry on business outside of the former settlements or mixed residential districts unless under the special permission of the administrative authorities.

The Home Office notification accompanying the ordinance states that such permission for laborers is obtainable from the local authorities. This latter provision is generally applied nowadays only to cases of importing contract-labor immigrants, and, as such, it is closely akin to the regulation of Australia, which demands the permission of the Minister in charge in order to import contract-labor immigrants. Contract-labor immigrants are prohibited in America. To necessitate permission of authority is different from forbidding. Here, again, facts are more eloquent than argument. There are in Japan thousands of Chinese workmen, besides many white laborers, including Russian refugees and former German prisoners, who prefer remaining in Japan, all employed in various lines of industry. The comparatively small number of foreign laborers in Japan is again not due to prohibition, but to the low status of labor as a result of an abundant native supply.

The third charge—that foreign doctors are required to pass a medical examination—is true, and Japan is proud of it. It is the duty of the State to protect its citizens from the danger of quack doctors. Physicians deal directly with the welfare of human life; hence communities have the right to see to it that only those properly trained are permitted to practice medicine. In fact, there is no responsible State which does not require some form of examination before it issues a license to a physician. Like all other advanced nations, Japan demands all those wishing to practice medicine in the empire to pass an examination—natives and foreigners alike. There is, how-

ever, no provision in the law or statutes of the land requiring foreigners to pass an examination in the Japanese language, and, in fact, many foreign physicians incapable of commanding the native language are found engaged in their profession. It may be added here that, by virtue of reciprocity, Japan exempts (since 1906) from examination the graduates of medical colleges of high standing in countries that extend a similar privilege to Japanese. The countries that extend such a privilege to Japan at present are Great Britain and Mexico.

REGARDING NATIONAL BANKS

Were it not for the prestige of the writers quoted, foolish items, such as that enumerated under the fourth charge—that foreigners cannot own shares in the national banks of Japan—would hardly merit consideration. Such a charge only reveals the critics' utter ignorance of the structure of the financial organizations of their own countries. The Federal Reserve Bank of the United States does not permit foreign banks or foreign individuals to become its shareholders. The Banque de France allows foreigners to become shareholders, but denies them the right to vote. De Netherlandische Bank limits its stockholders to the citizens of Holland. The Schweizerische National Bank allows the right of share holding not only to citizens of Switzerland, but also to juridical persons, even when these are foreign organizations, provided their establishments are in Switzerland. The Bank of Japan proceeds on the same principle as the Swiss National Bank, and grants the right of stock holding even to foreigners, provided they form a corporation in accordance with the laws of Japan, and through these juridical persons acquire the stock.

It may be added here that in New York and California the State law forbids foreign banks from engaging in the business of receiving deposits and discounting, whereas in Japan foreign banks enjoy, in the same way

as the native banks, the privilege of engaging in these lines of business. The Yokohama Specie Bank, the Hypothec Bank, and the Industrial Bank of Japan, each of which was established by a special charter granted by the Government, all are regulated by the specific law. Of the above-named banks, the Industrial Bank allows foreigners to become shareholders.

REGARDING MINES AND FARMS

The fifth charge—that foreigners as individuals cannot engage in mining in Japan—is true, but there is a very legitimate reason for this. Unlike the mineral products of America or Britain, those of Japan are very meagre. The little coal and iron turned out are life-givers to Japan's industries, and she has no such vast colonies as other countries have. She cannot risk her national existence by allowing a Carnegie or a Rockefeller to control her mineral resources. It is remarkable, under the circumstances, that she allows mining by any corporation formed of foreigners. And since the forming of a corporation is not a difficult matter, foreigners have no reason to complain about the arrangement; 837 subjects of other lands are engaged in mineral and industrial enterprises in Japan at present.

The statement that foreigners can not engage in agriculture in Japan is baseless. Any citizen of a foreign country wishing to do farming in Japan is quite welcome. The only handicap which he will encounter is the scarcity of land and the impossibility of using his accustomed method of cultivation. There are only fifteen million acres of farm land in Nippon, and thirty million people scratch a livelihood from them. This is equivalent to half an acre per individual of farming population. The result of the scarcity of land is an unparalleled intensive cultivation. In consequence, the Japanese farmers produce crops many times more per acre than, say, American farmers. It is, therefore, this impossibility of com-

peting with the natives, in other words, the small margin of profit found in agricultural pursuit, which forbids foreigners going to Japan as farmers. There is no law or statute, we repeat, prohibiting foreigners from undertaking farming in Japan. Fifteen foreigners are engaged at present in agriculture and stock farming there.

The statement under charge No. 7—that foreigners cannot become members, shareholders, or brokers of various Exchanges, nor members of the Chambers of Commerce—is only partly true; that is to say, they cannot become either members of these bodies or brokers of Exchanges. The Imperial Ordinance No. 58 of 1899 has, however, annulled the restriction placed upon foreigners forbidding them to become owners of stocks of Exchanges. Unlike those of America, the Exchanges and Chambers of Commerce of Japan are semi-official institutions, with charters granted by the Government, and accordingly their memberships are strictly restricted to a special class of Japanese.

When I come to the eighth point, that foreigners cannot hold any public office, and to the ninth, that foreigners do not enjoy the franchise, I cannot help being astounded at the naivete of the critics. They ought to turn to their own country or other advanced nations and see if these permit foreigners to become Cabinet Ministers or Mayors of cities, or even policemen. They ought surely to re-study the laws of their own country and see if England or America allows an alien the privilege of the franchise. In Japan there are many distinguished Americans and Englishmen who are employed in various branches of public work; for example, as advisers to the Government, or as professors in the universities, or as honorary Consuls in foreign lands. But as to the regular public offices and franchise, Japan, like all other nations, rightfully asks foreigners to become naturalized before they demand such rights. And Japan wel-

comes naturalization of foreigners—something that cannot be said of the United States, which bars the yellow race from that privilege.

The charge (10) that foreign life insurance companies must leave a portion of paid-up premiums in Japan is no charge at all. It reveals only the ignorance of the one who thinks it a point. Such men are referred to a recent admirable and comprehensive book by Greenwood, "Status Governing Foreign Corporations in All Nations," in which they will find a comparative exhibit of foreign corporation treatment in the principal countries. They will find after studying it that the Japanese regulation of foreign corporations is about the most generous.

The eleventh charge, that the laws of Japan permit steamship companies to give rebates on goods imported or exported by Japanese merchants, is a false charge. There is no such law in Japan. Steamship companies make no discrimination against any customer, and if they allow rebates, these apply to goods handled by Japanese and foreigners alike. The critics might as well go instead to America's Jones Shipping act, which allows differential tonnage dues and customs tariff to American ships and their cargoes, and provides for lower railroad freight rates for goods that are destined to be carried in American bottoms.

As to the twelfth point, since it is a grave charge, it should be accompanied by the citation of cases of judicial decision. So long as such cases proving the points are not given, the charge must be pronounced a calumny, or hearsay at best. A responsible person would not so lightly impugn the dignity, honor and independence of the courts and Judges of a foreign country.

Some of the foregoing charges are often adduced to show that Japan has not the right to protest against the discrimination now meted out in California to the Japanese. Such

an assumption is completely unwarranted, for, whatever shortcomings there may be in the treatment of foreigners in Japan, *no discrimination whatever is made against any particular people or race*, as is the case with California's treatment of the Japanese. All foreigners are treated alike in Japan.

JAPAN'S REAL ATTITUDE

The foregoing discussion will clearly disclose the baselessness of the assertion that Japan is hostile to foreigners. Those who imagine it have not mastered the A B C of the history of modern Japan. The fundamental policy that has inspired the Meiji statesmen and their successors, and that has nerved them to undertake sweeping reforms, was and is to bring Japan to an equal footing with Western powers. To achieve this aim, every possible effort was made to win the good-will of foreigners. This solicitude of Japan was sometimes carried to such an extreme as to result in comic performances, thus eliciting ridicule from foreigners and severe criticism from her stalwart sons. For Japan not only copied the best in Western law, legislation, science and philosophy, but went to the extent of copying European fashions in every detail from Court uniforms to ball dresses and of paying respect to every Western globe trotter who happened to land on her shores. Naturally, the laws and regulations governing foreign residents in Japan are framed as liberally as is possible within the bounds of the circumstances narrated at the outset of this article.

Especially toward Americans the Japanese people have always entertained a warm and friendly feeling, which is doubtless due to their conviction that their modern career owes much to American assistance and to the fair attitude Americans have heretofore uniformly maintained.

True, a sudden change has come within recent years, but a just historian will see in it nothing but a reflex of what has happened on this shore of the Pacific. At first confined to the advocates of Asiatic exclusion on the Pacific Coast, the adverse sentiment against Japan has recently been fostered and heightened by the critics of her foreign policies. While the great majority of the American people who, I confidently believe, entertain no ill-feeling toward Japan, remain inarticulate, the most vociferous of them engage in bitter attacks on their neighbors across the Pacific and spread broadcast false rumors and baseless misrepresentations, an illustration of which has been given in this article. The Japanese people naturally look askance at these attacks and are confounded by some of the acts of Amer-

ica, which seem to them as calculated to block every road open to them.

The misunderstandings and friction between the two peoples are, however, not the sole creation of yellow journalism or of a few mischief-makers and fire-eaters; they arise in large measure from the divergence in the angle of their vision when they consider the Pacific and Far Eastern problems. That the English and Japanese views on these questions are not far apart—is this not a confirmation of what I say? The key to the whole situation, then, is the harmonizing of the diverse viewpoints of the United States and Japan, a necessary preliminary to any satisfactory solution of those problems which are of vital concern to the Japanese people and of increasing interest to Americans. It is perhaps the greatest task that confronts the Washington conference.

THE LAST OF THE MONITORS

MARCH 8, 1862-August, 1921. These dates comprise the history of the iron-clad monitors, the first of which, invented by John Ericsson, met and defeated the Merrimac at Hampton Roads on the date first named. The last of the British monitors, after seeing minor service in the World War, were consigned to the scrap heap by the Admiralty last August. The history of the monitors goes back to the days of Napoleon III., when Great Britain was in a ferment, apprehending invasion from across the Channel. Ericsson, a Swedish engineer, urged the French Emperor in 1854 to build, according to his design, armored vessels of low freeboard, with big guns in revolving shot-proof cupolas, placed centrally on the decks. Such a type of armor-clad ship, he declared, would revolutionize naval warfare. The idea was not carried out, and Great Britain's wooden ships never had to face the ordeal of the Merrimac. But Ericsson prevailed on the Union leaders of the American Civil War to give his idea a trial. In 100 days his ship was built, armed and equipped, and it soon fulfilled the inventor's

hope that it would serve as a "monitor" or lesson to the Confederacy.

Even before this, however, the British Admiralty had taken up the idea, and had built a vessel of a similar type at Blackwall on the Thames, which it baptized the *Warrior*. Others were developed for coast defense. A few of these still remained when Lord Fisher, at the beginning of 1921, went to the Admiralty as First Sea Lord. When the war clouds broke, none were left, but the Admiralty, made apprehensive by the German invasion of Belgium, took over three such vessels that were being built for Brazil, and they did good service. Of light draft, they were able to steal in close to the Belgian coast and fire with effect on the right flank of the German Army. Others were built, but Lord Fisher's plans to build a considerable fleet were never carried out. Some of those existing were used in the Dover Patrol; others in the Mediterranean. At the time of the armistice the British Navy had thirty-seven of them. Now that the war is over, the superdreadnought idea is triumphant.

WHAT WOULD HAPPEN IF JAPAN ATTACKED AMERICA?

BY BARON ALEXIS P. BOODBERG

Lieutenant General of the Russian Army

Baron Boodberg was graduated from the Academy of the Russian General Staff in 1895, and, from that time up to the beginning of the World War, served in the Far East. Before the war he was Chief of Staff at the Fortress of Vladivostok, and Chief of Staff of the Amur Military District. During the war he was Chief of Staff of the 10th Russian Army; later he commanded the 14th Corps. From May to October, 1919, he acted as the Minister of War in the Omsk Government. Baron Boodberg, who now lives in California, is a recognized authority on the Far East. His article is presented here as an interesting expression of expert Russian military opinion on a subject which, for good or ill, is being discussed by the press of the whole world

ONE of America's thorniest problems is that of her relations with Japan. The present dispute over California and Yap and the sabre-rattling of the Japanese press make it legitimate to consider seriously the following questions: What are the possibilities of a complete diplomatic break between the two countries and of an ultimate declaration of war? What chance of success has Japan, in case such a war should occur?

Starting from a basis of twenty-five years' military service in the Russian Far East, and twelve years' holding down of military posts requiring exhaustive study of Japan's military resources, the first question I asked myself was this: "Can Japan ever drive matters to such an extremity as to lead to a declaration of war on the United States?" My answer was: "Yes! But only if Japan's destinies should by that time have fallen into the hands of men who are both politically and militarily illiterate, and who have reached a state of Berserker-like frenzy, which alone could account for such an adventure, spelling destruction for Japan."

The radical and swift changes, however, which have already taken place and are still occurring at the

present time in the conditions of Japanese political life warrant the belief that the chances for such persons taking hold of the reins of power are growing less. Although the bigoted, blind followers of the military caste and political intriguers and newspaper men looking for cheap popularity continue defiantly to "rattle the sword" and to base predictions on the generally hostile sentiments of the Japanese toward the United States, there can be no doubt that the same elements among the Japanese business and laboring classes, as well as increasingly large portions of the general public, have already sufficiently realized whither the policy of "Continental" military adventures has led their country. These elements are beginning to see both the futility and the danger of this rattling of swords at their neighbor across the Pacific, realizing that what was once expedient and effective and brought such splendid results in dealing with Russia and China would be stupid, harmful and dangerous if used against America.

If this attitude of belligerency sometimes meets with approval even among the classes just mentioned, it happens only in the artificial excitement caused by alleged military preparations ostensibly being made

by America with the object of swallowing up completely the beautiful land of Yamato's people! Were it not for the unceasing agitation of this alleged menace and of the California trouble we would find all aspirations of the sensible majority of the Japanese people reduced merely to the improvement of their condition, the lowering of the incredibly high cost of living, the restoration of trade and lost markets; and all political adventures launched by the military circles and by business trusts seeking an outlet in concessions on the mainland, in war orders, secret war loans, &c., would cease.

JAPANESE VICTORY IMPOSSIBLE

Let me, however, suppose that some extraordinary circumstances may arise which will drive Japan to a declaration of war; what, in that event, would be her chances of success, and could the Japanese army and navy inflict a crushing defeat on the enemy across the sea?

There can be only one answer; Japan has absolutely no chance of a decisive victory, not even a ghost of a chance! There can be only one issue of an armed conflict between Japan and the United States, namely, the total defeat of Japan, and the loss of everything she has gained in the course of thirty years of unbroken military, political and financial prosperity. This answer is by no means the result of any particular sympathies or antipathies; it is merely based on an impartial measuring of all the resources available for the struggle on both sides, taking into account certain immutable factors presented by the conditions of time and space under which such a conflict would have to be fought out. All the various major and minor causes predetermining just such an issue for this conflict may be reduced to these two: financial and military.

Japan, first of all, is not able to stand the tremendous financial strain which would be imposed upon her by a protracted war with so powerful,

persistent and resourceful an enemy as the United States. Japan's jingoes are boasting of her immense annual budget and of her 2,000,000,000 yen gold reserve [a gold yen is equivalent to one American dollar] as being an index to her financial power. But they are silent on the fact that this same budget is incredibly unsound and inflated; that in balancing it they are forced to withhold from the country the satisfaction of its most urgent domestic needs; and that for the sake of maintaining the formidable appearance of a great and terrible world power, the last sap has to be squeezed out of the country. They do not tell the people how many months this gold reserve could last, and what they could accomplish within those few months to bring the enemy to his knees, and to present to Japan triumphs and trophies far greater than those of Shimonoseki, Portsmouth and a score of Chinese treaties. Nor do they reveal what will become of Japan after the gold reserve and means of warfare have been exhausted, with the war only just begun and the foe across the ocean only beginning to unfold all the might of his resources, finances and technical equipment. They do not tell the people, lastly, that modern warfare against so powerful an enemy requires either inexhaustible natural resources, or powerful alliances, or open, unlimited foreign credits, or an assured, unbroken, plentiful flow of supplies from the outside, to furnish the army and the country with everything necessary for the prosecution of the war, and that Japan has nothing of that kind and never will have it.

They keep silent, for a true answer to any of these questions would prove fatal to them, should they dare unsheathe the sword. Even now Japan is panting and heaving under the strain of the effort to save herself from an economic catastrophe engendered by the critical state of her industry, inflated by war orders and not yet demobilized; she is unable to find a market for the billions of dol-

lars' worth of all kinds of third-rate goods congesting the warehouses of Yokohama, Kobe and Osaka; her markets are lost everywhere; her cost of living is incredibly high; her people are roaming all over the world in search of a livelihood.

Can a country suffering from such financial handicaps, and with technical resources inadequate to meet the colossal demands of modern warfare, ever wage a successful war with the United States, whose financial power, natural resources and technical equipment are so incomparably superior to those of Japan?

For the United States is not China, nor Russia of 1904-1905; it is not the kind of enemy which, challenged to battle, is capable of stopping halfway, and, under the influence of accidental failures or military reverses, of accepting national humiliation and defeat. The cards of the past have already been shown, and it is time for the military circles of Japan, who are so much puffed up over their Russian victories, to realize that the Russian armies were not defeated by the ability of Japanese military leaders, nor by the heroism of Japanese troops, but by that which, breaking into such luxurious and bloody flower in 1917-19, was already at that time imperceptibly sapping Russia's strength.

That same past, those identical years of 1917-19, the things that were done during those years by the United States, the immense scale of its military enterprise, its stupendous technical equipment, the enthusiasm of its people rising in defense of an alien cause and demonstrating what they are capable of; its financial and industrial endurance and elasticity are the factors on which the jingoes who are so defiantly rattling their Samurai swords, and who seem to forget that mere morale no longer suffices to settle armed disputes, ought to reflect.

JAPAN MAY TAKE PHILIPPINES

That the armed resources of Japan are excellent cannot be gainsaid; she undoubtedly has at this moment

under arms the best army in the world, homogeneous and strong in spirit, with a warlike rank and file capable of heroic deeds and great exertion. Her navy, manned by natural-born sons of the sea, proud of its importance to the country, is a powerful weapon. However, no matter how valuable these may be in themselves, they cannot in a war with the United States find the application that would make them a decisive factor and enable them to deliver a mortal blow. No matter how great an effort Japan may make to augment and perfect her army and navy, she cannot create conditions which would enable these armed forces to penetrate to the enemy's territory and strike a decisive blow within the limited time for which Japan could bear the strain of modern warfare.

But Japan has no such objective of war, either on the mainland or on the sea. It is usually pointed out that there is danger in the isolated position of the Philippines which renders them liable to seizure. Of course, with a certain amount of exertion on the part of the Japanese navy and landing forces, the seizure of the Philippines is quite likely. But what of it? Would that end the war? Would that be the mortal blow that would force Uncle Sam to the mat and make him beg for peace? By no means! For that would only be the beginning, the prelude to a long, stubborn, ruthless struggle to settle the Pacific problems once for all.

No other employment except a Philippine or Hawaiian expedition could exist for the formidable Japanese army. Some jingoes, and those who have been scared by their cries, talk about a landing of the Japanese army on the Pacific Coast, about a conquest of California, about battalions of death and similar nonsense; all these bugbears, however, are fit only to scare infants or over-credulous and over-timid folk. The fundamental, immutable characteristics of extensive landing operations are such

that a crossing of the vast expanse of Pacific waters and a landing on American soil, in the event of hostilities between Japan and the United States, are absolutely impossible. No sleep should be lost by the inhabitants of the Pacific Slope on that account.

INVASION IMPOSSIBLE.

In the first place, before making the decision to attempt such an extraordinary landing, it is indispensable for the landing forces to have an objective which would justify the immense expenditures and risks. The only objective of that kind would be the crushing of the American armies, thereby deciding the issue of the war. The very idea is fantastic, and no Japanese Commander-in-Chief would undertake it. He would not dare to, because he could not realize the first indispensable condition of success—absolute mastery of the sea and security of the landing vessels from attacks by the naval and air forces of the enemy.

There remains, then, the Japanese navy as a means of long-distance operations for ferreting out and destroying American war fleets, for cruising and destroying trade, for bombarding large ports along the Pacific Coast, &c. This, however, sounds terrible only in the stories told by Japanese militarists; a sober and calm analysis of all the conditions required for the actual execution of such operations will demonstrate their impossibility.

In order to operate against the American navy, the Japanese navy will have to cross the Pacific, get far away from its base, accept battle under most unfavorable conditions for Japan and most favorable ones for the enemy, near foreign shores, under the combined attacks of all the fleets of the enemy and of his submarines and aerial means of defense. Japan's naval forces are not so large that she can venture upon such an exceedingly risky action, which, even in

case of partial successes, would demand so high a price that nothing could compensate for it. The Japanese jingoes, bragging about their naval prowess, ought to forget all about the successes at Tzushima and Port Arthur, and realize that the American navy is not a hodge-podge of vessels fit only for relics in a museum, such as were the fleets of Rozdestvensky and Nebogatoff, which, according to the testimony of honest witnesses, had already gone to pieces long before their actual destruction.

However greatly the Japanese might overestimate their own powers and underestimate their enemy's resources, they could scarcely assume that the mere appearance of their formidable battle fleets would in itself prove sufficient to drive the American fleets to shelter in the bays of the Pacific Coast for the pupils of Togo and Kamimura to destroy as easily and swiftly as the Spanish ships were destroyed some years ago along the shores of Cuba and Manila. Cruising operations, stoppage of Pacific commerce, daring raids on the coast, bombardment of the shores, all these, of course, are possible, although accompanied by tremendous difficulties and great risk. But these operations, even though they proved successful, would be mere pin-pricks, exercising no influence upon the final issue of the struggle.

WARNING TO JIGOISM.

As a general conclusion, I feel confident that, from whatever viewpoint we may look at the possible issue of an armed clash between Japan and America, even if we are to make the most favorable allowances for the former power, such a conflict is bound to end in total failure for Japan.

The sooner the militaristic swash-bucklers in Japan, with their constant threats against their transpacific neighbor, disappear, the better will it be for peace throughout the world. The helmsmen of the Japanese ship

of State ought to consider seriously the future of their beautiful country; they should understand that those exceptionally fortunate circumstances which, in the course of thirty years, have promoted their previously obscure and backward country to the rank of a world power, and burdened their shoulders with a load beyond their capacity, are gone forever. They should realize that the task before their Asiatic island empire at present is no longer one of reaching out for choice and unattainable morsels and of stringing new beads on their chain of martial, political and annexational successes. Conditions have changed radically, and new, difficult times have come. Clear-sighted Japanese statesmen must already have computed the cost of their Siberian intervention, fruit of the alliance of swash-buckling jingoes and over-reaching

capitalists; they ought also to figure the cost of their Chinese policy and realize whither it has led them. Let them last give thought to where jingoistic hatred for America may lead them, and dam it up at its source.

One occasionally reads expressions of alarm over a Japanese-Chinese yellow alliance directed against the white races of the Western world. Such fears are fantastic. Few people realize the profound intensity of the hatred felt by the overwhelming majority of Chinese for their island neighbors. The Japanese politicians have during the last thirty years done their best to render such an alliance absolutely impossible. If ever the Japanese had a foe, a mortal foe, that speaks of them with gnashing teeth, with a sinister glare in the eyes, and with a thirst for revenge in the heart, that foe is China.

THE BALANCE OF THE SEXES

THE question of the balance of sexes has recently been much discussed in the light of the figures gathered by the British Census. Geographically, the problem of an excess of female over male population is clearly confined to Europe, and especially to the white races. Ten years ago all the various countries of Europe showed an excess of females over males of 8,062,000, distributed as follows:

Russia (estimated)	2,500,000
Great Britain	1,323,000
Germany	841,000
France	683,000
Italy	628,000
Spain	550,000
Austria	506,000
Portugal	363,000
Hungary	196,000
Sweden	125,000
Norway	111,000
Denmark	84,000
Switzerland	62,000
Belgium	60,000
Netherlands	60,000
Finland	22,000
Ireland	6,000
Total female excess.....	8,062,000

Bosnia and Herzegovina.....	91,000
Bulgaria	79,000
Serbia	70,000
Greece	18,000
Luxemburg	8,000
Total male excess.....	266,020

This leaves in round figures an excess of 7,750,000 females for Europe, excluding Turkey. Owing to the ravages of the war among the male population, this excess is now very much increased in some of these countries, notably France, Great Britain, Belgium, Germany, Austria, Hungary and Italy. The excess of females over males in Great Britain in the past ten years was close to 2,000,000. The latest census figures seem, however, to show that nature is trying to restore the balance, apparently confirming the popular belief that after a war there are more boy babies than girl babies born. The London correspondent of the Medical Record notes that in Great Britain there has been a preponderance of male births since 1915, and that for the three months ended Sept. 1, 1921, the ratio of boy babies was 1,057 for each 1,000 girls born.

On the other side of the account the following countries had an excess of males.

THE MONTH IN THE UNITED STATES

Progress in enrolment of the new National Guard and in organizing Army Reserves—Naval and merchant marine affairs—Ruling on the exclusion of surplus aliens—Cost of prohibition enforcement—Results of the Unemployment Conference—New Ministers appointed

[PERIOD ENDED OCT. 15, 1921]

IN a statement issued Oct. 10, the War Department announced that 126,000 officers and men were enrolled in the National Guard units, out of 215,397 allotted for organization by June 30, 1922. Progress in the reorganization of the National Guard in the various States had been so rapid that the Militia Bureau had been forced to refuse acceptance of several commands offered for Federal recognition, on account of lack of necessary funds. The department estimated that at the present rate of progress the National Guard would reach 450,000 in 1924.

An outline of the preliminary steps for the creation of the organized reserve of the United States Army on a basis that would permit a quick mobilization of more than 4,000,000 men was made public on Sept. 27 by Colonel J. Mayhew Wainwright, Acting Secretary of War. The scheme, which was prepared under authority of Congress, contemplated virtually no expenditure at present. General Harbord, Acting Chief of Staff, stated that it would furnish the framework for mobilization of the nation in weeks instead of months.

Twenty-seven infantry divisions of the reserve were provided for, numbering from the 76th to the 104th, and preserving in number and geographical location the sixteen war-time national army divisions. The same territorial distribution as to

armies and army corps areas would be followed as in the regular army organization and the present structure of the National Guard.

Lieutenant John A. Macready, test pilot at McCook Field, Dayton, Ohio, shattered the world altitude record on Sept. 28, attaining a height of 40,800 feet (about seven and three-quarters miles) in the same Le Pere biplane used by Rudolph C. Schroeder, who had set a record of 38,180 feet on Feb. 28, 1920.

Lieutenant Macready was in the air 1 hour and 47 minutes, requiring all but a few minutes of the total flying time to reach his mark. At 39,000 feet ice formed on his oxygen tank, but he pressed on until the altimeter registered 41,000 feet. At this point his engine died and he then glided safely to the ground. Later correction of the instruments made the official height 40,800 feet.

NAVY AND MERCHANT MARINE.

The Navy Department, on Sept. 29, announced that reduced Congressional appropriations had made it necessary to disenroll or transfer on their own request to the Volunteer Naval Reserve all members of the Naval Reserve Force, except classes one and six. It was said that this action would affect 195,000 officers and men. Those of classes two, three, four and five, now on active duty, and those of the

Reserve Force who have taken the examination for transfer to the permanent navy are not affected by the order. Inactive members of the Naval Reserve Force, whether confirmed or

COL. ARTHUR WOODS

Head of unemployment agency to co-ordinate relief measures

provisional, were disenrolled from Sept. 30.

It was stated on Sept. 29 that the bid of the Ship Construction and Trading Company for the wooden fleet had been rejected by the United States Shipping Board. The company had put in a bid of \$2,100 for each vessel of the wooden fleet, each of which had cost from \$300,000 to \$500,000 to build. The board was dissatisfied with the offer. Irregularities in the bid, failure to deposit a certified check and other technical points were cited by the board in supporting its contention that it could not be held liable under the negotiations. It was intimated that the com-

pany had threatened legal action to compel the acceptance of the offer.

The Senate on Oct. 10 by a vote of 47 to 37 passed the Borah bill, giving to vessels in the American coastwise trade the right of free passage through the Panama Canal. Five hours of debate preceded the final vote. Party lines were broken, with thirty-five Republicans and twelve Democrats voting for the bill and twenty Democrats and seventeen Republicans voting against it. Senator Lodge, the Republican floor leader, fought the bill, while Senator Underwood, the Democratic leader and Mr. Lodge's colleague on the delegation to the conference for the limitation of armaments, supported it.

Senator Lodge told his colleagues that, in his opinion, the enactment of the Borah bill, in view of the approaching arms parity, was neither wise nor sound policy. America, he said, had the "legal right" to grant free passage to its vessels, but even the assertion of a legal right was unwise when it exposed the country to an "implication of bad faith." The defense of the bill was led by Senators Borah and Reed, who contended that the purposes sought were largely domestic in character, and for that reason should not be of great concern to other nations.

RAILROAD INCOME HIGHER

Estimates prepared for the Interstate Commerce Commission, under date of Oct. 1, indicated that the Class 1 carriers of the United States earned a net operating income during August of at least \$90,000,000. Reports had been received from 178 of the 203 railroads, and these showed a total net operating income of \$85,653,000. The net operating income in July, 1921, as shown by revised figures, was \$69,298,521. The net operating income for August marked the best showing that the railroads had made for more than a year.

EXCLUDING SURPLUS ALIENS

In a decision of great interest to shipping companies and aliens in all parts of the world, Federal Judge Julian W. Mack on Sept. 8 ruled that not only had the immigration authorities the right to detain aliens arriving after the monthly quotas from their countries have been exhausted, but also had the right to exclude them. Judge Mack further held that the Government had the right to divide the annual quota into twelve monthly parts.

The case was a test proceeding brought on behalf of George Philipacopulos, a Greek immigrant who arrived in this country Aug. 20, and who was excluded on the ground that before his coming the monthly percentage quota of immigrants had been exhausted by prior arrivals from Greece. The decision covered the cases of other aliens of various nationalities held under similar conditions at Ellis Island.

The United States Supreme Court on Oct. 10 held that undesirable immigrants might be deported, even though they had been in this country for several years. The case was an appeal from the decision of the United States District and Circuit Courts at New York, which held that the Secretary of Labor could deport a certain Salvatore Lauria at any time. Deportation was based on crimes that Lauria was alleged to have committed in Italy.

PROHIBITION ENFORCEMENT

Efforts to enforce national prohibition cost the country \$6,250,095.43 for the last fiscal year, according to a statement given out Oct. 11 at prohibition headquarters in New York City. The figures were compiled from the records in Washington. The total was offset, it was explained, by assessments, involving civil penalties, special taxes, &c., of \$53,296,998.87, of which \$2,152,387.45 was collected. In addition, the appraised value of

property seized was \$10,906,687.53. Court fines, which are being compiled, will, it was stated, run into several million dollars. The chief items of expense in enforcing the prohibition law have been salaries, totaling \$3,501,209.61, and traveling costs, \$1,396,443.51.

During the year a total of 29,114 criminal cases involving violations of the prohibition law were commenced, 16,610 offenders pleaded guilty, 17,962 were convicted and 765 were acquitted. It is evident that the percentage of convictions was much higher outside of New York City, where only a few have been convicted. At the end of the fiscal year there were pending 10,365 cases involving prohibition law violations.

Cases made during the year involving assessments numbered 39,066, and the amounts assessed were as follows: Double taxes, Section 35, Prohibition act, \$28,399,133.10; additional penalties, \$17,943,875.90; \$1,000 special tax, Section 1,001, Revenue act, \$375,872.80; taxes on spirits, wines, &c., \$6,578,117.07; total, \$53,296,998.87. Property seizures total \$10,906,687.53 in value. A total of 413,987 gallons of distilled spirits were seized and 428,303 gallons of wine, cider and pomace.

HOUSE MEMBERSHIP

The House of Representatives on Oct. 14 recorded its opposition to any increase in its membership, recommitting to the Census Committee by a vote of 146 to 142 the Siegel bill to increase the membership from 435 to 460 members. The vote was taken on a motion to recommit, offered by Representative Fairfield of Indiana, after nine hours of debate and wrangling about Parliamentary procedure. Opponents of the bill contended that the House already was an unwieldy body, and that it would function less efficiently with an increased membership. Party lines were disregarded in the final vote.

FEDERAL EXPENSE RESTRICTED

Mr. Mellon, Secretary of the Treasury, stated on Oct. 14 that the Federal expenditures for the current fiscal year would be kept within the agreed limit of \$4,034,000,000, and denied reports that additional deficiency appropriations of \$370,000,000 would be asked for. The original program made allowance for estimated deficiency appropriations which "it was realized would be necessary in connection with certain Government activities," Mr. Mellon explained. These included particularly the settlement with the railroads growing out of Federal control and vocational training for former service men, but Mr. Mellon added that his information indicated that the revenue requirements of the Government still would be amply provided for in the \$4,034,000,000.

UNEMPLOYMENT CONFERENCE

The first session of the conference called by President Harding to help solve the nation's unemployment problem was held in Washington on Sept. 26. President Harding made a brief address and turned the direction of the proceedings over to Secretary Hoover. The President expressed the conviction that the nation's economic structure was sound and capable of weathering the period of reaction following the World War. He also said that there must be no program of paternalism or charity adopted which "seeks either palliation or tonic from the public treasury."

On Sept. 30 an emergency program was recommended for the immediate relief of the workers of the United States, estimated to be between 3,500,000 and 5,500,000. The more important recommendations were as follows:

Private houses, hotels, offices &c., can contribute to the situation by doing their repairs, cleaning and alterations during the Winter instead of waiting until Spring, when employment will be more plentiful.

Public construction is better than relief. The municipalities should expand their

school, street, sewerage, repair work, and public building to the fullest possible volume compatible with the existing circumstances. That existing circumstances are favorable is indicated by the fact that over \$700,000,000 of municipal bonds, the largest amount in history, have been sold in 1921. Of these, \$106,000,000 were sold by 333 municipalities in August. Municipalities should give short-time employment the same as other employers.

The Governor should unite all State agencies for support of the Mayors and, as the superior officer, should insist upon the responsibility of city officials; should do everything compatible with circumstances in expedition of construction of roads, State buildings, &c.

The Federal authorities, including the Federal Reserve Banks, should expedite the construction of public buildings and public works covered by existing appropriations.

A Congressional appropriation for roads, together with State appropriations amounting to many tens of millions of dollars already made in expectation of and dependence on Federal aid, would make available a large amount of employment. The conference, under existing circumstances, notwithstanding various opinions as to the character of the legislation and the necessity for economy, recommends Congressional action at the present session in order that work may go forward.

The greatest area for immediate relief of unemployment is in the construction industry, which has been artificially restricted during and since the war. We are short more than a million homes; all kinds of building and construction are far behind national necessity. The Senate Committee on Reconstruction and Production, in March of this year, estimated the total construction shortage in the country at between ten and twenty billion dollars. Considering all branches of the construction industries, more than two million people could be employed if construction were resumed.

These recommendations were for the immediate emergency, but on Oct. 11 a program was put forward for permanent recovery from present conditions. The salient features of this program were the following:

1. Readjustment of railways rates to a fairer basis of the relative value of commodities, with special consideration of the rates on primary commodities, at the same time safeguarding the financial stability of the railways.

2. Speedy completion of the tax bill, with its contemplated reduction of taxes, in order that business now held back pending definite determination may proceed.

3. Definite settlement of tariff legislation in order that business may determine its future conduct and policies.

4. Settlement of the financial relationships between the Government and the railways, having in mind the immediate necessity for increased maintenance and betterments, making effective increased railway employment and stimulation of general employment in order that the railways may be prepared for enlarged business as it comes.

5. Limitation of world armament and consequent increase of tranquillity and further decreases of the tax burden not only of the United States but of other countries.

6. Steps looking to the minimizing of fluctuation in exchange, because recovery from the great slump in exports (due to the economic situation in Europe) cannot make substantial progress so long as extravagant daily fluctuations continue in foreign exchange, for no merchant can determine the delivery cost of any international shipment.

7. Definite programs of action that will lead to elimination of waste and more regular employment in seasonal and intermittent industries, notably in the coal industry, in order that the decline upon capital may be lessened and the annual income of workers may be increased.

8. In the field of all the different industries and occupations the rapidity of recovery will depend greatly upon the speed of proportionate adjustment of the inequalities in deflation. A table is attached hereto, drawn from various sources, showing the percentage of present levels above or below the levels of the same commodities and services of the pre-war period. It will be observed that agriculture has reached an unuly low plane, while transportation, coal and some branches of the construction industries are of the highest. It will also be observed that there is an entire disproportion between the price of the primary commodities and the ultimate retail price. These disproportionate increases in the progressive stages of distribution are due to increased costs of transportation, enlarged profits, interest, taxes, labor and other charges.

BUSINESS CONDITIONS IMPROVED

A slight improvement in the unemployment situation, a prediction that "the industrial pendulum is definitely on the upward trend," and a report of "marked increase of industrial optimism from every section of the country" were features of the report of the United States Employment Service made public Oct. 6. Liquidation in the wholesale and retail business, due principally to the change of season, was given as one of the causes of the more hopeful conditions. The

report was based on statistics collected from the payrolls of 1,428 firms in sixty-five principal industrial centres, each of which usually employs more than 500 workers. On Sept. 30 these firms had 18,050 more employees on their payrolls than they carried on Aug. 31, an increase of 1.2 per cent.

The United States Steel Corporation on Oct. 11 led the way in an endeavor to alleviate the unemployment situation by voting the expenditure of \$10,000,000 in the extension of its manufacturing plants. This was done with the understanding that extensions be made where the services of their own employees who are now idle could be utilized and where costs would be fair.

PRAYER FOR UNKNOWN DEAD

The American people were called upon by President Harding, in a proclamation issued Sept. 30, to offer two minutes' silent prayer at noon on Armistice Day, Nov. 11, when the body of an unknown American soldier killed in France will be laid to rest in Arlington National Cemetery. "All devout and patriotic citizens" were called upon to pause for two minutes—from 12 o'clock noon to two minutes past 12—"for a period of silent prayer of thanks to the Giver of all good for these valuable and vaolorous lives, and of supplication for His divine mercy and for His blessings upon our beloved country."

EIGHT MINISTERS NAMED

President Harding on Oct. 4 made eight diplomatic appointments to European and Latin-American countries. Lewis Einstein of New York, former Minister to Costa Rica, was named as new Minister to Czechoslovakia, succeeding Richard Crane 3d. Mr. Einstein is a Columbia University man and has been prominent as a diplomat, author and editor. The other appointments announced were Edward E. Brodie of Oregon, to be Min-

ister to Siam; Charles L. Kagey of Kansas, to be Minister to Finland; Roy Davis of Missouri, to be Minister to Guatemala; Charles S. Wilson of Maine, to be Minister to Bulgaria; Dr. John Glover South of Kentucky, to be Minister to Panama; John E. Ramer of Colorado, to be Minister to Nicaragua, and Willis C. Cook of South Dakota, to be Minister to Venezuela.

Mr. Brodie is a newspaper publisher and President of the National Editorial Association. Mr. Kagey was born in Virginia and now is a lawyer of Kansas. He was formerly a District Judge and President of the Kansas Bar Association. Mr. Davis is prominently associated with educational, political and business affairs of Missouri. Mr. Wilson is a graduate of Harvard, has acted as Charge d'Afaires of the legation at Sofia since 1918, and has been connected with the Diplomatic Service as a Secretary of Embassy or Legation since 1901, serving in Greece, Cuba, Argentina, Italy, Russia and Rome. Dr. South was formerly President of the Kentucky Board of Health, and is now President of the Kentucky Medical Association. Mr. Ramer was former Secretary of State of Colorado. Mr. Cook is a graduate of the University of Wisconsin Law School, a former County Judge and a former State Senator. He is President of the South Dakota branch of the League to Enforce Peace, and until Dec. 1, 1920, was owner and publisher of The Sioux Falls Daily Press.

The President also nominated J. Morton Howell of Dayton to be Diplomatic Agent and Consul General at Cairo. Mr. Howell is the founder of the Dayton Board of Health and the American Child Hygiene Association.

DEATH OF SENATOR KNOX

Senator Philander C. Knox of Pennsylvania died suddenly in Washington of apoplexy, Oct. 12. He was 68 years old. For the last two decades Senator Knox had been a prominent figure in public life. He first came into national affairs when in 1901 President McKinley appointed him Attorney General. He retained that office under President Roosevelt until 1904, when he resigned to accept an appointment as United States Senator from Pennsylvania to succeed the late Senator Quay. He became Secretary of State in President Taft's Cabinet, and initiated an active policy of aiding the extension of American trade with foreign countries. He took a prominent part in the fight in the Senate against the ratification of the Versailles Treaty, and was the author of a resolution adopted by the Senate in May, 1920, declaring peace with Germany. This was vetoed by President Wilson, but later formed the basis of the separate peace treaty between Germany and the United States. His home was in Pittsburgh, where he had an extensive law practice.

BELGIAN EXCHANGE FELLOWSHIP

NINETEEN Belgian students, winners of the Belgian Exchange fellowships established at the suggestion of Herbert Hoover by the Commission of Relief in Belgium as a Belgian Educational Foundation, reached New York Sept. 12, 1921. Six Belgian scholars of the same foundation already had been enrolled in American universities. The nineteen newcomers were distributed as prearranged. Twenty-five American students, under this exchange ar-

angement, are now at work in Belgian universities on fellowships provided by the corresponding Belgian organization, the Fondation Universitaire. The two parallel foundations were established after the armistice, when the Commission for Relief in Belgium was liquidated and Mr. Hoover suggested the exchange of students. Both organizations are supported by the income of surplus funds of the Commission for Relief and the Comité Nationale.

THE FUTURE OF RUSSIA

BY SIDNEY C. GRAVES

Former Major and assistant to Chief of Staff of American Expeditionary Force in Siberia

To the Editor of Current History:

Can the United States, or the rest of the world, if animated by a sincere desire to further the cause of international peace, afford to neglect Russia in the coming conference? Can there be any conclusive settlement of Far Eastern affairs if the territorial integrity of the Russian Empire is to remain but a mockery and the inherent right of the Russian people to the benefit of their natural resources be continually violated? The question has no reference to the character of the Soviet Government or to the present impotency of the nation.

How short-sighted indeed is the opinion that Siberia affords a natural field for Japanese colonization and exploitation! How readily accepted seem the Japanese contentions that her efforts in these maritime provinces are of a temporary nature, to be discontinued in the event of the establishment of a stable government, and, calculated as a protective measure, preventing the spread of Bolshevism near enough to constitute a menace to the Japanese Empire. We have the evidence of her actions toward every government set up to the contrary, and, in view of her imperialistic infringements on China and Manchuria, it is hard to credit any unselfish motives in the vast expenditure to which she has been forced in Siberia.

Articles which have appeared in *CURRENT HISTORY*, giving concrete facts which expose the policy of Japan, have occasioned no effort at refutation and are a welcome diversion from the exponents of the purely opinion theory of Charles H. Sherrill. His idea that Siberia is a natural field for Japanese control originated while he was a guest in Japan, and was avidly seized upon by the Japanese, translated and distributed broadly as voicing American sentiment.

From Siberia information has been received that Japan is still dispatching her troops northward along the Chinese Eastern and Trans-Siberian Railways and the protests of the new republic established at Chita, requesting an evacuation of Russian territory or a declaration of intention to evacuate, evoke no reply despite the coming conference to settle the questions of the

Far East. The complete accord which existed, during the period of joint allied intervention, between British and Japanese representatives in Siberia is still in evidence; from the influx of English capital for development of the mineral resources, and from the seizure of the fishery rights by Japanese interests, it appears that the spoliation of Asiatic Russia is by agreement to go on apace. The United States is concerned with a sincere desire to arrive at a solution of points of difficulty in the Orient, but it is interesting to consider of what value an open door in Asia will be to the United States if transportation facilities remain in Japanese hands to exact toll from her competitors.

Russians of all parties derive little satisfaction from the declaration of Secretary Hughes that the rights of their country will be safeguarded, but that no representation from the Soviet or Chita Government will be entertained. The lessons of the Peace Conference are fresh in their minds; there they witnessed a partial dismemberment of the old empire in a desire on the part of Europe to create a series of small States as a buffer against Bolshevism, without regard to a future regenerated and rehabilitated nation. Of more recent moment have been the various futile counter-Soviet adventures; Kolchak, Denikin, Wrangel, &c., as participants in which the unselfishness of some of the Allies at least may be doubted and as a result of one of which Russia's eastern seaboard is still overrun by troops of a foreign power or by its mercenaries.

However, present information from Washington indicates that the faith which has always been placed in the American people by Russia will be justified to the extent that the future of Siberia is an important factor in the scope of the conference as contemplated by Mr. Hughes. It remains to be seen whether or not the question will be met by insincerity and evasion on the part of interested powers, but the continued aggressive actions of the Japanese toward the Chita Government can certainly not be construed as pointing to an early evacuation or to an abandonment of the advantages which have been seized.

THE FARMER AND HIS TROUBLES

BY HENRY C. WALLACE

Secretary of Agriculture of the United States

Causes and remedies of the widespread agricultural depression in the United States—Farm products bring less than pre-war prices, while nearly everything which the farmer must buy costs twice as much as before the war—A readjustment necessary

I DOUBT whether the people of the East realize just what has happened to the farmers of the producing sections. Take the grain and live-stock country of the Central West, for example; I speak of this region because it is the one with which I am most familiar, and also because it gives us our great surplus crops. We have the finest rural civilization, taken as a whole, the world has ever seen; our farmers average very high in intelligence; they produce more per man than almost any other farmers in the world; they have adopted the most advanced system of farming. Notwithstanding all this, they are now in a most trying period and are suffering severe financial losses.

People who are not familiar with agriculture find it hard to understand the situation. They refuse to believe that the depression is as serious as it really is. They point to the high value of our land, to the high prices at which farm products have been selling prior to this heavy drop, to the large number of automobiles owned by farmers, to the apparent wealth and comfort on every side; and they refuse to take seriously what the farmers say concerning their troubles.

There are two causes for this widespread agricultural depression. One

is the high cost of production. If we include all the factors which properly enter into the cost of production, we find, for example, that last year the cost of producing a bushel of corn in Iowa, the greatest corn State, was more than 90 cents. This includes the land cost, the labor cost, and everything else which ought to be included.

Many people say, "You are figuring the land on an inflated price. You should not do that. The farmer did not pay that price for the land. He wants dividends on water."

It is true that the land charge is considered on the basis of its value a year ago, but it is also true that the advance in land prices was not nearly as great as many people suppose. They hear of occasional sales at \$400 or \$500 an acre, and assume that that represents the average. Nothing of the sort. The average advance in the value of our rich corn-belt land was only about 80 per cent. above pre-war values. It must be remembered also that in the principal corn States over half the land is farmed by tenants, and these tenants mostly had to pay rent on the basis of the advanced land values. It is true, further, that if we omit the land charge altogether, the price which the farmer can get for a bushel of corn is still considerably below what it cost him to pro-

duce it. The largest item of cost in corn production is not land, but labor.

The man who has been farming his own land and who has saved his money has prospered. The five years prior to 1920 were profitable years, especially to the grain farmer. If he exercised ordinary intelligence, he made more money than he ever before made at farming. Those years were not so profitable to the live-stock farmer. The man who grew his own live stock and grain, and fed his grain to the live stock, on the whole, made money, although not as much as if he had sold the grain instead of feeding it. The man who bought the live stock and bought the grain, and fed the grain to the live stock, on the average, lost money. When hogs were selling at \$20 per hundredweight, everybody seemed to think the hog feeder was growing rich, but most of the time when hogs were selling at those high figures, the men who had to buy the grain to feed the hogs lost money.

LOW PRICES OF FARM PRODUCTS

The second cause of the farmer's trouble is this: Prices of farm products have dropped out of all proportion to the prices of other things, as well as out of all proportion to the cost of production. For example, the price of corn today on the Iowa farm is about 20 per cent. below the normal price of corn before the war; the price of oats on the Iowa farm is about 21 per cent. below pre-war normal; the price of fat cattle and of hogs is from 20 to 25 per cent. above the pre-war normal, if we take Chicago prices, but on the farm the prices of both cattle and hogs are down to pre-war normal.

Now note the prices of some of the things the farmer must buy: Wages of farm hands are about 100 per cent. above the pre-war normal; railroad rates are from 70 to 90 per cent. above pre-war normal; such basic commodities as pig iron, coke, petroleum, lumber, Portland cement, are

far above the pre-war normal—from 100 to 150, and in some cases, 200 per cent. above the pre-war normal. Factory wages and railroad wages are both more than 100 per cent. above the pre-war normal.

In other words, while the farmer is selling the things he produces at prices no higher, and, for great surplus crops, lower than the pre-war normal, he must buy practically everything he needs at prices from 50 to 150 per cent. above the pre-war normal. The severe agricultural depression is inevitable as long as such a condition exists, and this depression will certainly be communicated to industry and business generally.

While I have spoken particularly of the corn belt States, the farmers throughout the nation, and especially those in the South and West, are experiencing exactly the same trouble. The cotton farmers of the South, the rice farmers, the cattle and sheep growers of the Far West, the fruit growers, all are passing through this same valley of discouragement and financial stress.

This is a situation which should challenge the very best thought of the entire nation. If it continues, the trouble will be communicated to every one. We are brothers one of another. Anything which hurts the farmer will very soon be communicated to all our citizens. The farmers represent probably 35 to 40 per cent. of the population. Anything which seriously affects their buying power will bring trouble to the people who make or deal in the things the farmer buys.

PROBLEM OF SURPLUS FOOD

It is a terrible indictment to our modern civilization that this great country should be in a state of what might almost be called economic chaos because of our great surplus food supply, while across the seas, in both directions, almost half the world is suffering for want of food. If our statesmen had given more thought to getting the world back on a sound

economic basis, and perhaps had spent less time on idealistic schemes and theories, they would have rendered a greater contribution to the

Every good citizen, no matter in what business he may be engaged, should do what he can to help the farmers through this period of depression, not only for their sake, but also for the sake of helping himself.

We cannot hope to regain normal conditions until we reach a price level which will be fair to all our people and to all products. Farm products must come up in price, and other products must go down, until the normal relation between them has been restored. This talk of bringing prices, whether farm prices or other prices, back to the pre-war normal is wrong. We incurred a heavy national debt on the inflated prices. If now we force the prices back to the pre-war normal it will be equivalent to just about doubling that debt. We can pay off our debts much more easily if we maintain a price level near to that at which the debts were incurred. Of course, the higher prices which prevailed during the war cannot continue, but if we should try to bring

about a level, say 70 per cent. above the pre-war normal, everybody would be better off.

We shall get through this period. The nation is not going bankrupt. The farmers are not going bankrupt. Gradually farm prices will be brought into fair relation with other prices. But there is another thing in the long run—a more important phase of our agricultural problem—which we have been slow in considering. Let me sketch briefly the development of our agriculture.

(© Underwood & Underwood)

HENRY C. WALLACE

Secretary of Agriculture, formerly an Iowa editor and a practical farmer

peace and happiness of the people of the earth.

Surely the duty of the Department of Agriculture is evident. We should do everything possible to find an outlet for this great food surplus. We should search for ways to produce more cheaply. Our scientific men should try to find new uses for our surplus crops. We should develop more efficient marketing systems and bring the producer and consumer closer together. It is a time for every man who can help to take hold.

The farmers of the United States during the past seventy years have, on the average, produced and sold grains and live stock at less than the cost of production, if we take into consideration all the factors which properly enter into production costs. What I mean is, that if the farmer should draw up, on the basis of a system of sound business economy, a cost-total inclusive of a fair interest on the capital invested, both in his farm and his farm equipment, and inclusive of a fair wage for the actual labor expended on the farm; and if he should then compare this with the intake from marketing his crops, he would find that he had not received for them enough to cover his actual costs. We omit here the value of the fertility of his soil, which is in effect a portion of his capital, and which he has marketed in his crops; but we simply throw it in for good measure. I know that many people are inclined to question such a statement as to the farmer's losses. They think of individual farmers who have become well-to-do; but I am speaking of the average farmer, the farmers as a mass, and the statement I have just made is absolutely true and has been corroborated by every scientific investigation made.

The farmers have been able and willing to sell their crops at less than the actual cost of production because, first, they have been willing to accept the value of the farm as a home—a good place in which to raise their children—as a part of the substantial reward for their work; and, second, because as our population has increased there has been a steady increase in the value of farm land. In times past, therefore, the young farmer who could get enough ahead to make a very small payment on a piece of land—enough to give him a foothold—and who had a lot of hard work in him, and who had a good wife, as most of them have, was able, by living very economically, denying himself and his wife the luxuries and many of the comforts of life, to hang

on, paying out on the farm, and finally seeing it growing into a valuable piece of property.

DRIFT TOWARD THE CITIES

During all this period we have been a great surplus food producing nation. We have grown more food than our own people could consume. As a result, we have had to compete with the farmers of the world in the great consuming markets, and take prices fixed by that competition. Another result of this great surplus of food was to stimulate our industrial development and to build up our commercial enterprises of all kinds.

The steady increase in the value of our land and the relatively low prices for farm products have caused a constant drift of young farmers to the towns and cities, where they thought they could get better pay for their labor and find better opportunities to advance themselves in a material way. In some of our heaviest producing States there are not as many people on the farms today as there were thirty or forty years ago. This movement from the farm to the city has been a perfectly natural movement, and fully justified by conditions. It will continue as long as the cities offer greater financial rewards, greater opportunities for advancement, more comfortable living conditions, and better social, educational and religious privileges. It is the inevitable result of present economic conditions, and no amount of talk extolling the beauty of farm life can stop it.

Nor has this relative decline in the producing population been a very serious matter up to the present time. Certainly it has not been serious from the farmers' viewpoint. We have made great advances in methods of production. The development of labor-saving machinery has enabled us to increase our production per man. Notwithstanding our increase in total population and the decrease in farm population, we have, until very recently, steadily increased food production per thousand of total population.

This increase has come both from the use of labor-saving machinery and from bringing into cultivation new areas of fertile land. We cannot keep up this pace in the future. Consumption has almost overtaken production under normal world conditions.

Most of our fertile land which can be farmed profitably has been taken up. We still have large areas of swamp land, dry land and cut-over land, but these cannot be profitably reclaimed and farmed unless we can depend upon higher relative prices for farm products than those which prevailed before the war. So, also, we can greatly increase the productive power of a large area of the land in surplus-producing States, provided we can depend upon prices which will cover the increased expense. Under our system of farming we have produced far more per man than almost any other nation, but we have not produced nearly as much per acre as the nations of Europe. Our greatest increase of food production in the future must come from increasing our acre yields, but this, in turn, depends upon prices which will justify the increased cost.

The farmer is the one man engaged in a big business who has had no voice in fixing the price of the things he produces. He has been compelled to take whatever prices he could get. His cost of production has not at any time been considered in determining this price. In times of small crops prices have been high. In times of large crops prices have been ruinously low. Very large crops, as a rule, give the farmer fewer dollars than small crops. Farming seems to be one business in which large production is always penalized.

FUTURE PROSPECTS

No doubt, when we get through this period of world readjustment, there will be a gradual increase in the value of farm land, provided our national policy is fair to agriculture;

but this increase will be much slower than in times past. The speculative value has been taken out of the land. The farmer can no longer depend upon the increase in the value of his farm to make good the losses suffered through his farming operations year by year. Farmers' crops must sell higher relatively in the future than in the past.

We seem to have been going on the theory that the fertility of our soil, especially in the great corn and tame grass country, is inexhaustible. To the nation this is a most dangerous theory. We must start in earnest the development of an agricultural policy which will enable us to feed our people at fair prices and, at the same time, to retain the fertility of our soil, our greatest national material asset.

The increase in tenancy has aroused great concern. Many people seem to think that tenancy is in itself an evil. Not necessarily so. As land advances, tenancy increases. This has always been true everywhere, and it is not necessarily a bad thing in itself. The farmer who has a limited working capital can far better afford to rent than to own after the land has reached a fairly stable value based on its productive power. Men are willing to invest their money in land, and accept a very low rate of interest because of the security of the investment, but there are evils which grow out of the tenancy system which must be corrected.

If we are to make this a self-sustaining nation agriculturally, as President Harding said in one of his speeches, there is no time to be lost in studying these great problems. It is not a question of production alone, it is a question of the farmer's ability to sell what he produces at a price which will justify him in continuing to produce. We are the best producers in the world, but our sales system is very bad indeed. We must study everything which influences both production and price. We must look into the matter of competition

from farmers of foreign lands where the standards of living are very much below those which we demand for our people. We must look into world conditions both of supply and of demand; we must produce more intelligently and adjust our various crops to the probable needs. We must also look into the administration of our credit machinery. Those who control the finances of the country and who have it in their power to influence, either directly or indirectly, the extension of credit, can exercise a large amount of control over the prices of farm products. The same thing is true of the administration of our transportation systems. Through the simple

device of regulating the flow of cars, the prices of farm products can be sent up or down at the will of those who exercise such control. We had some costly experiences along this line during the war.

Our prosperity as a nation depends upon the prosperity of our farmers. The Department of Agriculture is shaping its activities with that thought always in view. We have here a magnificent body of men and a splendid organization. We are going to try to use the scientific knowledge of these men wherever it can best be used to promote the agriculture of the nation.

THE BRITISH DEAD IN FRANCE

THE world knows in general that thousands on thousands of British soldiers fell on French or Belgian soil during the great war, but few realize the gigantic task which the Imperial War Graves Commission has been facing for the last two years. The number of cemeteries in its charge in France totals 3,280. Nearly 1,200 of them have been decorated with old English garden flowers. Traveling gardeners—mainly war veterans—journey from cemetery to cemetery on motor lorries, mowing the grass, planting and watering flowers, and giving loving care to the last resting places of their dead comrades.

The French and Belgian people reverence these British dead. On pleasant Sundays and holidays the French come to walk by the smooth green lawns between the bright flower borders of the cemeteries in the Arras district, where 600 cemeteries send forth the white gleam of their rows of monuments. All these "God's Acres" are rectangular in shape. At one side stands the Stone of Remembrance, a great altarlike slab of white limestone, on which are cut the words: "Their name liveth for evermore." Facing it rises the tall Cross of Sacrifice, bearing a great bronze sword where the figure of Christ is placed on Catholic crucifixes. In between lie the graves in serried rows, each with its white marble headstone bearing the name, the regiment and the date of death.

A typical cemetery is that at Verlincthun, on the cliffs beside Boulogne, within sight of the English coast, where 12,000 officers and men rest peacefully. One little cemetery, where seventy New Zealanders who fell all together one day in 1918 are buried, is the smallest, the most secluded and perhaps the most touching of all. There are 10,000 graves at Tyne Cot Cemetery, on the edge of the bloody Ypres salient. Here, where men and guns and tanks struggled in vain to cross the sea of mud and the formidable barbed wire of barbed wires between 1914 and 1918, rich golden grain grows against the rusted sides of the abandoned tanks. The cemeteries which stand thick around Ypres, Hooze, Zillebeek, Gheluvelt, Boesinghe and the Paschendaele Ridge tell the tragic story of the defense of Ypres. In the ruined city an inscription in Flemish, French and English says:

The Burgomaster and the City Council of Ypres urge you to remember that the ground you walk on is hallowed by the sacrifice of 250,000 British officers and men who were killed or wounded in the four terrible years of battle endured in the salient of Ypres, and whose heroism Belgium can never forget.

This spirit of veneration and gratitude is found everywhere in France and Belgium. The British dead, sleeping from their land afar, are among friends linked by an unbreakable tie.

WHY THE FILIPINOS DESIRE INDEPENDENCE

BY MANUEL L. QUEZON

President of the Philippine Senate and leader of the independence movement

A clear and vigorous statement of reasons why the people of the Philippine Islands believe they should now be allowed to run their own Government—Gratitude to the United States combined with American ideals of liberty—No fear of Japanese aggression

IF anything in the long struggle of mankind toward democracy and liberty is worth while; if Mazzini, Garibaldi, Hofer, Arnold Winkelried, Patrick Henry, James Otis and Nathan Hale are still potent names in the world's admiration and regard, the movement for the independence of the Philippine Islands is worth the most serious attention of all men everywhere not moribund in their sympathies with human aspirations, and particularly worth while to the American Government.

I am asked to write for CURRENT HISTORY an article on this movement, and I accept the invitation with more than usual pleasure because on this visit to America I have been deeply gratified to find a greater readiness to recognize that the cause of the Filipinos is no less eternally just than was the cause of every other people struggling out of national submersion into national individuality.

The best way to make clear the scope, nature and aims of the independence movement in the Philippine Islands is to take up, one by one, the questions most commonly put to me as I travel about the United States:

1. *What is the desire for Philippine independence based upon?*

It is based upon the same instinct and passion for national existence and national expression that has animated every virile people in the world's history. The people of the Philippine Islands feel that they are

a separate nation, that they have the individual destiny that pertains, of right, to a homogeneous people dwelling within a defined area, having a common origin and a common vital philosophy. It is based upon exactly the same instinct for freedom that animated the American people from 1775 until they succeeded in erecting the great Republic; on the geographical, ethnological and institutional conditions that historically have justified nationality. We feel that if it was essentially incongruous for the free peoples that from many countries had come to settle the Atlantic seaboard of America previous to 1776, to be ruled and dominated by an alien people 3,000 miles away, of different instincts, institutions and aspirations, it is just as incongruous for the people of the Philippine Islands to be ruled by another country of different racial origin and feelings, 8,000 miles away; and we feel this to be essentially and unassailably true, no matter how generous, benevolent and well-intended may be the policy of that other nation toward us.

We desire to be free because all intelligent, ambitious, forward-looking people have and must have that impulse if they are to realize and express the real principles of their national life.

The movement for independence in the Philippine Islands is further based upon history. In America the fact is almost unknown that this

movement is not new, is not of this generation, of this century, nor even of the century before it. For 150 years the idea and hope of national liberty have been lights to the Filipinos, like the pillar of cloud and the pillar of fire in the desert to the children of Israel. However successfully Spain put down the successive revolutions that sought to attain liberty, the idea and promise of liberty were never eradicated from the Filipino mind and never will be.

In the next place—and this seems to be largely unknown or obscured to the American public—the present movement for independence in the Philippines is based upon the promise of the great American nation, expressed through every President, beginning with the honored McKinley, and reiterated through Governors General and Congress. From the outset this prospect has been held forth to us, this pledge has been given, and after more than twenty years the Filipinos are beginning to feel that longer delay in its fulfilment is footless, unreasonable and indefensible.

2. *In what way is the protectorate of the United States objectionable?*

"Objectionable" is not quite a fair word to use in regard to our relations with the United States. Every Filipino understands and acknowledges the obligations of his country to the generous altruism that the United States has followed in its policy toward these islands. It is not that any one in the islands would say, or would dream of pretending, that the sovereignty of the United States over the islands is oppressive, tyrannical, unjust or autocratic. On the contrary, the truth is that the people of the Philippines, since 1916, have been allowed a larger share of self-government in the direction of their own affairs than has been allowed to a dependency of any other nation. It is not that we revolt against oppression, wrong or repressive force; but there is all the time confronting us the fact that without nationality we are not realizing and shall not realize what is plainly our national and eth-

nological destiny. Every people is entitled to determine its own way and to secure, if it so wishes, a recognized place in the great family of nations. The fact that there are 10,500,000 people in the Philippine Islands and 105,000,000 people in the United States cannot possibly affect the basic and eternal principle of self-determination that is involved at the bottom of all this subject.

We are like, let us say, a young married couple starting out in life.

A mother-in-law is helping to run their establishment. She may be a perfectly admirable woman, kind, generous, affectionate, wise, and the best cook on earth, but the young household does not want her, ought not to have her, and can never enjoy the happiness that comes of self-effort, self-expression and self-control, until the dear old dame has withdrawn her hand from the affairs of the new home. A block down the street, or across the river, the household thinks of her with profound affection and regard, maintains the friendliest association and is always her warmest friend and champion, but it does not want her forever stirring the pot and dominating the bill of fare.

This is not only natural but inevitable. There never has been a case in history where a normal people were willing to bargain independence and self-expression for benevolence, no matter how kind, liberal and sincere.

This, I think, exactly expresses the situation in the Philippines. Effort is made to cause it to appear that because we desire our own country for ourselves we are ungrateful to the United States. This is most unfair and untrue. We do not forget and can never forget the kindness we have had at American hands. It is a tie that we shall hope always to feel, binding us in bonds of affectionate friendship to our national foster mother. But I may be pardoned if I suggest that one of the elements of continued friendship and good-will between two men or two peoples is

the observance of good faith and the fulfillment of promises.

The Filipinos today love and admire the United States because they feel that it alone, among the great nations of the world, scorns the exploitation of the weak. It is the only

(© Harris & Ewing)

MANUEL L. QUEZON

President of the Philippine Senate and leader of the independence movement

country that has refused to grab territory from reluctant inhabitants or play the international bully, pirate and land thief. It has an unsmirched record of promises kept and ideals maintained. We base our appeal for independence upon that record and we are confident that we shall not be disappointed.

3. *In the event of independence, would the Filipinos feel in the least afraid that Japan would seek to dominate them?*

No. There is no person well informed of the exact economic situa-

tion in the Orient who entertains any such fear or belief. There is no more danger that in the case of Philippine independence Japan would seize the islands than there is that she would descend upon the islands of Italy or of France. The notion that Japan is a demon only waiting for the United States to withdraw that she may spring upon the defenseless Philippines and devour them is groundless. The fact is that Japan is governed by her economic needs and not by mere desire for territory. The Philippine Islands could supply none of her economic needs. She must seek that supply in other quarters. This ought to be sufficient to relieve the sensitive and timorous mind of the shadow of the Japanese bugaboo, even if it were true that Japan alone of all the nations in the world was entirely without a code of morals or a sense of decency. As a matter of fact, Japan is no less amenable to the court of the world's opinion than any other country, and no more likely to incur the world's damnation.

4. *Would the Filipinos be able to organize a stable Government?*

The history of the last five years in the Philippine Islands proves conclusively that they would. In those years they have, in fact, organized such a Government and operated it with conspicuous success. Of its stability there is not room for the slightest question. It is a Government in which law and order are observed, in which life and property are secure, in which legislation is intelligently conceived, in which the essential functions of government in a civilized state of society are in accordance with modern social science. Nothing remains to be done to achieve stability of government in the Philippine Islands. All that is still to be accomplished is to achieve independence.

5. *Would it be along republican lines?*

Most assuredly. What other lines could it be along? Great as is the lack of familiarity in America with the people and history of the Philip-

pine Islands, it can hardly be imagined in any quarter that these people have the slightest notion of ever again tolerating any form of outworn monarchy. I think that those familiar with our story will laugh at the question. As a matter of fact, there does not exist in the world a people whose instincts, impulses and convictions are more broadly democratic than the Filipinos. A glance at history will easily verify the fact that a form of democracy was practiced in the Philippine Islands when there was hardly a beginning of it in England.

But even if the earliest antecedents of these people were not strongly impregnated with democracy, what do you imagine has been the effect upon them of more than twenty years of widespread and even intensive study of the history of the United States? To the people of the Philippine Islands, George Washington, Nathan Hale, Israel Putnam, Francis Marion and Thomas Jefferson are just as great figures as they are to any Americans. Washington's Birthday and the Fourth of July are celebrated throughout the Philippine Islands with at least as much fervor as they are anywhere in the United States. What has appealed to the Filipino's imagination in the stories of these men is their supreme devotion to the eternal principle of human liberty; and is it conceivable that, after adoring these heroes and diligently impressing upon the youthful mind the greatness of their services, the same people could, by any possibility, depart from that principle?

On this subject at least all uneasiness may be allayed. The Filipino people hold democracy no less dear than the Americans, the French, the Swiss or any other republicans upon earth, and will be no less ready to sacrifice for and serve it.

6. *What was the record of the islands under the sovereignty of the United States?*

It was good. No Filipino desires to obscure or avoid or belittle the fact that the islands made great progress while they were under the immediate

direction of the American Government. The facts are open to all. Schools were established, roads were built, communication improved and all material ganglia of civilization were stimulated into healthful activity. But please observe that in the five years in which the Filipinos have been entrusted with self-government all these processes of civilization have gone on under native management with no less intelligence and efficiency than before. That being the fact, explicitly acknowledged by eminent visitors, what possible reason can there be for denying to people that have so abundantly and excellently proved their capacity the full exercise of the rights of national individuality and existence?

7. *Is the desire of the people for independence a political desire of a certain faction to get control of the offices, or is it a universal movement?*

It is a universal movement, if there ever was such anywhere on the face of the earth. The charge that the demand for independence is only a device in a political game has the same ground, or rather lack of ground, as the fiction of the Japanese demon, the fiction of intertribal hostilities and the fiction that the Filipino people go naked and eat dogs. Wherever in the history of the world a movement for nationality has come in conflict with profits and the cash drawer, similar fictions have been as plentiful as blackberries. Mankind by this time should be immune to them. Let me say, then, emphatically, and I hope once for all, that there are no politics in the movement for Philippine independence.

The people of the Philippine Islands desire to be free. It is their movement, not the movement of any party faction or set of politicians. It is kept alive and made to grow daily in intensity and seriousness of purpose by the inflexible will of the masses of the people of the Philippine Islands. It is because they want it, plead for it, beg for it, demand it, and will never be satisfied with any-

thing short of it, that the men they elect to office in the Philippine Islands feel agitation for independence to be their first, most solemn and most sacred duty.

It is perfectly true, as opponents of independence frequently and gleefully tell you, that certain individuals in the remote regions of the islands, elderly men on whom civilization and enlightenment have not yet fallen, respond unintelligently or without enthusiasm to inquiries about independence. But these men are few and insignificant. Similarly, in the American struggle for independence you could have found on a remote mountain or in a dense forest settlers untouched by the great movement for liberty that was firing the hearts of the rest of the colonists. Indeed, if I remember correctly, there were Americans—and a considerable number of them—who were called "Tories" and traitors to the national cause, who vigorously opposed it, who even joined the armies of King George, who took gun in hand to fight their countrymen or who fled to Canada to escape inclusion as citizens of the new-born Republic. The number of the natives in the Philippine Islands not with all their hearts and souls in favor of independence is relatively smaller than the number of Americans that in 1776 disgraced their birth and flag by turning Tories.

The charge of selfish motive has been applied by reactionary influences to every person in our history that has taken a prominent part in any movement for freedom. It is the universal weapon of reaction and autocracy. In the American Civil War, everything that Lincoln did and said was described as directed toward his own re-election. A million critics would never for a moment admit that he was capable of disinterested purpose in standing for emancipation and freedom. Washington was denounced all about England as a self-seeker and a land-grabber. Garibaldi was supposed to be carried away by his boyish satisfaction in his red

jacket and sword of command. Even Lafayette was described as an adventurer that joined the cause of American independence merely because he was poverty-stricken.

But, however much endangered autocracy or menaced profits may distort motive or heap up vituperation, the single fact remains undeniable to any reader of history that movements for freedom do not continue from year to year and from generation to generation because of the machinations, wiles, plots, ambitions or designs of any politicians or persons that seek office. Such movements always have had and always must have their roots deep in a universal feeling of the people or they wither in the first noontide of struggle. Movements for freedom are not the manufacture of any man, set of men, group or faction. No man can create them. No man can direct them. No man can restrain them. When a people set their hearts upon liberty and the fire of that desire has entered into their blood, if they be people of any worth or character, they never abandon the struggle until they have won; and the individuals that stand in the way, or individuals that help along the movement are not of enduring importance. It is the people and the people alone that count, and unless America has most strangely and lamentably fallen away from ancient and honored standards that fact is just as certain in the mind of every American as is the fact of his own existence.

8. *If left to a vote, what percentage of the people would vote for absolute independence from the United States?*

This is a question that will have to be determined without the assistance of directly bearing statistics, for the reason that it has never in that exact form been submitted to the vote of the people. But it has been submitted to their judgment and decision in other ways, and from the verdict they have given it is possible to arrive at an approximate estimate of their judgment.

I call special attention to the fact that the Government of the Philippine Islands, under the Jones law, is vested chiefly in a Legislature of two Chambers, elected by the vote of the people. Every such Legislature has unanimously adopted a resolution or an address asking for complete independence from the United States. The Representatives and Senators that have voted for these resolutions, that have voted for appropriations to defray the expense of agitation for independence, that have in every conceivable way voiced the demand for it, go back to their respective constituencies for the review of their legislative service. These men, conspicuous in the independence movement and with records of repeated votes in its favor, are re-elected practically without opposition on that score. For the fact is that every political party in the Philippine Islands is committed to independence. There is no issue at the polls between independence and the continuance of the present relation, because no native in the Philippine Islands sufficiently desires the present relations to express that desire in a vote.

The intense enthusiasm that is invariably aroused in any assembly of Filipinos anywhere in the islands by even so much as a mention of independence is a satisfactory gauge of the state of the public mind. If any one doubts that the masses of the Philippine people are overwhelmingly in favor of separation, and separation at once, such a one can easily ascertain how just is the basis of his doubt. Let him go to the Philippine Islands. Let him arise in any public assembly of natives, oppose independence, and argue in favor of a continuation of the present relation. I should estimate that the time required to eliminate all doubt from his mind might be about ninety seconds.

This, it is to be understood, represents the state of mind in all parts of the islands, north as well as south. It is customary and has often been convenient to picture the people of the Philippine Islands as carrying on

irreconcilable feuds among themselves. For instance, the inhabitants of the southern islands are supposed, by a fiction, to be very much incensed against the inhabitants of the northern islands. It is even said that a Moro or southerner would much rather be governed by an American or by a Spaniard than by a fellow-Filipino from the north. This again has been proved by abundant experience to be a preposterous and a malicious invention. The people of the Philippine Islands, north and south, are of one mind in regard to independence.

Let me call attention to one significant fact, from among many that might be cited, of a nature to make all this clear to every intelligence. You will find in southern towns and cities—as, for instance, at Zamboanga, a capital city of the southern country—memorials or monuments to Rizal or to other heroes of the Philippine struggle. These are erected by the public as expressions of a certain feeling. What is that feeling? It is that these men suffered for Philippine independence, and it is this alone that is commemorated in them. Dr. Rizal, it is true, was a man of extraordinary endowments and achievements in many directions, but great as he was, he would be today without a monument if he had not given up his life in the Philippine cause. The same is true of other men whose names adorn Philippine streets, squares, schools, buildings and the like. Every one of them is dear to the popular imagination, north and south, but dear only because of his contribution to the one cause which the Filipinos have never for a moment lost sight of, that their country should be free.

They ask to be free and they feel that the time to set them free is now. They have demonstrated their complete ability to conduct an efficient Government, answerable to the sternest tests of modern society. The laws that in the last five years have been passed by the Philippine Legislature, which is composed entirely of na-

tives, may be placed side by side with the laws passed by any other legislative body in the world in the same period and will not suffer in any point of comparison, whether for clearness, reasonableness, logicity or conformation with the highest ideals of modern governmental science.

The percentage of literacy in the Philippine Islands today is far higher than the percentage of literacy in the American Colonies when they won freedom; the number of minds trained to carry on government by its best methods is much larger; the justice of the Philippine claim to freedom is at least as good; and we come now before the American people, the arbiters of this great question, and

say, "We stand here for justice. Shall we have it?"

It is not possible to convince the people of the Philippines that to this question, of such overwhelming importance to them, the answer will be in the negative. You cannot, by word of speech, convince a Filipino that America will prove recreant to its faith or place itself in the category of nations whose only morals are their pocketbooks. Only one thing could possibly bear this conviction down upon my countrymen. It would be the adverse action of the American people themselves; and the collapse of the Filipino's faith in and friendship for America that would follow such a demonstration would not be less than a historic catastrophe.

THE MEMOIRS OF PRINCE WINDISCHGRAETZ

BIOGRAPHIES and memoirs of former great statesmen, diplomats, High Admirals and Field Marshals have multiplied since the conclusion of the war. A new contribution to historical material of this kind has recently been made by Prince Ludwig Windischgraetz's book, "My Memoirs," now published in English translation by the London firm of George Allen & Unwin. This work is beyond question one of the most vivid accounts yet written of the fall of the Hapsburg monarchy. Prince Windischgraetz, as former Hungarian Food Minister and confidential adviser to Emperor Charles, was in a position to know the truth of the fall of the Austrian Empire. Prejudiced, bitter and resentful, the haughty and megalomaniac trend of the great aristocrat is eloquently expressed in such phrases as "A Windischgraetz always knows best," or "Before the cock crowed thrice, he had betrayed me." With a picturesque and epigrammatic pen, the Prince portrays a society strangely like that revealed by the author of "The World's Illusion," brilliant, decadent, swathed in "Spanish etiquette of the spirit," dissipated, entertaining, filled with eccentric characters, facile causeurs, horse racing devotees, and so on.

Vivid pictures are given of the old Emperor, displaying flashes of good will, but

imprisoned in formalism as in a strait-jacket; of Count Berchtold, "the true after-dinner type; an interesting converser on Gobelins, women and horses; of Count Tisza, as grim and dour as a Calvinist-schoolmaster, yet dancing in his shirt-sleeves, with passionate abandon, to the wild music of a gypsy orchestra; of Count Karolyi, ridiculed in youth on account of the silver palate in his mouth, a reputed dandy and idler, who quite suddenly, with grim determination, began to train himself for the career of a public man.

The memoirs show how the ruin of Austria galloped on apace after the death of old Francis Joseph and under the reign of his successor, young Emperor Charles. Perhaps the most dramatic moment of the book is the account of the momentous session of the Hungarian Parliament on Oct. 18, 1918, when, after the Prime Minister's weaving of rose-colored clouds of camouflage, Karolyi rose and uttered the cry of revolution. In tense silence the House waited for Tisza to crush Karolyi like a worm. Tisza raised his huge bulk, and to the amazement of all, disavowed Wekerle's roseate picture, and admitted Karolyi's sombre depiction of the situation as correct. "We are beaten," he concluded. He sank back on his bench, "a huge stag which had received its death blow."

THE BOROBOEDOER, A BUDDHIST TEMPLE IN MIDDLE JAVA

HOLLAND'S COLONIAL EMPIRE

BY SPENCER BRODNEY

How the far-away Islands of Java, Sumatra and Borneo came into the possession of little Holland, making her rich, and why they are now a burden—Their defense against possible Japanese aggression a problem for the Disarmament Conference

HOLLAND, in these days one of the smallest and least powerful of nations, has retained until the present time a great colonial empire which she won three centuries ago. It is an empire in the far eastern seas—a rich cluster of islands, vast in extent, glowing with the beauty and warmth of tropical luxuriance, varied and abundant in natural resources, already highly productive, and still more bountiful in promise

for the future. Because of these possessions, known as the Dutch East Indies, Holland has been invited by President Harding to take part in the Washington conference on matters affecting the Pacific and Far East.

Although Holland no longer counts as a great naval or military power and cannot hope to measure swords with the dominant nations of today, so intense is her anxiety about her colonies that she is being driven into

organizing a scheme of defense for her East Indian possessions more costly than she can bear. This scheme, it is openly stated in the Netherlands, is to be primarily for protection against Japan. But the Dutch would much rather not have to assume the serious financial burden of a larger and stronger colonial fleet. A settlement of the clashing interests of the great powers with guarantees for the integrity of the Dutch possessions is the end most devoutly wished for by Holland.

The Dutch East Indies are not the only colonies belonging to Holland. She also has Surinam (Dutch Guinea) and Curacao in the West Indies, with a total area of about 50,000 square miles, which is only a fraction of the size of the eastern empire. Being assured by the Monroe Doctrine of their security from the designs of other nations, the Dutch mind is quite at ease about the West Indian possessions.

To appreciate the vast oversea interests of Holland we must turn to that great region of the globe stretching from the southeast of Asia to the northwest and north of Australia, generally designated as the Malay, or Indian, Archipelago. Here are Sumatra, Java, Borneo, Celebes, New Guinea and innumerable other islands, large and small, of which by far the greatest portion comes under the jurisdiction of the Governor General

of the Dutch East Indies. Holland itself has an area of a little over 12,000 square miles, which is about the same as that of Maryland, and a population of 6,000,000, which is only a little more than that of New York City. On the other hand, the territorial extent of the Dutch East Indies is equal to the combined area of Texas, California, Arizona, Nevada and Colorado, with a population about half that of the United States. Approximately the area of the different islands, portions of islands and groups of islands which belong to Holland is as follows:

HOLLAND'S COLONIAL POSSESSIONS

Name of Island.	Square Miles.
Java and Madura	51,000
Sumatra	163,000
Dutch Borneo	214,000
Celebes Islands	73,000
Molucca Islands	44,000
Timor Archipelago	18,000
Dutch New Guinea.....	154,000
Other islands	27,000
Total	744,000

The colonial possessions of other nations in the same regions are: The Philippines, including the Sulu Islands, which belong to the United States, about 128,000 square miles; British East Indies, comprising British North Borneo, the island of Labuan and the protectorates of Brunei and Sarawak, about 31,000 square miles; British New Guinea (Papua) and former German New Guinea, now under Australian administration, 158,000 square miles,

HEAVY LINE ENCLOSES THE DUTCH EAST INDIES, THE ISLAND EMPIRE IN THE PACIFIC, RULED FOR CENTURIES BY HOLLAND

and the eastern portion of the island of Timor and the neighboring island of Pulo Cambing, which belong to Portugal, about 6,500 square miles. From this it will be seen that Holland has the lion's share. In the absence of recent census figures, the estimated population of the Dutch possessions may be set down at about 50,000,000.

From the Dutch East Indies come large quantities of a great variety of products—coffee, tea, sugar, rice, sago, palm oil, tobacco, indigo, rubber, petroleum, gold, silver, tin and other metals, and numerous minor commodities, including cinchona and the spices which centuries ago attracted the merchant adventurers of Europe and sowed the seed of bitter commercial rivalries and wars of conquest.

HOLLAND'S ERA OF EXPANSION

To learn by what series of events Holland won her empire in the east we have to turn back to one of the

great dramas of European history, the long struggle against Spain which led to the creation of the Dutch Republic, its attainment of the status of a free and independent nation, and its rise as a mighty commercial and maritime power. But long before that the traders of the Netherlands nursed a bitter grievance against the Spanish and Portuguese Governments. By a bull issued by Pope Alexander VI. (Rodrigo Borgia) in 1502 both the eastern seas and the western ocean were closed to all but Spanish and Portuguese ships. Simply by tracing a line on a map the Pope, in 1493, had bestowed upon Spain the whole of the Americas west of a certain line running through Brazil, and upon Portugal all the new countries east of that line. In the terms of the bull the King of Portugal was constituted "lord of the navigation, conquests and trade of Ethiopia, Arabia, Persia and India."

The Portuguese were the first to explore and establish settlements in

the Indian archipelago and develop the sea-borne trade with the East by way of the Cape of Good Hope. Until 1580 the Dutch, who had already smashed the sea power of Spain, did not attack the Portuguese, but in that year—it was the year after the Dutch had definitely declared their independence—the King of Spain became also the King of Portugal and succeeded to the Portuguese domain in the East Indies. The Dutch, who had been trying to find a trade route to the Orient by land, now struck out boldly to reach their goal by sea. In this they were helped by the bitter animosity which had grown up between England and Spain and by the total inability of Spain to defend her widely scattered possessions after the loss of the Invincible Armada in 1588.

The Dutch, having established their right to sail the seas formerly

closed to them, began to send expeditions to the East Indies by way of the Cape of Good Hope. The first, under Houtman, left Holland in 1595 and visited Sumatra and Java. Private companies for trade with the East were formed and became so successful that within three years they were already firmly established and drawing on themselves the enmity of English merchants. The main object of the Dutch was to corner the supply of pepper and spices and control the sale at monopoly prices. Out of this rose the fierce rivalry between Holland and England, resulting in wars and the eventual destruction of Dutch sea power, but not, as might have been expected, in the loss of the Dutch East Indian possessions.

The commercial value of pepper and spices in those days is indicated by the fact that the Moluccas were for a long time known as the Spice

(Netherlands Chamber of Commerce, New York)
PRIMITIVE FERRY OVER A MOUNTAIN STREAM IN THE PICTURESQUE ISLAND OF JAVA

Islands. Spices were relatively more important because, as one historian explains, there was not then, as now, the same varied abundance of vegetables. Pepper was the most profitable article of the Eastern trade. When the Dutch merchants created a monopoly in its sale and raised the price from about 70 cents to between \$1.50 and \$2 a pound, the English were up in arms. The merchants of London got together, formed a company to trade directly with the East and had it chartered by Queen Elizabeth. This company, the first of several finally merged in the East India Company, which laid the foundations of the British Indian Empire, started modestly with a capital of \$350,000. The merchants of Holland, not to be outdone, two years later, in 1602, amalgamated their various Eastern trading associations as the Dutch East India Company and boldly commenced operations with a capital of several million dollars. This corporation was more closely identified with the Government than the English company and was chartered by the States General, with vast monopolistic rights and privileges. It soon acquired a large fleet of trading vessels and set to work not only to expel the Portuguese from the East Indies, but also to prevent the English from obtaining a foothold there. The Dutch succeeded almost entirely in both objects. The Portuguese were left with nothing but a few scraps of territory and the English were forced back on the mainland of Asia. During the seventeenth century, the period in which Holland was the greatest maritime power in the world, the Dutch East India Company prospered exceedingly. The record of the dividends it paid shows that it was one of the biggest profiteering concerns in history.

POLICY OF MONOPOLY

The opening of the eighteenth century saw a change in the affairs of the company. Although Dutch control of the East Indies had been ex-

tended and consolidated, the company became involved in financial difficulties. In the strictest sense, the Dutch did not colonize. They had no conception of the modern method of settling people on the land and increasing production or guiding it into more useful channels. The sole aim of the Dutch was trade, and they traded under the mistaken idea that profits were to be made only by monopolies. The English in India and Ceylon were now keen and vigorous competitors, determined to break up the Dutch monopoly in the spice market. The Dutch company was, moreover, burdened with the heavy cost of maintaining armed forces and the expense of administering the colonies. Dishonesty among officials and other evils also affected the financial security of the corporation. In 1783 Great Britain finally

destroyed the sea power of Holland and won the long fight for the freedom of the spice market. As the century drew to its close the affairs of the Dutch East India Company went from bad to worse. In 1794 it ceased to carry on business, and in 1798 was dissolved.

Control of the colonies was assumed by the States General, and several honest and energetic Governors General were sent out to retrieve the situation. The best-remembered of these Viceroys was Daendels, whose administration lasted from 1808 to 1811. He saw that the colonies could not succeed by trade only, but that attention must be given to production and to the many requirements of an undeveloped country. He introduced improvements in agriculture, and, by having 40,000,000 coffee trees planted, founded one of the

most successful of the present industries, Java today being one of the chief coffee-growing countries of the world. Daendels initiated better relations with the natives, gave consideration to education and religion, undertook important public works by a system of forced labor, wiped out corruption among his subordinates, reorganized the administration and strengthened the defenses of the colonies.

Then for a short time the Dutch lost their East Indian possessions. The British seized them and placed Sir Stamford Raffles in charge. Under his administration reforms, particularly in the system of land tenure, were introduced, and the new rulers made themselves liked by the natives. In the European settlement following the downfall of Napoleon the Dutch regained posses-

sion of their own country, and it was decided that their colonies also should be restored to them, but with two important exceptions—Ceylon and the Cape of Good Hope, which were retained by Great Britain. In 1816 Dutch rule was resumed in the East Indies, but not without considerable friction with the natives, who had learned to prefer their English masters.

Although the prosperity of the colonies has increased during the past century, they have not been a bed of roses for the Dutch Government. After the withdrawal of the British a critical situation began to develop in consequence of a new attempt to make money out of a monopoly. Coffee was now the principal, if not the exclusive, staple product. The Government, needing more revenue, passed a decree that the natives should cultivate coffee under the superintendence of the authorities and hand over 40 per cent. of the crop for disposal in Holland. As the sale of coffee to foreigners was forbidden, the natives were unable to do anything with the remaining 60 per cent. of the crop by legal means. While the Government could maintain its control of the sale of the coffee its profits were enormous. But a contraband traffic sprung up and destroyed the monopoly. Large quantities of coffee were smuggled to China and there bought by competitors, who forced down prices. A deficit in the Government finances had to be met by a loan, and many firms engaged in the East Indian trade went bankrupt. In 1824 the King of Holland tried to end the crisis by taking the lead in the formation of the *Nederlandsche Handel Maatschappij* (Dutch Trading Society), which subsequently became and remains today one of the leading banking and commercial institutions of the world. But the situation grew worse. The natives of Java, for whom the monopoly which the Government tried to create meant little less than slavery,

broke out into open rebellion. For five years, from 1825 to 1830, the Dutch were unable to restore order. At last matters became so serious that the Government of Holland was almost about to abandon the island.

INTRODUCING MODERN METHODS

At this critical moment the famous Van Den Bosch came on the scene as Governor General of the colonies. Commencing his administration in 1830, he pacified the natives and began to establish the system known by his name. A vast improvement, it nevertheless retained some of the vices of the previous regime and of the Dutch East India Company. Instead of letting Java depend solely upon coffee growing, he decreed that the natives should devote one-fifth of their land to the raising of different crops for which there were good markets in Europe, such as rice, sugar, tobacco, spices, indigo and tea. Dutch rule was substituted for that of the chiefs, and relations with the natives were placed upon a better basis. One of the bad features of the Van Den Bosch regime was the introduction of forced labor. The natives were compelled to give one in every five of their working days to the State. However, agriculture flourished and the output of coffee and sugar was doubled in a few years and excellent results obtained in the production of tea, tobacco and other commodities. Trade and shipping increased and the population multiplied. Many foreigners, especially Chinese, were attracted to the Dutch East Indies. In 1838 the large island of Sumatra was added to the existing possessions. The Van Den Bosch system remained in operation till 1850, when it was found necessary to introduce various modifications. Since then the chief tendency in the policy of the colonies has been to grant increased scope and opportunity to private enterprise, and the Government has withdrawn from several industries which it formerly carried on for revenue purposes.

The Dutch for the most part have been successful in their handling of the natives, who today are said to be so contented with their rulers that they would not transfer their allegiance to any other nation. But there is one black page in the record. For thirty years from 1873 the Achinese in the northern extremity of Sumatra resisted the Dutch authority, and there was almost constant fighting and skirmishing. Again, from 1902 to 1909 the Achinese were in rebellion. Between 1905 and 1907 there was also fighting in Borneo and the Celebes. It has been alleged that the Dutch waged war with barbarous cruelty and did not spare the non-combatant population. During the fighting in Achin in 1904 a thousand women and children were killed by the Dutch troops. When the matter was debated in the States General, the Colonial Minister, on behalf of the Government, said that he deplored the death of so many women and children, but, he added, the Dutch army had no alternative to making war to the bitter end. Some of the members of the States General urged that if such barbarity were necessary, it would be better to get rid of the colonies. Another argument put forward was that in any case it would be wise to sell the East Indies before the great powers seized them. As the result of these and later discussions, reforms were effected and peace restored. Forced labor, for example, was abolished in 1914.

The natives belong to the Malay-Polynesian and Papuan races. In the less developed portions of the islands they are nearer to the ways of primitive savagery. But the troubles with which the Dutch have had to contend have not been due to lack of civilization among the natives so much as to the fact that native rulers claimed the control of trade, mines, oilfields and other sources of wealth in their respective territories. There are still many local Sultans and chiefs who in theory are not subject to the Dutch Government, the rights of the

latter being established by treaties and declarations, some of which were made over a century ago. With the increasing wisdom of experience the Dutch have in the last few years begun to harmonize the necessities of economic development with the principle that due regard should be paid to the rights and interests of the native population. The bureaucratic and centralized character of the administration is now being modified by the policy known as "the emancipation of native government."

GOVERNING THE ISLANDS

The scheme of government of the Dutch East Indies is this: The Parliament (States General) of Holland is the supreme legislative authority. The home Government has power to make regulations in the form of royal decrees and has a body known as the Council of the Dutch East Indies to advise it both as to new legislation and executive acts. The colonies are actually administered in the name of the monarch by a Governor General, who has his headquarters in Java. He has both legislative and executive powers, but subject to the acts of the States General and the regulations and instructions of the home Government, and he carries on his administration in consultation with the heads of the different departments, who form a kind of cabinet.

At the end of 1916 the States General for the first time introduced an element of democracy into the Colonial Government by passing an act to create a representative body called the People's Council (Volksraad). The Council consists of 39 members. The Chairman is appointed by the Crown; 19 members—5 natives and 14 Europeans and foreign Orientals—are nominated by the Governor General after consulting the Council of the Dutch East Indies; and the remaining 19 members—10 natives and 9 Europeans and foreign Orientals—are elected by members of local councils. The Governor Gen-

eral is compelled to consult the People's Council on the budget, the raising of loans, proposed ordinances to impose military duties on the inhabitants and other matters prescribed by the home Government. He may, if he so desires, consult the Council on any other subject. The Council, which assembled for the first time in May, 1918, is, of course, a long way from being a real organ of democracy, but is very much like similar bodies which in the British colonies were the embryo of complete self-government.

For administrative purposes the colonies are divided into two sections: Java, with Madura (a neighboring island), and the Outlying Possessions. Java is the most highly developed of all the islands and has about 37,000,000 of the 50,000,000 population in the Dutch East Indies. Here the Government has direct control and has also gone furthest in carrying out its policy of decentralization. In the Outlying Possessions the variations in the forms of administration are greater, according to the extent to which the territories have been explored and brought under control. There are still regions which have not been completely penetrated and the natives of which know no authority but that of their own chiefs. In other parts of the islands the native rulers have full power under treaties or agreements. Where a native chief remains ruler the Government is represented by a resident. In the directly controlled divisions the native officials of the highest grade exercise considerable authority. They are known as regents. Subject to having the necessary qualifications, the position of regent is hereditary. He is the head of the native population and adviser to the Dutch official in charge of the division, or regency. There are various other grades of native officials, whom the Dutch take care to fit for their duties by instruction in special training schools and the Civil Service College in Batavia, the capital. Local government has been initiated by the establishment of pro-

vincial councils in Java and district and town councils in both Java and the Outlying Possessions.

No account of the population of the Dutch East Indies would be complete without a reference to the foreign Orientals, who now number about 900,000. They are principally Chinese and Arabs, with the former the larger and more important element. The Chinese are mainly occupied as merchants, storekeepers and cultivators, and have many large business interests and valuable estates. Chinese coolies are employed in growing tobacco and rubber and in the tin mines. The Arabs came with the opening of the Suez Canal and are mostly small dealers or coastal seamen. So that the Government may cope with the foreign Orientals more easily, official advisers and intermediaries are appointed to co-operate with the Dutch administrators and given the rank of Chinese Majors, Captains and Lieutenants. As stated, the foreign Orientals have the right to be represented on the People's Council.

ISLANDS NO LONGER PROFITABLE.

The immense fertility of the soil, the ideal tropical climate, the variety of agricultural production, and the valuable mines and oilfields make the Dutch East Indies a possession worth keeping and, if need be, fighting for. Dutch enterprise has for three centuries benefited enormously from the island empire. But to the Dutch Government during the greater part of the last half century the colonial administration has been a financial burden. At one time the sale of the products of Government industry yielded a handsome surplus over the expenses of administration, but the withdrawal of the Government from business, the cost of native wars, and the necessity of carrying out public works and introducing reforms have converted a profit into a loss, which has to be made good by the taxpayer. The Dutch have done splendid work in improving ports and harbors, building docks, deepening rivers,

constructing roads and bridges, erecting public buildings, making cities sanitary, caring for the health of the natives, extending education and generally raising the standard of civilization. All this has meant vast outlays of money, and, if steps have to be taken to defend the colonies against the designs of more powerful nations, the financial drain must become much more severe.

The possibility of any aggression that might deprive them of their possessions has had a profound influence upon the Dutch. They have learned that their best way of dealing with the natives is to make them contented and loyal. By maintaining an open door policy to all and inviting the co-operation of foreign capital, industry and science, other nations have been conciliated. Throughout the world the Dutch have endeavored to influence public opinion in favor of disarmament. But at the same

time, if peaceful methods should be of no avail, Holland is determined, if she can, to hold her colonies by armed force, and for that purpose has devoted much attention to naval defense. In 1913 the Commission on the Defense of the Dutch East Indies declared it necessary to build a fleet to protect the colonies and proposed the following program: 9 dreadnoughts, 6 torpedo destroyers, 8 destroyers, 44 torpedo boats and 22 submarines. The creation of the new navy was already under way when the World War broke out. At the time when the Disarmament Conference was called, Holland was planning still further to strengthen this fleet because of fear of Japan. Thus, though the Dutch delegates to the conference are not expected to take an active part in deciding the question of reduced armaments, they are as deeply interested in it as the larger powers.

GERMAN MISSIONARIES IN BRITISH COLONIES

LEGISLATION has been passed by all the British overseas colonies and protectorates prohibiting the entrance of any former enemy alien for a period of three years following the conclusion of the war. The World Alliance for Promoting International Friendship through the Churches has recently made an attempt to secure the raising of this ban in favor of German missionaries. A letter sent by the executive of this organization to the British Secretary of State for the Colonies toward the end of July elicited from the Secretary a reply in which he made the following statement:

As regards ex-enemy missionaries, I am to state that experience during the war showed that certain foreign societies and individuals were unable to prevent their national instincts from influencing their conduct to a degree incompatible with the due exercise of their proper functions, and prejudicial to the security of the territories in which they were working.

Consequently, apart from the restrictions applying to former enemy aliens generally, it is considered that missionaries of alien nationality cannot be permitted to carry on work in the colonies and protectorates without adequate guarantees that they will confine themselves to their proper functions, and abstain from any activities calculated to interfere with harmonious relations between the native races and the constituted authorities.

An exception, however, the Secretary added, would be made in the case of "individual German missionaries of unimpeachable antecedents * * * subject to their being under the control of a British, allied or associated subject in the colony, and to their being vouched for by a responsible British ecclesiastical authority." In view of the exceptional circumstances still prevailing in the mandated territories, said the Secretary, a considerable degree of supervision would be necessary for some time to come.

THE BRITISH EMPIRE AND THE UNITED STATES

BY J. ELLIS BARKER

Remarkable changes that have reversed the standing of the two nations in financial and industrial strength—England's proposal of the Monroe Doctrine, and her support of it throughout the century of its existence—Necessity that the two great English-speaking nations should stand together

THE relations between England and the United States have greatly changed, not so much owing to the war as owing to the natural progress of events. In the past England was far ahead of the United States in population, in wealth and in economic power. The great struggle of 1914-18 has not caused, but has merely accentuated, the vast predominance of the Republic in numbers and in economic strength. The gradual change which has taken place between the two States may summarily be expressed as follows:

Population of United Kingdom.	Population of U. S., Excluding Alaska and Pos'sns.
1821.....21,272,187	1820.....9,638,453
1831.....24,392,485	1830.....12,860,702
1841.....27,036,450	1840.....17,036,353
1851.....27,724,056	1850.....23,191,876
1861.....29,321,288	1860.....31,443,321
1871.....31,845,379	1870.....38,558,371
1881.....35,241,482	1880.....50,155,783
1891.....38,104,975	1890.....62,947,714
1901.....41,976,827	1900.....75,994,575
1911.....45,216,665	1910.....91,972,266
1921.....42,767,530	1920.....105,683,108

*Ireland's population is omitted from this figure, as no census was taken in Ireland in 1921.

In 1820-21 the population of the United Kingdom was more than twice as large as that of the United States. In 1860-61, before the Civil War, the population of the two countries was approximately equal, but England was far wealthier than the United States because the American indus-

tries were in their infancy, while England was, in the words of Cobden, "the workshop of the world." In 1910-11 the United States had more than twice as many inhabitants as the United Kingdom. Within ninety years the relative importance of the two countries had been completely reversed.

In the middle of the last century England dominated the world with her industries and commerce. At that time she produced two-thirds of the world's coal and two-thirds of the world's iron and steel. She turned two-thirds of the world's cotton into manufactured goods and owned two-thirds of the world's shipping. She financed all the powers, and English engineers built with English money railways and factories without number all over the five continents. The United States was an agricultural nation, which seemingly was destined always to be dependent upon English finance and industry. Steam was conquering the world. Coal was the basis of industry and of wealth, and it was believed that England would always predominate in industry and commerce, because nature had endowed that country with a superabundance of cheap coal. English experts expressed the opinion that the United States could never become an important industrial country, because the American coal fields were sepa-

rated by vast distances from the sea border. Besides, while in England coal and iron occurred close together, these two minerals were separated in the United States by a thousand miles.

American energy and ingenuity have overcome these hampering factors. According to present geological knowledge, the United States has more than twenty times as much coal as the United Kingdom, and America's superiority over England in water power, in oil, in minerals of every kind, and in raw products required in industry, is absolutely overwhelming. America's population and wealth have increased principally in the towns, owing to the extraordinary development which trade and industry have taken. According to conservative estimates, the United States may have 250,000,000 inhabitants in the year 2000 and 500,000,000 inhabitants in the year 2100. Apparently the United States is destined to eclipse completely the small islands in the North Sea.

England's inferiority to the United States is due not only to the smallness of the area of the United Kingdom and to the scantiness of its resources, but also to the fact that industrial efficiency is far greater in the United States than in England. Analytical comparison tends to show that production per worker is three times as great in the United States as in the United Kingdom. From the industrial point of view England has not 45,000,000 inhabitants, but only 15,000,000 inhabitants. However, this artificial difference may be overcome by the Americanizing of the British industries, which is inevitable, unless England is willing to sink to the rank of a third-rate power.

It has often happened in the history of the world that mighty empires have declined and decayed because their territorial basis was too small. All the great sea empires of the world, from Phoenicia and Athens to Venice and Holland, have grown great and powerful because the nar-

rowness of their territories compelled the inhabitants to seek a living overseas and caused them to become great seafarers and colonizers. The few square miles of Sidon, Tyre, Athens, Venice, Holland and other States became, through the pressure of circumstances, the centres of far-flung sea empires, and the greatness of each of these was destroyed because the strength of the motherland was not sufficiently great to defend her vast possessions. Will England have a similar fate? Before considering this question, let us take note of the changed relations between the United Kingdom and the United States.

GROWTH OF FRIENDSHIP

For decades the bitterness caused by the war between England and the American Colonies rankled on both sides of the Atlantic. Americans saw in England a tyrannic power which had desired to enslave them. Englishmen, on the other hand, looking at the matter from the English point of view, brooded on the wrongs which they had suffered at the hands of men of their own race. However, in the course of years the old grievances and hatreds became less exasperating to the thoughtful on both sides. Americans learned to appreciate England, and Englishmen began to understand the mistakes which their forefathers had made in dealing with the American Colonists. The two nations began to draw together once more. Intermarriages became more and more frequent. Eminent Englishmen were received with open arms in America, and eminent Americans were warmly welcomed in England. Abraham Lincoln is probably as much venerated in the one country as in the other, and the Fathers of the Republic are no longer considered as rebels by intelligent Englishmen. Washington and Franklin, Hamilton and Jefferson have become heroes in the eyes of all men who speak the English language.

Had England been animated by strong anti-American feelings she

might have inflicted serious damage upon the United States. However, England has pursued in the past not so much a policy of interest as a sentimental policy. She has seen in the United States a rising power of her own blood, and the maternal instinct has prompted her to defend the young Republic against those who wished to destroy it. After the Napoleonic wars reaction swept over Europe. The powers wished to subdue the Spanish colonies in America which had revolted against the motherland. Their intentions were foiled by the proclamation of the Monroe Doctrine.

It is not generally realized that England is largely responsible for the promulgation of the Monroe Doctrine. It is true that English and American historians do not agree as to whether England or America was chiefly responsible for its proclamation. It is, however, a fact that Mr. Canning, the British Foreign Secretary, after revealing to Richard Rush, the United States Minister to Great Britain, the intentions of the Continental Powers, urged on him in a letter dated Aug. 20, 1823, the formulation of an American policy of resistance to European encroachment on the American Continent, and intimated that Great Britain would be ready to join with the United States in a common declaration to that effect. This offer becomes remarkable when one reflects that the War of 1812 was still fresh in the memory of all Englishmen. The proposal was communicated by Mr. Adams, the American Secretary of State, to Mr. Monroe, the President of the American Republic. Monroe wisely consulted Jefferson and Madison, his predecessors in office, and they approved the idea; finally, on Dec. 2, 1823, President Monroe published his annual message, in which the now famous Monroe Doctrine was clearly and decisively formulated.

In the United States, however, the fact that England played such an important part in formulating and de-

claring the Doctrine is scarcely ever mentioned. Nor is it generally realized that Great Britain has consistently defended it by placing her fleet between the military powers of Europe and the United States, and that Great Britain is, and always has been, as strongly opposed to colonization of the New World by any of the great military powers of Europe as is the United States itself. What one ought, in justice, to call the Canning-Monroe Doctrine is also a leading principle of British Foreign policy. It is an Anglo-American Doctrine.

Great Britain showed her protective feeling for this Doctrine on repeated occasions. She withdrew from the Mexican adventure of Napoleon III. as soon as she recognized Napoleon's aim, and refused Napoleon's proposals of pressing on the States of the North and of the South an armistice which would have led to the perpetual division of the American Republic. During the Spanish-American War Great Britain supported the United States against Germany before Manila, and she refused to support or to countenance European intervention. Though in 1902 she was induced by Germany to join the blockade of the ports of Venezuela undertaken for alleged flagrant wrongs done to German citizens, she withdrew her participation as soon as she saw Germany's hidden aims. All suggestions made by the Germans relative to the establishment of a Greater Germany in Brazil and other South American countries met with an unconditional refusal on the part of England, though political considerations would have made this possibility of embroiling Germany with the United States exceedingly profitable to Great Britain. So reads the historical and diplomatic record, and always it shows Great Britain in the role of the protector of the Monroe Doctrine.

Her motive in this has been one of sentiment, based upon the principle of racial solidarity. This principle has led her also as a builder of empire.

She has constantly striven to enlarge her dominions, not in order to exploit them—it is very doubtful, indeed, whether on balance her possessions yield a profit to the motherland—but in the instinctive desire of reserving the vast and fruitful territories of the New World to the Anglo-Saxon race. Therefore she views not with jealousy, but with approval, America's prosperity and America's expansion. She has had many opportunities to expose the United States to the greatest dangers, without any risk to herself, by merely allowing the European powers to attack them; but she has steadfastly resisted their temptations to countenance European aggression.

THE LOGIC OF ALLIANCE

During many years previous to the war many people in England, among them the writer of these pages, urged the conclusion of an Anglo-American alliance, or even an Anglo-American reunion, on the plea that British civilization and American civilization are so closely akin as to be practically identical; that England and the United States combined should jointly face the danger of a German attack which threatened democracy in both countries, and that the best guarantee for the preservation of peace throughout the world lay in the cordial co-operation of these two States, which would be irresistible if they were united by one purpose. Had there been such an alliance or such a union, the great war would never have occurred.

Germany has been defeated and disarmed, and the short-sighted have proclaimed that militarism is dead, that an Anglo-Saxon union in some form or other is henceforth unnecessary. That idea has contributed to some extent to the slight estrangement which followed the period of stress when England and America fought shoulder to shoulder. The States of the British Empire and the United States are the only countries in the world where democracy is firmly established and where it has been a success. Whether the other

nations of the world which have introduced the democratic form of government will succeed in retaining it seems doubtful. Powerful monarchies with aggressive designs may arise once more in Europe and threaten the peace of the Anglo-Saxon nations. Other dangers also may be impending. It is not written in the book of fate that the white races were created to dominate the earth, or that Providence intended the Anglo-Saxon nations to own nearly all the most desirable portions of the world. The greatest wars of all times have been caused by the economic factor. Nations have always fought for territory; land means bread, means wealth. There is great danger in the fact that the most numerous and the most industrious races of the world are cooped up within narrow bounds and are subject to poverty and periodical famines, while the Anglo-Saxon race possesses boundless thinly populated lands from which it rigidly excludes the teeming millions of the East. How thinly the United States and the British Empire are peopled may be seen at a glance by the following table:

Nation.	Year.	Population.	Sq. Mile.
United Kingdom.....	1911	45,216,665	372.6
Japan	49,582,505	335.8
Germany	1910	64,925,993	331.0
Italy	1911	34,687,000	313.5
China proper.....	..	407,253,029	266.0
Austria	1910	28,571,934	246.7
France	1911	39,601,509	191.2
Hungary	1910	20,886,487	166.6
Russia in Europe.....	1897	105,413,775	55.2
British Empire.....	1911	417,148,000	36.8
United States and possessions	1910	101,840,367	13.7

The British Empire and the United States have room for hundreds of millions of people. Therefore it is only natural that the European States, which have a population of 200 or 300 people and more per square mile, look with longing and envy to the vast, fruitful, highly mineralized and thinly populated territories, situated in a temperate zone, which are owned and controlled by the Anglo-Saxon nations, and their resentment is increased by the fact that these

hold in addition all the most important strategical points which command the approaches to their world-wide possessions.

The continent of America lies midway between overpopulated Europe and overpopulated Asia. How thinly some of the most desirable parts of the United States are populated is seen by comparing California or Oregon with some of the provinces of China or with Japan, or by comparing Texas with France or Germany. California is larger than Japan, and Texas is considerably larger than was the German Empire in 1914. There is probably little danger of a war occurring between Japan and the United States. It is absolutely inconceivable that England should support Japan in such a war. However, there is a great danger that China may follow Japan's footsteps. That country would be far more dangerous than Japan, because the Chinese are abler men than the Japanese, are far more numerous, and possess infinitely greater natural resources. At present it would seem fantastic to expect Asia to challenge the white race. However, more fantastic things have happened in the past. When Julius Caesar landed among the savages of England, he would have laughed aloud if a seer had told him that the Roman Empire would be destroyed by the barbarians, that the Roman language would disappear, and that the savages of Britain, who were dressed in skins and who painted their bodies with woad, would conquer and rule and civilize the world and direct empires infinitely greater than that controlled by Imperial Rome. The great French statesman, Sully, wrote less than three hundred years ago that France was, and always would remain, the dominant power in Europe because she was the foremost State in the world by the number of her inhabitants. Less than a century ago the eminent Austrian Field Marshal, von Radetzki, foretold that Russia was bound to dominate the world because of the rapid and continuous increase

of the population and the conquering policy of the Czars.

THE ECONOMIC FACTOR

In the beginning of this article it was pointed out that the continuation of America's expansion in population and in wealth might cause England to sink to the position of a second or a third rate power, especially if her industries should continue stagnating owing to insufficient production per worker. For decades England has followed an individualist policy. English statesmen did not try to develop planfully the vast territories of the empire. Millions of emigrants, who might have been diverted toward Canada, Australia, &c., at very little expense, went to the United States. Had they been directed to the British possessions, and had these been developed with energy, the British Empire might now contain a larger number of white people than the United States, and might possess that pre-eminence in industrial power, productivity and wealth which is now possessed by the Republic.

The World War has awakened England and has shown even to the most determined individualist the extraordinary value of the British possessions and the necessity of peopling and developing the vast empty lands of the empire as rapidly as possible. Thoughtful Englishmen, bearing in mind the fate which has overtaken all the great sea empires of the past, have recognized the necessity of broadening the basis of the empire, of creating a great empire partnership, which is to unite not only the 60,000,000 white, but the other nationalities as well. India is rapidly becoming a self-governing unit, a dominion like Canada and Australia. At present England is the centre of gravity. However, the time may come when Canada or Australia will become the more important partner, owing to superior numbers and superior wealth. It is not inconceivable that the capital of the British Empire will some day be shifted from London

to Ottawa or Montreal, or to Sydney or Melbourne, exactly as the capital of the Phœnician Empire was transferred to Carthage. In the organization of the empire the success of the United States in binding together numerous self-governing communities should serve as a model.

If we glance at the figures given at the beginning of this article it will be clear that before long the United States will completely overshadow England in power and wealth. However, a greater England is arising, and in the future the progress of the British Empire may be faster than that of the United States. The area of the empire is four times as large as that of the Republic, and its natural resources are great and varied. It is not known how great they are, because no scientific inventory has as yet been taken. Emigrants have peopled the United States. The Republic may no longer prove as attractive to those who wish to leave the overpopulated countries of the Old World as it has been in the past. In a few decades Canada, Australia, New Zealand and South Africa may become real great powers. New Zealand alone is almost as large as the United Kingdom.

THE HOPE OF THE FUTURE

All thinking Englishmen see in close relations between Great and Greater Britain and the United States the hope of the future. A few months ago Lord Charnwood, the author of an excellent life of Abraham Lincoln, which is written with love and understanding for that great man and statesman, wrote to me a letter on the future of Anglo-American relations, in which he expressed views thoroughly representative of those held by the majority of thinking people in England. In this letter he said:

Let us not speak of an Anglo-American alliance or Anglo-American friendship of an exclusive sort. These are inaccurate expressions, and the true conception is that of full and frank understanding (in the literal sense) and a friendship which is by no means exclusive, and which does not postu-

late invariable agreement. Unfortunately, inaccurate expression in this matter does a great deal of harm which English people find it hard to understand, for it suggests to Americans a design on our part to make them serve some private ends of our own, though the private ends are largely, and the design is wholly, imaginary. Let us also not imagine that the League of Nations is necessarily the mechanism through which we are to reach understanding with America. I am a believer in the League of Nations, but in several directions it presents possibilities of entanglement to the United States which it would take a long time to explain to English people, but which Americans are apt to feel instinctively and perhaps excessively.

There are two more definite causes of misunderstanding which now need straightening out, even at the cost of what may be called propagandism. I will say little now of Ireland. There are more Irish in the United States than in Ireland, and these care much, and ought to care much, about Ireland; but most Americans can see that we have here an intensely difficult problem (as difficult as some of their own) which mainly concerns ourselves. This only must be said—that any Irishmen in America who approach the question with a primary desire to hurt the British Empire may succeed in that, but cannot possibly succeed in benefiting Ireland. But I suspect there is still more need of clearing up misunderstanding about the Pacific. We here do not yet realize that there are causes of danger and strife around the Pacific at all. Much less do most of us grasp the double fact that Americans generally still feel remote from the world problems which interest us, but are getting keenly interested in a world problem which has hardly yet dawned upon us and is at present connected chiefly with Japan.

Few people in our country realize keenly what Australians and New Zealanders feel, and rightly feel, about color problems (they all sympathize with them entirely when they do). Few of us, again, have the least idea that anything recently happened in regard to Shantung which Americans criticise and for which they criticise us. None of us has the least idea what the real policy of America in regard to Japan may be. On the other hand, we have some interests in common with Japan, and it is fresh in our memory that Japan did the Allies' cause, including that of America, great and indispensable service during the war. The resulting problem is, of course, difficult, and perhaps there is considerable excuse for the marvelous misunderstandings in regard to our attitude which seem to abound in America. Two things, however, are quite certain, and it is surely not demanding too much of American common sense to ask that they should be realized.

In the first place we shall not stand by and see our kinsmen in the Dominions in peril from Japan. In the second place, nothing whatever could move the people of the United Kingdom to fight America on behalf of Japan. Anybody who, after thinking it over for a moment, denied this would be a liar.

There have been misunderstandings between England and the United States about oil in Mesopotamia and about other questions which comparatively are trifling and which can easily be adjusted with a little good-

will on both sides. From the English point of view the principal thing is that a cordial understanding with the United States should assure the co-operation of the two great English-speaking States, their standing together for the defense of the ideals and the institutions and the interests which they have in common. Their harmony and union will give peace to the world. Their disagreement and strife would fill the world with unhappiness and war.

CANADA AND THE BRITISH EMPIRE

BY JOHN R. BONE
Of The Toronto Star

The Dominion's rapid strides toward autonomy since the war, as seen at the Imperial Conference in London and in the demand for a Canadian Ambassador at Washington—An analysis of the change and of its significance

AN organization known as the Round Table was formed in 1910 for the purpose of studying the relations of the various parts of the British Empire and the nature of the future citizenship of British subjects. Prominent in the group of organizers were Lionel Curtis, who had been with Lord Milner in South Africa; Philip Kerr, who acted as editor of the Round Table Quarterly and later became Lloyd George's secretary and political editor of The London Daily Chronicle, and R. H. Brand, banker, author, publicist, and now a financial adviser of the British Government. Lord Milner himself was understood to be keenly interested. The Round Table did not seek large numbers or notoriety. It consisted of university young men and others interested in public affairs, and was or-

ganized in groups of eight or ten each. A group was described as a "segment" of the Round Table and held regular meetings in private houses. The headquarters of the society were in London, but the segments existed chiefly, if not exclusively, in the outlying Dominions—Canada, Australia, New Zealand and South Africa.

Though the organization was formed for inquiry, not for propaganda, and though all gradations of political thought were represented in it, the idea predominant in the mind of the chief promoters was an Imperial Federation of the Empire. The British Empire, they said, had to be reorganized. As it existed it was a conglomeration of States of varying status, whose relations were full of intolerable anomalies and anachronisms. There were only two possible

alternatives: either an organic union bringing the whole empire into a single homogeneous State, or disintegration and collapse, with each Dominion pursuing its own independent course. There could be no middle, muddling course. It followed that the only way to preserve the empire was to organize a new governing body—a new Parliament in which the United Kingdom and the other self-governing nations would be given representation, generally according to population. The Parliament would deal with foreign relations, defense, decisions as to peace and war, and the administration of dependencies not ready for self-government. It would have power to levy and collect taxes. If a world crisis came before this organic union could be put into operation, its exponents feared the worst. The empire would fall to pieces like a house of cards.

The world crisis came in 1914, when the Round Table was at the top of its activities and influence. But it was the Round Table that disintegrated and collapsed—originally because most of its members went to fight—and it has not yet been revived. The British Empire gave a demonstration of cohesiveness and solidarity that amazed the world. There were those who argued that it was its very looseness of organization that gave it its vitality and moral vigor. Canada, for example, after enlisting an army of almost half a million men voluntarily, adopted a Conscription act and asked its people for a fresh war loan of half a billion dollars. What, it was asked, would have been the result if such sacrifices had been demanded not by a Canadian Parliament but by an Imperial Parliament 3,000 miles away? It is probably not putting it inaccurately to say that since 1914 imperial federation, meaning thereby an Imperial Government responsible to an Imperial Parliament with jurisdiction as to taxation covering the whole empire, has been dead. Leading statesmen both of the Dominion and of the

United Kingdom have so affirmed without contradiction.

MOVEMENT TOWARD AUTONOMY

With the retirement of the Round Table Imperialists—Centralists they were often called to distinguish them from many other varieties of imperialists—the pendulum swung sharply to the other side, that is, toward the side of the autonomists, or advocates of the preservation and extension of local self-government. The Round Table discussions had been earnest, keenly analytical and far-seeing, and their influence stopped neither at the circumferences of the segments nor with the collapse of the organization.

A clinching argument used by the centralizers was that under present conditions British residents in the dominions enjoyed a citizenship markedly inferior to that enjoyed by residents of the United Kingdom, and that if only to attain self-respect there must be "equality of status." Many of the dominions' disabilities were theoretical or minor, such as the theoretical power of the Imperial Parliament to veto legislation passed by a Dominion Parliament, or the fact that judicial appeals from the dominions may, in certain instances, be carried to an imperial court. But one disability that was neither theoretical nor unimportant was the status of the dominions in their foreign relations. The dominions had acquired a certain standing in the negotiation of treaties bearing on commercial subjects. On political affairs, however, the only voice authorized to speak for any portion of the British Empire, or of which foreign States could take cognizance, was the British Foreign Office. And as the dominions had no control over the British Foreign Office and no effective machinery by which they could bring home to it their influence, it was evident there was here a real inferiority.

In the piping days of pre-war peace this did not matter greatly, or at least

did not seem to matter. But when the world tragedy broke it was brought home to the dominions that they had been engulfed in a catastrophe in the approach to which they had been of necessity ignored. In all the diplomacy preceding the war, in all the decisions as to foreign policy leading up to the final cataclysm, they had had absolutely no voice. It was not that they complained against pre-war British diplomacy. It was rather that they realized that had British foreign policy been wrong instead of right they had not been in a position to influence it in a correcting direction; that, indeed, of the very nature of the decisions which affected their destiny no less than it affected the destiny of the United Kingdom they had been in many cases in actual ignorance.

The Round Table Imperialists had demonstrated the theoretical inferiority of dominion citizenship. War gave the practical demonstration when 50,000 Canadians were laid under the sod in France and Belgium in a war into which Canada was plunged without even a formal declaration on the part of her Parliament. Here, it was felt, was a situation that needed adjustment.

And so it came about that "equality of status," which had been used by the centralizers as a flaming torch to arouse enthusiasm in favor of an Imperial Parliament, was snatched by other hands for use in quite a different cause. Not through more centralization, but through more autonomy, did the adapters of the phrase assert that "equality of status" might be achieved.

Even a casual observer of Canadian public affairs cannot fail to be struck with the strength of the tide toward more complete autonomy during the last five years. Self-government is, of course, an old story in Canada. In its modern form it dates from Lord Durham's report following the Mackenzie rebellion of 1837, and when, thirty years later, confederation was set up with an exceedingly

liberal Constitution, it may well have seemed that the last word in colonial independence within an imperial organization had been spoken. In legislation the Canadian Parliament's jurisdiction has not been challenged. No act passed by it has been vetoed. Not only does Canada pay no taxes to the motherland, but she actually imposes taxes on British goods when imported.

DAWN OF A NEW ERA

Domestic administration passed completely to the control of the local Government, and when the last detachment of imperial troops was recalled, Canada saw the departure of the last official—outside the Governor General's house—clothed with imperial authority in Canada. In the judiciary a link with the motherland remained, but this seemed a minor matter when almost everything else in the way of independent self-government had been conceded. But growth in population, wealth and national consciousness, the propaganda of the Round Table and the great war ushered in the new era in imperial relations which is now developing. Years ago the self-governing outlying portions of the empire ceased to be known as colonies; they became dominions. But the new responsibilities imposed by the world conflagration, the searching glare spread by that event, and the more acute mental vision of the times revealed the fact that remnants of the old colonialism remained.

Titles were among the first relics of the past to come under fire; first the method of conferring them, and then the titles themselves. By Parliamentary wish, titles are no longer conferred in Canada. Thus a deliberate limitation has been placed upon the prerogative of the King in Canada. It is probably an unprecedented limitation, for a monarch who cannot honor his subjects in any way he sees fit must be unique. But the Canadian protest contained no element of

criticism of his Majesty. It was directed against the setting up in Canada of Old World class distinctions, particularly when it seemed that sometimes the selections might be made by persons not responsible to the electors of Canada.

Later there came an agitation, still continuing, to provide that the Governor General, the representative of the King in Canada, should be appointed, not on the recommendation of the British Government, but on that of the Canadian Government, and that if possible he should be a Canadian. For this proposal there is no official backing. Another agitation, supported by the Attorney General for Ontario, though opposed by large numbers of the legal profession, seeks to put an end to appeals from Canadian courts to the Privy Council.

In another category has been the official conduct and attitude of representatives of the Canadian Government. They have acted, no doubt, under stress of personal conviction, and also under pressure of the logic of events. First came the historic controversy, not yet fully revealed, between Sir Sam Hughes, Canada's Minister of Militia, and the British War Office as to jurisdiction over Canada's army in France. In the same period the Canadian Government requested emancipation from the jurisdiction of the Colonial Office. Hitherto the channel of communication between the Dominion and the British Government had been the Colonial Office. In theory the whole Government of the Dominion was a subdepartment of a secondary imperial department. It was requested that this indignity, even if only a theoretical one, should be removed, and that the Dominion Government communicate with the British Government as equal to equal.

In the Imperial War Cabinet, which came into being as a piece of emergency war machinery, the Canadian Prime Minister, Sir Robert Borden, took his place, not as a

subordinate, but as an equal. And about this time his speeches began to contain frequent references to the "full nationhood" of the dominions, "equality of status," an equal voice in the decisions of peace and war and similar phrases. The culmination was reached when dominion delegates took their place in the Peace Conference, when they became signatories to the Treaty of Versailles and were admitted to independent membership in the League of Nations.

CONTROL OF FOREIGN AFFAIRS

Having established a new status with the Colonial Office, the dominions now find that, in view of their broadened world outlook and interests, their relations with another department of the British Government require adjustment. That department is the Foreign Office. At present the current toward autonomy is lapping at the base of that Rock of Gibraltar. The protest of the Canadian Prime Minister, Mr. Meighen, against renewal of the Japanese treaty is an official intimation that Canada, in foreign affairs, is now thinking for herself and no longer accepts without question the decisions on foreign relations made by the British Foreign Office. So also is the decision of the Canadian Parliament to appoint a Canadian Ambassador at Washington.

It will be obvious that these are acts of far-reaching importance. The Round Table exponents of an Imperial Parliament used to insist that when the dominions began deciding for themselves the issues of peace and war, and appointing representatives at foreign capitals, the empire would be on the eve of disintegration. The Japanese treaty is a war treaty, and Washington is certainly a foreign capital. Are these steps, then, the first steps toward separation? Is the strong tide toward increased autonomy really a movement toward independence? Ob-

servers in foreign countries who have not lived under British institutions, who do not understand the elasticity of the British Constitution, and who do not appreciate the natural British instincts of the peoples living in the British dominion might be deceived into so thinking. When European delegates saw the dominions apply for membership in the League of Nations they thought crafty Albion was trying to increase her voting power; when later they saw those same dominion delegates declare unyielding opposition to the United Kingdom delegates on important issues they thought the British Empire was crumbling before their eyes. Both deductions were hasty.

There are also Canadian critics who view the autonomist movement with alarm. Sir Gilbert Parker, the novelist, for example, is alarmed at the assaults on the method of appointing the Governor General. If that prerogative is taken from the British Government, he has said in an interview, nothing can hold the empire together. Mr. J. Castell Hopkins, editor of the *Canadian Annual Review*, also sees in the present movement a trend toward independence.

AUTONOMISTS ARE NOT SEPARATISTS

No such admission is made by the exponents of the new autonomy, and the personnel of the chief exponents seems to rob the allegation of force. When Sir Wilfrid Laurier at a pre-war imperial conference opposed a scheme of imperial federation advanced by Sir Joseph Ward of New Zealand, he was accused of separatist tendencies, and a long-forgotten speech was resurrected to support the charge. But Sir Robert Borden, leader of Canadian Conservatives for twenty years, has been known all his life as an imperialist. So has Hon. N. W. Rowell, head of the Liberal Unionist element in the war-time Unionist Government. Mr. Meighen, the present Prime Minister, who protested against the Japanese treaty, is a life-long Conservative who has

been consistently imperialistic in his declarations.

If Meighen, Borden and Rowell are separatists, they are not conscious of the fact. No one would think of charging them with separatist sympathies. And the same may be said of the great majority of Canadian autonomists. If there is any appreciable separatism in Canada, it is concealing its light. It is not articulate, except perhaps, academically in the person of John S. Ewart, a distinguished constitutional lawyer, author of the "*Kingdom Papers*," a series of exhaustive studies on the constitutional relations of the empire. Mr. Ewart has the keenly logical mind to which the anomalies and anachronisms of the present Commonwealth are also intolerable. To him, as to the Round Table Centralizers, there are only two alternatives—imperial federation or independence. He chooses the opposite horn of the dilemma.

Has the pendulum now swung too far toward autonomy? Did Borden and Rowell, when in office, go further in their declarations for full nationhood and in their concrete proposals—such as for a Canadian Ambassador at Washington—than they were warranted in going by Canadian public opinion? Professor W. P. M. Kennedy, in *The Contemporary Review* for July attached significance to the new Premier's silence on constitutional questions. Since Mr. Meighen has participated in the Imperial Conference, it now appears that his former silence was due to other causes.

As far as the political parties in Canada are concerned, it is doubtful if there ever was an issue, except the war, on which there was as great unanimity as on the general principle of self-government. The attitude of the Conservative and Unionist parties may be assumed to be indicated by the actions, already noted, of their leaders in the Government, while both the Liberal and the Agrarian parties in National Conventions have, since the armistice, adopted formal resolutions

warning the country against any centralizing imperial scheme. Their criticism of the present Government was not that it was too autonomist, but that it might fail to be sufficiently so.

AMBASSADOR AT WASHINGTON

It is true that in Parliament the debate on the appointment of a Canadian Ambassador at Washington evoked considerable criticism, and from widely divergent quarters. Dr. Michael Clark, Agrarian, said "the appointment of a plenipotentiary to a foreign court is a mark of a foreign State," and in making such a step "we are getting very near to revolution." D. D. McKenzie, former Liberal leader, in criticising the project, said: "I am old-fashioned enough to be prouder of being a British subject than of being a Canadian." Hon. W. S. Fielding, formerly Liberal Minister of Finance, said: "We are right on the very verge of independence," and added that it was a ridiculous thing to say that Canada was a nation. W. F. Cockshutt, a prominent protectionist Conservative, took a similarly serious view of the proposal. There were criticisms of details from other quarters. But when the debate was ended, the outstanding fact remained that the appropriation necessary for the appointment was unanimously adopted, and that the principle of the appointment was, with the exceptions noted, approved by almost the whole house, including, of course, the Premier and his Government.

The case for the appointment, as presented by Sir Robert Borden, Mr. Rowell and others, is one of practical utility and expediency. Lord Bryce, Sir Robert recalled, placed the proportion of the work of the British Embassy at Washington devoted to Canadian affairs as between two-thirds and three-fourths. Among recent issues requiring attention were the following: The Chicago drainage canal, supplies of coal for Canada, levels of the Lake of the Woods, the United States Merchant Marine act,

levels of Lake Memphremagog, export of pulp wood from Canada, interchange between Canadian and American railways, Panama Canal tolls, fishing questions. On all such domestic issues there seems absolutely no reason for the intervention of a British ambassadorial staff or for not sending communications direct from Washington to Ottawa, instead of from Washington to the British Foreign Office, then to the Colonial Office, then to Ottawa, a circumlocutory route that might have appalled even the author of "Little Dorrit."

So much for the purely domestic American-Canadian relations. But there is another motive for the Canadian Embassy that is more recent and goes deeper. British Empire foreign policy in its larger aspects now appears for the first time upon the stage of the Western Hemisphere. The World War shifted the pole of world politics from the North Sea to the North Pacific, and immediately within its magnetic field lie the United States and Canada. Canadians who advocate the appointment of an Ambassador at Washington insist that it is of the utmost importance that in the years which lie immediately ahead, when decisions will be made and policies formulated affecting the future of civilization and with grave potentialities for the future of Canada, there should be the freest possible interchange of opinion between Canada and the United States, whose continent-wide border line has not heard or seen a gun in 100 years; that, whether the event proves that the interests of these two countries are common or not, every step possible should be taken to see that each keeps in touch with the other's ideals, views and policies. Nothing should be left to chance or to the possible dulling effects of circumlocution. Herein lies the strong motive for the Canadian Ambassador.

Delay in filling the office has been ascribed by the Canadian Prime Minister to difficulty in making an appropriate appointment. Canada has no school of diplomats to draw from.

Outside the criticism in Parliament already referred to there has been no intimation that public opinion regarded the proposal as ultra-radical or unsound. In other parts of the empire undoubtedly the project caused questionings. If the establishment of a Canadian Embassy at Washington meant that other dominions would set up embassies at Washington and that Canada and the others would set up embassies all over the world, the prospect for the British Foreign Office would, indeed, be chaotic. But at the recent Imperial Conference, it is understood, Mr. Meighen emphasized the unique closeness of the relations between Canada and the United States. On this basis the appointment of a Canadian Ambassador to Washington does not need to be accepted as a precedent.

ANOTHER STARTLING DOCTRINE

But Canadian leaders go further in their desires respecting Canadian-American relations than the appointment of an Ambassador. The doctrine has been laid down by Mr. Rowell and Sir Robert Borden in Parliament, and according to one report by Mr. Meighen at London—and, so far as known, its soundness has not been challenged—that in all British foreign issues where the interests of Canada are paramount, as they might easily be in the case of issues involving the United States, the views of Canada should not merely be consulted, but should be accepted. Here is a far-reaching conception, the significance of which has not yet been universally grasped, certainly not by those who see in Canada's aspiration toward nationhood only a movement toward independence. It is not that these leaders, in seeking to advance Canada's influence on American relations, are seeking separation from the empire; what they ask is that in the decisions affecting those relations Canada shall represent the empire. It may be that in this and in other respects the

movement toward autonomy involves the assumption of responsibilities which the Canadian Nation is not ready for, in which case there will be a continuance for a time, or until some new solution is found, of some of the colonial disabilities, which it may be observed some sections of the people do not seem to regard as irksome.

Canada's representatives will attend the Washington conference as part of the British delegation. Although Canadian nationhood has been recognized by the British Empire and by the League of Nations, it was not recognized by the United States in issuing preliminary invitations to the conference. Apparently, therefore, the status of the Canadian delegates at Washington will be different from what it was at Geneva, where they stood on their own feet and did not hesitate on occasion to disagree with the delegates from the United Kingdom, to the wonderment of foreign observers.

Nothing more interesting in the way of constitutional development has occurred than the incursion of the British dominions into the realm of foreign affairs. Advocates of imperial federation on the one hand, and of separation on the other, predict that the experiment cannot work and if persisted in will end in disruption. But the same thing has been said about nearly every former step in self-government, and the silken bond of empire as it increased in elasticity has increased in strength.

CANADA'S DIFFICULT PROBLEM

The present problem is not easy. The only piece of co-ordinating machinery for the empire as a whole is the convocation, at irregular intervals, of Imperial Premiers, to which convocation the Centralizers wish to give the name and authority of Imperial Cabinet, whereas the Autonomists insist it must not be more than a conference. The task before this imperfect piece of machinery is to

provide for the continuance of the empire on the basis of equal partnership between the United Kingdom and the dominions. In the words of Lord Milner, it is one of the most complicated tasks which statesmanship has ever had to face. The assurance of success lies not in the imperfect machinery of government that is available, but in the will of the peoples of the dominions and of the British Isles to remain united. The strength of the empire is as strong as this will. It can be no stronger, a point which is sometimes forgotten by the Imperial Federationists, who seek in organic union complete insurance for the future.

The course of history is strewn with the wrecks of empires, and fatalists predict that the British Empire will prove no exception. But no previous empire has adopted, as the modern British Commonwealth has adopted and is continuing to develop, the formulae of self-government, freedom and equal citizenship. A passage from the "Decline and Fall of the Roman Empire" is suggestive.

After pointing out that the revolt of Britain in the reign of Honorius resulted in the establishment of a popular Assembly in the seven Provinces of Gaul, and after describing the powers which were delegated to this—in that day—unusual body, Gibbon proceeds:

If such an institution, which gave the people an interest in their own Government, had been universally established by Trajan or the Antonines, the seeds of public wisdom and virtue might have been cherished and propagated in the Empire of Rome. The privileges of the subjects would have secured the throne of the monarch. * * * Under the mild and generous influence of liberty the Roman Empire might have remained invincible and immortal; or if its excessive magnitude and the instability of human affairs had opposed such perpetual continuance, its vital and constituent members might have separately preserved their vigor and independence.

There are autonomists in Canada who are optimistic enough to believe that, after one severe lesson, one hundred and fifty years ago, the British Commonwealth has discovered the secret of immortality that evaded Rome.

PASSING OF THE GREAT ENGLISH ESTATES

AN effort by the British Government to sell at auction Runnymede Meadow, a part of the Crown lands, where in 1215 the barons of England exacted the famous Magna Charta of popular liberty from King John, recently roused a storm of protest, and in so doing served to bring to notice how many of the great historic properties in England, some of which had been broken up into small holdings, have been changing hands since the war. Through force of economic circumstances, one nobleman after another has been compelled to place his estate in the market, and several medieval castles have gone under the hammer. In the year 1920 no less than 349,695 acres of country estates were sold by one firm of auctioneers for £4,332,514. Of these estates, one of the most magnificent—sold for the paltry sum of £50,000—was Stowe House, the once palatial seat of the Dukes of Buckingham and Chandos, with its great suite of state rooms, its domed marble hall

fashioned after the Pantheon at Rome, and its armory and chapel. Similarly, among great London mansions, Devonshire House, famous as a centre of high social and political life, passed from the long possession of the Cavendish family.

In this respect the Duke of Portland, in addressing his tenants at Welbeck on Aug. 4, predicted the wholesale closing down of historic and stately homes and the housing of their lordly owners in humbler style. "The great war," he said, "has entirely altered the outlook for me and most other large landowners. For centuries past the landed estates have been handed down from generation to generation in one family, and landlords and tenants have lived on terms of mutual trust and affection. I fear, however, that that state of things is passing away, for, with the present enormous weight of taxation and the extremely onerous death duties, the future has become uncertain for all landed proprietors in England."

SECOND ASSEMBLY OF THE LEAGUE OF NATIONS

Permanent Court of International Justice created, with eleven Judges—Important rulings on Article X. and other paragraphs of the Covenant—Progress made in the settlement of several boundary disputes—Action taken in favor of disarmament, despite opposition of larger powers

THE second plenary conference of the Assembly of the League of Nations met in Geneva, Switzerland, on Sept. 5 and adjourned on Oct. 6, 1921. The length of the conference was due mainly to the momentous nature of some of the topics discussed, notably the burning topic of world disarmament. Over the representatives of the forty-eight nations gathered in the old Hall of Reformation fell the shadow of the coming conference on armament reduction called by President Harding in Washington. The debates were animated and protracted, in some instances giving rise to noble and impressive oratory, but the influence of the greater powers—especially Great Britain and France, who wished the Washington conference to have a free hand—was so strong that the smaller nations were checked in their plans. Despite this handicap, they succeeded in putting through a disarmament program which testified to the League's determination to steam ahead independently of Washington.

Another evidence of this spirit was the Assembly's concrete action in electing the Judges for the permanent Tribunal of World Peace, thus completing the last stage of an edifice which will soon be able to function for the highest purposes of the League and the good of mankind. Important amendments to the League Covenant were adopted, several international disputes were started on the way to settlement, the delay on mandates was laid squarely on the shoul-

ders of America, and action taken to expedite a settlement; measures of international beneficence, such as the suppression of the international white slave traffic, the use of opium and other harmful drugs, control of immigration, &c., were also shown to be hampered by the failure of the United States to participate in the League's councils; but the League members gave every evidence of a determination to go forward in spite of America's action in blocking the wheels of their machinery.

The sessions were preceded by a short conference of the League Council, which prepared the agenda of the Assembly discussions and fought out several matters of procedure in respect to disarmament proposals, mandates, &c.

OPENING OF THE ASSEMBLY

The second plenary Assembly opened in the Hall of Reformation on Sept. 5 at 11 o'clock. For several days the normally quiet streets of Geneva had been a Babel of foreign tongues, as almost fifty nations had assembled for the coming sessions. The sombre old hall was crowded to the very galleries by curious and interested spectators. Some of the leaders of the preceding Assembly, such as the picturesque Paderewski of Poland, Tittoni of Italy, Rowell of Canada, Huneus of Chile, Puyrredon of Argentina, were absent. Noticeable especially was the absence of all the Central American States. New

members stood out: Bishop Noli, head of the Albanian delegation, come to plead the cause of his country against aggressors; Premier Stambolisky of Bulgaria; Lord Robert Cecil, representing for the second time South Africa, walked between the benches, showing his eagle profile and his reserved smile; M. Leon Bourgeois, flanked by M. Viviani the "silver-tongued," and by M. Hanotaux, talked energetically; Arthur Balfour, diffusing his suave and charming manner wherever he went, chatted with Hjalmar Branting (now Premier of Sweden); the tall and austere Dr. Fridtjof Nansen, frowning and preoccupied with the appeal which he was preparing to make to the Assembly on behalf of starving Russia, contrasted in his frosty whiteness of visage with Baron Hayashi and Viscount Ishii, small, dapper and ivory-complexioned; Eduard Benes of Czechoslovakia and Paul Hymans of Belgium exchanged greetings and conversed quietly.

Exactly at 11 o'clock the youthful figure of Dr. Wellington Koo, the Chinese Ambassador to London, and a graduate of Columbia University, took the chair as acting President of the Council amid loud applause. In faultless English Dr. Koo delivered an eloquent address of welcome to the assembled delegates, in which he traced the past achievements of the League in respect to financial and economic matters, transit and communication, moral and social problems—all work which made no dramatic appeal to the imagination, but of the highest value to the world—described the solid foundations the League had laid for future world peace, not forgetting the creation of the International Tribunal, and stressed eloquently the wide vista opened before the organization for the attainment of the aims of international peace and justice.

The first business of the Assembly was the election of a permanent President. Five candidates were nominated at the afternoon session. Jonkheer van Karnebeek, Foreign

Minister of Holland, received the highest vote and took the chair. Then the Assembly got down to business—and debate. Storm clouds broke almost immediately over the application made by the representative of Bolivia asking the Assembly to consider the revision of the treaty between Bolivia and Chile. This treaty, concluded nearly twenty years ago on the ending of the war of Chile against Bolivia and her ally Peru, and caused by a dispute over the rich Tacna-Arica territories, has long been a sore point with the Bolivians. The Chilean delegation rose instantly to combat this demand for revision, and a crisis was averted only after a special commission had decided that the Assembly had no jurisdiction to revise treaties already ratified and confirmed.

UNITED STATES CRITICISED

In a strong speech before the Assembly at the session of Sept. 8, Lord Robert Cecil blamed the United States severely for the delay forced on the League in defending and settling the mandates. He criticised the Washington Government for ignoring the League and insisting on negotiating only with the separate Governments. He recapitulated the League's efforts to get the United States to state its desires, and deplored the failure of those efforts. The fate of the peoples of the mandated territories and the prestige of the League were at stake, he declared, and he urged the Assembly, inasmuch as it knew unofficially the views of America, to proceed fearlessly in its work on mandates. His resolution to refer the mandates to a committee of eight for definition was accepted, and the personnel of this committee named. A bitter attack made by him on the permanent Advisory Council on Disarmament paved the way to the all-important debate on disarmament for which the Assembly was eager.

The debate on disarmament was based principally on the report of the Council and the Disarmament Com-

mission, the tone of which was one of "inspissated gloom." The debate was opened by Mr. Arthur J. Balfour, head of the British delegation, at the session of Sept. 10. Mr. Balfour frankly admitted his belief that the League was impotent to make headway toward disarmament in view of the present frame of mind of the nations. Both he and M. Leon Bourgeois, however, believed that the League should work on for peace in its own way. A far stronger attitude was adopted by Dr. Lange of Norway, who attacked Mr. Balfour's view that the League was impotent because great nations such as the United States, Germany and Russia remained outside, and declared it was the League's duty to proceed with its immediate efforts toward disarmament. The Council, he charged, was not carrying out the Assembly's wishes, and the Permanent Advisory Disarmament Commission was in close contact with War Ministers and lukewarm for universal peace. Germany was being disarmed, Russia was no longer a military bogey, and the United States was moving actively for disarmament. The Washington conference, however, would concern itself mainly with naval disarmament, whereas the League must work for land disarmament in Europe. Its failure to do so would be fatal to it.

After a spirited debate, the proposal of M. Jouhaux, head of the French delegation of labor, that the League call an international conference to limit the private manufacture of arms, was adopted, though the efforts of Lord Robert Cecil and Dr. Lange to have a date fixed for this conference early next June came to grief against the opposition of both Great Britain and France. Both of these advocates of fixing an early date declared that the League could not stop the private manufacture of arms if the United States, with its vast resources, continued to manufacture them. The Assembly, however, through the committee, voted to hold

such an international conference, but left the date indeterminate.

Although it appeared that but few members of the Disarmament Commission believed that the Washington conference would accomplish anything, they united on Sept. 28 in a resolution expressing the gratification of the League that President Harding had called the conference in Washington and expressing sincere good wishes for its success. The committee then voted to ask the Permanent Disarmament Commission to prepare plans for control and ultimate prevention of the use of poison gas in warfare. It also voted for the establishment of a special branch of the Secretariat to carry on propaganda in favor of disarmament among all nations.

JAPAN ALONE SILENT

Thus the disarmament work was mapped out for the future. At the session of Oct. 1 eloquent speeches were made by M. Noblemaire of France, H. A. L. Fisher and Lord Robert Cecil. All the nations joined in disarmament pledges except Japan, which maintained silence. M. Noblemaire defended France from the charge of militarism, and declared that France wished only security, and that moral disarmament—in Germany as elsewhere—must precede physical disarmament. Until Germany, or at least a part of Germany, gave up its hatred and plans for revenge, France must keep her arms in hand. When she gained security she would be only too glad to seek the ways of peace. H. A. L. Fisher paid a tribute to France, and declared that though there had been differences of view, the fundamental aims of Great Britain and France for peace were the same. France and England between them, he declared, had it in their power, aided by the members of the League, to realize the dream of humanity and lay the foundation of general peace. Lord Robert Cecil, as reporter for the Dis-

armament Commission, made an eloquent plea for the revised proposals of the League, which were, taken all together, as follows:

(1) Preparation for the next Assembly of a general plan of disarmament, and, to make that feasible, a request to the nations to furnish data on their armaments, including the amount of money spent on them; (2) a proposal for an international conference on the restriction of the manufacture of arms; (3) a proposal to restrain the use of poison gas in warfare; (4) the establishment of world-wide propaganda for disarmament and (5) a resolution expressing hope for real progress at the Washington Conference.

Lord Robert's report and these resolutions and proposals were unanimously adopted, and thus the Assembly's discussions and committee work on the most important item of its agenda reached their logical end.

ELECTION OF JUDGES

The election of eleven Judges for full membership on the Permanent Court of International Justice, and of four Deputy Judges, took place at the session of Sept. 14, the Council and the Assembly voting simultaneously at the headquarters of the League. A clash between the two organizations soon became apparent, and it took five successive ballots to reach agreement. The final result showed that the following eleven jurists had been chosen full members of the court:

Viscount R. B. Finlay of Great Britain.
Charles André Weiss of France.
Dionisio Anzilotti of Italy.
John Bassett Moore of the United States.
Rafael Altamira y Cravea of Spain.
Senator Ruy Barbosa of Brazil.
Antonio de Bustamante of Cuba.
Max Huber of Switzerland.
B. C. J. Loder of Holland.
Didrik Galtrup G. Nyholm of Denmark.
Yoruzo Oda of Japan.

At the same time three Deputy Judges were elected, and later a joint committee completed the list with a fourth, as follows:

M. Negulesco of Rumania.
Mr. Wang Ch'ung-hui of China.
M. Yovanovitch of Yugoslavia.
M. Beichmann of Norway.

The completion of these elections was hailed by President van Karnebeek as a "historic event, which opens a new era in the life of the community of nations." The delegates learned with keen regret of the refusal of Elihu Root to serve on the tribunal, owing to advancing years. The American representative chosen, the Hon. John Bassett Moore, is Professor of International Law at Columbia University. Over ninety nominations were made in all, and each selection was based on undisputed legal eminence.

ARTICLE X. INTERPRETED

Of great import to the Assembly also was the question of amendments to the covenant. Throughout many sessions this aroused veritable storms of debate. First of all, the amendment of Article XXVI., so as to make a majority vote valid, opened the way to further changes. The amendments proposed were the following: Modification of Article X. in such wise as to take from it the offensive features to which the United States Senate had so dramatically objected; amendment of Articles XII., XIII., XIV. and XV., necessitated by the establishment of the International Tribunal; amendment of Article XVI., relating to the economic blockade of any member resorting to war in disregard of the provisions of the covenant; amendment of Article XXI. in such wise as to recognize regional agreements between member nations; an amendment lastly of the covenant provision on membership.

One of the most valuable bits of constructive work done by the Assembly was the definition of the much-attacked Article X. All the delegations agreed that this article did not constitute a pledge by members to go to war to protect the territorial borders of other members, but was a declaration of principle and a pledge by the nations not to violate the territory of their neighbors, on the agreement that such aggression would be

(Keystone View Co.)

Foreign Minister of Holland, elected President of the second League Assembly

punished largely by use of the economic weapon. The new construction declared expressly that no nation is bound to send troops for such a purpose. An attempt by the Canadian Minister, Charles J. Doherty, however, to secure the elimination of the whole article was sent over for consideration to the next Assembly, and it was made clear, both in this case and in others, that the League intended to feel its way toward fundamental change in the covenant only slowly and cautiously. The amendments of Articles XII.-XV. were accepted without dispute, as required by the establishment of the World Tribunal. Proposed changes in Article XVI., however, made a considerable flurry. Switzerland, the Scandinavian countries and other lesser powers wielded strong influence in the

modifications finally accepted. As amended, the article left a way out of obligation to blockade when the Council considered that the proximity of a member to the covenant-breaking State put that member in danger. The crux of the new text added is contained in the italicized portion of the passages quoted below:

The Council will notify all members of the League of the date which it recommends for the application of economic pressure under this article. Nevertheless, the Council may, in the case of any particular member, postpone the coming into force of any of these measures for a specific period, where the Council is satisfied that such postponement will facilitate the attainment of the object of the measures referred to in the preceding paragraph, *or that it is necessary in order to minimize the loss and convenience which will be caused to such member.*

The Assembly rejected the proposed amendment of Article XVI. This amendment had been presented by the new State of Czechoslovakia, and its object had been to secure an extension of the Monroe Doctrine to regional agreements in Europe of a similar purpose. Specifically, Czechoslovakia was the spokesman of the so-called "Little Entente"—the new coalition recently put in force between Czechoslovakia, Yugoslavia and Rumania—and sought to secure the recognition of its aims. The Assembly decided, however, that all such regional agreements were amply provided for by Article XXI., which sanctioned such coalitions for purposes identical with those of the League; hence it rejected the proposed amendment. The amendment of the article on membership, proposed by Argentina at the Assembly of the preceding year, was also rejected. This amendment proposed that all nations, whether League members or not, should automatically become members of the League. The rejection of this amendment at the first Assembly led to the dramatic withdrawal of the whole Argentine delegation, headed by Senor Puyrredon, from the conference, and the eloquent absence of almost all the Cen-

tral American States at the second conference was attributed to Argentina's withdrawal and dissatisfaction. Nonetheless, the Assembly was unwilling to subject the membership privilege to so drastic an extension at present, and consequently voted to send the amendment over to another year.

It also took similar action regarding a proposed amendment of Article

JOHN BASSETT MOORE

Former Counselor of the Department of State, elected as American Judge in the World Court of the League of Nations

XVII., on the registration of treaties, declaring that "every treaty or international agreement entered into hereafter by any member of the League shall be registered with the Secretariat and shall, as soon as possible, be published by it. No such treaty or international agreement shall be binding until so registered." Strong objection had been made by various delegates, especially by Senor Raoul Fernandez of Brazil and Lord Robert

Cecil, to the inclusion of the words "international agreements," which implied, in addition to public treaties, the registration and publication of secret military and technical agreements. The Assembly's tendency also here was to go slow—the subject was a very complicated and difficult one—and to consider the proposed change in the light of another year's study. Under the article, Germany, who was a signatory to the convention, had the largest number of treaties registered. The latest treaties included one with China, four with Poland, one each with France, Sweden, Danzig, Czechoslovakia, Austria, Serbia and Switzerland; also several agreements with the allied powers relating to the administration of the Sarre Valley.

INTERNATIONAL DISPUTES

In the field of international disputes, the Assembly was confronted by the ever-recrudescent Vilna problem, the complaints of Albania against military aggression by Yugoslavia and Greece, the demand by Austria against Hungarian aggressions in Burgenland, or Western Hungary, assigned to the Austrians under the League settlement, and finally the demand by Bolivia that the League consider the revision of her treaty with Chile. This last appeal was settled during the first meetings of the Assembly by Bolivia's withdrawal of her demands.

The Vilna dispute between Poland and Lithuania had been announced some weeks before as settled by a compromise agreement engineered by M. Paul Hymans of Belgium, but as the matter was explained on the floor of the Assembly the two nations were again in dispute, the Lithuanians insisting on the immediate withdrawal of the irregular forces of General Zeligowski and on Vilna being set up as an autonomous community, and the Poles, headed by M. Askenazy, energetically refusing this solution. After considerable debate, the Assembly at its session of Sept. 24

united in a resolution urging Poland and Lithuania to reopen new parleys to settle the outstanding subjects in dispute. This resolution was adopted enforcedly in view of the fact that the requisite unanimity could not be obtained, though the sentiment of the delegates was undeniably against Poland after the exposition of the opposing factions. The fact that Poland allowed General Zeligowski to remain in occupation of Vilna reacted strongly against the Poles, and Askenazy's attempts at rebuttal were considered weak and unconvincing.

The quarrel between Albania and her aggressive neighbors, Yugoslavia and Greece, stirred up the Assembly, especially when Bishop Noli, head of the Albanian delegation, gave the delegates proof that Albanian villages were being bombarded by Serbs. An attempt by M. Spaikalovitch, who has been called the "stormy petrel" of Yugoslavia, to pooh-pooh the claims of Albania, and to subject that country to a violent onslaught of vituperation, met with reproof by M. van Karnebeek, the President of the Assembly, who told Spaikalovitch to moderate his language. The dispute waxed warm and split the Assembly into two divisions, one demanding immediate support for Albania, the other urging that the matter be settled by the larger powers at their leisure. The delegates representing the larger powers inclined to this latter view. Albania, however, took the stand that she would be completely swallowed up by her more powerful and aggressive neighbors if something were not done forthwith, and was opposed to the suggested solution by the Council of Ambassadors, whose competency she denied, and demanded that the controversy and aggression be settled by the League of Nations itself. This, however, the Assembly could not do, as the contention of the Yugoslavs had been all along that the boundaries of Albania had never been settled, and that no charge of aggression on such hypothetical boundaries could legitimately be made. The delegates therefore de-

cided to urge the Council of Ambassadors to settle these boundaries as soon as possible, to enable the League to act *en connaissance de cause*.

Regarding the aggressions of the Hungarians in Burgenland, it was decided to suspend a decision pending an investigation.

The settlement of the status of Upper Silesia was found by the Assembly too complex and thorny a problem to be settled by any swift decision. The whole dispute between the Germans and the Poles as to whether this plebiscite territory should fall to one or the other had been passed on some weeks before by the Supreme Council, and by the Council had been referred to a committee composed of representatives of Brazil, Spain, China and Belgium, for intensive study. The investigation was continuing, but the formidable nature of the task was recognized by all, and, pending a report from this committee, the Assembly's hands were tied.

NO ACTION ON RUSSIA

A special appeal came before the Assembly on the subject of financial help for starving Russia. This appeal was made by Dr. Fridtjof Nansen of Norway, who had concluded a working agreement with the Soviet leaders on behalf of the European relief organizations for the distribution of food. His request that the Assembly authorize a money grant met with strong opposition, and Dr. Nansen showed bitterness over the contradiction displayed between the eloquent expressions of sympathy for the starving masses of Russia and the refusal to alleviate it by concrete assistance. He implied plainly his view that the League was playing politics, under the leadership of some of the greater powers interested in the overthrow of the Soviet Government. M. Spaikalovitch of Yugoslavia seized the opportunity to launch a vitriolic attack upon the Soviet Government, with which, he declared, no intercourse should be had

on account of the principles for which it stood. Yugoslavia, he said, was close to the Soviet land, and knew better than some other nations what the Soviet leaders stood for. The Assembly, despite Dr. Nansen's appeals decided to refer the subject to the coming international conference at Brussels on measures of relief for Russia.

The three Baltic States—Latvia, Lithuania and Esthonia—were admitted to membership. The admission of Hungary was deferred. The renewed claims of Armenia, based on the changed aspect of the military situation in the East, were considered, but no action was taken either in Armenia's case or that of the Caucasus nations. Herr Mensdorff, the Austrian delegate, was heard by the Assembly on Austria's financial distress, the alleviation of which, like so many other matters, was held up by the failure of the United States to act, in this case by reaching a decision on the League's suggestion that the Washington Government forego its financial claims on Vienna.

Many other subjects were discussed by the Assembly in its month's sessions, notably regarding international measures to be taken by the League to prevent the traffic in women and children, which since the conclusion of the war had again made its appearance, the suppression of opium and other dangerous drugs, the prevention of disease, and immigration problems and subjects akin. It ap-

peared that all the League's activities in regard to these international perils were being held up by the same cause—America's refusal to participate in the League's councils. International bodies had been set up by the League, but they were functioning badly in a number of instances because of the Washington Administration's continued refusal to co-operate with them. A new program, however, was laid out for future activity in this field, to which the League attaches high importance.

The question of finances was brought up by the report of the committee charged with this subject presented to the Assembly at the session of Oct. 5. This report showed that Great Britain and France are scheduled to pay 9.2 per cent. of the total cost. Italy, China, Japan and India were each to pay 6.65 per cent. In the third category were placed Argentina (which has not yet officially withdrawn from the League), Spain, Brazil, Rumania, Yugoslavia and Czechoslovakia, each to pay 3.58 per cent. The scale was graduated down to twenty-one-hundredths of 1 per cent. for Nicaragua, Luxemburg, Panama, Paraguay, Salvador, Costa Rica, Guatemala, Honduras and Liberia. Under this ruling Great Britain and France will pay 1,800,000 gold francs, the nations in the second category 1,300,000, and those of the third 42,000 gold francs. The budget for 1922 amounts to 23,786,846 gold francs, as against 21,250,000 for 1921.

THE ANGLO-JAPANESE ALLIANCE

To the Editor of Current History:

IN the August number of *CURRENT HISTORY* George L. Koehn, at Page 740 of his article on the "Menace of the Anglo-Japanese Alliance," states that no "treaty of general arbitration" is in effect between the United States and Great Britain. Article 1 of the treaty of 1908 with Great Britain, provided that "differences which may arise of a legal nature or relating to the interpretation of treaties existing between the two contracting parties, and which it may not

have been possible to settle by diplomacy, shall be referred to the Permanent Court of Arbitration" at The Hague, excepting matters affecting vital interests, independence, or honor, and those concerning third parties. This treaty was renewed for ten years by an agreement signed at Washington June 3, 1918, proclaimed Sept. 30, 1918. Is not this a "treaty of general arbitration," or has it been abrogated?

DELAPLANE WILSON.

Pedro Miguel, Canal Zone, Sept. 14, 1921.

GERMANY'S FINANCIAL CRISIS

Shall It Be Bankruptcy or State Socialism?

BY EDWARD BERNSTEIN

Member of the Reichstag and leader of the Moderate Socialists

Germany's desperate finances and the Government's efforts to increase its revenues by heavy taxes—Opposition to such taxation, and the alternative of socialization through "seizure of real values" by the Government

THE awkward situation of the German Republic in respect to finances is well known to the world today. The whole Reich—a collective term now connoting all Germany—with its confederated States and local Government bodies, is struggling under depressing deficits. Incomes, fortunes, increments of fortunes, interest on capital, inheritances and trade are highly taxed. All commodities are hit by the tax on the amount of business done—the turnover—and a number of them besides are subject to direct taxes and importation duties.

The deficit in the National Treasury, which affects all the States and municipalities, as well as the Reichstag budget, is steadily on the increase. The increasing shortage is partly due to the continuous fall of the international market value of the mark, which has led to a corresponding rise of prices, wages, &c. It is also due in a high degree to the increasing payments that have to be made to the Allies on account of reparations, charges for occupation troops and kindred purposes; also to the outlays for pensions to the victims of the war, and for compensation payments to the German nationals expelled from districts and provinces which, by the dictatorial provisions of the Treaty

of Versailles, were ceded to other countries.

The funding debt of the Reich has now reached a total of approximately 90,000,000,000 marks. The floating debt in Treasury bonds, &c., amounts to about 240,000,000,000 marks. Paper money issues, inclusive of about 7,000,000,000 marks in notes issued by Government departments to cover small loans, reach a total of nearly 88,000,000,000 marks. Taken in the aggregate, the debt of the Reich is now in excess of 300,000,000,000 marks.

In the defunct empire the finances of the Reich were handled quite distinctly from those of the States. Up to 1913 there was a partition of the sources of revenue in force based on the principle that the importation duties and home taxes on commodities went into the Treasury of the Reich, while direct taxes and some kindred taxation were left to the States and the local bodies. A deficit in the budget of the Reich was to be covered by an assessment on the States according to population (the "Matricular Umlage"). In compensation therefor the States were entitled to all the revenue from import duties and from a few other imperial taxes totaling more than 130,000,000 marks.

The Constitution of the republic is much more highly centralized than was that of the empire. The Social Democratic members and some other

DR. EDWARD BERNSTEIN

Member of the German Reichstag and a leader of the Majority Socialist Party

progressives of the Constitutional Assembly would have preferred to do away with the historical federalism of the late empire, and to make Germany a unified republic organized on the principle of a modern democratic federation. This could not be achieved, but in the domain of finance the principle of centralization made some headway. In accordance with the Constitution and the finance law of the republic, the whole system of taxation, with some few unimportant exceptions, is now enacted and administered by the Reich, the States and the local bodies receiving certain percentages of its revenue. This must be taken into consideration if the sum total of the budget in revenue and expenditure in the Reich is to be justly estimated.

BUDGET AND INCOME TAXES

According to the budget for the year 1921 the total expenditure was estimated at 87,500,000,000 marks, of which 26,000,000,000 was for payments demanded by the allied powers under the Treaty of Versailles. This item will ultimately turn out to be a much higher one, and besides this Germany has to pay the annuities prescribed by the London ultimatum. The total revenue was estimated at 49,300,000,000 marks, of which the largest part is revenue from direct taxation, viz., 25,000,000,000 marks, and the largest single item is the revenue from the income tax, viz., 12,000,000,000 marks. Altogether, the direct taxes of the Reich on property and income are as follows:

- a. Taxes on incomes of individuals.
- b. Taxes on incomes of corporations (societies, partnerships, &c.).
- c. Special tax on the income from capital.
- d. Emergency tax on fortunes (the "Reichsnotopfer," or "sacrifices for the need of the nation").
- e. Regular tax on fortunes.
- f. Inheritance and succession duty.
- g. Tax on the increments of fortunes.

The income tax is a progressive tax on the annual incomes of individuals from whatsoever sources such incomes may derive. It leaves a certain minimum income free; at the creation of the law (March 31, 1920), this minimum was put at 1,500 marks, but it has since been increased considerably in consequence of the fall of exchange. The tax on the taxable income begins with 10 per cent. on amounts up to 24,000 marks over the free income; from there on for every additional hundred marks a surplus tax of 20 per cent. is levied; so that for 30,000 marks 3,600 marks must be paid. This progressive tax rises to 25 per cent.; from 35,000 marks upward it is 30 per cent.; from 40,000 upward, 35 per cent., and so on up to incomes above 400,000 marks, where the tax is nearly 50 per cent. of the whole, viz., 191,600 marks. For every 100 marks above this scale

there is an additional tax of 60 marks; the scale then runs as follows:

For 500,000 marks...	251,000 marks
For 1,000,000 marks...	551,600 marks
For 10,000,000 marks...	5,951,600 marks
For 20,000,000 marks...	11,951,600 marks

This means an income tax of 59.76 per cent. There are, however, many deductions for particular expenses allowed, and the exemption possibilities are not few. It is most unlikely that any one of our multi-millionaires pays over 50 per cent. on his actual income.

The tax on the incomes of corporations was created in 1920. It affects all corporations, societies and associations that have an income from property, investments and business enterprises, with the exception of those whose incomes fall to the Reich, the States, the municipalities, public schools, recognized benevolent institutions, workers' insurance organizations and the like. Co-operative societies are taxed only for income from possessions and from business with non-members. The tax is 10 per cent. of the taxable income of the said corporations and associations, plus an additional tax on all the dividends, bonuses, &c., distributed out of that income if they exceed 3 per cent. of the capital. The tax begins with 2 per cent. of the distributed sums if the dividends, &c., do not exceed 4 per cent. of the capital; it rises progressively to 10 per cent. if the dividends exceed 18 per cent. of the capital.

The revenue out of this tax is estimated in the budget of 1921 at 1,050,000,000 marks, which is not much if one considers the great profits the industrial companies make at present. In fact, this law favors the companies against the individual taxpayer not a little. While the income of the latter may, as we have seen, be taxed up to nearly 60 per cent. in cases where large amounts are involved, the incomes of the companies have at the highest to pay only 20 per cent. The legislator was here led astray by the desire to avoid double taxation. But

he did not reckon with the wiles of the shrewd capitalist. A much larger number of capitalistic enterprises than in former years were changed in 1921 into limited liability associations. In the whole year of 1920 only 7,862 limited liability societies, with 778,000,000 capital, were founded; but in the first five months of 1921 the number of such societies created was 4,112, with a capital of 1,758,000,000 marks, or more than double the capital of the whole twelve months of 1920. A similar increase is shown by the limited liability share-holding companies.

The limited liability association is a form even more popular in capitalistic circles. The law concedes it all the advantages of the limited liability share-holding companies without some of their duties. It lends itself easily to all sorts of evasions of the law.

The syndicates, the Kartelle and kindred monopolizing associations have, as such, never been taxed in Germany, and are not now taxed. Where they have as a central nucleus a limited liability association, its capital is, as we have seen, ludicrously small compared with the actual capital of the combined enterprises. Moreover, these and other capitalistic associations can evade that part of the corporation tax which taxes the distributed dividends by simply accumulating the profits instead of paying out dividends; that is what many of the societies and associations, particularly those recently created, are now doing.

PENDING TAX LEGISLATION

In view of this fact the Government of the republic has worked out and laid before the Reichstag a bill which raises the tax on the annual income of societies up to 30 per cent. and abolishes some of the exemptions granted societies that hold considerable part of the shares of other societies; this latter proviso would hit to some extent the highest associations of syndicates. The bill is one of quite a number now pending, all in-

tended to increase the revenue of the republic. They fall into three main groups, namely: (1) Those for taxation of wealth and income; (2) those for taxation of movements of capital and values, such as stock exchange transactions, betting, and bookmaking, automobiles and insurance, and (3) those for further taxation of commodities, such as food, fuel and illumination.

If the taxes of the first group are intended to hit "Besitz," or wealth—a term here used somewhat freely in face of the declining value of German money—the second group is in this respect of doubtful character, for a tax on transactions in capital can often act as an indirect supertax on the already-taxed savings of the non-wealthy. Of the third group a good many of the bills hit the necessities and small luxuries of the masses; especially is this true of the proposed tax on the trade in food and fuel. This tax is fixed at 3 per cent. of the turnover of dealers, but since most commodities change hands three or four times before reaching the consumer, the latter will, in fact, be mulcted about 12 per cent. by this tax alone. The present tax is only $1\frac{1}{2}$ per cent. of each turnover, and yet its yield has surpassed all expectations. It was first estimated that it would yield from three to four billion marks, but its actual yield is pretty sure to exceed 7,000,000,000 marks. From the doubling of the tax and its extension a yield of about 24,000,000,000 marks is estimated, which, with Germany's population of 60,000,000, would be 400 marks per capita of population. A tax on a very important necessity of the masses is the coal tax, and its proposed increase has raised much discontent.

NATIONAL INSOLVENCY

Altogether the bundle of bills elaborated with much pains by the Ministry of Finance has met with a great amount of adverse criticism. Quite apart from the objections and counterproposals of the people af-

fected by it, such as manufacturers, traders and the like, who nearly always raise the first outcry, many political scientists, experts of commerce and finance have expressed great doubts about its adequateness, and in socialist circles it is attacked as both unjust and insufficient. The proposed taxes will, as a whole, prove insufficient to yield the sums that are required to stop the gap in the budget and provide the means for paying the billions due to the allied powers. The first social-economic effect of the taxes on traffic and commodities will be to provoke movements for rises in wages and salaries, create by this new uneasiness in the industrial world and contribute to lower the value of the mark.

"SEIZURE OF REAL VALUES"

In the ranks of those who hold these opinions a strong movement has arisen to demand as a means of reaching a system of sound finance the seizure of real values. It has as determined supporters the two Social Democratic Parties, who in the Reichstag command 169 votes of a total of 467 members, and who have declared that they will make their vote on the finance bill dependent upon the consideration of this demand. It is therefore of interest to be informed of its nature and significance.

This term, "the seizure of real values," often also called "gold values," comprises those objects whose value, like that of gold, is not essentially affected by the movement in the value of paper money. In particular, the term refers to industrial, commercial and financial establishments, to land or town estates, inhabited houses and buildings used as factories and the like. It is proposed that the Reich shall be declared partner of those of them that the law designates, and share in their annual net profits to a generally estimated percentage ranging from 20 to 25 per cent. This participation of the Reich is to take the legal form of mortgages,

which the Reich may either administer itself, issuing debentures on them, or which it may sell if necessity requires. If one considers the value of the property and the profits of all the enterprises concerned, there can be little doubt that the measure would provide the Reich with considerably more means than any group of the proposed taxes. The Reich, moreover, would be in position to raise money on the debentures in cases of emergency. It is further pointed out as an essential advantage of the measure that with it the industrial and other establishments would not be deprived of a cent of their working capital or their stock in trade, since a part only of the net profits or surplus revenue would go to the Reich or to the owner of the debentured mortgage.

Promising as this sounds, the measure is nevertheless strongly objected to by almost the whole capitalistic world, and particularly by all the landowners. All the middle class parties of the Reichstag have so far declared against it. The capitalistic entrepreneurs see in it a dangerous step that would open the door to troublesome interference in the management of their enterprises, and the landowners, hitherto the spoiled children of the legislator and of the assessment authorities, hate the idea of a public partnership in the surplus of their estates. It is, moreover, said that the measure would increase the danger of *Ueberfremdung*, that is to say, of a wholesale transfer of German enterprises and fixed German property into the hands of foreigners. And finally the general fear is expressed that it may prove an indirect way to socialization.

SOCIALIZATION OR BANKRUPTCY

It must be admitted that there is a certain amount of truth in this, and there is also some truth in one or two of the other assertions. The measure would certainly be a step in quite a new direction and consequently likely to be fraught with unexpected pos-

sibilities. But, conceding this, one is compelled to ask whether there are any alternatives free of the danger of leaps into the unknown? There are none. The described finance bills of the Government, even if fully adopted, will, at best, yield sufficient revenue to cover the deficit in the household of the Reich, but they remain far behind their object of covering all the necessary expenditure, for there are, besides the needs of the household, the needs for the fulfillment of the obligations to the allied powers as fixed by the London ultimatum; the annuity of 2,000,000,000 marks in gold value plus 26 per cent. of the value of the German exports, which will amount at least to another billion gold marks. With the present value of the German paper mark, this would make over 50,000,000,000 of the latter, and they are not provided for. The financial policy of the Government turns around the core of the problem, instead of resolutely taking it in hand.

The situation is this: that Germany must either proceed to heroic measures or declare herself bankrupt. What will follow if she chooses the latter alternative everybody knows; the French Government has left no doubt about its intentions in this case; the German owners of real values will then fare not a bit better than under the suggested measure. And as regards the danger of selling out to foreigners, there is only the alternative of letting it go on, as now, in the open market where there is no limit or control, or to carry it out, if inevitable, in an organic way to the necessary extent and in such forms as would safeguard the general interest of the community as much as possible. In the quite exceptional position in which Germany finds herself she will never succeed in solving her economic problems without courageously taking to new ways.

Even though this seizure of real values should lead to socialization, this would not be so great a danger as has been depicted and feared. Limited to a certain percentage of the

surpluses, it takes more regard of the economic interests of trade than any other scheme of socialization yet worked out. Since Germany has become a republic she has had two commissions on socialization, both composed of renowned socialistic and middle-class economists of great learning and a goodly number of experts, whose reports are most fruitful reading and contain very ingenious plans and suggestions. The same can be said of at least a part of the daily increasing general literature on the subject. It should also be remembered that of all the schemes yet devised, there is none that has not its difficulties and possible drawbacks.

The German Republic found itself at its birth, as regards economics distinguished from finance, before two great tasks: on the one hand there was the necessity to restore as far as possible the economic life of the nation, disorganized in more than one respect by the war and the blockade, troubled by the excited and irritated spirit of the workers and of the several millions of homecoming soldiers, and menaced on the one hand by the demands of the victors and on the other by the Bolsheviks and their agents, who worked with unlimited finances for civil war and the dictatorship of the proletariat, the realization of which, under the given conditions, would have meant disaster. They had to be fought, and the Socialist workers, the founders of the republic and its staunchest and most indispensable supporters, had to be satisfied in their desire for the quick realization of efficient socialistic reform.

It is evident at the first glance that these two tasks could only in a degree be reconciled and that they were in many respects mutually contradictory. We cannot experiment on a sick and weakened organism without endangering its life. The most urgent of the two tasks was the first, and this is one of the reasons why in the series of social reforms taken in hand just that one which seemed to the

workers the most decisive, viz., socialization of the means of production, was deferred the longest. Another reason is this, that if socialization means only absorption of enterprises or trades by the State or the municipality, there was already in Germany more socialization than in most other countries, though almost all the establishments concerned worked with terrifying deficits. Thus, e. g., the State railways, which before the war had always had considerable surpluses and furnished a large portion of the public revenue, had now a deficit of several billions, and the outlook was that this deficit would grow for years instead of diminishing. Such, indeed, has been the case.

UNOFFICIAL SOCIALIZATION

But socialization is not a set formula that requires only one mode of practical application. It is the expression of a principle that allows a variety of applications according to conditions and the nature of the object, viz., the principle of regarding economics as social functions subjected to the general interest, and in their different forms and performances entitled to maintenance only so far as at each phase of social evolution and according to the mode of production they serve the general interest better than any other possible form. What is of consequence is the recognition of this principle and its realization in the whole domain of social life. As I wrote some twenty years ago: "A good factory law can contain more socialism than absorption by the State of whole groups of factories." (*Neue Zeit*, year 1897-98, Vol. 1., P. 740ff.)

From this point of view the young German Republic, in spite of all the difficulties it had to fight against, has done more in the way of socialism than is generally known or recognized by the mass of the people themselves. From the proclamation of the maximum eight hours working day and kindred measures of social legis-

lation in the first days of the revolution down to the law of 1920 on the establishment of Shop Councils, quite a number of prescriptions to raise the social status of the employes in all spheres of economic life have been carried out. These measures leave the outward form of social institutions untouched, and are therefore not appreciated by the general public at once in their whole social import; their true significance will show itself only later in the light of the measures engendered by them.

As regards economics proper there are a number of measures which, while not making trades or industries public property, yet subject them to a high degree of public control. This is true, for instance, of the office to control the coal trade in respect to fixing prices, and so on. In this office—the Kohlenhandelsstelle—the Reich, the owners and the workers are all represented. Both the Social Democratic Parties urge the transfer of the whole coal industry to public ownership as a first measure of socialization in the traditional meaning of the word. But besides the opposition of the middle-class parties, there are great objective hindrances in the way. It must never be forgotten that Germany, though a republic, is not a free country. She is, by the Treaty of Versailles and its amplifications in the London demand, to a great extent in a state of bondage. The Allies have reserved the right to lay hold of all public property in case Germany should fail in payment of the reparation and other bills against her. One will easily understand that these conditions do not encourage the taking over of whole industries by the State.

A LIVING PRINCIPLE

But if socialization in the traditional meaning of the term does not make headway at present, the principle is nevertheless alive in the spirit of the nation. One proof of this is the movement for the better

organization of the economics of the whole country by the legal application of the economic principle of the trusts. "Planwirtschaft"—methodical economy—it is called, and it proposes to save unnecessary costs by eliminating establishments that work uneconomically and by carrying out a methodical distribution of production. A gifted member of the working class, Herr Rudolf Wissel—originally a metal worker, and for some time Minister of Economics of the republic—and Herr Walther Rathenau, an ingenious captain of industry of great learning, have both worked out schemes to that effect, which are now being animatedly discussed. On the other hand, the majority of the Commission on Socialization proposes a scheme for the nationalization of leading industries under public control without making the Reich the actual owner, and to this plan both the Social Democratic Parties would by preference give their support.

But both schemes are at present only discussed, and for practical application are relegated to the background by the movement for the seizure of real values. It has already been shown how popular this proposal is with the organized workers of the country. It would signify but a partial socialization, but this on such a large scale that its adoption would be hailed with the greatest satisfaction by them, and would thus go far in strengthening the general situation of the republic. And since the law can receive a form that removes the exaggerated fears of the manufacturers and traders, it is yet not unlikely that in some shape at least it will finally find acceptance. One of its great advantages is that it proposes to furnish the means for fixing the exchange value of the mark. In some circles of the middle classes the opposition is already less violent than it was at first. They begin to parley, and political necessity will do the rest.

Berlin, Sept. 15, 1921.

RESTORING THE RUINED FACTORIES OF FRANCE

BY LOUIS LOUCHEUR

Minister of the Liberated Regions

A brief statement, written for Current History, of the progress made in the reconstruction of war-damaged industries—Nearly one-half the pre-war quota of employes again at work

THE reconstruction of the French factories damaged or destroyed during the war constitutes a task unprecedented in history. It is a question not only of re-erecting the buildings, but also of restoring the plants and tools under most difficult conditions. A modern factory is as complex as a piece of clockwork; if any smallest part is absent or defective, the whole machinery is thrown out of gear. The difficulties of reconstruction were increased by the fact that many special plants had themselves to be rebuilt before the outfit for certain factories could be provided. In many cases it has been found necessary to assist in the installation, at the cost of much time and labor, of side industries without which the reconstruction of essential industries would have been greatly retarded.

In order to get some idea of the vast work already accomplished, as well as of the work still to be done, it is necessary to compare the situation before the war with the situation when the armistice was signed on Nov. 11, 1918. The ten ravaged departments held about 30 per cent. of French industry. They produced 35 per cent. of the sugar made in the whole country, 50 per cent. of the coal brought to the surface, 63 per cent. of the steel turned out, 81 per cent. of the textiles, 92 per cent. of the iron ore. When the enemy armies withdrew, it is no exaggeration to say that ruin and desolation were uni-

versal throughout those areas. Without dwelling upon the moral and physical sufferings or the courage of the population that had remained in the invaded districts; without mentioning the fair lands played up by trenches and shells, and dotted with unexploded projectiles, I will merely refer to the 290,000 houses that were damaged and the 300,000 that were completely destroyed. My theme is now the industrial damages, their extent, the measures projected for the restoration of factories and the results thus far obtained.

At the time of the armistice 20,603 works had suffered damage, as follows:

- (a) Works completely destroyed (buildings and material past being turned to account in any way whatever)..... 4,486
- (b) Works plundered (buildings of no further use, plant stripped or destroyed). 6,376
- (c) Works damaged (buildings and plant capable of further use, wholly or in part, after undergoing repairs)..... 9,741

Total20,603

The aggregate damage suffered by these industrial establishments, on the basis of their value in 1914, exceeds 7,000,000,000 francs, of which 920,000,000 represent the damage inflicted upon coal mines. The effect of the invasion has been to reduce the production of the damaged works in a proportion varying from 25 per cent. for workshops turning out machinery to 74 per cent. for the coal mines, 81 per cent. for iron and steel works, and as high as 93 per cent. for some of the most important branches of the textile industry.

For the purpose of speeding up the reconstruction of the liberated regions, the Government created a Board of Industrial Reconstruction, and this proved to be a very pliable organism, adapting itself readily to the actual conditions, in spite of the very great diversity of the questions raised. Powerfully seconded by the Central Association for the Revival of Industrial Activity in the Invaded Areas, by the Central Purchasing Board and by the Regional Committees instituted in the devastated departments, the Board of Industrial Reconstruction was most favorably received by the manufacturers that had suffered damage.

But what words of praise could do justice to the courage and self-devotion of those manufacturers and their staffs in the accomplishment of a task on which depended the restoration of the economic power of the whole country? Thanks to them, the factories rose again from their ruins, and while the work yet to be accomplished is immense, the results obtained allow us to take a sanguine view of the future.

The most urgent task after the withdrawal of the enemy forces was to bring about the return of workmen and to supply them with food and building materials. To give an idea of the conditions under which these supplies were brought up it will be sufficient to state that 5,600 kilometers of railways had been destroyed or rendered unserviceable, as well as 500 bridges and 12 tunnels; that 51,547 kilometers of national or departmental highways were out of use, and that 3,168 engineering works had been destroyed, while the canals were obstructed and useless.

With rare determination, masters and men set to work together, and the difficulties experienced only increased their desire to succeed. Their efforts can be compared only with those of the farmers, daily risking their lives in restoring to cultivation fields strewn with the most dangerous engines of war.

At the close of the year 1918 practically all the damaged factories were silent and dead. Six months later, by July 1, 1919, about 10 per cent. of the pre-war personnel had returned to work. One year later, on July 1, 1920, the number of employes was 42 per cent. of the personnel employed in 1914, and by July 1, 1921, it was over 47 per cent. of that personnel, in spite of the present economic crisis, whereby the reconstructed factories are affected as adversely as the rest.

There remains, however, a serious obstacle in the path of industrial reconstruction. Putting the damaged factories into proper condition is not enough in itself; it is also necessary to recruit the personnel whose task it is to breathe life into reconstituted works. French industry has been hard hit in this respect. To the workmen lost in the war must be added those who came back maimed for life; the facts must be taken into account that a certain proportion of the working classes will not return to their native towns and that for the last five years no apprentices have been trained. A far-reaching scarcity of labor, therefore, confronts employers. It is difficult to estimate the importance of this deficit, but it may be put down at something like 250,000 hands. For the housing of labor, large blocks of dwellings have been built, strong companies have been founded for the supplying of cheap dwellings, and the day may be said to be at hand when a large proportion of the working population of the devastated areas will be housed under distinctly favorable conditions.

To sum up: A situation unparalleled in history has been met by a series of efforts to which nothing in the past can be compared. Important results have been obtained, but they have not made us lose sight of the huge task which remains to be accomplished. The keenness hitherto shown by workmen and employers alike permits us to look forward confidently to the future.

POSTHUMOUS MEMOIRS OF TALAAT PASHA

The former Grand Vizier's own account, written shortly before his assassination, of why and how Turkey entered the war—Secret alliance that preceded the conflict—Causes of the Armenian massacres as stated by the man who ordered them

EDITORIAL NOTE—The following article is a translation of portions of a manuscript penned by Talaat Pasha, the Young Turk leader and former Grand Vizier of the Turkish Empire, after his flight from Constantinople and during his sojourn in Berlin, where he was carrying on a campaign of Turkish Nationalist intrigue when he was shot and killed by an Armenian student on March 15, 1921. (See July CURRENT HISTORY for his connection with the Armenian massacres.) After Talaat's death the manuscript passed into the possession of his wife, who remained in Germany; she has not yet published the whole of it, but after the acquittal of her husband's assassin she permitted the Paris correspondent of the *Vakit*, a liberal Turkish newspaper published in Constantinople, to reproduce the most interesting portions of it. These have been translated from the Turkish for CURRENT HISTORY by M. Zekeria, a native of Constantinople. They represent about fifty pages of the original manuscript, the opening sentence of which, "I do not tell all the truth, but all I tell is truth," aroused a great sensation in Turkey.

FROM the beginning of the revolution of 1907 down to the Balkan war, Turkey had no definite foreign policy. One day a pro-English feeling would prevail at the Porte, the next we would turn toward Germany. We were in a hesitating state, not knowing where to go, whose hand to shake. We followed the exigencies of the hour, trying to be equally good to all the European powers.

After the Balkan War we thought that the loss of Turkey's European provinces was largely due to our undecided and vacillating policy. Consequently, we thought it necessary to settle all our difficulties and disputed problems with the European powers,

and, discarding all pretexts of European intervention, to devote our efforts to the social and economic reconstruction of our country. With this aim in view, the Cabinet of Mahmoud Shevket Pasha organized a commission under the Presidency of Hakky Pasha—the former Turkish Prime Minister, who was Turkish Ambassador to Germany during the war, and who died in 1917 at Berlin—and invested it with the extraordinary mission of visiting all the European capitals, with full authority to solve unsettled problems and to reach an agreement with the nations of Europe about their supposed interests in Turkey. Hakky Pasha began his work, going first to England. After concluding an arrangement with the English Government he was to go to Paris, then to Germany, &c.

But just at that time Russia sent a vigorous note to the Porte. After the Balkan War there was a worldwide belief that Turkey had become very weak and was lying on her death-bed. Russia, taking advantage of this opportunity, demanded the application of the Treaty of Berlin to the eastern provinces of the empire. This treaty had been violated many times after its signature, and its stipulations had become obsolete. Russia, however, wished to use it as a means of aggression at a time when she knew that Turkey was not able to resist. This unexpected hostility of Russia created great anxiety at the Porte. Trying, on the one hand, to

get the help of the other Ambassadors at Constantinople to frustrate the consequences of the Russian note, we gave, on the other hand, a telegraphic order to Hakky Pasha at London to sign an agreement with England and secure her help for the realization of a constructive program by the Turkish Government in the eastern provinces.

According to the Treaty of Berlin, the integrity of these Turkish provinces, where our interests were clashing with those of Russia, was assured by England. Hakky Pasha, starting from this point, asked the English Government to appoint English subjects as supervisors of the constructive work to be carried on in this disputed area. The English Government accepted this proposal, and some of the English inspectors who were to go to Turkey for this purpose were even selected and their names announced. The application of this agreement would have eliminated the dangerous effects of the Russian note and would have saved Turkey from great embarrassment. St. Petersburg, realizing this, immediately applied to London and began to use its influence against the agreement. Unfortunately, she succeeded. As a consequence, the English Government subsequently withdrew its consent, and the project to get English help for the constructive work failed.

WHY TURKEY FAVORED GERMANY.

When England turned her back to the Porte, Germany was courting Turkey to secure her sympathy. During the Balkan War Germany had not failed to flatter the national feeling of the Turks, while the other nations had only insulted it. When we addressed the Ambassadors to ask their help against the Russian demand, they all advised us to submit to the Russian desires, except the German Ambassador, who encouraged us in our project and promised us his help. Although the negotiation at London failed, we continued

our political activities, and, with the moral aid of Germany, we were able to divert the move of the Russian note and to put it among the problems of the general reform program.

But this incident, which was followed by others, gave a new impetus to the pro-German feeling among the members of the Cabinet. After the Balkan War, the political balance of the Balkans being broken in a way unfavorable to Turkey, we advocated an alliance with one of the European groups to offset this disadvantage. The amiable attitude of Germany encouraged us, and during the diplomatic conversations in regard to the eastern provinces we suggested to the German Ambassador at Constantinople that we were ready to make an alliance with Germany. The German Ambassador received this suggestion favorably, and asked instructions from Berlin. The German Government, however, did not appear enthusiastic about it, and in its answer expressed the belief that Turkey was too weak to make an alliance with Germany; that an alliance might be useful only if contracted at a propitious time, and that for the moment the time was not ripe for such a union. All our endeavors to find an ally failed because of this fact. The European powers wished a strong and powerful ally to help them.

In the Summer of 1914, however, Germany, to our surprise, revived our old suggestion and proposed to consider it anew. As no change had occurred in our foreign policy in the interval, there was no reason for refusing this proposal, which we had initiated some time before. Consequently we accepted the discussion of the problem, and in some consecutive meetings with the German Ambassador we prepared a project of alliance. Both parties easily fell into accord regarding the guiding principles and signed an agreement which would form the main lines of a political and military alliance between Germany and Turkey.

Immediately after the signature of this document the incidents followed which ended in the World War. When we signed the agreement there was no prospect of war. But after it was signed the assassination of the

(Photo by Paul Thompson)

TALAAT PASHA

Turkish official who ordered the massacre of Armenians, and who was assassinated by an Armenian youth in Berlin

Austrian Prince and the hostilities between Austria and Serbia suddenly proved ominous. We realized that the change in the attitude of Germany in seeking our co-operation was due to a forecast of future events; but we thought that, even so, this alliance would be still to the benefit of Turkey, because none of the European powers would admit us into their circle without hope of gaining material benefit.

TRYING TO AVOID WAR

Some months later we were facing the World War. Our position was exceedingly delicate. By the alliance recently concluded, we were engaged on the side of one of the combatants.

The German and Austrian Ambassadors visited us every day, insisting upon our immediate entry into the war on their side. Every day we were pressed to answer such questions as these: "When will you join us? When will you show your good will by fulfilling the terms of your agreement?" &c.

The answer to these questions was simple. We could have said: "Italy, although one of the allied members, has not yet joined the Central Powers; though the neutrality of Belgium has been assured by international treaties, Germany herself has not respected her own signature." But such an answer would have been equivalent to the denial of the alliance, which we had sought so anxiously and esteemed so highly. Moreover, such an attitude would have shown the world our faithlessness to our agreement, and would have ended the confidence of the civilized world in our word. Consequently we preferred to make a more diplomatic reply to the Germans' insistence. We told them that Turkey was faithful to her word; that she would gladly act as soon as necessity showed the need of her help; that as Russia was the most inveterate and menacing enemy of Turkey, it was not only a moral obligation for Turkey to ally herself with Germany in the war, but a necessity proved by historical facts; that it was useless and even dangerous, both for Turkey and for her allies, for us to join the Central Powers without knowing what would be the attitude of Bulgaria, who by various pacts was closely tied to Russia.

"After the Balkan War," we further explained, "our European frontier was modified in such a way that Constantinople was rendered defenseless before a serious attack of the Bulgarian Army. If Bulgaria joins the Allies against Turkey, our capital will be exposed to a danger which neither Germany nor the Turkish Army can prevent. Therefore, it will be an unsafe adventure for Tur-

key to enter the war, unless Bulgaria decisively defines her position. It is possible to win the help of Bulgaria, as there is a hostile feeling among the Bulgarians against Serbia. If Germany can induce Bulgaria to go against the Serbs, Turkey will be glad to fulfill her engagement."

This ambiguous and yet apparently logical and skillfully prepared answer saved our position for a long time. Delaying our entry into the war, we could follow the military operations at the fronts and the political changes which occurred in Europe and in the Balkans.

THE ALLIES EVASIVE

There was a belief that during this period, in which we tried to remain neutral, the Allies had offered us very alluring proposals, and that we refused them without serious consideration. This is an exaggeration of facts. The truth is, that from the beginning of the World War until the incident of the Black Sea, which caused us to enter the conflict, not a real or formal proposition had been handed us by the Allies. It is true also that the French and English Ambassadors advised us many times to keep our neutrality. Even when they observed our inclination toward Germany, the only promise they could give us was that, in the case of our preserving strict neutrality, they would guarantee the integrity of the empire and would persuade Russia to do the same. They never went further in their proposal than that, and never proposed anything else.

The pledge to preserve the integrity of the Ottoman Empire had been repeated many times after the Paris conference, but never kept. It was not possible and wise, therefore, to give serious consideration to the evasive proposal of the Allies. Who could assure us that this promise would or could be kept after the war? We had a good example of what might happen in England's attitude regarding the eastern provinces.

Translation: I confess also that the deportation was not carried out lawfully everywhere. In some places unlawful acts were committed. The existing hatred among the Armenians and Mohammedans, intensified by the barbarous activities of the former, had brought many tragic consequences. Some of the officials abused their authority, and in many places people took the preventive measures into their own hands and innocent people were molested. I confess it.

Had she not broken her word upon the demand of Russia? Who could say that tomorrow Russian ambition would not nullify all the agreements entered into with the Allies?

On the contrary, we had many reasons for not believing in their promises. In the very beginning of the war England, without any reason, without even a previous announcement, had requisitioned our two great dreadnoughts, Osman I. and Reshadie, in construction at English arsenals. These two warships were ordered from England at the cost of a tremendous sacrifice on the part of the Turkish people. Poor and rich alike had shared in the expense. The Turkish women had sacrificed their valuable jewels for these ships. In spite of all our efforts and protests, we lost them, because England refused to give ear to our representations. This fact created a very bad impression both on the Porte and on the public. The requisition was interpreted by the Turks as a scheme to secure in the Mediterranean the supremacy of the Greek Navy, which had been recently strengthened by an American dreadnought, renamed the Averoff.

After these facts we could hardly

believe that England would fulfill her assurance of integrity. It was true, however, that the Allies earnestly desired our neutrality. In many cases, for instance in the purchase of the German ships the Goeben and the Breslau, and in the abolition of the capitulations, they never went further than a formal protest, and never tried to break political relations with Turkey. The Allies, who were fighting against a formidable enemy, and who knew not what the result of the war would be, appreciated the im-

were suspicious of the policy of the Porte. The German military mission was a source of real anxiety for them. We had changed the names of the German warships and put them under Turkish rule and the Turkish flag; the Allies, however, naturally protested against the keeping of the German officers and the German crews on board. On this score we were in a very difficult position, and yet the Allies limited their efforts to keeping us neutral.

BULGARIA AND RUMANIA

In answer to Germany's pressure for our immediate aid, we insisted so much upon a definite decision by Bulgaria that at last Germany asked us if it would not be advisable to enter into diplomatic negotiations with Bulgaria to that effect. It would have been unwise if not impossible to refuse such a suggestion. At that time Mr. Radoslavov was at the head of the Bulgarian Government, and Mr. Gnatiev, with whom we were personally acquainted, was his Foreign Minister. After a long discussion of the matter in a meeting of the Cabinet, we decided to send a delegate to Sofia to get into personal touch with leading persons and to investigate the situation. In company with Halil Bey, Speaker of the Chamber of Deputies at that time, I went to Sofia. We interviewed Messrs. Radoslavov and Gnatiev; we discussed at length with them the position of Bulgaria, and after many

portance of even a small and weak nation going against them. Their policy, therefore, was not to gain our assistance, because they soon understood that was impossible, but to keep us out of the war as long as they could. On the other hand, our aim was to delay joining the Central Powers as long as possible, and while watching the political changes which might occur in the Balkans, to secure our interest as best we might.

The first military operations were favorable to Germany, and very hopeful for the Central Powers. Even after the battle of the Marne, in which the Germans were defeated, the military experts strongly believed that ultimate victory would belong to Germany. The Allies, meanwhile,

close conferences we understood that the key of the situation was not in Sofia, but at Bucharest. Bulgaria, deprived of her previous gains by the second Balkan War, was ready to go against Serbia. Even the threatening attitude of Greece was not considered dangerous at Sofia. The only source of fear was Rumania. The Bulgarian leaders were afraid of a Rumanian blow, which, with the help of the Russian Army, might be a great menace in the Balkans. It was impossible to secure the help of Bulgaria without assuring her protection from the danger that threatened in the rear. We left Sofia, therefore, for Bucharest.

Bratiano was the Prime Minister of Rumania at that time. The German Embassy was occupied by von Kuhlmann, later Foreign Minister of Germany, and the Austrian Embassy by Count Tchernin, later Foreign Minister of Austria. We visited both of them and also saw Mr. Radev, Bulgarian Ambassador to Rumania. According to the program planned in our conferences with them, each of us began to pay separate visits to the King, the Prime Minister, the Foreign Minister and different political leaders of Rumania. In the evening we met in one of the embassies, where we reported our activities and prepared the program for the next day.

After a long discussion of the matter with the Rumanian leaders, we got the impression that Rumania was in favor of strict neutrality. The Rumanian Government promised us to keep its neutrality, despite all changes that might occur in the Balkans. Radoslavov, the Prime Minister of Bulgaria, informed of the pacific intention of Rumania, asked a written agreement to that effect. When we applied to Bratiano for a written assurance he said: "Rumania promised the world to remain neutral during the present war. Serbia belongs to one of the hostile parties. To give a written promise to Bulgaria, encouraging her to war with Serbia, would mean to use our

neutrality in favor of one of the combating nations. This act, therefore, would be the negation of our promise. Consequently, to sign a written agreement in favor of one of the combating parties is against our interest and our national honor. But verbally I promise you that Rumania will not change her neutral attitude, even if Bulgaria should declare war against Serbia."

This assurance, though valuable, was not strong enough to induce Bulgaria to make a decision. She wished, and insisted upon getting, a written promise. Realizing that our mission had failed, we returned to Constantinople.

I do not know how far the aim and the result of our trip to Sofia and Bucharest were known by the allied representatives, but after our return the situation went on in the same indeterminate way. The German and Austrian Ambassadors continued playing their tricks to lead us into the war, and the allied representatives endeavored to avoid breaking political relations with the Porte. The Porte, between these two opposing forces, tried to delay war as long as possible.

GERMANY FORCES THE ISSUE

Day by day our position became more and more difficult. The addition of the German naval mission to the German military organization, the increasing number of German officers and crews, and their ever-growing influence in Constantinople rendered the situation very critical. Just at this moment the incident of the Black Sea occurred. The German Admiral Sushon, taking some of the strongest ships of the Turkish fleet, went out on the Black Sea, attacked the Russian fleet and bombarded some of the Russian ports. Contrary to the general belief, this incident had not taken place with the knowledge of the Porte. During the war I did not deny the rumor that it had; but now that the war is over, and I am not in power, I most emphatically de-

clare that I learned, as everybody did, of this regretful incident just after it happened, and that no one of the Cabinet members gave his consent to this sudden attack on the Russian fleet.

This incident caused the Porte real anxiety. All the members of the Cabinet were angry. Some of them, such as Mahmoud Pasha Churuk-soulou, Minister of Public Works; Mr. Suleiman Elbustany, Minister of Agriculture; Mr. Oskan, Minister of Posts and the only Armenian member of the Cabinet, resigned as a protest, and Djavid Bey, Minister of Finance, threatened to resign if the incident was not closed amicably in a short time. Even Said Halim Pasha, the Prime Minister, consented to keep his place for only one session of the Cabinet, in which we were to discuss the matter at length, and to reach a final decision. This incident had created great surprise and excitement, not only in political circles, but among the people as well, who followed with enthusiasm the German victories at the front.

The situation had become exceedingly critical. We had to decide whether to admit this incident as an accomplished fact and to side with Germany, or to apologize for the sudden attack of the German Admiral and try to close the incident peacefully. We immediately convoked an extra session of the Cabinet at the home of Said Halim Pasha. At the end of a long and animated discussion, we authorized Said Halim Pasha, the Prime Minister and Minister of Foreign Affairs, to see the allied representatives, particularly the Russian Ambassador, and to try to settle the matter peacefully. At the same time Djavid Bey, who was known as pro-ally, was to see Mr. Bompas, the French Ambassador at Constantinople, and to ask his help.

TURKEY PUSHED INTO WAR

Immediately after the Black Sea incident had occurred, the Russian Ambassador sent a vigorous protest,

which was followed by similar protests from the allied representatives. The French and British, however, showed a certain inclination for a peaceful settlement, and, in order to close the matter amicably, they proposed that we disarm the two German ships, the Goeben and the Breslau, which had been annexed to the Ottoman fleet; that we send back all the German officers and crew, end our secret relations with Germany, and fulfill all the requirements of neutrality. Acceptance of these conditions would have amounted to breaking our alliance with Germany. The situation, already critical, had become acute. It was impossible to prolong this rather ridiculous position. We had to choose one of two alternatives; either to satisfy the demands of the allied Ambassadors, which meant to lose Germany forever, or to join the Central Powers. At a meeting of the Cabinet we discussed the matter very minutely.

Personally I regretted the incident, which aggravated the already existing difficulties, but in fact I was in favor of war. I firmly believed that, if we avoided the fulfillment of our agreement then, we should lose the confidence of all the civilized world. The Allies had already observed that we inclined toward Germany. We could hardly hope for effective help or material advantages from the Allies. They had never done more than give meaningless and ludicrous assurances of integrity. If we insisted upon keeping our neutrality until the end of the war, refusing aid to our allies in the time of their necessity, Germany and Austria also would reasonably refuse to help us in case they were victorious. Consequently, no matter whether the Allies were victorious or not, if we did not take part on one side or the other, Turkey was doomed. In both cases the victorious party would punish Turkey for her inaction, and would try to satisfy its political ambitions against the empire. At the end of the war we should be in a most disadvantageous position. As a statesman, I could

not consent to yield my country to such a disastrous fate. I was, therefore, in favor of entering the war on the side of Germany. I wished only to delay this decisive act as long as possible and to join Germany at the most propitious time.

The Black Sea incident accelerated Turkey's entrance into the war, which I believed to be inevitable. Djavid and Rahmy Beys, in whom I had unlimited confidence, opposed our entry, not because they were against it, but because they believed that the propitious moment had not yet arrived. But once the necessity of war was admitted, the question of time was of very little importance.

In the meantime, while we were discussing what decisive attitude to take, the news reaching the Porte from the Caucasian frontier indicated an increasing concentration of Russian forces on the front. This concentration, which necessitated equal precautionary measures by us, had created a very tense feeling between the two armies. Since we had advanced so far and had reached this climax, it was hardly possible to retreat. I therefore advised the members of the Cabinet to consider the Black Sea incident as an accomplished fact, and openly to declare war against the Allies. As this suggestion was backed by a majority in the meeting, we refused the conditions proposed by the allied Ambassadors, and openly joined Germany. * * * *

DEPORTATION OF THE ARMENIANS

The deportation of the Armenians, in some localities of the Greeks, and in Syria of some of the Arabs, was used inside and outside the empire as a source of attack on the Turkish Government. First of all, I wish to inform the public that the rumors of deportation and assassination were exceedingly exaggerated. The Greeks and the Armenians, taking advantage of the ignorance of the American and European public of the Near Eastern situation and of the character of the

Turks, used the deportation as a means for propaganda, and painted it as best suited their aim. In saying this, I do not mean to deny the facts. I desire only to eliminate the exaggerations and to relate the facts as they occurred.

I admit that we deported many Armenians from our eastern provinces, but we never acted in this matter upon a previously prepared scheme. The responsibility for these acts falls first of all upon the deported people themselves. Russia, in order to lay hand on our eastern provinces, had armed and equipped the Armenian inhabitants of this district, and had organized strong Armenian bandit forces in the said area. When we entered the great war, these bandits began their destructive activities in the rear of the Turkish Army on the Caucasus front, blowing up the bridges, setting fire to the Turkish towns and villages and killing the innocent Mohammedan inhabitants, regardless of age and sex. They spread death and terror all over the eastern provinces, and endangered the Turkish Army's line of retreat. All these Armenian bandits were helped by the native Armenians. When they were pursued by the Turkish gendarmes, the Armenian villages were a refuge for them. When they needed help, the Armenian peasants around them, taking their arms hidden in their churches, ran to their aid. Every Armenian church, it was later discovered, was a depot of ammunition. In this disloyal way they killed more than 300,000 Mohammedans, and destroyed the communication of the Turkish Army with its bases.

The information that we were receiving from the administrators of these provinces and from the commander of the Caucasian Army gave us details of the most revolting and barbarous activities of the Armenian bandits. It was impossible to shut our eyes to the treacherous acts of the Armenians, at a time when we were engaged in a war which would deter-

mine the fate of our country. Even if these atrocities had occurred in a time of peace, our Government would have been obliged to quell such outbreaks. The Porte, acting under the same obligation, and wishing to secure the safety of its army and its citizens, took energetic measures to check these uprisings. The deportation of the Armenians was one of these preventive measures.

I admit also that the deportation was not carried out lawfully everywhere. In some places unlawful acts were committed. The already existing hatred among the Armenians and Mohammedans, intensified by the barbarous activities of the former, had created many tragic consequences. Some of the officials abused their authority, and in many places people took preventive measures into their own hands and innocent people were molested. I confess it. I confess, also, that the duty of the Government was to prevent these abuses and atrocities, or at least to hunt down and punish their perpetrators severely. In many places, where the property and goods of the deported people were looted, and the Armenians molested, we did arrest those who were responsible and punished them according to the law. I confess, however, that we ought to have acted more sternly, opened up a general investigation for the purpose of finding out all the promoters and looters and punished them severely.

ATROCITIES CONDONED

But we could not do that. Although we punished many of the guilty, most of them were untouched. These people, whom we might call outlaws, because of their unlawful attitude in disregarding the order of the Central Government, were divided into two classes. Some of them were acting under personal hatred, or for individual profit. Those who looted the goods of the deported Armenians were easily punishable, and we punished them. But there was another

group, who sincerely believed that the general interest of the community necessitated the punishment alike of those Armenians who massacred the guiltless Mohammedans and those who helped the Armenian bandits to endanger our national life. The Turkish elements here referred to were short-sighted, fanatic, and yet sincere in their belief. The public encouraged them, and they had the general approval behind them. They were numerous and strong. Their open and immediate punishment would have aroused great discontent among the people, who favored their acts. An endeavor to arrest and to punish all these promoters would have created anarchy in Anatolia at a time when we greatly needed unity. It would have been dangerous to divide the nation into two camps, when we needed strength to fight outside enemies. We did all that we could, but we preferred to postpone the solution of our internal difficulties until after the defeat of our external enemies.

As to the deportation of the Greeks and the Arabs, this charge is based more on propaganda than on real fact. The truth is that the Greeks living on the coast of the Sea of Marmora supplied food and petrol to the enemy submarines, which, passing through the strait, entered the Marmora and threatened our communication by sea. In order to prevent the Greeks from aiding the enemy, we deported those who were guilty to Anatolia. But their deportation was carried out in a very regular way. They suffered neither loss of life nor of goods. As to the Arabs of Syria, we confined ourselves to the application of martial law, and punished only those who promoted a revolution to overthrow the Turkish authority in Syria.

These preventive measures were taken in every country during the war, but, while the regrettable results were passed over in silence in the other countries, the echo of our acts was heard the world over, because everybody's eyes were upon us.

WHAT SOVIETISM HAS DONE TO RUSSIA

BY WALTER EDGAR IVES

The real nature of the Communist idea, as defined by Bolshevik leaders, and how it has worked under Lenin and Trotzky, crushing first the Russian farmer, then the workman—Peril of the insidious poison in other countries, including the United States

SOVIET Russia has now become a name of ominous import to the whole civilized world, including America. The new and unprecedented experiment of creating an alleged workingman's Government has been linked with a propaganda aimed at world revolution which has caused all the Western nations extreme disquietude. Alarmed by Bolshevik propaganda in the Near East and India, Great Britain has temporized with the Soviet regime; France has refused compromise, and has followed an aggressive policy; the United States remains firm for a system of non-intervention. The friends of the communist republic point triumphantly to the new reform measures introduced by Lenin not long ago to placate the hostility of the peasants and to stave off the imminent economic catastrophe. Lenin succeeded in putting through a partial return to private industry; a number of factories were denationalized, free trade was permitted to the sullen, hostile peasants; the latter were relieved of the forced requisitions of their grain and were allowed to "pay in kind." Glowing reports came out of Russia following the application of these new measures, while the extreme Bolshevik leaders looked on askance at these apostacies to the fundamental tenets of communism.

Hardly had the new measures been

set in motion when the Moscow Government was confronted with one of the most critical situations it has yet been called upon to face. Famine stalked the land, thousands were perishing in the normally rich Volga country, and the death of millions was threatened. Staggering under this last blow, the communist leaders called on the hated bourgeois Governments of the outside world, whose existence they had long been threatening, for help. The United States relief organization has already delivered more than 5,000 tons of food to the starving people. The Soviet Government, by incredible efforts, has found the seed necessary for the next harvests. The vast and suffering land is saved again. Or at least the Soviet Government is saved—for the time being. Those who favor it point triumphantly to the new measures, and declare that by successive modifications it will evolve into a true democracy and maintain its power. Those who judge it wholly upon its record, and who have seen clearly, from the utterances of the Bolshevik leaders themselves, that these recent concessions are nothing but temporary expedients, wrung from them by necessity; that their beliefs remain the same, and that they still cling to the dream of world revolution, have armed their hearts with patience in the hope of an overthrow from within.

Meanwhile the ramifications of Bolshevik propaganda extend from Moscow in radii that reach like lines of steel to the Far East and the Far West, and even across the ocean into the United States. Underground and secret, the poisonous leaven is working everywhere. Turkey is infected by it, and Afghanistan. To Italy, Milan, Bologna and Imola have spoken in plain language. In Germany it has already caused the blood of thousands to flow. Like a poisonous stream it crawls through France and Great Britain. Dammed up in America by official hostility, it flows on underground. The leaders of our Government, however, underestimate its danger. Only Lenin, in the Kremlin, knows how dangerous it is to the "bourgeois" Governments. Labor and intelligentsia alike are being misled by it. For the communist arguments are insidious and speciously convincing. The average man, to say nothing of the more ignorant elements of our population, would be wholly unable to answer them. To minds unprepared, they seem convincing. And therein lies the danger—and the lesson.

About a year ago a combination of circumstances brought me into intimate touch with one of the leaders of the Communist Party in one of the principal foreign capitals. I had gone to Europe for a study of economic conditions. As regards communism, I had long believed that there must be some good fundamental reason why the Soviet theory had been able, through these years, to hold its own, and even to expand throughout the world. But this was as far as I had gone. I decided now to take advantage of this unforeseen opportunity, and to devote myself to the study of my new friend's philosophy. I succeeded in gaining the confidence of his coterie, and was admitted to one of its secret sessions. I there learned, for the first time, what the communist doctrine really was. This revelation was illuminating, and I

bowed to the apparent cogency of its reasoning. It is this doctrine in all its nakedness which I wish to lay before the reader, before showing exactly what its application did to Russia.

At this secret session, the men and women whom I found around me were not at all the type of wild-eyed communist which the world usually visualizes. On the contrary, they were sober, serious-looking people, keen-eyed and determined of expression. I soon discovered that I had before me some of the master minds of the Russian revolution—the monster's brains.

FROM MARX TO LENIN

The principal speaker, whom I shall call, for reasons of convenience, Mischinev, spoke wholly in French. His argument—the chronological development of the whole communist creed—traced down the history of socialism from the pre-Marxian period until its final emergence into pure communism and its culmination in the Soviet revolution. This is what Mischinev said:

The early pioneers of socialism—men like Fourier and Owen—had not been able to detect in the capitalistic form of society which survived the French Revolution—a movement not strictly anti-capitalistic in character—the massed powers which unchecked will crush this society. Marx for the first time showed how the development of production under the domination of capitalism, entailed the ever-growing subjugation of the masses, and he also showed that a concentration of industry must be met by a parallel concentration of the masses abused by this industry. Emancipation through organization now became a slogan ominous in the ears of the capitalist exploiters.

Engel's famous manifesto of 1847 made the issue clearer. It was to be an uninterrupted struggle by brain and wit, pending the inevitable resort to armed revolution. This was already communism, which is fundamentally the doctrine of the revolution. The Marx-Engels doctrine, however, degenerated in the hands of the Social Democrats, who advocated evolution, as opposed to revolution. The principle of influencing governmental decisions through general elections was preached by Ferdinand Lassalle, the leading mind of com-

munism in the sixties. This theory was advanced by the wave of prosperity during that decade, and was only temporarily checked by the business reaction all over Europe which set in about 1880, favored in Germany, in particular, by Bismarck's ruthless policy of suppression. Then came the unprecedented boom of prosperity in the nineties. The workmen obtained everywhere representation in their respective Parliaments, and the era of the "Revisionists" (revisers of the Marxian doctrine)—led by such men as Bernstein in Germany, Jaurès in France and Trèves in Italy—now began.

The fallacy of revisionism, however, became apparent with the formation by capital of trusts, syndicates and other all-powerful and despotic organizations, which imposed protective agricultural tariffs, brought sharp rises in grain and other commodities, and began to push to the wall not only the proletariat, but also to a great extent the middle classes. The trade unions, which had held their own against the average employer, were powerless against the steel, coal and oil kings, who commanded tens of thousands. The imperialistic policy of all large European nations bade well to convert the fight of the syndicates and trusts for the markets of the world into a world war. Increased taxation for the support of military and naval armaments and exploitation of every description awoke the workers from their Utopian dream of revisionism.

Then came the first Russian revolution of 1905, which demonstrated the power that is dormant in the masses. Already these masses were feeling their power. The idea of the mass strike originated in this same year in Austria. The practicability of the measure was soon afterward recognized in Germany and France, and in the latter country the Syndicalists proclaimed it under the name "La grève générale" (the general strike), as the all-potent means of the coming emancipation. In Germany a slogan was made of the poet's ominous verse:

Alle Raeder stehen still,
Wenn dein starker Arm es will!

Then came the momentous question of deciding whether the general strike was to become a primary or a secondary weapon in the hand of the proletariat. In other words, was it to be wielded by the Parliamentary labor leaders as an auxiliary aid, or was it to be used directly by the masses in their own advantage? And although it was fully established that Parliaments everywhere formed but a screen for the secret councils in which the sharks of junkerdom and capitalism decided all the vital questions, including the fate of the people, the majority of leading minds of socialism, men like Karl Kautsky, advocated the general strike as an auxiliary weapon! Kautsky & Co. thus revealed themselves as sham communists, and sought to postpone, if not

to avoid, the decisive battle which the desperate situation of the masses imperatively demanded. Only one great minority leader, Anton Pannekoek, then by far the most intelligent mind of socialism, stood out, portrayed the Parliamentary farce in all its grotesque colors, and proved conclusively the necessity of smashing a capitalist state in all its veiling democratic forms to achieve victory. Slowly the masses moved toward his view.

But before the blessing of seeing theories transformed into practice in at least one country was bestowed on it, the proletariat had first to suffer the fatal consequences of its own impotence. It must go through the hell of the World War, and bleed to death in the interest of a feudal bourgeoisie, of junkerdom and capitalism. Nearly a century of oppression had not sufficed to rouse the enslaved masses to more than an occasional timid resistance. It remained for the monster of the World War to show them their utter helplessness.

The Russian people were the first to understand the monster's teaching, and to draw the consequence by bringing about the long-deferred revolution. This revolution constituted the first answer of the proletariat to the World War, and hence it is the harbinger and champion of the international revolution. Despite all obstacles and counter-revolutionary efforts of the capitalist nations, the Russian proletariat, ruling by the dictatorship of the proletariat through the workmen's councils, will continue a relentless war throughout the world to make this dictatorship universal. It will listen to no futile arguments of heretical Mensheviks in Russia, Italy, Germany or France, who plead for delay until the capitalistic system has developed to its maximum of power. Soviet communism aims to bring about the revolution now. From all over the world, despite all baseness and lies of the bourgeoisie and their press, we receive day by day the proofs that this preparatory fight of the proletariat is progressing, stimulated by the developments in Russia, the land that has pointed out to them the road to liberty.

AN INSIDIOUS DOCTRINE

The sensation I had, as I listened to this long and chronological explanation, may be best described as a thrill of novelty, despite the fact that I had been made informally familiar with the cardinal points of the Soviet doctrine before I was admitted to the conclave. I venture to say that the average loyal citizen would have found himself in my state of mind. Research work has convinced me that the number of my

readers who have had the opportunity to obtain clear and exhaustive definitions of the communist idea is negligible. The value of such definitions, in my mind, is beyond all question. Our own Government has underestimated the danger and the insidiousness of this doctrine, which Soviet propagandists are ever spreading throughout this country. The public mind must be prepared to understand the true aspect of this teaching and be taught to refute it. The menace is all the more pronounced because the propagandists understand how to dwell upon and utilize such elements of truth as may be contained in their indictment of capitalistic society to further their sinister ends. And there is no gain-saying the existence of such elements. To deny, for instance, that imperialism, whether displayed in military or in naval power, is not pregnant with plutocratic ideas, and hence to maintain that the World War was void of all capitalistic tendencies, requires a large measure of simplicity or duplicity, or both. There was this difference between the principal contestants, that on the one side such plutocratic factors as were at stake were shrouded in forms of suavity, while on the other the frame was rudely carved in lines of offensive arrogance. It was German arrogance that preferred the quick decision of arms to the laborious one of commercial development.

This truth was for a long time so cleverly veiled that many students of the war, not excluding myself, were, prior to America's entry into the conflict, deceived as to the real issue, and were led to back the wrong horse. Only after my visit to Germany in 1916 did I come to see things in a different light. By a series of circumstances, I came to believe that two fundamental evils were struggling for preponderance, and that as long as one must necessarily come out ahead, it was best in our own interest to have the lesser evil gain the upper hand.

In the following pages I shall at-

tempt, from my knowledge of conditions in Soviet Russia, to give the general guiding lines along which the public should be instructed to meet and to refute even the most convincingly advanced theories of communism. Inasmuch as the improvement of the social condition of the proletariat is fundamentally the goal at which communist science pretends to aim, the proof that the application of the revolutionary theory in Russia has brought about exactly the reverse condition will mean a good step forward on the road that will lead deluded minds back to common sense as readily as it has rid me personally of pernicious misconceptions. I shall attempt to give this proof in condensed form.

HOW LENIN CRUSHED PEASANTS

To the observer who follows Mischinev's invitation and turns his eyes to Russia for enlightenment, it will at once become obvious that any attempt to draw a parallel between developments in Russia and other countries would be based on a fundamentally wrong presumption—the presumption that the war placed all countries in the same indescribable state of chaos and demoralization as Russia. In Russia the animal-like and drifting hordes would have followed the leadership of a Hottentot chief or the archfiend himself, if only he used the right means to chain them to his colors. Lenin, the daring adventurer who utilized the breakdown of a civil and military machine to seize dictatorial power, chose the right means to prop his rule. The slogan which the new Government of Lenin and his satellites used to gain the unqualified support of the bestial, drunken mobs was this: "Soldiers, workmen, peasants, the country is yours, all that it contains is yours, satisfy your passions!" This was for the analphabets, the illiterate hordes. Those proletarians intellectually higher were attached to the Government by being given posts in the new bureaucracy.

To the support of these two groups, the leaders added that of the Red Guards. It was this latter body that in November, 1917, executed the coup d'état which put Lenin in power. It consisted at the time of perhaps 10,000 daring adventurers, who did not worry over questions of polity, but, like the rabble, were out to gratify their passions. The recruits were chosen either from such of the more intelligent workmen as preferred army life to work in a Government office, or they were selected from the Lettish population. The Russian Lett was notorious for his savagery, and always to be counted on when it came to a question of shedding blood. Like the official caste, the Red Guard Army was endowed with every imaginable privilege. The combination of both formed the whip in the hand of the Government which was to scourge the deluded masses as soon as the Government gained sufficient strength.

The peasantry was that part of the proletariat which was first to feel the lash. The Government quite suddenly canceled all the privileges which the peasant had enjoyed during the period in which it was gathering strength. For example, he was ordered to deliver all arms to the Government within twenty days. He was further informed that free transportation on the railways would cease, and that he must pay for the class he used. The peasant, hitherto encouraged and even urged to possess arms, and taught that as a free citizen of the divine new communist society he was entitled to the free utilization of all public property, railways or otherwise, was dumfounded. He was given little time for thought. The Red Guards promptly appeared at his home within the twenty days of grace, and, where arms were found, no need remained for bringing the delinquent to justice after the departure of the Government's representatives. As for the trains, one of the Red Guards' most popular pastimes consisted in lasso-

ing the hapless peasant as he slept peacefully in the sleeping car which, in the days of the Czar, he had never so much as dreamed of entering, and yanking him out of the window of the compartment just as the train was set in motion.

These and other Draconian measures created an atmosphere of desperate acquiescence. Meanwhile, however, as a natural consequence of the corrupt methods and mismanagement of the new official caste, prices began to soar, money lost its value, what production remained came to a complete standstill, and it became virtually impossible to obtain food. This lack of food, which was most dangerous, the Government blamed on the *kulak* (literally, "fist"), or well-to-do peasant, who was charged with hoarding food and profiteering. As a matter of fact, the *kulak* had long before been exterminated. The Government's invitation to the workmen to organize armed bands to compel the farmer-peasant to "sell" his product, amounted virtually to declaring civil war between the workmen's proletariat and the proletariat of the peasantry.

DECREE OF PAUPERISM

To facilitate the disintegration of this peasant proletariat, the Government devised a scheme which combined trickery with brute force. I refer to the "Decree of Village Pauperism" issued early in 1918. It ordered the formation of a committee in each village, ostensibly to safeguard the rights of the peasant against the extinct *kulak*. All inhabitants of the village, except those in possession of twelve kilograms of flour monthly, were said to have a "surplus," and were forbidden membership on this committee. This absurd limitation meant that 80 per cent. of the grain-producing inhabitants of even a very poor village community were excluded from the committee and classed as *kulaks*. The small percentage eligible con-

sisted mostly of peasants who had been "tipped off" by the Government to keep their wheat or grain production down to the prescribed limit, and who now found themselves richly compensated and in a position to produce their bread clandestinely. Other members were drawn from Soviet workmen who in the guise of destitute farmers had been sent to settle in the villages. For a time all was well. When these committees began to grow too powerful, the Government calmly suppressed them and confiscated their ill-gotten loot for its own benefit.

In addition to these various blows, the amazed and resentful peasantry were ordered by a decree of September, 1918, to hand over to the Government all the land taken from the bourgeoisie and the real *kulak* in the early days of the communist regime. As the principle of equal division of land among the rural proletariat had been, and still is, one of the main features of the communist doctrine, such a measure was a heavy blow to the faithful. A further demand that all chattels that had gone with the land must also be delivered created a perplexing situation. The chattels had vanished. The Government, facing the fact that these chattels could not be restored, gave the peasant an opportunity to redeem himself upon other lines. In the late Fall of 1918 the introduction of universal military service was decided on.

This step was another measure diametrically opposed to communist doctrine. The peasant, like the workmen, wanted peace, and was reluctant to don again the garb of militarism. It was, however, on him, who was expected to "redeem" himself, that the main burden fell. He resorted to subterfuge, to obstruction and desertion, in some cases to open resistance. He was dealt with in a manner beyond description. Furthermore, the Government, to finance the succession of military campaigns which now began, issued the "Decree of the Ten-Billion War Tax." It was again on

the rural proletariat that the main burden fell. Arbitrary levies and denunciation were employed. The so-called Special Commissions for the Suppression of Speculation and Sabotage descended on the rural communities. In some cases whole villages were practically exterminated in penalty for not understanding and conforming to arbitrary and unexpected interpretations of a given tax, viz., the tax on luxuries.

Mindful of the revolutionary slogan that all systems must perish when they become intolerable, the enslaved rural masses, frantic in their travail, rallied at last to execute the counter-revolution. Hundreds of thousands strong, they rose in the provinces of Samara, Brjank, Tula, Rjasan and dozens of others, and all during the Spring and Summer of 1919 they fought sanguinary battles against their oppressors, the real battle of the proletariat for liberty, a battle forced on them, not because they were capitalistically inclined, but because they had been reduced by their liberators to a condition unparalleled since the time of Ivan the Terrible.

The Government used every possible means to conceal from the world the seriousness of this rebellion. Where complete denial proved impossible, official reports were issued minimizing the facts. The full truth leaked out finally through private sources. This counter-revolution, which loomed up again and again during 1919, was finally smothered because it lacked arms and organization. The "open letters" issued by Trotzky, declaring that the Government wished to consider the peasants as its friends, were a fiendish joke, calculated merely to deceive the foreign peasantry regarding the real condition of their Russian brethren. The fact that there is apparently today no open rebellion against the Government must not be mistaken as evidence that the Russian peasantry have become reconciled to their lamentable lot, which had not improved

one iota in 1920 when I made my personal investigation. The most recent measures of free trade and payment in kind are merely a palliative devised to cure a dangerous epidemic of peasant hatred; they will fail of their purpose. The will to counter-revolution still burns on. It is only complete impotency that is keeping the rural proletariat of Russia in subjection.

SUBJUGATION OF WORKMEN

What, now, was the experience of the town proletariat? Like their brothers in the countryside, they were destined to undergo a similar process of progressive disillusion. Like them, they had been taught that they were liberated of all yokes, under no compulsion to submit to restrictions of any kind. The workman had been taught that the factory was his, and that the managing council chosen by his vote would be submissive to his wishes. He was unwilling to submit to even the most elementary requirements of production, such as the keeping of hours or the dropping of occupations of a personal or private nature during working hours. He was now suddenly asked to take orders from the factory council. Passive and even active resistance began. For a time obstructive measures triumphed, inasmuch as the Government was still busy waging its war on the rural proletariat. For many months the workman was able to defy, when he saw fit, any orders his council dared give him. Unpopular delegates were simply deposed and replaced by representatives subservient to the workmen's will to maximum profits at a minimum outlay of work and inconvenience. But an end came to this blissful state as soon as the Government's hands were free for a new battle. The Red Guards began to appear in the industrial communities.

The Government's first measure was to revoke the right of the workmen to recall their delegates—at

least within a period of six months. This removed them from the workmen's control and dictation. Thus a basic principle of the communist doctrine, preached since the time of Karl Marx—the right of recall of workmen's representatives—was annulled. Mischinev, the communist whose speech I summarized at the beginning of this study, very wisely passed over in complete silence this flagrant violation of a fundamental principle of communism. Why should a communist apostle weaken his cause? And this was but a first step. A mass of other measures followed, leading up to the complete suppression of the workmen's proletariat. The workmen's council was now given sweeping power. Only a small element were sincere communist idealists, striving to promote production. The rest were selfish grafters, who sought their own advantage under a regime of tyranny.

It is curious and interesting to observe how closely these newly organized councils followed the parallel of the rural committees previously discussed. Like these committees, the councils became too powerful; their egotistical dictation threatened to bring production to a standstill. The Government followed its old procedure. The councils, in the Fall of 1918, were divested of power and reduced to the position of factory police and official denunciators. The power was now entrusted to Executive Councils, formed by special commissaries, who were sent to the factories from Moscow and Petrograd. This was the first step toward nationalization.

The new Executive Councils, however, were no more successful in promoting production than the preceding delegates. In addition, the food shortage became so threatening that the Soviet leaders feared disaffection in the ranks of the Red Guards. It was necessary to placate the workmen. This was done by once more appealing to the lowest instincts of the most debased elements of the masses.

They were told that sabotage of the "bourgeois intelligentsia" was to blame for the failure of the Government to redeem its promises of prosperity. But this "bourgeois intelligentsia" had already been exterminated, with the exception of needed technical and scientific experts. The fury of the deluded and greedy populace was thus let loose upon the peasantry, on the lower middle classes in the cities, and on the few remaining honest elements of the workmen class itself. And the Government issued its "decree of the workmen's right to take possession of the bourgeois home."

In many cities, notably Petrograd, where the death toll of the bourgeoisie had been especially heavy, the most desirable apartments and homes, unless requisitioned by the Government, were vacant. Nevertheless, the Government unceasingly directed the workmen to occupy the inhabited homes. The process of ejecting such bourgeois elements, mostly women and children, as were still scattered over the city, and also the lower middle classes, compensated the lewd sections of the workmen for all their sufferings. Another bait to the scum was the "decree of the right of requisition," which gave to the mob the property of all classes who had saved up some bare necessities, including such workmen as had incurred the displeasure of the Government commissaries in charge of requisitions. All these and similar measures had only a temporary effect upon the restive proletariat masses, but they enabled the Government to "carry on" until the crop of the Fall of 1918 insured the regime against disaffection in their own ranks.

But then began the military campaigns against foreign nations, which gave the Soviet leaders a new pretext for carrying on their policy of suppression. "For Russia's sake" the working proletariat was stripped of its few remaining rights. The right of free speech was abolished. Pamphlets and printed matter of every

kind were vigorously suppressed unless specially sanctioned by the Government. The right of assembly was denied. Any displeasing attitude or utterance, no matter how inconsequential, was prosecuted under the act against sabotage and counter-revolution.

NATIONALIZATION OF INDUSTRY

And even yet oppression had not reached its limit. In the late Fall of 1918 the general nationalization of industry was decided upon. The Executive Factory Council was now to be composed of a member of the General Executive Council at Moscow, of a technical factory superintendent to be appointed by the General Executive Council, and of a workmen's representative to be chosen by the workmen in the factory. Nine times out of ten the Government so manipulated the appointment of the workmen's delegate that the latter was no more the representative and champion of the rights of the workmen than the other two members appointed by Moscow direct. Very soon the new "representatives" of the workmen, availing themselves of their position as direct representatives of the Moscow Government, began to practice their persecution on a vastly more sweeping scale than the preceding councils had done. The first act of the councils was to create a general spy and denunciation system everywhere, in factory, school, home, and elsewhere, the minuteness of which was admirable. Less than six weeks after nationalization had been carried through, even members of families dared not exchange their views on the new order of things.

Nor was this tyrannical and terroristic rule without its ironic aspect. The workmen were given the explicit right of appeal to the General Executive Council at Moscow. They had even been urged to make use of that right. If the naive complainant was lucky, he never received an answer to his com-

plaint to Moscow. If he wasn't, the reply would be the arrival of the Red Guards, sent to hale the renegade before the supreme council. As a rule, this was the last heard of him. It is not surprising that complaints grew more and more infrequent. Meanwhile the work of crushing the proletarian workman continued.

In February, 1919, a national decree was issued which directed follows:

A. For not reporting to work, 5 days' imprisonment. Second offense, 10 days' imprisonment. Third offense, court-martial for sabotage and counter-revolutionary tendency.

B. For being late to work: One-quarter of an hour late, 5 hours' arrest in the factory jail; one-half hour late, jail from 5 P. M. until 7 A. M. One hour late, 3 days in jail.

In March this decree was amplified as follows:

1. The council has the right to regulate the legal working time and to institute regular overtime as it sees fit.

2. The right to strike is abolished. Any attempt at disregarding this order will be prosecuted under the act against sabotage and counter-revolution.

The first part of the new decree entailed the imposing of from ten to twelve working hours. The second part, in all its outrage to the rights of the workingman, was simply an official confirmation of what had hitherto been an unwritten law. Where, in the history of capitalism, against which Mischinev inveighed so bitterly, where during the most rampant epoch of trustism, or even under the stress of the World War, was labor ever subjected to measures such as those adopted in the decrees just quoted?

And here also the law of almighty nature, reaction, whipped the proletariat of the cities to the same hopeless battle against the tyranny of a ruling minority. Unorganized, despair their only leader, the urban workmen rose spontaneously to share their rural brethren's fate. On March 18, 1919, the flame of insurrection shot up from the enormous Putilov Works at Petrograd. The Soviet Govern-

ment had been in power for nearly eighteen months. Could there have been a more terrible indictment of its rule than this desperate attempt not of the bourgeoisie but of the very proletariat masses to free themselves from the monster's grip? The Government dealt with the rebellion of the unorganized and poorly armed majority as it had dealt with the revolt of the outraged peasantry. Machine guns, those loathed tools of capitalism, struck up their frenzied dance. Toward the end of 1919 the torch of active resistance had been quenched in the proletariat's blood. The quiet that now apparently prevails in Russia is the quiet of the graveyard.

And yet the Mischinevs, apostles of this infernal creed, have the effrontery to continue to hold up Russia as an example of the perfect State!

RUSSIA ON EXHIBIT

But how is it, I am asked, that occasionally not only Socialists, but representatives of the bourgeoisie, who have been guests of the Bolsheviks, will return to their native land full of praise for the so-called new social order? The explanation is simple. Everything is done to make the guest's visit an unforgettably agreeable one. The guest is shown what the Government is anxious for him to see, and nothing more. There is an artful display of "glory," enthusiasm and pomp. What student of affairs communistic has forgotten the glowing reports of the festivities of the Third International at Moscow in February and March, 1919, that were brought to the outside world by the returning delegates, in some cases serious-minded newspaper men? Grand opera and theatrical performances, high-sounding addresses by Trotzky, Kamenev, et al.; overflow meetings, overwhelming enthusiasm of the "masses," official dinners, brilliant parades, the unending line of Red Guards, infantry, cavalry and artillery, second to none in dress, physique and discipline, moving down

the richly decorated avenues and squares. Dazzled by all this magnificence, the foreign guests did not observe that from these wildly cheering "masses" the lower middle classes and even the proletariat were conspicuously absent. These frantic crowds were all members of the privileged official class, tied to the Government by the strongest ties, those of self-preservation and self-interest—the instinct of the gangster to protect the chief whose capture will deliver his henchmen into the hands of the law.

Only of late have the Soviets begun to find it more difficult to deceive their foreign guests. Returning observers have begun in many and important instances to be divided in their opinions of this ideal State. On Oct. 6, 1920, a Parliamentary executive group of the Italian Socialist Party listened to a report at Trieste of a special Italian labor commission which had just returned from Soviet Russia. Three members of the commission, notably Deputy Bombacci, drew an optimistic picture of the Soviet regime. He was strongly opposed by the majority of his colleagues. Deputy d'Aragona, General Secretary of the Italian Confederation of Labor, summed up his experiences as follows:

The economic life of Russia is characterized by an enormous moral and material misery. The means of production in the hands of the Soviet has meant complete ruin. The capitalist régime has been successfully destroyed in Russia, but communism has failed to build up a moral organization in its place.

Why, then, does not the Red Army rise up against such an oppressive system, and why does it continue to fight for Holy Russia? The elaborate spy and denunciation system of which I have already spoken, the introduction of foreign elements, Mohammedans, Chinese and Germans, and the self-interest of the strong and reckless minority in the army representing the ruling class, are sufficient explanation of the first part of this query.

The repeated victories of this army are explained by the irrefutable fact that the armies of Denikin, Kolchak, Judenitch and, perhaps also, at least to some extent, Wrangel, were Czarist reactionaries.

The deathblow to Bolshevism can be struck only from without. France is the only nation which from the start has had the correct conception of the methods that will eventually prevail against the Bolshevik tyranny. If the world is to be freed from the plague emanating from Russia, the nations will sooner or later have to come to the French point of view and co-operate in an active campaign against it. There is no use to hope for an anti-Bolshevist upheaval from within; even should it occur, it will simply mean new complications. A counter-revolutionary Russia which has gained power without foreign help will carry punishment to the foreign countries that have remained inactive in yet another form.

We are squarely placed before the alternative: Recognition of communism, or its destruction at the source. Unless we are willing to stoop to the former, we must do away with the suspense in which we shall be held for years to come, a suspense which will make a return to normalcy impossible, and which will render life intolerable. Our course is twofold: first, at home, in place of violent and senseless suppression of the Crimson Creed, the adoption of a policy of counter-propaganda and enlightenment, spread through Church and home, in school and factory, this to go hand in hand with the stern but just punishment only of actual violation of law; second, abroad, in place of the hitherto prevailing weakness and vacillation, acceptance of France's principle of active measures against the present Russian Government, the source of the malady that has infected the world. May our Government give the deserving answer to Civilization's categorical "QUOUSQUE TANDÉM * * *?"

THE BALKAN TURMOIL

BY CONSTANTINE STEPHANOVE

A Bulgarian scholar and statesman residing at Sofia

Bulgaria's passionate protest against unjust treatment by the Entente Powers—Painful impression caused by their note making Bulgaria responsible for any disorder in Thrace—The Stambolisky Government's record in fighting trouble makers

HAVE the conditions of things in the Balkans changed since the great war? Not in the least. Today France and England are replacing Russia and Austria, and are continuing their clandestine diplomacy. England is stubbornly supporting Greece, which she virtually created at the Peace Conference, while France, finding herself outplayed in the Near East, is beginning to take the side of the Bulgarians, with ominous results for them. France's intimate relations with Ismail Kemal Pasha and her efforts to create an autonomous province out of Thrace under her protectorate have evoked England's hostility toward Bulgaria. This fact explains why the English press so readily gave publicity to the recent reports emanating from Greek sources to the effect that Bulgaria had official connection not only with the Angora Government, but with the Moscow Soviet as well; that she was secretly making military preparations for an attack on her, and that, in the meantime, she was encouraging the local bands to harass Greece in Thrace. And, in order to mitigate public opinion abroad in regard to King Constantine's return, the Greeks spread the news that ex-Czar Ferdinand was on his way to Bulgaria to regain his throne!

The truth is Greece greatly fears Bulgaria lest she make a dash for the Aegean, particularly now, while she is engaged in Asia Minor, and since the friendly meeting of Mr. Dimitroff, Bulgarian Minister of the Interior,

and Premier Pashitch of Serbia, at Belgrade on June 5 last. All the more is she suspicious of Bulgaria, since France is very friendly to the latter and is working for United Yugoslavia with Bulgaria in it. Greece's apprehensions, naturally enough, were sympathetically viewed in London, where the official circles are hostile to a Serbo-Bulgarian rapprochement. The echo of it was manifested first in the form of press reports about Bulgaria's alleged complicity with the enemies of Greece, &c.

But England's espousal of the Greek cause was subsequently more concretely expressed on July 23, when the Bulgarian Government was presented with a "friendly" and "mild" diplomatic note. Though both the French and Italian Ministers accompanied their British colleague in the handing of the note, it was plain to all that they had done it reluctantly and out of courtesy. The sudden change of England's attitude toward Bulgaria—until then Bulgaria's warmest supporter—marks a new phase in the Near Eastern question, which doesn't presage good to the peace of the world. The respective Ministers, in presenting it, declared that they "were authorized by their Governments to call attention to the inclination of some individuals to create disturbances in Thrace, which, if realized, would cause grave consequences," and gave warning that "Bulgaria will be held responsible should any movement or movements be started in that province."

Those familiar with the earnestness and efficacy of the present Cabinet in putting into execution the Entente's wishes, in fulfilling its peace obligations, and in suppressing every symptom of Bolshevik or any other kind of illicit movement in the country, all are at a loss to understand the present action of the three great powers. Though the Government has incurred the unbounded enmity of all opposition parties and the public in general, because of its blunderous home measures, even its direst enemies agree that Premier Stambolisky's Cabinet has shown itself sufficiently able to cope with any attempt on the part of any organized body of people to involve the country in new conflicts with its neighbors.

To that effect it has shown itself drastic, merciless and severe to the point of brutality. It has terrorized the Macedonian, Thracian and Dobrudjan benevolent organizations, interned or driving out of the country many members, and arresting others. It had gone so far, in its zeal to please the Entente Powers and its neighbors, as to hinder delegates of these organizations from going abroad to plead their cause before Europe and America. For two years its mailed fist has been raised upon half a million refugees from Macedonia, Thrace, Dobrudja and the Tzaribrod district, who had fled to its borders for safety from a persecution and terror surpassing the blackest days of Turkish misrule.

All in the desire to further good neighborly relations and of leading to a federation of the Balkan States, Premier Stambolisky's Government repeatedly renounced interests in Macedonia and the other Bulgar provinces. And recently, in order to show the Serbians that its desire for a clearer and more amicable understanding is bona fide, the Government promulgated the new orthographic program which, as the Bulgarian Minister at Belgrade recently declared, renders the Bulgarian and Serbian languages more nearly iden-

tical, being another step toward paving the way for a Serbo-Bulgarian rapprochement.

Stambolisky's Government, little successful in solving the country's economical and financial problems, has shown an exceptional aptitude in handling every reactionary manifestation in the country, particularly that of the "narrow Socialists or Communists." The Entente representatives had a splendid opportunity to witness the masterly hand of Stambolisky in suppressing, on Dec. 24, 1919, the serious attempt at revolution by the Bulgarian Communist Party. This plot was aided by secret Bolshevik agents who had slipped into the country with the Russian refugees which the Entente itself had forced Bulgaria to admit. More recently, on St. Cyril's Day, the communistic clubs and printing press in Sofia were demolished by an infuriated populace, maddened by the explosion of a bomb believed to have been hurled by a Bolshevik. This one regrettable incident at any rate shows how strongly hostile the common people in Bulgaria are to Bolshevism. It could not be otherwise in a country in which the peasantry forms the great bulk of the population and is master of its own house.

The note presented by the powers to the Premier was untimely and uncalled for. It was a mistake, for it has created just the opposite effect from that which it was intended to produce. It is more than a mistake, it is one of a series of political blunders which characterize the Entente Powers' Oriental policy — blunders which have protracted the World War to this day, so that nobody can foretell the end of it. The Supreme Council is daily showing itself blind to the eternal truth that there is but one solution of a problem, and that is the right one. Its solution of the Near Eastern problem is a wrong one, for it flagrantly violates the very principles the Entente preached always up to the eve of victory.

There is more and wicked oppression of humanity in the Near

East today than existed prior to the war, and that under the eyes and with the sanction of the greatest democracies of Europe! These nations, in the name of the principles of democracy, are strangling the most democratic and manly people in Southeastern Europe. That people has been slandered and sinned against as seldom has been the case with another nation. And today, when its neighbors have doubled and tripled their population and territory, while its own have dwindled to one-tenth of theirs, it is still being slandered, blackened and conspired against.

Why? Because its cultural weapons are more feared than its military power. The Macedonian Bulgar, even in Turkish times, was a better educated man than his free Serbian brother. Consult the statistics and assure yourself of it. The educational level in Bulgaria today is higher than that of its older and more fortunate neighbors. It is the only country in Southeastern Europe where there is a spirit of tolerance that vies with that of the most advanced States. Come and see it for yourself, as we are witnessing it.

Why doesn't Bulgaria complain of the Greek, Serbian and Rumanian bands that are disturbing her peace? Wouldn't that be more natural, she being the weakest of the four? Isn't this a question which is a genuine test of their respective claims and positions? "Thus conscience doth make cowards of us all" explains the attitude of these nations. Isn't that the strongest argument against Bulgaria's neighbors' claims to Mace-

donia, Dobrudja, Tsaribrod and Thrace? And isn't that the real cause of their well-concerted propaganda of intrigue against Bulgaria? If you doubt that, too, and if you doubt the testimony of impartial historians, learned investigators, consular reports, incontrovertible evidence brought out by missionaries, both Protestant and Catholic, send another Carnegie commission and find out which of the four States has most claim to your sympathy, which has sinned least, and which has suffered most by blackmail and blackest vituperation.

The note in question in reality is a very successful diplomatic stroke inspired by Greece and Serbia, whose internal state of things breathes of revolution; the rulers of those States are seeking to divert public attention elsewhere, and Bulgaria offers the most alluring victim, being disarmed and almost stifled geographically.

England. France and Italy couldn't do more than this note has done to encourage Bulgaria's neighbors in their tactics and to tighten their grip upon the unfortunate races condemned to bear their inhuman rule. In that respect the note is not only a blunder, it is a crime, for it encourages the persecution and the wholesale murder of innocent people. For, pray, what have the poor Macedonians and Dobrudjians and Thracians done to the Entente powers to merit such a fate? You have punished Bulgaria, the enemy; why punish those victims who were dragged into the bloody whirlwind as everybody else in Europe was?

THE PRINCESS MARY

BY W. T. MARSDEN

An intimate Character Sketch of the only daughter of the King and Queen of England—How she sold some of her jewels to raise money for the soldiers—Anecdotes of her tastes and ways

THE war made a profound difference in the life of the only daughter of King George and Queen Mary of England. It enabled her to break away from nearly all the restrictive etiquette that surrounds a Princess of the reigning house, to meet all sorts and conditions of people, and to obtain a vastly broader view of life than it is normally possible for the daughter of the sovereign to do. The Princess was 17 when the war broke out, and her education was not yet completed. She was reminded of the fact by her parents when she expressed her wish to leave the schoolroom and take a part in those various activities called into being by the war.

The desire of the Princess was granted on one condition: She would have to pass an examination in various branches of her studies. If she did not get certain marks she would have to remain in school for at least another six months. The examination papers were set by two of the King's Chaplains, and in all subjects but one she gained the necessary 50 per cent. of marks. The subject she failed to pass in was English composition. She was set to write a character sketch of Horace Walpole and made two mistakes in it—one in regard to a date, the other an error in spelling. For these two mistakes the Princess lost sixty marks out of a possible hundred; but a distinguished historian, who later read the essay, and who was unaware of the identity of the writer, declared it to be an ex-

tremely original and able character study of the famous statesman.

"And now what are you going to do, Mary?" asked the King on the morning when their Majesties informed the Princess that she might regard herself as being free from the necessity of pursuing her studies.

The Princess had an answer ready that rather surprised her parents. She took from the drawer of the writing table in her boudoir a sheet of foolscap on which she had drawn up all the details of a scheme for starting a fund to provide every man serving in any branch of his Majesty's forces with a Christmas gift of a pipe and a box of tobacco. The royal parents gave their consent to the scheme, and a few weeks later the Princess sent a letter to the press appealing for funds. She acted in the matter with an impulsiveness that is one of her most delightful characteristics as well as one of her weaknesses.

The fact is that had the Princess considered the matter more carefully she would have seen the difficulties in the way of accomplishing her object. Her appeal for funds was not made until October. It met with a generous response from the public, but there was not quite enough time remaining before Christmas to get in the considerable sum of money required to pay for the immense quantity of tobacco and the large number of pipes that had been ordered as soon as the Princess had got her scheme into working order.

When the fund (it was known as the Princess Mary's fund) was closed shortly before Christmas of 1914, it was found that it fell short by nearly £1,000 of the money required to pay the sum due under contracts that had been entered into with various tobacco and pipe manufacturers. It would, of course, have been easy for the Princess to go to the King and Queen for the money, but they were busy, and she would not trouble them. The actual cash in her own possession was a balance of less than £100 to her credit in the Post Office Savings Bank.

The Princess did not take long to consider what she would do. Through a friend she disposed of enough of her jewelry to raise the money required. It was not till after the armistice that her royal Highness made her parents aware of how she had acted in this matter, and though she had rather a severe lecture from the Queen, both parents, I think, were pleased with what she had done and readily pardoned her.

On the Princess's war work there is no need to dwell here. How she became a girl guide and assisted in the organization of many war charitable enterprises has been fully related in the press. But one incident, I think, has not been told before, and it sheds an interesting light on her character. After the outbreak of war she had begun to attend sewing parties engaged in making various articles of clothing for the soldiers. At one sewing party she met the daughter of a doctor and took a particular liking to her, so that the two came to be on quite friendly terms. One day the doctor's daughter addressed her simply as "Princess," though the official way of addressing a daughter of the reigning house is "your Royal Highness" or "Madam"; only people intimately acquainted with her would call her "Princess" in speaking to her. When a lady of the Court who was present pointed out this fact, the doctor's daughter at once apologized for her familiarity. The apology greatly

distressed the Princess. "Of course call me Princess—or Mary would be better," she exclaimed. "I do not see why we should not call each other by our names; how ridiculous all this etiquette and ceremony at a time like this! I will not have it with my friends, anyway." And a week later the doctor's daughter was a dinner guest at the palace, and is still an intimate friend of Princess Mary.

The most trying public ceremony which the Princess had to perform was that of inspecting the First Battalion of the Royal Scots at Edinburgh in September, 1919, as their Colonel-in-Chief. Here is an account of the incident given me by a lady of the royal household who knows her Royal Highness intimately:

The Princess was terribly nervous; some one had drafted out a long speech for her, and she had stayed up until nearly 2 o'clock the night before the ceremony committing it to memory. But the following day, when driving to Edinburgh, she told a friend that she would not deliver the speech. "It is all so tedious and ceremonious," she said; "I am going to say only a few words." After performing the ceremony of inspection and investing about 150 officers and men with decorations and medals, she turned to the Colonel and said: "I am awfully proud to be Colonel-in-Chief of this regiment. My great-grandmother and my great-grandfather were also Colonels-in-Chief of it, as you may know, and you can understand how proud I feel. It is a splendid regiment and the oldest, I think, in the British Army." That was all, and what could have been better? The few words were said so simply and unaffectedly.

Princess Mary is not especially devoted to out-door life, but she is a fairly good horsewoman and plays a moderately good game of golf and lawn tennis. She has often confessed that her favorite form of taking out-door exercise is driving, a taste inherited from her mother, who never finds a country drive, however long, tedious or monotonous.

The Princess was going out to drive to some hospital with her governess, in the early days of the war, when she met Lord John Hamilton at the entrance to the palace. "You will be sorry to hear, your Royal High-

ness," said Lord John, "that poor Poulton has been killed." "Oh, I am sorry!" she exclaimed; "I must go and tell father." And it was from

ners, "that no horse seems to have won the Derby twice?" After the laughter that the Princess's question caused had subsided, Lord Derby said to her gravely: "Because, your Royal Highness, horses, like human beings, cannot have the same birthday twice." The Princess said nothing, but she seemed more mystified than ever, until the King later explained to her that the Derby was a race for three-year-olds.

The Princess during the past few years has paid a good deal of attention to the study of domestic and foreign affairs, her chief instructor being her father. "I do not want Mary to have any politics," said his Majesty once to a member of the household, "but I want her to understand them."

Not long since the Princess sat next to M. Paul Cambon at a luncheon party and discussed with him the relations between England and France. The conversation, it may be added, was carried on in French. "Our work as diplomats," said the French Ambassador,

"would be much easier if more people had so good a knowledge of foreign affairs as your Royal Highness." And the compliment was well deserved.

But though the Princess takes a serious and intelligent interest in public affairs, she greatly enjoys the lighter side of life. On one occasion, when she was going to the palace theatre with her parents, a lady-in-waiting who is rather blase said to her, "I expect we shall all be terribly bored before the end of the show." "Oh," exclaimed the Princess with a laugh, "I am sorry for you if you feel like that; I simply love a good music hall show."

The Princess thoroughly enjoys dancing, and although modern dances,

PRINCESS MARY

Only daughter of the King and Queen of England

the Princess that the King a few minutes later heard, much to his Majesty's sorrow, that the brilliant young Rugby player who captained England in 1914 had been killed in France. Lord John Hamilton himself was killed not long afterward.

Of racing the Princess Mary is profoundly ignorant, though she has witnessed the most classic events in the racing world. Lord Derby was lunching at Buckingham Palace one afternoon, and afterward in company with the King and Princess Mary was looking at his Majesty's collection of prints of famous race horses. "Why is it," asked the Princess of Lord Derby, after she had looked at prints of several Derby win-

such as the fox trot, tango and two-step are not danced at the state balls, she persuaded her mother last Winter to allow them to be danced at small dances in the palace which were arranged by Princess Mary and the Prince of Wales, and at which brother and sister acted as host and hostess. The Queen's objection to modern dances was very strong, and up to twelve months ago she would not allow them to be danced at the palace, nor would she permit the Princess to attend any social gathering where any modern dance was on the program. The ban was lifted only after she had been persuaded to permit a party of a dozen young people at the palace to try a few modern dances. After that the Queen allowed the Princess and her eldest brother to give a series of dances at the palace, but, as I have said, modern dances are still barred at the state balls.

Princess Mary and the Prince of Wales have done away with that very strict rule of royal etiquette that no member of the royal family should dance more than once with a person not of royal rank. At a dance some little while ago, when the Princess first took advantage of her newly won freedom in the ballroom and danced three times with the same partner—the heir to a Dukedom—the rumor arose that the Princess had become engaged, and it traveled so far that it had to be officially contradicted in the press. But now no one would be so foolish as to argue that because the Princess danced several times with the same partner she was engaged to him.

An incident of another kind shows what a clever and practical econo-

mist the Princess is. She recently went to visit a hostel for working girls in London, and in conversation with several of the girls learned that, though the institution was well conducted and comfortable, it was regarded as an expensive place. The charges amounted to £2 12s 6d a week (about \$12.75 at normal exchange). The woman who managed the hostel was well known to the Princess, and she spoke to her on the matter. The manageress declared that it would not be possible to work the place at a reasonable profit if the charges were cut.

"I know," she said, "that your Royal Highness understands such matters, and if you would look into our books and show me how we can reduce our charges, I would feel very grateful and very much honored."

The Princess took the manageress at her word. She put off all her social engagements and spent every day for a week at the hostel, going through the books as carefully as any professional accountant. At the end of her labors she made out a detailed statement showing how foodstuffs of the same quality as were being supplied could be purchased 10 per cent. cheaper than under existing contracts and how certain other expenses might be cut by almost 20 per cent. "If these reductions are made," said the Princess when she showed her report to the manageress, "you will be able to reduce your charges to the girls to £2 a week and maintain your profits." In a few weeks the recommendations of the Princess were given effect, and the hostel is now generally regarded as one of the cheapest and best institutions of its kind in London.

BUILDING A NATION IN PALESTINE

Official Report of Sir Herbert Samuel, the British High Commissioner for Palestine, on the results achieved by one year of the British Civil Administration—Progress along all lines of development

NO other outcome of the war has appealed more generally to the imagination of the world than the movement to make Palestine again the national home of the Jews. The difficulties in the way of the enterprise were tremendous, and many Jews were and are still opposed to the whole Zionist idea. Nevertheless, a new State, under a British mandate, has been created in Palestine, and has now been a going concern for more than a year. What has it accomplished? This question is answered in interesting detail by the first annual report of the British High Commissioner, Sir Herbert Samuel, which he presented to Parliament in August, 1921, and which has since been published as a British White Paper under the title, "An Interim Report of the Civil Administration of Palestine During the Period July 1, 1920, to June 30, 1921." The essential portions of the report are as follows:

The country is underpopulated because of its lack of development. There are now in the whole of Palestine hardly 700,000 people, a population much less than that of the Province of Galilee alone in the time of Christ. Of these, 235,000 live in the larger towns, 465,000 in the smaller towns and villages. Four-fifths of the whole population are Moslems. A small proportion of these are Bedouin Arabs; the remainder, although they speak Arabic and are termed Arabs, are largely of mixed race. Some 77,000 of the population are Christians, in large majority belonging to the Orthodox Church, and speaking Arabic. The minority are members of the Latin or of the Uniate Greek Catholic Church or—a small number—are Protestants.

The Jewish element of the population numbers 76,000. Almost all have entered Palestine during the last forty years. Prior to 1850 there was in the country only a handful of Jews. In the following thirty years a few hundreds came to Palestine. Most of them were animated by religious motives; they came to pray and to die in the Holy Land and to be buried in its soil. After the persecutions in Russia forty years ago, the movement of the Jews to Palestine assumed larger proportions. Jewish agricultural colonies were founded. They de-

veloped the culture of oranges and gave importance to the Jaffa orange trade. They cultivated the vine and manufactured and exported wine. They drained swamps. They planted eucalyptus trees. They practiced with modern methods all the processes of agriculture. There are at the present time sixty-four of these settlements, large and small, with a population of some 15,000. Every traveler in Palestine who visits them is impressed by the contrast between these pleasant villages, with the beautiful stretches of prosperous cultivation about them, and the primitive conditions of life and work by which they are surrounded.

The success of these agricultural colonies attracted the eager interest of the masses of the Jewish people scattered throughout the world. In many countries they were living under the pressure of laws or customs which cramped their capacities and thwarted their energies; they saw in Palestine the prospect of a home in which they might live at ease. * * *

Societies were formed which purchased areas of land in Palestine for further Jewish colonization. The Hebrew language, which, except for purposes of ritual, had been dead for many centuries, was revived as a vernacular. A new vocabulary, to meet the needs of modern life, was welded into it. Hebrew is now the language spoken by almost all the younger generation of Jews in Palestine, and by a large proportion of their elders. The Jewish newspapers are published in it. It is the language of instruction in the schools and colleges, the language used for sermons in the synagogues, for political speeches and for scientific lectures. [English and Arabic are the other two official languages.]

Large sums of money were collected in Europe and America and spent in Palestine for forwarding the movement. Many looked forward to a steady process of Jewish immigration, of Jewish land colonization and industrial development, until at last the Jews throughout the world would be able to see one country in which their race had a political and spiritual home, in which, perhaps, the Jewish genius might repeat the services it had rendered to mankind from the same soil long ago.

The British Government was impressed with the reality, the strength and idealism of this movement. It recognized its value in insuring the future development of Palestine, which now appears likely to come within the British sphere of influence. It decided to give to the Zionist idea, within certain limits, its approval and

support. By the hand of Mr. Balfour, then Foreign Secretary, it made in November, 1917, the following declaration: "His Majesty's Government view with favor the establishment in Palestine of a national home for the Jewish people, and will use their best endeavors to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in any other country."

A Zionist commission was sent to Palestine, after its occupation by Allenby's forces, to carry into effect the policy thus formulated. Meanwhile, however, the Arabs of Palestine became alarmed by the implications which they read into the Balfour declaration, despite the concluding provision in respect to the "civil and religious rights" of the non-Jewish communities. Fearing expulsion and the expropriation of the Arab holy places, they set on foot an anti-Jewish campaign among the Arab populace, which culminated finally in a serious outbreak in the streets of Jerusalem in April, 1920, when a number of Jews were killed and wounded and Jewish shops were looted.

Such was the political atmosphere, continues Sir Herbert Samuel's report, when the British Government established a civil administration on July 1, 1920. This administration made it plain from the start that it intended to safeguard the rights of the Arabs fully, while giving to all legitimate Zionist aspirations their fullest development compatible with the limitation expressed. The long delay in settling Palestine's international status, however, tended to disturb the people's minds. A Government loan, consequently, could not be negotiated, and hence many public works could not be carried out. The Zionist organization, owing to post-war financial conditions, could not contribute any large sums either for development or colonization.* Hence there was comparatively little expansion in employment opportunities. About 10,000 Jewish immigrants arrived, however, between September, 1920, and May, 1921. The Administration was further faced by new

anti-Jewish riots at Jaffa, Petah Tikvah and Chederah, which began on May 1 and continued for several days. These riots were suppressed by armed troops, with considerable loss to the attackers. Martial law was proclaimed over the area affected, but for some weeks there was considerable unrest. In all, some 88 persons were killed and 238 wounded, and considerable property was looted. A number of the Arab agitators were prosecuted by special civil and military courts, and a commission of inquiry was appointed under the Chairmanship of Sir Thomas Haycraft, the Chief Justice of Palestine. Meanwhile a delegation of eight members, appointed by a conference representing a considerable body of Moslem and Christian opinion, left for England in July to lay their views upon the political situation before the authorities. (This delegation has since been received by the British authorities, and has been given every opportunity to present the grievances of the Moslem and Christian minorities. On Sept. 14 the Zionist Congress in session at Carlsbad passed a resolution urging the fulfillment of the Balfour Declaration and emphasizing a friendly policy toward the Arabs.)

The report describes the steps taken by the Administration to build up a workable system of government as follows:

ADMINISTRATION—The administration of the country, entrusted to the High Commissioner, is conducted through a staff the heads of which, both in the central departments and in the districts, are British. A new framework of government has had to be constructed; it has been found necessary in certain cases to introduce new laws and regulations; experienced administrators, familiar with Western methods and impartial in local disputes, have been indispensable. It is intended to reduce the number of British and to increase the number of Palestinian officials. This process had, indeed, already begun.

In October, 1920, an Advisory Council was constituted. It consists of ten unofficial members nominated by the High Commissioner, of whom four are Moslems, three Christians and three Jews, and of ten members of the Administration. Its functions are consultative, but no case has yet arisen in which the Government has been unable to accept the opinion of the majority of the unofficial members.

It is the policy of the Administration to continue, whenever possible, to apply the Turkish laws, to which the people are accustomed. Changes are made only where they are indispensable. "Ne pas trop gouverner" is a good maxim, particularly in an Eastern country, and above all in the early years of a new régime.

*The Zionist Congress on Sept. 14, 1921, passed a budget of £1,500,000 for the development of Palestine, providing for land purchase, credit, institutions for the promotion of agricultural and urban settlements, irrigation, education and an agricultural experimental station.—Ed.

It was stated at the inauguration of the Advisory Council that its establishment was no more than a first step in the development of self-governing institutions. * * * Steps are now being taken to frame a Constitution for the country, which will include an elective element,

(Times Wide World Photos)

SIR HERBERT SAMUEL

British High Commissioner for Palestine

and the leaders of the various sections are being consulted as to its terms.

FINANCE—The cost of the civil administration in Palestine has been kept within the amount of the local revenue, and no grant-in-aid is received from the British Exchequer. Several taxes, oppressive in their incidence and small in their yield, have been abolished. * * * The civil administration has reduced the import duties on building materials and on live stock from 11 per cent. to 3 per cent. In substitution for the octroi, an additional import duty is levied of 1 per cent. on most articles and of 2 per cent. on some. A more important reform has been the abolition of the tobacco monopoly established by the Turks and conducted by the Tobacco Régie. The effect has been that the price of tobacco to the consumer has greatly fallen; that the cultivation of tobacco, hitherto prohibited, is about to be begun in several districts; that two factories for the manufacture of cigarettes have already been opened, employing a considerable number of work people, and

others are in prospect, while at the same time the Government is drawing a large new customs revenue from the importation of tobacco.

The railways of Palestine were taken over from the military authorities in October, 1920, and their revenue and expenditure included in those of the Government. The revenue of the Ottoman Public Debt Administration in Palestine was amalgamated with the general revenue of Palestine as from April 1, 1921. On the other side of the account, Palestine will be charged, under the provisions of the Treaty of Sèvres, with an annuity in respect of her share of the Ottoman pre-war debt. The amount of that share has not yet been definitely fixed, but it is estimated to be less than £200,000. [The Egyptian pound runs a little less than the British pound sterling.]

DEFENSE AND PUBLIC SECURITY—The defense of Palestine is assured by a garrison maintained by the mandatory power. The numbers of the garrison have now been reduced to 5,000 combatant troops. The charge thereby imposed upon the British Exchequer is £2,500,000 a year. It therefore appears that the cost of a British garrison, with its complement of ancillary troops, officers, artillery, horses and mules, is now at the rate of £1,000 a year for every two fighting men, or £1,000,000 for every 2,000 men.

The Palestine Administration maintains a police force with a strength of 1,300, drawn from all sections of the local population. The force is not yet at a satisfactory standard of efficiency, but a training school has been established, and is already achieving good results, and every effort is being made to raise the standard. In addition, a new gendarmerie of 500 men, 300 mounted, of whom 50 on camels, and 200 unmounted, is being organized. This force, though it will form a part of the Palestine police, will not be employed on ordinary police duties. It will be highly trained under British officers, will receive better pay than the ordinary police, and will be employed, in bodies of not less than twenty-five men, in the protection of the frontiers against raids from neighboring territories and in suppressing any internal disturbances that may occur.

A great number of blood feuds among the Bedouins of Palestine have been settled by the intervention of district officials. In the Beer-sheba district alone 134 have been dealt with. The peace and order of the country have been thereby improved.

JUDICIAL PROCEDURE—A judicial system has been established by the military and developed by the civil administration, which dispenses justice with a degree of integrity, impartiality and promptitude hitherto unknown in Palestine. Minor jurisdiction in civil and criminal cases is exercised by Palestinian Magistrates. Four District Courts, presided over by British Judges, who sit with two Palestinian members, try the more serious civil and criminal cases and hear appeals from the Magistrates' judgments. There is a Court of Appeal at Jerusalem with a British Chief Justice and a British Vice President, which is the Supreme

Court and hears appeals from the District Courts. In cases in which a British or foreign subject is tried for a criminal offense, the court is constituted with a British Magistrate or with a majority of British Judges. * * * The Ottoman law remains as the foundation of the legal system, with such amendments, principally affecting a simplification of the procedure, as have been introduced by ordinances and rules of court issued by the Administration. In the Beersheba district tribal law continues to be administered among the Bedouins by the Sheikh's court, from which an appeal lies to a British officer.

TRANSPORTATION DEVELOPMENT—All the railways, as stated, have been brought under the control of the Government. In addition, the Palestine Railway Department operates, on behalf of the army, the Sinai Military Railway between Kantara, on the Suez Canal, and Rafah, on the Egyptian-Palestine frontier. The total length of the entire system is approximately 1,000 kilometers. Within the limits of the funds available, many improvements have been effected during the last twelve months. The main line between Rafah and Haifa, hastily constructed during the campaign, has been strengthened and protected. The line from Jaffa to Ludd Junction was of narrow gauge, involving the transshipment of all goods carried by railway between the Port of Jaffa and other parts of Palestine and Egypt. This railway has now been broadened. Stations have been improved and new stations opened. Sleeping cars and dining cars are run on a number of trains.

COMMERCE AND INDUSTRY—A Department of Commerce and Industry has been created, which keeps in close touch with the trading classes and uses its best endeavors to promote the economic development of the country. Chambers of Commerce have been formed in all the principal towns of Palestine. There has been a general fall in the prices of commodities, in sympathy with the world movement, but they still remain high in comparison with prices in Egypt and elsewhere. Except that the export of live stock is still prohibited, and except for the usual police regulations dealing with the importation of arms and deleterious drugs, &c., all restrictions upon the import and export trade have now been abolished. Several new industrial enterprises are being established. A revival of house building is beginning in various parts of the country. The granting of mining concessions and of 'prospectors' licenses is still prohibited by instruction of his Majesty's Government. Egyptian currency has been made the only legal tender in Palestine, together with the British gold sovereign, at the rate of 97.5 Egyptian piastres to the pound. The prohibition on the export of gold has been rescinded, with some advantage to trade and with no counterbalancing disadvantage.

AGRICULTURE—A department was formed in the last months of the Military Administration for the assistance of agriculture, which is, and must remain, the principal industry of Palestine. This department now includes itinerant agricultural assistants, who notify imme-

diately of all plant diseases and insect pests, so that steps may be taken to prevent their spread; a field staff of veterinary surgeons to deal with contagious live-stock diseases; a fisheries service, five meteorological stations, and a forestry section, under whose supervision the felling of trees has been stopped, forest nurseries have been established, and several hundreds of thousands of trees have been planted. Such are the first beginnings of a process which should add largely to the productiveness of Palestine, increase its rainfall and bring fresh charm to its scenery. The measures that have been taken, and particularly the provision of ££370,000 to agriculturists, have assisted the revival of the country. Large additional areas have been cultivated this year, and the head of stock showed a remarkable recuperation. The agricultural development of the country * * * is hampered by the confusion into which the titles of ownership of land were allowed to fall during the Turkish régime. Land settlement courts have been established. A survey department has been created. A land ordinance has been enacted, which includes provisions designed to prevent land from being purchased by speculators and held back from productive use. The ordinance includes important clauses also for the protection of existing tenants when areas of land are sold for colonization. A Land Commission examines all proposals dealing with the use of State lands or the colonization of private lands. The land registries were reopened in October for transactions. * * *

EDUCATION—There is evidence throughout Palestine of an active desire for opportunities for education. The majority of the Moslems are illiterate. The Administration has adopted a scheme under which the people of any town or village where a school is needed are invited to provide a suitable building and to keep it in repair; the Government defrays, out of general taxation, the salaries of the teachers and the other costs of maintenance. Under this scheme new schools are being opened at an average rate of more than one a week. It is intended to continue this process until the whole country is covered. A period of four years will probably be necessary. To assist in the staffing of these schools, the two Government training colleges * * * have been considerably enlarged. Peripatetic teachers paid by the Government have been appointed to work among the Bedouin tribes of the Beersheba district. A number of voluntary schools, maintained for the most part by organizations outside of Palestine, assist in providing for the needs of the population. A system of State grants to these schools, accompanied by Government inspection, has been inaugurated. Law classes have been established in Jerusalem, which will enable young Palestinians to qualify as advocates in local courts.

IMMIGRATION AND TRAVEL—Since the ports of Palestine were opened to immigration with certain restrictions in August, 1920, slightly over 10,000 immigrants have arrived in the country. These were almost all Jewish; only 315 non-Jewish immigrants were registered. Of the Jews, 8,084 came under the auspices of the Zionist Organization. During the disturbances

in Jaffa and the neighborhood, early in May this year, all immigration was suspended for the time being. But in any event it was becoming increasingly evident that the flow of immigrants was greater than the country was able to absorb. The postponement of works of development, due to the causes specified earlier in this report (lack of available funds), restricted the openings for employment far more narrowly than had been anticipated. New regulations were consequently drawn up. To obtain a visé to enter Palestine a person must now be able to show that he belongs to one of the following categories: (1) Persons of independent means who intend to take up permanent residence in Palestine; (2) Members of professions who intend to follow their calling; (3) Wives, children and other persons wholly dependent on residents in Palestine; (4) Persons who have a definite prospect of employment with specified employers or enterprises; (5) Persons of religious occupation who can show that they have means of maintenance here; (6) Travelers who do not propose to remain in Palestine longer than three months; (7) Returning residents.

In the month of July the ports have again been opened, and persons belonging to those classes have been arriving. * * * Partly among the immigrants and partly among the pre-war residents of Palestine a small group of communists was formed. This group sought to become an agency of Bolshevik propaganda. It aroused against itself an almost universal hostility. * * * As many as possible of this group have been identified; fifteen who are aliens have been deported from the country

and eight who had acquired Ottoman nationality, together with five aliens, have been bound over to be of good behavior.

The foregoing summary gives the salient features of Sir Herbert Samuel's report. Various other topics are discussed, including the growth of the postal service, the work of the Department of Public Health to stamp out malaria and trachoma, the measures taken to insure full religious liberty and the encouragement given to archaeological research. An interesting concluding section deals with the neighboring district of Trans-Jardania, which is now administered by the Emir Abdallah, the younger brother of Emir Feisal, King of Mesopotamia. The Emir holds office as the representative of the mandatory power for Palestine, with the assistance of a small number of British officers. This arrangement is provisional, and a definite settlement is expected within six months. Conditions were troubled before Abdallah's advent, but since he took hold of Trans-Jardania all has gone smoothly. The relations between this outlying province, inhabited by some 35,000 people, and Palestine are intimate and amicable.

MESOPOTAMIA'S KEMALIST MENACE

[PERIOD ENDED OCT. 15, 1921]

THE British Colonial Office has made public the reply King Feisal sent to the message of King George congratulating his Shereefan Majesty on assuming the throne of Irak, at Bagdad, Aug. 23. It professes eternal friendship and gratitude for British aid in restoring his nationhood and enabling his Arabs to fulfill their aspirations, and expresses hope of an early treaty to cement the bonds wrought by the mingling of the blood of Briton and Arab on the war's battlefields.

The Colonial Office also issued a statement in regard to the Central Arabian Emirate of Nejd, whose relations with the neighboring Arab countries had given some cause for anxiety to the British Government, particularly during the political campaign preceding the coronation of Feisal. This noted the Nejd Arabs' choice of Emir Bin Saud as Sultan of Nejd and its de-

pendencies, and the conveyance to him of their resolution by Sir Percy Cox, British High Commissioner of Irak. Emir Bin Saud expressed grateful acknowledgment of Britain's attitude and reliance on her friendship. Also he expressed pleasure at King Feisal's confirmation and a desire for close friendship with Irak.

But the Nationalist Turks are not to allow Feisal to reign in peace. As early as Sept. 20, it was observed by Sir Percy Cox that Kemalists were strengthening their positions on the Mesopotamian borderland. They had sent Nihad Pasha thither with the twofold object of crushing that section of the Kurds of Southern Kurdistan which, under British auspices, aspires to emulate Irak and of promoting an insurrectionary movement against King Feisal, which if successful would be supported by Kemalist bayonets. It is also reported at Bagdad

that part of the scheme is to favor the support of the ex-Sheik-es-Senussi as King of Northern Irak, if disturbances break out against Feisal. Pirs and Sheiks of all descriptions have considerable influence among the barbaric but simple-minded Kûrds, and it is said to be certain that the ex-head of the Senussi confraternity has been most useful in distributing Kemalist propaganda. This matter was made the subject of a semi-official statement issued on Sept. 23, describing a quelling of mutinous Kurds in Mesopotamia by 200 local levies under British officers and the submission of Ubaidullah, the leader of the Kurdish malcontents.

After the coronation one of the first official acts of King Feisal was to organize the Government by calling on the Naqib of Bagdad, President of the Provisional Council to the State of Irak, to form the first Cabinet in the history of the new nation. The portfolios were distributed thus:

President, His Highness the Naqib, G. B. E.; the Interior, Haji Ahmed Namji; Defense, Ja'far Pasha al Askari; Finance, Sassoon Effendi Haskail; Justice, Naji Bey Ibn Yusif al Suwaidi; Auqaf, Saiyid Muhammad Ali Effendi al Fathli; Commerce, Abdul Latif Pasha Mandil; Public Works, Izzat Pasha; Education, Shaikh Abdul Karim Jazairi; Health, Dr. Hanna Khaiyat.

PERSIA FLOUTS BRITAIN

[PERIOD ENDED OCT. 15, 1921]

WITH the departure of Mr. Armitage-Smith, the British Controller of Persian Finances, from Teheran on Sept. 20, the last vestige of British civil authority departed from Persia. Three days later, with the demobilization of the South Persian Rifles, British military authority vanished. Thus Persia has accomplished in 1921 what Great Britain, under Russian imperial pressure, prevented W. Morgan Shuster from accomplishing for her ten years ago.

This disbanding of the South Persian Rifles is far more important than the exit of Mr. Armitage-Smith, for it can hardly fail to affect British military prestige in the Middle East. Lord Curzon, the British Foreign Minister, had first rejected the offer of the Persian Government to take over the corps. The reason given was the absence of

guarantees for the effective taking over of a highly disciplined force with a very considerable quantity of munitions. His Majesty's Government therefore decided that the disbandment must continue, and that no arms or munitions should be disposed of in Persia, either to the Persian Government or to unofficial persons.

The press of Teheran resented the impudatation, and has declared that the corps was "the most undisciplined military force in Persia and a constant menace to established government." It was, however, according

to all experts, a most effective body of highly trained men. Its organization was begun in the Spring of 1916 by Brig. Gen. P. M. Sykes at Bandar Abbas, when it became known that Germany had ordered the Turks to attempt to reach India by way of Persia.

In a recent article General Sykes, in relating the history of the corps, stated that in 1918, when Persia thought that Germany would become the victor, the Persian authorities undermined the loyalty of the corps and succeeded in causing it to be disbanded. General Sykes takes a gloomy view of Persia's future. He gives it as his opinion that Persia will be bankrupt and fall a prey to anarchy. She will be free, indeed, of British influence, but powerless to resist a Bolshevik attack or Bolshevik penetration. She is acting against her true interests in turning her back on her old friends, but until she passes out of a stage of civilization that resembles that of Europe in the Middle Ages there is little hope of a stable Government being formed. The construction of a railway would, more than any other single measure, constitute a step in this direction, but unless heavily subsidized a railway could not pay, and consequently is unlikely to be built. The friends of Persia will not abandon hope, but seldom has the outlook been as gloomy as at present.

THE WAR IN ANATOLIA

Both Greeks and Turks are left with equivocal advantages after mutual rough handling—General Papoulas's report of the Battle of Sakaria River

[PERIOD ENDED OCT. 15, 1921]

THERE is a French mission at Angora; an Italian mission is on its way; but Great Britain, which alone has received from the Greeks the terms on which they will make peace with the Nationalist Turks, has not a mission at the capital of Mustapha Kemal Pasha, nor up to the middle of October had she dispatched one thither. There are unmistakable signs, however, that hostilities will not be resumed, at least not on a large scale; for both armies have severely handled each other, and by the end of October the Winter, with its severe snow storms and intense cold, will have begun on the central plateau, where the altitude ranges from 4,000 to 8,000 feet.

The retreat of the Greeks that followed the great battle of the Sakaria River, in which they are said to have lost 25,000 men and the Turks at least twice as many, was continued until Sept. 25, when they reached the old Turkish line, running from east of Brusa southward via Eski-Shehr, Afium-Karahissar and Seid-Gazi. On that day it was officially announced in Athens that the military operations were over for the season. But five days later the Turks started a drive on Afium-Karahissar with three divisions, including about 60,000 men, and were defeated with severe loss after a nine days' battle. This was a palpable victory for General Papoulas, as the Turks had tried to do on his right wing what they had succeeded in doing on his left wing last Spring. It was a great moral stimulant for the Government at Athens, for, although a lengthy report had been published on Sept. 10 concerning the battle on the Sakaria itself (Aug. 23-Sept. 2) and the drive across the river, it was silent on the subsequent retreat of the Greeks. The Papoulas report, which generally corresponds to the Battle of the Sakaria River as briefly sketched in these columns last month, ends as follows:

During the subsequent days the fighting has subsided along the greater part of the line, with the exception of our left wing.

The enemy is feverishly fortifying himself in new positions, and has put up an obstinate and desperate defense. Our army, after an admirable march of ten days and an heroic and victorious battle of fifteen days, has inflicted defeat and severe losses on the enemy. It has occupied the enemy's strongly fortified positions and established itself firmly on the east of the Sakaria. It is fighting 300 kilometers (187 miles) from its base, and part of its march was over 180 kilometers (112½ miles) of desert. During this pause it is stretching its lines of communication and remedying their defects, while preparing to continue its successful operations until the object of definitely defeating the adversary is attained.

A few days later the river was recrossed and the retreat was in full swing. Curious as it may seem, however, on the very day that the Kemalists made their abortive attack upon Papoulas's right wing before Afium-Karahissar, Mustapha Kemal was being made a Marshal at Angora with the title of "Victorious," and was eloquently thanking the Grand Parliament for the honor. The theme of the speech is old—the desire of the Turks to live their own lives on their own land at peace with the world—but toward the end the peace element was emphasized more than formerly. He said:

As President of the Parliament I say before you openly that we do not want war; we want peace. My own opinion is that there is not any obstacle to such an aim. If the Greek Army supposes it will make us give up our legitimate rights it is mistaken.

Mr. Lloyd George on Aug. 16, in the British House of Commons, indicated intervention in favor of the winner of the war. It is Turkey who has now won, and I am hopeful that Mr. Lloyd George will not go back on his word. It is altogether natural that we are defending our country's existence by arms against attempts to wipe out our nationhood. There can, indeed, be no more reasonable nor justifiable attitude than this. Gentlemen, I assure you that we will continue our offensive pressure on the Greek Army till not a single enemy soldier is left in our country.

Since the publication of Papoulas's report

which told of the victory of the Sakaria, but not of the retreat from the field, the Greek Government has allowed fragments of the story of the retreat to appear. From these the following summary of the retreat has been constructed, and confirmed by military bulletins issued tardily, first from the General Headquarters at Sivri-Hissar, and then from Eski-Shehr, forty-three and one-half miles further west.

According to the bulletin, the retreat was divided into three stages, during none of which were the Turks able to attempt more than a scouting pursuit. Their maximum effort seems to have been made on Sept. 15, when a Kemalist column, estimated at about one division of infantry and about 3,000 or 4,000 cavalry, approached from the south and attacked the Greek Army; but after an engagement that does not seem to have lasted many hours, the Greeks put them to flight and captured some prisoners. There were other attacks similar in strategy but lighter in tactics, all which were reported at Angora as Turkish "victories." Thus retreating, the Greek Army reached its prepared lines on Sept. 25. Then came the Turkish concentration and attack on its right wing five days later.

The specific event which brought about the retreat was this: After crossing the Sakaria the Greek right wing was found to be too far extended, and here the Turks, taking advantage of the situation, pushed home an attack and managed to throw back two Greek divisions in complete disorder.

These two divisions suffered heavily and lost most of their artillery. This took place immediately after the crossing of the Sakaria. The final stages of the battle were when the Greeks came up against the Turkish second line, on which they were completely held, and on which they could make no impression (Aug. 23).

Then came the Turkish counter-offensive, with evidently considerable reserves, and quite unexpected by the Greeks. This offensive was launched at a time when the Greek troops were fatigued, and succeeded in throwing back the Greek left and centre, creating considerable confusion. Thereupon the Greek General Staff, after a hurried council of war, decided to retreat behind the Sakaria; then on a line northwest from Yappan Hamman; then on Sivri-Hissar; then on Eski-Shehr and Afium-Karahissar.

In spite of the still doubtful military situation, M. Stergiades, the Greek High Commissioner in Smyrna, on Sept. 25, made public a program for the civil administration of the entire Smyrna zone, given conditionally to the Greeks as mandatory under the Sèvres Treaty. On the same day M. Theotokis, Minister for War, announced at Brusa that the Government proposed to proclaim the annexation of the territory occupied by the Greek troops. Such a declaration, it is believed in Athens and the City of Smyrna, will go far toward assuring an early peace, with the sympathy of the Allies and with their good offices exercised at Angora.

PORTUGAL'S NEW MINISTRY

LITTLE news emanates from Portugal through the regular channels in these days, not on account of any censorship of the press, but because the deplorable financial conditions of the country make routine events there of little interest to chancelleries or commercial organizations abroad. Thus the downfall of the Government of Senhor Barros Queiroz, toward the last of August, was not even reported through the regular channels. It was only by Senhor Antonio Granjo's rise to power that the event became known in that way.

The July election had given Queiroz sixty-five seats, while his financial reforms

were supported by fifty-seven Democrats, thus apparently leaving an opposition of only twelve—Monarchists, Catholics and other groups. But his own party, the Liberal, was the first to revolt. The prospect of his successor is said to be no brighter.

The Liberals remain divided, and the new Granjo coalition is looked upon as only a tool until the Democrats can unite upon a common policy which shall be supported by the more conservative among the Liberals. Queiroz fell merely as a victim of idealism, whose idea of working with another party for the good of the nation was resented by his own.

ITALY'S CONTINUED CONCORD

Having settled her fishery question with Yugoslavia, she mediates between that country and Fiume, confirms a modus vivendi with the Vatican, and shows good feeling toward the United States

[PERIOD ENDED OCT. 15, 1921]

ON Oct. 14, at Brioni, near Pola, Italian and Yugoslav Commissioners signed away another cause of friction between their countries. This was an agreement in regard to the Italian fishing rights on the Dalmatian coast. The basis of the agreement was the Italo-Austrian settlement of 1906, under which Italian fishermen enjoyed full rights, provided their catches were taken to Italian markets.

There remains the Porto Baros problem, which the new Fiume Government would adjust directly with Yugoslavia. To solve this and other problems, which have to do chiefly with Fiume in the light of Italian and Yugoslav interests, the Italian Government invited to Rome, for Oct. 21, President Zanella of Fiume and the Yugoslav Premier, Dr. Pashitch.

On Oct. 10 Signor Rolando Ricci, the Italian Ambassador at Washington, then in Italy, in a statement to the Roman press, said that the United States would not cancel the debts owed by the Allies to the Washington Government. From this extraordinary undertaking of an Ambassador to expound the policy of the country to which he is accredited, it is inferred that Italy will support President Harding's program at the coming "disarmament" conference at Washington, where she hopes to recover some of the prestige she believes she lost through President Wilson at the Paris Peace Conference.

Confirmation of the era of good feeling between Italy and the United States is to be found in the results of a journey which the American Ambassador at Rome, Richard Washburn Child, has been making through the provinces. He has made many speeches and has been constantly interviewed. In spite of his inability to speak Italian, the genius of his interpreter has measurably rendered his mission most sat-

isfactory to both the Italian and American Governments—to the former particularly in commercial, industrial and labor circles.

The assassination of the Socialist Deputy, Giuseppe di Vagno, at Mola di Bari, on Sept. 26, strained, but did not break, the truce established between the Socialists and the Fascisti.

Nearly every political party is holding a congress—that of the Socialists is going on at Milan, and the Catholic or Populists will meet at Venice Oct. 20-23. The results are expected to have a restraining influence on politics and society for the coming Winter.

On Sept. 30 the Osservatore Romano, the organ of the Vatican, issued a long pronouncement on the rumors of a definite settlement of the "Roman Question." It declared that the Vatican could not take the initiative and that the Quirinal had not done so. Thereupon the Government press pointed out that the Quirinal was quite satisfied with the de facto reconciliation brought about during Signor Nitti's Premiership between Cardinal Gasparri and Signor Tittoni, then Minister of Foreign Affairs.

This modus vivendi, which, in the foreign domain, led to a tacit co-operation between the two powers in the Orient, and at home to the constitution of the Popular or Catholic Party, was deemed adequate to meet all the requirements of the moment. Since then several of Italy's claims in the Near East have been supported by the Vatican. The late Cardinal Giustini even visited the Holy Land under Italian military auspices, going in an Italian warship.

So the "Roman Question" seems again to be shelved, at least for the time, with the Vatican's claim to temporal dominion of the Popes still unrecognized.

THE IRISH PEACE CONFERENCE

A rapid summary of the telegraphic correspondence that finally led up to a new peace conference in London—How Mr. Lloyd George evolved the lacking formula on which the two sides could come together

[PERIOD ENDED OCT. 15, 1921]

CONTINUATION of the Irish peace negotiations by correspondence took the form of a rapid exchange of telegrams between Eamon de Valera and Premier Lloyd George, in which both parties strove to avoid a break while retaining their relative positions for and against recognition of an independent sovereignty for Ireland. That was the question upon which success or failure of the negotiations mainly hung, with a brighter prospect for peace or a return to an even worse condition of civil strife in the balance. To discover, therefore, some common ground on which both parties could meet, some formula of a preliminary agreement which would not jeopardize the claim to Irish national independence on the one side or admit it on the other, became the earnest purpose of the Irish and British leaders.

Thus in the letter from Mr. de Valera delivered to the British Premier by Harry Boland, and published on Sept. 15, the Irish leader wrote: That while his people were willing to "enter a conference to ascertain how association of Ireland with the community of nations known as the British Empire can best be reconciled with Irish national aspirations," nevertheless he deemed it a duty to reaffirm the position defined throughout this correspondence that "our nation has formally declared its independence and recognizes itself as a sovereign State."

In his telegraphed reply of the 15th Mr. Lloyd George said he must make it absolutely clear that "if we accepted a conference with your delegates on the formal statement of the claim which you have reaffirmed it would constitute an official recognition by his Majesty's Government of the severance of Ireland from the empire and of its existence as an independent republic. It would, moreover, entitle you to declare, as of right acknowledged by

us, that in preference to association with the British Empire you would pursue closer association with some other foreign power. There is only one answer to such a claim at that." But the British Premier, while announcing cancellation of arrangements for the proposed Inverness conference, left the door open to further negotiations by promising to communicate the result of the summoning of another Cabinet Council in the Scotch Highlands, to discuss the new situation, in a few days.

On Sept. 17 messages were again exchanged. That from Lloyd George contended that "it would be idle to say a conference in which we had already met your delegates as representatives of an independent and sovereign State would be a conference 'without prejudice.'" The Premier proceeded to enumerate the rights and consequences of receiving the Irish delegates as the representatives of a sovereign State, and declared: "We cannot consent to any abandonment, however informal, of the principle of allegiance to the King, upon which the whole fabric of the empire and every constitution within it are based. * * * While you insist on claiming that, a conference between us is impossible."

Mr. de Valera's reply stated that the Premier's invitation of Sept. 7 had already been accepted. While he and his followers had not asked for the abandonment of any principle, even informally, surely it must be understood "that we can only recognize ourselves for what we are." He went on in a more conciliatory tone, adding: "Believe me, we have but one object at heart, the setting of the conference on such a basis of truth and reality as would make it possible to secure through it the result which the peoples of these two islands so ardently desire."

This message was promptly answered

by Lloyd George on the 18th. The gist of the answer lay in the words "I must, therefore, repeat that unless the second paragraph of your letter of the 12th is withdrawn, a conference between us is impossible." The Premier, however, was prepared to meet the delegates, as he had met Mr. de Valera in July, as the chosen spokesman of the great majority in Southern Ireland, to discuss the association of Ireland with the British Commonwealth.

Mr. de Valera replied on Sept. 19, protesting against the Premier's attitude and throwing out the following suggestion:

A treaty or accommodation and association, properly concluded between the people of these two islands and between Ireland and the group of States in the British Commonwealth would, we believe, end the dispute forever and enable the two nations to settle down in peace, each pursuing its own individual development and contributing its own quota to civilization, but working together in free and friendly co-operation in affairs of agreed common concern.

To negotiate such a treaty the respective representatives of the two nations must meet, but if you seek to impose preliminary conditions which we must regard as involving the surrender of our whole position, they cannot meet. * * *

We request you, therefore, to state whether your letter of Sept. 7 is intended to be a demand for surrender on our part or an invitation to a conference free on both sides, and without prejudice should an agreement not be reached.

If the latter, we readily confirm our acceptance of the invitation, and our appointed delegates will meet your Government's representatives at any time in the immediate future that you designate.

Several days of anxious waiting followed, during which Mr. Lloyd George conferred with his Ministers; and the British press indulged in columns of speculation regarding the outcome of this duel by correspondence. Among prominent men who spoke at this time Arthur Griffith, Foreign Minister in the Dail Eireann Cabinet and Chairman of the plenipotentiaries appointed to the proposed Inverness conference, said in concluding a speech in Dublin on Sept. 20: "If the long conflict is to be ended, it must be ended not temporarily or vaguely, but permanently and definitely. There is a real chance today of ending the oldest war in the world and establishing an enduring amity between the combatants. There will be no chance to-

morrow if the British Government tries to play false." About this time another promising note was sounded by Sir James Craig, Ulster Premier, in an expression of willingness to take part in the parley.

Also at "this fateful hour when the future of Ireland trembles in the balance" and "a world waits with bated breath," a message breathing the spirit of an exalted and earnest good-will was forwarded by the Catholic hierarchy of the United States to Cardinal Logue and his brethren of the Irish hierarchy. To this Cardinal Logue replied: "It will stir to the depths the hearts of the Irish people from their sense of gratitude, coming after the splendid proofs already given."

On Sept. 29 hope on both sides was greatly stimulated by the publication of a note from Premier Lloyd George to Mr. de Valera, ending with a new offer, as follows:

We therefore send you herewith a fresh invitation to a conference in London on Oct. 11, where we can meet your delegates as the spokesmen of the people whom you represent, with a view to ascertaining how the association of Ireland with the community of nations known as the British Empire may best be reconciled with Irish national aspirations.

In what was characterized as a "brief and businesslike message" Mr. de Valera, on Sept. 30, accepted the British Premier's latest invitation. It was noteworthy that the formula of the association of Ireland with the other communities of the British Empire, which had brought together the two opposing sides to the long-drawn-out controversy on terms which it was considered involved surrender by neither, was conceived by Mr. Lloyd George. Mr. de Valera's acceptance read:

We received your letter of invitation to a conference in London, Oct. 11, with a view to ascertaining how the association of Ireland with the community of nations known as the British Empire may best be reconciled with Irish national aspirations.

Our respective positions have been stated and understood, and we agree that conference, not correspondence, is the most practical and hopeful way to an understanding.

We accept the invitation. Our delegates will meet you in London on the date mentioned and explore every possibility of a settlement by personal discussion.

The personnel of the English delegates

to the conference was officially announced on Oct. 7 as follows: Premier Lloyd George, Lord Birkenhead, Lord Chancellor; Sir Hamar Greenwood, Chief Secretary for Ireland; Austen Chamberlain, Government Leader in the House of Commons; Sir Laming Worthington-Evans, Secretary of War, and Winston Spencer Churchill, Colonial Secretary. Attorney General Hewart was designated a member of the conference for constitutional questions.

On Oct. 8 a large crowd gathered at the Westland Row Station, Dublin, to bestow a hearty send-off to the Irish delegates proceeding to London. Except for Michael Collins, temporarily detained on private business, the Sinn Fein party consisted of Arthur Griffith, Minister of Foreign Affairs; R. C. Barton, Minister of Economics; Gavan Duffy, Sinn Fein representative at Rome, and Commandant E. J. Duggan, together with fifteen secretaries, press representatives and typists. The delegation reached London the same evening, where it was welcomed by Irish leaders in England and an enthusiastic crowd. It proceeded at once to 22 Hans Place, in the heart of Belgravia, provided as a headquarters residence.

On the morning of the first meeting of the conference, Oct. 11, a small but good-natured crowd of English and Irish people gathered in Whitehall. A few minutes before the appointed hour the British representatives strolled up to 10 Downing Street. Promptly on the stroke of 11 two handsome motor cars brought the Irish delegates. A cheer greeted their arrival, but otherwise there was little demonstration. The conference took place in the famous Cabinet room where so much history and so many decisions regarding Ireland had been made.

Premier Lloyd George opened the proceedings with a short speech, and the discussion gradually became general. At first it was clear that the Sinn Feiners were suspicious of their surroundings, as if afraid they might give away points without knowing it, but they gained confidence as the morning advanced and expressed their views more freely. Thus the initial exchange of opinions went forward amiably, both sides being anxious not to raise awkward questions at this period of the

negotiations. Actual subjects of the debate were not given out. One point, however, that did come up for discussion was the extent to which the truce was being kept. After both sides had recognized the fact that subordinates had failed to carry out agreements made by their superiors, it was decided that British and Irish officials meet on the following day and try to draft regulations to fit existing conditions. At the conclusion of the meeting at 6 P. M. it was hoped by the British that the difficulty of creating an atmosphere of good faith had been overcome.

According to the agreement arrived at in conference a small joint committee met at the Cabinet offices in Whitehall Gardens on the 12th. This committee consisted of Sir Hamar Greenwood, Sir L. Worthington-Evans, General Macready, Michael Collins, R. C. Barton and E. J. Duggan. A harmonious conversation was entered into regarding a better preservation of the truce. On the 13th the conference met at noon in Downing Street, and the subcommittee later in the day. Michael Collins, with two of his colleagues, also had a long discussion with Winston Spencer Churchill at the Colonial Office. On Oct. 14 an adjournment of the conference was taken until the following Monday but, it was understood, this had no political significance.

Meantime Mr. Harold Spender made an extensive journey through Southern Ireland and described conditions as he found them. "Great paralysis and desolation lie over the centre of Ireland," he wrote. "It is a paralysis of spirit. Agriculture is busy enough, but the people give one the impression of being underfed and deeply depressed by these long strikes. The old cheerful heartiness of the Irish peasant has quite deserted him. Suspicion broods over the land like a great thundercloud. One sees frightened faces in every doorway as one passes. The truce is well kept, but one hears complaints."

Regarding the attitude of the population toward the conflict Mr. Spender wrote: "I have investigated the conditions in many villages and it is my sober judgment that today there is no party in the south of Ireland that counts at all ex-

cept the Republican Party. The whole of the South of Ireland is out for independence from British rule, some by peaceful means, some by violent. They all desire peace, yes, but always on their own terms. The two sides stand absolutely apart. On one side are the soldiers and police, now

with absolutely nothing to do and already tired of the idleness of the truce. On the other side are the Irish people. There is a gulf of blood fixed between them, and it will flow again and flow far more freely and terribly unless civilian statesmen can find a way out."

ENGLAND'S UNEMPLOYED MILLIONS

[PERIOD ENDED OCT. 15, 1921]

THREE vital themes engrossed British minds during the month in review, namely, Ireland, the Disarmament Conference and the nation's unemployed. Of these, the last-named was the most insistent and threatening. In accepting the freedom of the City of Dingwall on Sept. 22, Premier Lloyd George said that he doubted whether any of the great on Dingwall's roll of honor, such as Fox, Grey, Gladstone, Rosebery and Chamberlain, had had "as hard and insistently strenuous a task as the one Providence has intrusted to my feeble hands." He had tried to find rest in Wales, in England, on the Continent, and now he had fled to the Scotch Highlands, but his task had pursued him even into those remote glens. However, he must go through with it, and if God gave him the strength he would go through with it.

It will take a great deal of getting through [the continued], but sometimes when things seem worse they are really much better. I know from the touch of things and from the sight of things, comparing them today with a year ago and the year before, that they are gradually getting better. All the same, we are not quite through and we must pull together. If we pull together, it will greatly help the world, for if Britain goes down I do not know what help there is for Europe.

Lloyd George's task had indeed literally followed him into the remote glens of the Highlands, for the unemployment problem had become so desperate that twelve Laborite Mayors of London boroughs had traveled thither third-class at their own expense to obtain his advice and active assistance. He met them at Gairlock and promised earnest consideration of the problem, but rejected the Mayors' plan that the Government carry the burden singly. The Government had already expended over

£105,000,000 in relief of unemployment through the insurance scheme. As Mr. Churchill had said in his Dundee speech on Sept. 24, if the Government had not been repeatedly stabbed at by strikes, the distress would have been less and the means of coping with it would have been much greater. Lloyd George stated the Government's attitude in the softest possible words in a speech at Inverness on Oct. 4 when he said:

National honor demands that those willing but unable to get work must be saved from starvation, but the measure of relief depends upon the national resources. * * * No one in this country will be allowed to starve so long as there is a crumb in the national cupboard; but there must be co-operation between all classes, otherwise things will proceed from a crisis to disaster.

Serious riots had broken out in London and some of the provincial centres. On Sept. 22 the Parliamentary Committee of the Trades Union Congress had issued a manifesto declaring that unemployment should not be made a local burden—that the Government should provide work. Meetings of Cabinet Ministers and Parliament members discussed various plans of procedure without finding any practicable way out. James Henry Thomas, the General Secretary of the National Union of Railway Men, told the workers on Oct. 2: "At no time during the war did the situation look so black and dangerous as now. The next few months will be the most difficult period for the leaders."

According to figures supplied the State Department in Washington by A. P. Dennis, Commercial Attaché in London, the peak of British unemployment was reached in June, with 2,177,899 men out of work. By Sept. 16 this figure had declined to 1,469,700, rep-

representing a drop of 28,500 in the last week reported. Mr. Dennis illuminated the critical situation as follows:

Measures are contemplated which should have far-reaching results in alleviating the conditions; otherwise, unless trade revives, at least 1,000,000 idle men must be maintained indefinitely at an average cost of £2 each week, or £100,000,000 annually. The measures contemplated would mean a heavy demand on the Treasury, but at the same time the expenditures would be made for constructive work rather than to non-producers. The Government will assist traders and industrial concerns to expand business.

Under the present dole system the tax-paying ability of certain industrial districts is breaking down. In one East Side London borough, with a population of 167,000, 18,000 are receiving relief.

To provide employment the Admiralty announced on Oct. 8 that it was prepared to sell a number of obsolete warships at moderate prices for breaking up by firms which agreed to commence work upon completion of sale. In various parts of the country demonstrations were held on Oct. 9, "Unemployment Sunday." At one of these a letter was read from the Bishop of Winchester suggesting that the nation ration itself. An action expected to relieve the tension in London's East End was the release from prison of the twenty-nine Popular Councilors who had been arrested on a matter of local taxation. On the 13th demonstrations of a more ominous character took place in London, Manchester, Sheffield and Dundee. In London 20,000 men participated in a parade, the "biggest of

its kind ever seen in London," and among the banners carried one bore the inscription, "Bread or Revolution!" A committee which sought to interview the Premier saw two of his secretaries, and received a letter from Lloyd George which stated that the Government was well aware of the gravity of the situation and was exerting every possible endeavor to grapple with it.

C. W. McCurdy, Joint Chief Coalition Whip, speaking at Northampton on Sept. 21, said he had made a comprehensive survey of the question of relief of ex-service men and was staggered by the immensity of the task the Government had to face. The State was now paying £111,000,000 in pensions. British war casualties numbered 2,250,000, and 3,333,000 men, women and children were receiving pensions and allowances each week. These were:

Disabled officers and men.....	1,150,000
Widows	172,000
Motherless children (wards of Pensions Ministry)	17,000
Dependents	368,000
Children of widows	359,000
Wives and children of disabled men.	1,280,000

On Sept. 23 Mrs. Wintringham was elected as the second English woman member of the House of Commons. Mrs. Wintringham was returned for the Louth Division of Lincolnshire, being the widow of a former member. As a Liberal with a good many democratic tendencies it was expected that she would sit beside Lady Astor on the Labor bench.

BUSINESS DEPRESSION IN SWITZERLAND

JOSEPH C. GREW of Massachusetts, our Minister to Denmark, was transferred to Switzerland Sept. 21. At the same time John D. Prince of New Jersey was appointed Minister to Denmark. The prolonged depression in the Swiss watchmaking industry, and especially the decrease of American purchasers, has created such depression that the Watchmakers' Association appealed to the Government for a subsidy to tide it over the next eighteen months. It is stated that 32,000 watchmakers are at present wholly or partially unemployed. The total number of Swiss unemployed

in September was estimated at 135,000. The Swiss Parliament met Oct. 6 in extraordinary session. A bill was introduced proposing that Federal councilors be elected by the people instead of by Parliament. The result of the eight-hour working day has so greatly dislocated Swiss railroads and factories that it is proposed to add a new article to the Swiss Constitution, under which factory owners and railroad companies can ask employees to work fifty-four hours weekly. Another proposal soon to be submitted to the Swiss voters is the abolition of the Federal war profits tax.

STABILIZING THE GERMAN REPUBLIC

Cabinet is menaced by dissatisfaction over Silesia, but the decision to make social reform wait upon democracy seems a bulwark against monarchism

[PERIOD ENDED OCT. 18, 1921]

WHEN the German Reichstag reassembled on Sept. 27 after its Summer vacation, the political atmosphere was filled with rumors of the impending fall of the Cabinet headed by Dr. Wirth, but on Oct. 18 the Chancellor was still at his post. That his position was precarious, however, was evidenced by his statement to correspondents of American newspapers on Oct. 13 regarding the crisis caused by the reported decision by the Council of the League of Nations dividing Upper Silesia between Poland and Germany. The Chancellor said:

On the day the Geneva decision is approved the present German Government is subject to the verdict of the Reichstag. There has been talk that I would fall. I shall not run away—it is not in my nature or character. But the policy I have pursued hitherto can be continued only if backed by the majority of the German people. The loss of Upper Silesia and loss of confidence mean a change of policy.

According to advance reports concerning the official decision on the Upper Silesia question, neither Poland nor Germany receives the entire plebiscite district, but it is to be divided between them. Germany will get about two-thirds of the territory, but in the third going to Poland are the three predominantly German industrial cities of Beuthen, Koenigshuette and Kattowitz. The entire Pless district and the greater part of Rybnik are assigned to Poland. The industrial triangle is divided, with Germany due to get the Gleiwitz and Zabrze districts. Tarnowitz and Lublinitz are split, the eastern parts of the districts going to Poland and the western to Germany. The districts in the north and centre—Rosenberg, Kreuzberg, Oppeln, Gross Strelitz, Tost, Kosel, Oberglogau, Loebenschutz and Ratibor are to go to Germany. Two-thirds of the undeveloped mineral resources of Upper Silesia are said to lie in the territory assigned to Poland. Equal industrial and cultural rights for Poles and Germans in the divided territory are to be assured by a commission to be

subject to the control of the League of Nations. The publication of these advance reports on the Council's decision raised a great storm in Germany and afforded another opportunity for the Junker and reactionary business interests to attack the Wirth Government. They declared that this "outrageous" decision showed that the Chancellor's conciliatory policy toward the Allies and his efforts to meet the terms of the Treaty of Versailles had only resulted in additional insults and impositions by the Entente. On the other hand, the Majority Socialists, the Centrists and the Democrats, as well as the "neutral" Independent Socialists, insisted that, although the blow to Germany was a hard one, it was not the Chancellor's fault and, consequently, there was no reason for him to leave his post.

During the month preceding the storm brought about by the Upper Silesian decision the position of the Wirth Government had been materially strengthened by the following circumstances:

The Government's fight against the reactionary Junkers and their allies among certain big business elements, precipitated by the murder of Matthias Erzberger on Aug. 26, had been carried on quite successfully, with the approval of the great mass of the people. In Bavaria the resignation of Dr. von Kahr, the reactionary Premier, was followed by that of his right-hand man, Herr Poehner, Chief of Police. On Sept. 22 the Bavarian Diet elected Count Hugo Lerchenfeld, a rather liberal-minded aristocrat, to von Kahr's post. In a few days an agreement was reached between Munich and the Central Government, providing for raising the prolonged state of siege in Bavaria that had facilitated the persecution of alleged Bolsheviki and other labor leaders, and providing for the control of the press by the State instead of the national authorities. Extensive Junker plots for the restoration of the monarchy were widely rumored, but nothing materialized. Arnold Ruge, alleged chief of the reaction-

ary spy bureau in Silesia, was arrested, and on Oct. 6 the Public Prosecutor in Berlin issued warrants for the arrest on charges of high treason of Dr. Kapp, Colonel Bauer, Major Pabst, General von Lüttwitz, Captain Ehrhardt, Ignatius Tribitsch Lincoln and two other leaders of the monarchist "putsch" of March, 1920. A reward of 50,000 marks was offered for information leading to the arrest of any one of these men; but, as most of them were believed to be in foreign lands, the Government's move was regarded rather as an evidence of good intentions than as a serious effort to get hold of the monarchist chiefs.

The Social Democratic Party (the Majority Socialists) modified its program at its national convention held in Goerlitz, Sept. 18-25, and the leaders of the People's Party (representing big business) in session at Heidelberg at about the same time, decided to enter the Government if allowed to have a rather large voice in the financial and business management of the country. Thus the foundation was laid for the formation of a Cabinet containing representatives of the Social Democrats, the Centrists, the Democrats and the business interests. Such a combination would be able to defy the opposition of the handful of communists on the one hand, and the small group of extreme reactionaries organized in the Nationalist Party on the other. The Independent Socialists might be expected to preserve an attitude of benevolent neutrality.

Practically all the developments of the reparation situation during the period were favorable to Germany. Under the protocol of the Franco-German agreement on the furnishing of materials, signed by Dr. Walter Rathenau, the German Minister of Reconstruction, and Louis Loucheur, the French Minister of the Devastated Regions, in Wiesbaden on Oct. 6 [the details of which are given in the article on France], German industry will be kept busy for several years, with a consequent good effect upon the general situation. The agreement is almost sure to be approved by the Reparation Commission, the Reichstag and the French Chamber of Deputies.

On Sept. 29 the Interallied Rhineland Commission announced that, as Germany had agreed to the establishment of an interallied commission to collaborate with the German officials in granting export and

import licenses in the occupied territory, the economic penalties imposed last March were to be abolished the next day at midnight. This leaves only the military penalties in operation. On Oct. 1 the Interallied Committee of Guarantees announced in Berlin that the amount of the next reparation payment—estimated at about 350,000,000 gold marks, i. e., 26 per cent. of the value of Germany's exports during the three months ended July 31—had already been covered by deliveries of material. On the same day the village of Losheim, near Malmedy, was restored to Germany by the Frontier Commission. Germany will be credited with about 745,000,000 gold marks on the indemnity account for the 2,153,407 tons of shipping handed over to the Allies up to May 1, 1921, according to an announcement made by the Reparation Commission in Paris on Sept. 22.

Roland Boyden, the American representative on the Reparation Commission invited by the Allies to decide at what rate of exchange Germany must pay to the Allies the loans they had advanced to Belgium during the war, ruled on Sept. 30 that the debt must be calculated in gold marks at the rate of exchange prevailing on Nov. 11, 1918.

Further progress was reported in the work of disarmament by the Interallied Military Control Commission. The commission protested to the German Government on Sept. 25 against the continued military formation of the Security Police. Data on the destruction of arms and munitions up to Sept. 15 showed that there had been destroyed 32,000 cannon, 34,000,000 tons of loaded shells, 110,350 trench mortars, 83,566 machine guns, 4,160,000 rifles and 355,000,000 small arms and cartridges for them; leaving 102 cannon, 1,000,000 tons of shells, 186 mortars, 2,852 machine guns, 163,000 rifles and 90,000,000 small arms and cartridges to be destroyed.

All these events enabled the German Government to point out that it was doing its best to fulfill the terms of the Treaty of Versailles, while at the same time it hoped for a material modification of those terms as time went on.

Although the exchange value of the mark reached new low ground on Oct. 17, when 100 marks could be bought in New York for 52¼ cents, a fact which caused much ex-

citement on the Berlin Boerse, German industry continued to improve. On Sept. 30 it was estimated in official circles that there were only some 250,000 persons drawing unemployment benefits in all Germany. The export trade continued to rise, and German shipyards kept on turning out new vessels and doing a great deal of repair work for foreign shipping companies. On Oct. 4 it was announced that German steamship companies had bought back from England fifty of the ships surrendered under the Treaty of Versailles—a total tonnage of 150,000.

The peace treaty between the United States and Germany was ratified by the Reichstag on Sept. 30, with only the few Communist Deputies voting No. Some of the extreme Nationalists, including Dr. Karl Helfferich, Count von Westarp and General von Gallwitz, left the Chamber before the vote was taken. The next day the Reichstag adjourned for three weeks to give the Cabinet time to whip into shape the numerous tax bills by which Dr. Wirth hopes to raise enough money to run his Government and meet the demands of the Peace Treaty. On Oct. 6 the Reichsrat (National Council) officially announced its assent to the treaty. The United States Senate ratified the treaty on Oct. 18 by a vote of 66 to 20.

German publicists and statesmen attach great importance to the decision reached by the Social Democratic Party's convention in Goerlitz calling for democracy first and social reform afterward. It is emphasized that the Social Democracy, with 1,221,000 dues-paying members and 112 Deputies in the Reichstag, having formally resolved to co-operate with any parties that will stand by the republic, is in a position, through its influence over the some 9,000,000 members of the so-called Socialist trade unions, to nip in the bud any serious attempts by the Junkers to re-establish the monarchy. Because of the convention's decision to co-operate with all Republican bourgeois parties, if necessary, the prospects of a union between the Social Democrats and the Independent Socialists have been weakened, but it has been evident for some time that the latter party has been losing ground steadily as an actual force in German politics. Its moderate members are going back to the Social Democrats, while its ex-

tremists are either dropping all political activities or joining the communists.

In the search for the murderers of Matthias Erzberger, developments were limited to the arrest in Munich of eleven persons, seven of whom were former members of the notorious Ehrhardt Marine Brigade which captured Berlin for the Kapp reactionaries in March, 1920, and to the publication of charges by the President of Baden declaring that the murderers were members of a secret political group pledged to destroy the republic. These charges were repeated by Herr Weissmann, Prussian Commissioner of Public Safety. Schultz and Tillessen, the alleged slayers, are supposed to have escaped to Austria or Hungary.

The special municipal election held in Berlin on Oct. 16 resulted in a defeat for the Red parties, the votes cast for the Socialists and Communists being about 800,000 against 842,000 for their bourgeois opponents. The new Board of Aldermen will be made up of approximately 116 non-Socialists and 106 Socialists and Communists. The old board was composed of 125 Socialists and Communists and 100 bourgeois members. The Nationalists, Social Democrats and Democrats gained in the election of Oct. 16 at the expense of the Independent Socialists, Communists and the People's Party.

The greatest explosion in Germany's industrial history occurred at 7:30 A. M., Sept. 21, when the synthetic nitrate plant of the Badische Anilin Company at Oppau blew up, killing about 800 persons and doing property damage estimated at 1,000,000,000 paper marks. The little town was practically wiped out, and the force of the explosion was so great that store fronts collapsed in Worms, twelve miles distant, and the shock was felt fifty miles away. The injured numbered some 2,000, about 400 of them being seriously wounded. Paul Tirard, the French High Commissioner on the Rhine, took charge of the first relief work, and French occupying troops distinguished themselves in rescue work. The members of the French detachment stationed in the plant were all killed, and several other French soldiers perished in the barracks at Eisenheim, which was wrecked by the force of the explosion. The cause of the disaster remained unknown.

Figures on the German crops made pub-

lic in Berlin on Oct. 5 showed an estimated production of Winter wheat of 2,370,000 metric tons, against 1,895,000 tons last year, and 6,500,000 tons of rye, against 4,800,000 in 1920. Summer wheat and rye, as well as potatoes, were slightly below last year's crop. Sugar beets were below the average. Oats were the same as last year, while hay was short.

On Sept. 24 the formal separation of Church and State in Prussia took place when, at its first meeting, an assembly of 192 delegates took over the authority over

Protestant Church affairs from the head of the State.

Among the prominent Germans who died during the period were Professor Englebert Humperdinck, the opera composer, and William II., former King of Württemberg. The ex-King was buried in Ludwigsburg on Oct. 7 with great pomp and much display of militarism, while the composer was honored by music lovers and artists the world over. Ex-King Ludwig of Bavaria went to his estates near Steinamanger, West Hungary, where he died on Oct. 18.

HUNGARY'S FILIBUSTERING EPISODE

Rival bands of Legitimists and Horthyists terrorize Burgenland, crossing the Austrian border and threatening the peace of Europe—Agreement terms

[PERIOD ENDED OCT. 15, 1921]

THE incidents growing out of the transfer of Burgenland to Austria developed into an international crisis involving the peace of all Central Europe. On Aug. 29 the Austrian officials sent to take possession of that province under the provisions of the Treaty of Trianon were attacked and repulsed by Magyar "irregulars" and "insurgents" and a guerrilla warfare began which the Hungarians soon carried over to Austrian territory. It became increasingly clear that the episode was planned by the Magyar militarist leaders as a duplication of d'Annunzio's Fiume escape and the adventure of the Polish General Zeligowski at Vilna.

The Burgenland situation, however, was complicated by the additional difficulty that there was a rivalry between the two factions of the Magyar bands. One, led by the former Premier Friedrich; Count Sigray, Governor of the Burgenland district; General Lehar and Major Ostenburg, backed the claim of ex-King Charles to restoration; the other, including Lieut. Col. Pronay and Lieutenant Hejjas, leader of the Awakening Hungarians, the dreaded anti-Semitic Mafia, supported Regent Horthy's aspirations. It was revealed that early in August, at a conference held at Steinamanger, the Legitimist leaders had agreed on a plan to launch a coup d'état in connection with the

evacuation of Burgenland, culminating in an attempt to bring back the ex-King Charles, to seize Vienna and to proclaim the restoration at Budapest. Regent Horthy, however, learned of the plan, and on Aug. 28-29, when the Legitimist chiefs carried out the first item of their program, repulsing the Austrians and establishing their dictatorship at Oedenburg, Horthyist leaders were on the scene, too, to share the laurels of their rivals. Despite the bitter enmity between the two groups, some sort of accord was reached in their offensive against the Austrians. The Horthyists operated chiefly in the northern, the Legitimists in the southern section of the province. In several instances Austrian territory was invaded.

The Austrian Government in the meantime appealed to the Entente for authorization to send regular troops against the Magyars. This was refused, whereupon the Austrian Government withdrew its gendarmerie from the contested area, putting it up to the Entente to deal with the situation. An exchange of several notes followed, the Czechoslovak Government joining in with communications upholding the Austrian side. A Magyar note, delivered to the Entente representatives on Sept. 11, denied any official responsibility for the Burgenland events, explaining the situation as

the outcome of individual action on the part of Deputy Friedrich. On Sept. 12 the Czechoslovak Foreign Minister, Dr. Benes, addressed a very strongly worded note to the Council of Ambassadors at Paris, protesting against Magyar violence and pointing out the danger to the peace of Europe arising from the Burgenland situation. On Sept. 23 the Council of Ambassadors addressed an ultimatum to the Hungarian Government, demanding evacuation.

In the meantime the reign of terror instituted by the Magyar "insurgents" and disguised regular troops continued, and the fighting was carried to the gates of Wiener-Neustadt, an important industrial suburb of the Austrian capital. An offer of the Czechoslovak and Yugoslav Governments to restore order by military intervention was rejected by the allied representatives, owing to the protest of Italy, which saw its interests menaced by the junction of the two Slav powers. However, the Italian Government undertook mediation between the Hungarians and Austrians. At first this attempt remained unsuccessful, and on Sept. 23 another attempt to restore peace was made by the Czech Foreign Minister, Dr. Benes, who, this time, was asked to intervene by the Magyar Government. On Oct. 4 the Magyar Government agreed to sign a protocol at Oedenburg, guaranteeing the withdrawal of the rebel leaders. This protocol, however, was fulfilled no more than were previous pledges, and the terrorism of the Magyar bands continued. According to one report the Magyar operations in Burgenland were directed by the Prussian Colonel Bauer, Ludendorff's aid, and thus the movement was linked with royalist activities in Tyrol and Bavaria.

On Oct. 13 it was reported that an agreement was reached at Venice between the Magyar Foreign Minister, Banffy, and the Austrian Chancellor Schober, with the Marquis della Torretta, the Italian Foreign Minister, acting as mediator. The terms of this agreement were as follows:

1. Hungary binds herself to clear Burgenland by military means, if necessary, and guarantees this undertaking to the Italian Government. The military measures proposed by Hungary were discussed and accepted by the conference.

2. Austria accepts the plan of a plebiscite for Oedenburg, Roboncz and five or six small neighboring districts.

3. Should this plebiscite favor Hungary, Austria will renounce almost entirely her financial claims against Hungary. Should any counterclaim be raised by Austria, the two parties agree to put the question into the hands of an arbitrator.

A plebiscite was to be held at Oedenburg within ten days.

Great excitement was caused at Budapest by the discovery, about the middle of September, of a gigantic governmental graft, involving several billion kronen. The Minister, Stephen Szabo of Nagyatád, a leader of the Farmers' Party, was gravely compromised. On Sept. 25 a former First Lieutenant in the army, George Ibrahim Kover, fired several shots in the National Assembly at Stephen Rakovszky, former Speaker of the House. None of the shots took effect. The would-be assassin, when examined after his arrest, declared he wanted to kill Rakovszky and also Count Julius Andrássy, because they were responsible for dragging Hungary into the World War, and also for the Burgenland calamity.

AUSTRIA—The financial situation in Austria became demoralized during the first weeks of October, so that the Austrian crown became practically worthless. Offers of 3,400 crowns for \$1 were made in Vienna during October, the normal value of the crown being less than five to the dollar. This situation brought about chaotic business conditions. The country was flooded with an influx of foreigners who, taking advantage of the prices before readjustment of values, had been buying everything of intrinsic value on the basis of the greatly depreciated crown. For days all trading on the Boerse was stopped. Dr. Ferdinand Grimm, the Minister of Finance, resigned his post Sept. 26; he was succeeded by a Social Democrat, thus making the Government a coalition one. It was announced Oct. 14 that the controversy between Austria and Hungary over Burgenland had been settled to the satisfaction of both countries. This news served to allay the popular disquiet which was manifesting itself in riots and other serious disturbances.

FRANCE'S SENSE OF ISOLATION

Premier Briand, on the eve of the Washington conference, explains his country's views on disarmament—Prior security essential—Nation pleased by the economic agreement with Germany signed at Wiesbaden

[PERIOD ENDED OCT. 15, 1921]

IF any one doubts that France feels herself isolated politically, he need only follow the articles abounding in the French press, which either state this sentiment specifically or allow it to be read between the lines. Painful to France is the consciousness that in carrying out the policy toward Germany dictated by her fears of a third attack upon her national existence she has been compelled to witness an ever-widening chasm between herself and England. Such French statesmen as Poincaré, former President of the republic, have seen the peril of this rift, regretted it, and discussed the possibilities of a new rapprochement. On the eve of the Washington Conference on Disarmament this need has been repeatedly and emphatically expressed. On Oct. 9, ten days before the reopening of the French Parliament, Premier Briand, following the usual custom of his predecessors in office, made a public exposition of his Government's policy. At St. Nazaire he declared in the strongest terms that France could never disarm unless she received bed-rock guarantees of protection for the future. France, he declared, had earned the right to have her security assured. His mission in Washington, he said, would be to prove to the nations there represented that France really wanted peace and disarmament, but only on the condition of protection which to her is indispensable.

The almost universally favorable comment of the French press on M. Briand's exposition of his Government's policy showed that he was truly speaking for the whole nation and (excluding the irreconcilable communists) for all political parties. This favorable reception of the Premier's statements made it clear that his Cabinet would not be overthrown when Parliament reopened on Oct. 18, and that he would be able to carry out his plan of participating personally in the discussions at Washington. The great benefit to France of a reduction of armament was pointed out variously. It

was officially shown that France is spending on her army and navy annually a total of 4,500,000,000 francs, and this at a time when the budget shows a deficit of over 2,000,000,000.

The official visit of General Pershing to France, combined with the coming conference at Washington, turned the attention of the whole nation, and particularly of the Government leaders, toward the possibilities of a change in the attitude of the American Government toward France. Pershing was received with continuous honors from the time he landed at Havre on Sept. 23 to the day of his departure for Coblenz on Sept. 26. Ambassadorial honors were accorded him on his reception by President Millerand at the Elysées. On Oct. 2, with moving solemnity and amid imposing military display, General Pershing, in the name of the American Government and the American people, laid the Congressional Medal of Honor, which he had borne with him from Washington, on the tomb of the Unknown Soldier of France at the Arc de Triomphe. Standing in a brilliant group of French military leaders and statesmen, he listened to an opening address by the American Ambassador, Mr. Herrick. The Ambassador explained that the American Government had sent this medal by its most distinguished soldier to do honor to the heroic soldiers of France who had died in defense of their fatherland. But the sword, he said, had done its work, and the unfinished work of the dead heroes must be completed. As France, the symbol of civilization, stood or fell, the battle for the future of humanity would be lost or won.

General Pershing then stepped forward and made an eloquent and affecting apostrophe to the Unknown Soldier whose last remains reposed in the shadow of the great Arch. He concluded thus:

In the name of the President and people of the United States of America, as a pledge of eternal faith in the justice of our cause,

for which you died, and in witness of respect and admiration for you and your comrades, I lay on your tomb this Medal of Honor of the American Congress.

The General then pinned on an embroidered cushion the medal which he had brought from America and, dropping on one knee, laid the tribute at the head of the tomb. The acceptance and thanks of France were voiced by M. Barthou, the French Minister of War. Replying directly to Ambassador Herrick, M. Barthou said:

I thank you, Mr. Ambassador, for having said here, especially here, that the security of France is the basis for the peace of the world.

The big problem for France is still that of German reparations. With the economic guarantees on the Rhine abolished (Sept. 29) and the decision of the Interallied Commission on Guarantees, announced in Berlin on Oct. 1, that the 26 per cent. on German exports—an estimated total of 350,000,000 gold marks—due from Germany for the three months ended July 31 had been covered by deliveries of materials, the prospect seemed none too encouraging. One source of satisfaction was the decision of Roland W. Boyden, American representative on the Reparation Commission, who had been asked by the allied Governments to arbitrate on how Germany should repay the considerable sums loaned Belgium following the German invasion. Mr. Boyden ruled that the debt must be calculated in gold marks at the exchange rate prevailing on Nov. 11, 1918, the day of the armistice. This decision was highly pleasing to France. Under the Versailles Treaty (Article 232), Germany promised to repay these loans at 5 per cent. interest. The amounts involved are as follows: France, 2,500,000,000 francs; England, £60,000,000; the United States, \$250,000,000. Each country, however, had loaned these respective sums in its own currency, and France protested strongly at the Financial Conference held in Paris in August against the heavy loss which she would incur if the present exchange rate were accepted. It was, indeed, to satisfy the French leaders that Mr. Boyden was invited to arbitrate. His decision will enable France to recover the full value of the sum loaned by her. The approximate new valuations must be fixed by

the Commission on Reparations and paid by Germany before May 1, 1926.

The greatest satisfaction of all, however, so far as France alone was concerned, came from the economic pact between France and Germany at Wiesbaden on Oct. 6. The main feature of this agreement is that Germany is to deliver building material to France for the reconstruction of the devastated area up to a value of 7,000,000,000 gold marks, these deliveries to be completed by May 1, 1926. Two similar organizations are to be created in each country, the German company to look after the assembling of the material ordered by the French company at the main shipping points. Payment to the German manufacturers is to be made by the German Government out of Government bonds to be issued specially for this purpose. Transportation and delivery by the German company at suitable terminals and on suitable dates were also incorporated in the agreement. Any dispute over prices, transportation, &c., will be referred to a committee of three, to be made up of one French, one German and one neutral delegate. The price list will be fixed every three months, and this list will correspond to normal prices in the interior of France, less customs duties and transportation charges. The credits to be made on the books of the Reparation Commission are subject to three limitations, viz.: (1) Only 35 per cent. of the value of the merchandise if the deliveries reach 1,000,000,000 gold marks, or 45 per cent. if the total amount of presentations do not reach that total, will be credited; (2) Germany will never be credited with more than 1,000,000,000 gold marks up to May, 1926; (3) Germany will never be credited with a sum higher than France's share in the yearly reparations. There was every indication that this agreement would pass both the French Chamber and the Reichstag some time in October. It was officially announced on Sept. 26 that the devastated area would receive special aid, meanwhile, from French sources. A loan of 3,000,000,000 francs was to be floated by the Credit National for this purpose, beginning Oct. 24.

Of predominant interest to the whole nation was the coming discussion of the country's foreign policy in Parliament. Premier Briand, it was learned Oct. 16, had asked

that the new session open with this discussion, in order that it might be completed before Oct. 29, the date set for his departure to the United States, thus enabling

him to arrange his program on behalf of France at Washington on a definite and authoritative basis. A large number of interpellations had been filed.

BULGARIA AND THE BALKANS

Premier Stambolisky's exposure of the hostile propaganda spread abroad by neighboring States—The month's events in Rumania and Jugoslavia

[PERIOD ENDED OCT. 15, 1921]

A FEW days before he departed for the League Assembly Conference at Geneva, M. Stambolisky, the Bulgarian Premier and Minister for Foreign Affairs, made, before the Sobranje, a long speech, in which he analyzed one after another the various phases of Bulgaphobic propaganda intended to malign his country at the Chancelleries of the Allies. In repudiating the charge that his Government was sympathetically inclined toward Bolshevism, he made the following statement in regard to finance:

They say that we persecute the capitalists. This is not the truth. Bulgaria has been ruined by wars. Who will pay? We do fight speculation and we would like to have capital employed in industry and not in speculation. We would also encourage foreign capital to aid our industries. But we do fight speculation. That is why we encourage co-operation. With equitable co-operation and distribution there can be no speculation.

On the following day he called the representatives of the press together and spoke more pointedly about Bolshevism. He said:

Moscow evidently intends to accomplish a revolution in the Balkan States with the assistance of the Extreme Left Communist Parties in these States. The Bolsheviks' immediate goal is a revolution in Jugoslavia, and their operations will later be extended to Rumania, Austria and Bulgaria. Bolshevik forces are now gathering on the Northeastern Rumanian frontier along the Dniester. I believe they intend to break through the front into Rumania. Meanwhile they are actively mining the Black Sea with both floating and moored mines.

The political horizon in the Balkan States is dark. It behooves Bulgaria to be on the watch. Negotiations are now going on for a Balkan States Conference, at which the question of disarmament in face of the Bolshevik activities will be discussed. We in the Balkans must present a solid front to-

ward Bolshevism. The entry of Poland and Austria into the Little Entente, a closer agreement between Jugoslavia and Bulgaria and Bulgaria's eventual entrance into the Jugoslav State might prove an effective means of combating Bolshevik plans.

At Belgrade the suggestion in the foregoing remarkable statement about Bulgaria becoming a part of Jugoslavia was received with incredulous smiles. The press there pointed out that M. Stambolisky had been persistently worrying Belgrade for a reconciliation and agreement between the "Slav sisters," and at the same time working for a federation of agrarian States in Danubian and Central Europe under the aegis of the "Green (or Peasants') International." Hence, Stambolisky's new suggestion was merely an evolution of the old.

On Oct. 11 the authorities at Sofia arrested a Soviet delegation from the Ukraine, which was alleged to have in its possession jewels belonging to the Russian Imperial Treasury. Moscow was communicated with, and guarantees demanded that Soviet delegates should be prohibited from circulating Bolshevik propaganda while in Bulgaria.

The speeches exchanged between Dr. Stephan Panaretoff, the reinstated Bulgarian Minister at Washington, and President Harding, when the latter received him after his lectures at the Institute of Politics, Williamstown, Mass., reached Sofia on Sept. 25, and were published in the papers of the following day with enthusiastic comment. President Harding's cordial reception of a Minister who had been found persona non grata by his predecessor's Administration was emphasized and lauded.

On Sept. 22 Bulgaria's great national poet and novelist, Ivan Vazoff, died at the age of 71. In the funeral almost royal

honors were accorded him; a military escort accompanied the remains, minute-guns were fired and eulogies were pronounced by members of the Government. At least two of his books, the novels "Pod Igoto" ("Under the Yoke") and "Virgin Soil," have been translated into English.

RUMANIA—When the published texts of the various treaties of the Little Entente reached Moscow, and the provisions for a united defense against Bolshevism were noted, no complaint was made by the Soviet Government. The news, therefore, published in Riga on Sept. 12 that Soviet Russia had declared a state of war in Bessarabia came as a surprise. The Little Entente treaties, however, had provided for subsequent military conventions, which, when concluded, were not made public. One of these—that concluded between Rumania and Poland—is said to have been revealed to the Soviet Government, which then declared the state of war in Bessarabia.

The Moscow Government has never recognized the decree of the Supreme Council ratified by the Council of the League of Nations giving Bessarabia to Rumania. The territory has a population of about 2,000,000, and covers an area of 18,000 square miles. Half the people claim to be of pure Rumanian stock; the other half are made up of Russians, Tartars, Slavs of various sects, gypsies, Greeks, Armenians and about 170,000 Jews. For two years there has been a Rumanian civil administration in Bessarabia.

JUGOSLAVIA—King Alexander of Yugoslavia still tarries in Paris, while the throne left vacant at Belgrade by the death of his father still remains vacant. Two months had passed, when, on Oct. 12, the Yugoslav Legation at Paris reaffirmed the status of Alexander as King of Yugoslavia and made formal denial of the reports that he had abdicated or would renounce the

throne—"the King does not think of abdicating in favor of his brother George." This statement is said to have been made at the command of M. Pashitch, the Yugoslav Premier, who arrived in Paris on Oct. 8.

When King Peter died it was reported that Alexander, who had been known as the Prince Regent, was seriously ill at the Hotel Continental, Paris. In August he removed to a villa at Versailles. The day after M. Pashitch arrived, the new King made with him a formal visit to the Elysée Palace and was received by President Millerand.

Meanwhile, there is much gossip about the King, and many theories are advanced to explain his reluctance to return to Belgrade, from the fascinations of life in Paris to fear of political dangers at home.

FIUME—On Oct. 6 the Constituent Assembly of the Independent State of Fiume elected Professor Riccardo Zanella President of the Provisional National Government by a vote of 57 to 11. Professor Zanella is the leader of the autonomists, or the People's Party. Signor Blasich, the leader of the minority party, declared that the minority would fight for the annexation of Fiume to Italy. The first two acts of the new President were to consign the defense of the Porto Baros to the Italian carabinieri and to inform Belgrade that the Government of Fiume was ready to negotiate the disposition of the port without intervention on the part of Italy.

It was the Constituent Assembly, not President Zanella, which selected the first Cabinet in the nation's history. It was made up as follows:

President and Minister of Foreign Affairs, Zanella; Interior, Blasich; Finance and the Treasury, Mohosic; Public Works, Poteeni; Justice, Fechel; Education, Sablich; Social Defense, Lasciach.

POLAND UNDER A NEW CABINET

*Installation of an "extra-Parliamentary" Government under M. Ponikowski
—A new war averted—Polish joy over the decision on Silesia*

[PERIOD ENDED OCT. 15, 1921]

POLAND, beset with difficulties since its erection into an independent nation, is striving to cope with new troubles as they arise. Premier Witos, after several stormy months of struggle, resigned Sept. 9; the Government leaders, finding a Parliamentary Cabinet could not be agreed upon, adopted the unprecedented experiment of forming an "extra-Parliamentary" Cabinet, under the leadership of M. Ponikowski, who was striving at the end of September to find strong men to work with him for Poland's regeneration. The fall of the peasant Government of M. Witos, who had held office ever since the Summer of 1920, stirred Polish public opinion greatly, and the Polish Parliamentary leaders made strenuous efforts to form a Cabinet under M. Glombinsky, former Austrian Minister of Railways. This meant the predominance of the Nationalist Democratic Party in the new Government. Meanwhile M. Korfanty, the stormy petrel of Silesian fame, who represents a Posnanian constituency in the Polish Diet, worked vainly for other combinations.

When it became apparent that Glombinsky could not obtain a majority, the selection of M. Ponikowski, Director of the Warsaw Polytechnical College, was decided on by the Centre parties at the suggestion of the Marshal of the Diet, M. Trampczynski. The acceptance of M. Ponikowski, a former "Activist" (that is, one of those Poles who believed they could serve Poland best during the German occupation by collaborating with the enemies of Russia), as the leader of the Government, shows how far the Poles have gone toward political moderation. The new Premier stated that he would retain M. Skirmunt as Foreign Minister, and General Sosnkowski as Minister of War. He also appointed M. Sikorski, formerly a Prussian Railway official, as Minister of Railways, but the important posts of Minister of Finance and Minister of Trade still remained vacant. The new Premier's great problem was to find men

of expert knowledge and experience free from all contagion of party politics. His efforts to complete his Cabinet were successful; the full list of the new Ministers, as later announced, was as follows:

Premier, Antoni Ponikowski; Minister of Foreign Affairs, Konstanty Skirmunt; Minister of Finance, George Michalski; Minister of Transportation, Boleslaw Sikorski; Minister of Public Works, Gabryel Narutowicz; Minister of War, Casimir Sosnkowski; Minister of Commerce and Industry, Henryk Strasburger; Minister of Agriculture, Joseph Raczynski; Minister of Posts and Telegraphs, Wladislaw Steslowicz; Minister of Health, Witold Chodzko; Minister of Justice, Bronislaw Sobolewski; Minister of Provisions, Hieronim Wyczolkowski; Minister of the former German Poland, Dr. Julius Trzcinski; Minister of Public Welfare, Ludwik Darowski; Minister of Internal Affairs, Stanislas Domanowicz.

Shortly after the new Premier assumed office he was fired upon by a would-be assassin, a Ukrainian named Fedak; he escaped injury, but Count Grobowski, who was with him at the time, was shot in the leg; Fedak tried to commit suicide, but was foiled.

The months of August and September were full of misgiving in Poland over the imminent peril of a new war with Russia, because Russia had failed to turn over certain property provided for by the Riga treaty and also had failed to pay thirty million gold rubles as agreed upon. After a heated exchange of notes and the sending by Poland of what purported to be an ultimatum, M. Karakhan, the Soviet envoy to Warsaw, acting under instructions from his Government, got into contact with M. Dombksi, the Polish Foreign Minister. Discussions lasting for a number of days led to a new agreement on Oct. 8. Under it Poland agreed to expel anti-Soviet plotters and Russia promised to pay the sum already pledged within two weeks, and to return Polish property in Russia. Thus the tense situation was relieved, a new war was averted, and the two Slavic nations pre-

pared for at least a few months more of peace.

The status of the dispute of Poland with Lithuania over Vilna was not appreciably improved by the discussions in the Assembly of the League of Nations (see the League article elsewhere in this issue), which showed that the already announced agreement was fallacious. The Lithuanians refused to accept the second solution offered by M. Paul Hymans, the League intermediary, until the Polish Government should compel General Zeligowski, the Polish *d'Annunzio*, to evacuate Vilna, which he has held illegally for many months. The way was paved, however, to new negotiations, and hostilities were again averted. Nor could it be denied that in this respect, at least, the League had fulfilled its main function—to preserve peace among the nations. Before the League undertook to mediate, the Poles and the Lithuanians were periodically flying at one another's throats on the Vilna border. The continual delay in settlement was vexatious to the Poles, but it was better than the former condition of actual warfare, with all the unsettling of conditions on one of its main frontiers that this implied.

On the other hand, the Poles were delighted with the decision of the League of Nations commission, reached by Oct. 10, in respect to the disposition of Upper Silesia. It will be recalled that the Supreme Allied Council, unable to agree on how to unwind the tangled skein of German and Polish votes under the plebiscite held last March, referred the problem to the Council of the League of Nations for solution. The council began its sittings on this question on Aug. 29, and, after a few days' preliminary discussions, intrusted the investigation of

the case to a committee composed of four non-permanent members of the League Council, viz., M. Paul Hymans (Belgium), Señor Quinones de Leon (Spain), Senhor da Cunha (Brazil), and Dr. Wellington Koo (China). These four heard evidence of both Germans and Poles, employers and employed, from Upper Silesia, and also sent to the plebiscite area a neutral commission for first-hand investigation. After collating all the information gathered, the committee reported its findings to the council.

Although the decision was not officially published, it was semi-officially divulged, and aroused great excitement in Germany and Poland, to say nothing of Upper Silesia itself. France rejoiced, for under this decision the Silesian triangle in which a number of rich mining districts are included will be bisected in such a way as to give Poland, France's protégé, at least three important towns, namely, Beuthen, Königshuette and Kattowitz, and also many of the coal pockets. A frontier boundary commission will be created, and an intricate system devised to maintain the results of the plebiscite vote, even where badly tangled, by downright allocation to one or the other element, with a balancing of the minority elements given to one power by observing a similar ratio in another sector. Germany, who hoped to get the whole or the best of the Silesian booty, stormed, the Stock Exchange was affected, the Wirth Cabinet endangered, and talk of a formal protest to Great Britain was rife. The decision must yet be ratified by the Supreme Council. If it stands, Poland will get 43 out of the 57 coal mines of the area, while German coal resources will be reduced, roughly, by 20,000,000 tons.

ANTI-MILITARISM IN HOLLAND

DR. J. C. A. EVERWIJN, the new Dutch Minister at Washington, who arrived Sept. 17, is 48 years of age, and a Doctor of Laws from the university at Leyden.

The Dutch Parliament reassembled Sept. 20, and the Queen's speech was interrupted by anti-militarist shouts for the purpose of securing the release of a man imprisoned

for refusing to perform military service. The Queen's address advocated strengthening the fleet for the defense of the Dutch East Indies. A bill calling for the construction of a new East Indian fleet has passed the Indian Council. A clause in the Queen's speech endorsed a proposed law giving exemption to conscientious objectors.

SCANDINAVIAN DEALINGS WITH MOSCOW

Norway recognizes the Soviet in a commercial treaty as Russia's de facto government — Sweden remains non-committal to Moscow's overtures

[PERIOD ENDED OCT. 15, 1921]

AFTER a month's debate, amid much press criticism, the Norwegian Storting ratified the commercial treaty with Soviet Russia the last of September, by a vote of 69 members of the Left and Socialist parties against 47 of the Conservatives. This treaty had been signed the first of the month by the Norwegian Minister of Commerce, Ludovig Mowinckel, and the Soviet representative, M. Kerzhentsev, who came to Christiania from Stockholm for the purpose. The remarkable thing about the treaty is that, though it follows the Soviet trade treaty with Britain in all essentials, binding each country not to interfere in the political affairs of the other, it recognizes the Soviet as the de facto government of Russia. The main press criticism had been that the treaty did not bind Russia to repay the Norwegian loans and confiscated properties, amounting to 250,000,000 kroner, but in the course of the final debate, Foreign Minister Arnold Raestad said that Russia would repay the Norwegian loan of 4,000,000 kroner. The President of the Storting, Gunnar Knudsen, declared that Russia appeared to be "better pay" than the other countries, as Norway's expenses in connection with the German and British war prisoners had not yet been paid.

Ever since the middle of September, M. Kerzhentsev, who is the Soviet representative in Stockholm, has been vainly importuning the Swedish Government to accept the conditions of the Norwegian trade treaty, threatening a breaking off of commercial relations in case of refusal. He declared that in recognizing the Soviet as the de facto Russian régime, the Norwegian treaty follows more closely the Russo-German than the Anglo-Russian treaty. Danish and English interests have recently declared that trade with Russia had been found to be impossible, as the Soviet had nothing to export except gold. According to Sweden's leading financial

journal, Svenska Handels-Tidningen, the serious position of the Soviet compelled it to increase again the export of gold as the only commodity it could offer in exchange for necessities. Considerable quantities of the metal had lately been landed in Sweden and melted down in the Stockholm mint.

The Swedish Government and the Red Cross claimed for the Russian relief expedition they organized, after their representative returned in September from a conference in Geneva with Dr. Nansen, the same rights as were allowed to Dr. Nansen. Supplies were to be stopped should the Soviet fail in any way to carry out its guarantees. The Swedish relief expedition, divided into social, sanitary, and consulting sections, made its headquarters at Samara. The Swedish railways granted a reduction of fares for the transportation of 1,000 Russian children through Sweden to be conveyed to England.

Denmark, as Foreign Minister Harald de Scavenius announced Sept. 30, suspended the Russian aid it had organized in the middle of the month, because the Soviet refused to admit more than five of the fifteen Danish representatives into Russia, and even these were permitted to act only in the Volga districts. Under such restrictions, M. Scavenius said, it would be impossible to make sure of getting the food and clothes distributed to the destitute children, and not until such a guarantee should be given could the committee be entitled to use the Danish Government's grants. The Government had granted a million crowns to feed the children, especially in the Petrograd area, and to combat the diseases prevalent there. For the latter purpose it had ordered large supplies of serum from the Danish Serum Institute.

SWEDEN—The two remarkable developments of the Swedish month were the recall of Hjalmar Branting as Prime Minister, and the great plurality polled by his Social-

Democratic Party in the Riksdag elections. The whole political tendency in Sweden thus swung far to the Left, after the menace of Red internationalism had been dispelled. The personnel of the Branting Cabinet following the resignation early in October of that headed by Oscar von Sydow, according to the latest advices was constituted as follows:

Premier and Foreign Minister—Hjalmar Branting.

Minister of Justice—A. Aekerman.

Minister of Defense—Per Albin Hansson.

Minister of Finance—Fredrik Thorsson.

Minister of the Interior—Herman Lindquist.

Minister of Commerce—A. Orne.

Minister of Public Works—C. E. Svensson.

Minister of Culture—Olof Slosson.

Minister of Agriculture—S. Linders.

In the former Branting Cabinet, MM. Hansson, Thorsson and Svensson, respectively, held the portfolios of Justice, Finance and the Interior. M. Lindquist used to be Speaker of the Second Chamber (lower house) of the Riksdag, and in 1919 was the Swedish delegate to the International Labor Congress at Washington.

The prospect of a Socialist régime has had a depressing influence on business. Owing to the depression in the shipping industry, Swedish shipowners have transferred to German vessels aggregating 55,000 tons, while licenses for the transfer of 30,000 tons more of shipping have been applied for. German management is expected to reduce the operating expense of these vessels by four-fifths.

Sweden extended recognition, Sept. 29, to the *de jure* Government of Lithuania.

NORWAY—The bill authorizing the importation of liquors or wines containing not more than 14 per cent. of alcohol, which was passed by the lower house of the Storting near the end of the last period, was subsequently endorsed by the Senate, thus establishing the status of limited prohibition in Norway. As supplementary to this act, on Sept. 24, the Storting rejected, by a vote of 38 to 31, a proposal for medicinal rationing of alcoholic liquors, and passed a new law giving access to prescription alcohol for either man or beast, in cases of disease attack.

Thus the law of Norway with regard to alcohol will stand, unless the Parliamentary elections set for Oct. 24 return a Conservative majority, in which case it is expected

that even limited prohibition will be abolished.

The Administration has ordered the immediate application of the maximum tariff to all goods coming from Portugal and the Portuguese colonies in retaliation for Portugal's similar action with regard to Norwegian stockfish, after Norway's adoption of limited prohibition.

Owing to the activity of liquor smugglers, mostly in German vessels, which have been keeping just outside the three-mile limit, the lower house has passed a Government bill extending the limit of Norway's territorial waters, for customs purposes, to a ten-mile limit.

The eagerly awaited opening of the newly completed trunk-line railroad, Dovrebanen, from Christiania to Trondhjem, was marred by the wrecking of the train carrying most of the guests of the festive occasion. Six persons were killed and many injured, among the dead being M. Heftye, the Director of Telegraphs and a former member of the International Slesvig Commission; and Colonel Sejerstad, head of the Norwegian Ordnance Survey. On the morning of the opening, Sept. 17, King Haakon and Crown Prince Olav, attended by a number of authorities, were joined by the Trondhjem authorities at the highest point of the road, at Hjerkin. The royal train proceeded amid scenes of great enthusiasm to Trondhjem, where, in the evening, an official reception was given, including a torchlight procession. The King and Crown Prince, deciding to remain overnight there, were not on the train, which was wrecked at midnight on the return trip.

This new trunk line is the longest and most important in Norway. The new part extends from Trondhjem to Dombass, over some of the most difficult of the marvelous scenic passes of the lofty Dovre Mountains; there it connects with the earlier completed part from Dombass. to Christiania, via the Gudbrandsdalen. Thus industrial and scenic parts of the country hitherto hardly accessible were opened to urgent traffic and increased tourist travel. The completion of this road, begun as early as 1908, gives to Norway over 2,000 miles of track, the Christiania-Bergen Railroad being second in importance.

Foreign Minister Arnold Raestad, in a re-

cent message on his country's behalf to *The World's Markets*, New York, wrote:

During recent years Norway has become an excellent market for American products. In 1917 no less than one-third of Norway's imports came from the United States. On the other hand, a market for Norwegian canned goods and other fish products, paper, electro-chemical products, &c., has been developed in America, and the demand for these commodities is constantly improving. Thus the exchange of goods between the two nations has grown to be of considerable volume and will continue to increase.

President Harding, on Oct. 6, nominated as Minister to Norway Mr. Laurits S. Swenson, a Minnesota banker and real estate man, who served as minister to several European countries before 1913.

DENMARK—Mr. H. A. Bernhoft, the Danish Minister to France, was elected President of the Conference for the Neutralization of the Aaland Islands, called at Geneva, Oct. 10, in accordance with a decision of the Council of the League of Nations. Among the representatives present were those of Sweden, France, Great Britain, Italy, and Poland.

President Harding's choice for the new United States Minister to Denmark is Professor John Duneley Prince, head of the Department of Slavonic Languages at Columbia University, for many years Professor of Semitic Languages in the same institution and in New York University, and prominent in New Jersey State politics. From 1917 he has been President of the New Jersey State Civil Commission, and has served as Speaker of the New Jersey State Assembly and President of the State Senate. He studied Scandinavian languages and literatures while an undergraduate at Columbia under the late Professor Hjalmar Hjorth Boyesen, and has since become fluent enough to make political speeches in them to his State constituents of Scandinavian extraction.

King Christian X. was decorated by King Gustaf of Sweden with a medal in commemoration of the Danish monarch's rescue work in connection with the wreck of the *Bele* in the course of his recent visit to Greenland. King Gustaf's visit to Copenhagen at the time, Sept. 17-20, in company with his Foreign Minister, was said to be without political motive. At about the same time King Christian received at the palace Admiral Niblack of the United States Navy,

and Brig. Gen. Allen, commanding the American troops on the Rhine. Later the King returned the visit on the United States battleship *Utah*, and also entertained Admiral Niblack on the royal yacht *Dannebrog*.

The Arctic expedition of the Danish explorer, Knud Rasmussen, whom the King met on two occasions during his Greenland visit, has kept heroically on in spite of hardships and of losses in both personnel and material. The clothing sent out from Denmark for the expedition on board the *Bele* was lost in the wreck, but has since been partly replaced, and the party has become well equipped. The personnel, however, has suffered from the epidemic of influenza that has ravaged Greenland. Rasmussen's power-schooner *Sea King* went to Thule, Northwest Greenland, and took back to Godthaab, on the southwest coast of Greenland, the Eskimo members of the expedition—four men and three women, besides seventy-two dogs, sledges and valuable furs. It is reported that one of these women, Navarana, the wife of the Danish explorer Peter Freuchen, Rasmussen's right-hand man, who took the *Sea King* to Greenland, and two of the Eskimo men died of influenza on this return journey. The expedition left Godthaab again on Sept. 7, to go first to the coast of Labrador for scientific investigations, and thence to Lyon Inlet, in the Melville Peninsula. After that Captain Pedersen was to take the *Sea King* to St. John's, Newfoundland, and send home the next report. M. Knud Rasmussen's object is to map the archipelago between Greenland and the American continent, also to investigate Eskimo history.

That the Germans still covet North Slesvig was indicated at a propaganda festival held in September at the University of Kiel. The Protector of the university stated that the institution would hold a memorial every year for the loss of North Slesvig, and that "its work aimed at regaining what had been lost." Early in the Summer the university had sent an invitation to Norwegian and Swedish students to attend an "Autumn week of art and science" at Kiel in September. The Swedish students of the University of Lund refused to attend unless Danish students were invited. The Danish students declined the belated invitation they received, fearing the meeting would be used for anti-Danish agitation.

RUSSIA TRANSFORMED BY FAMINE

How the Soviet Government is co-operating with the American Relief organization—Communist principles temporarily laid aside for a return to private ownership and free trade—England and France displeased by Soviet propaganda

[PERIOD ENDED OCT. 15, 1921]

THE famine threatening the death of millions is having consequences scarcely foreseen when the Moscow cry for aid first went out to the world. One result has been the drawing closer together of Russia and the United States, following the Soviet acceptance of Herbert Hoover's terms of relief, in contrast with an even greater alienation of France, which saw in the whole movement of aid for Russia only another device of the Bolshevik Government to bolster up a régime believed already to be tottering. Another result has undoubtedly been to give the communist leaders a new feeling of confidence, combined with the firm resolution not to permit the acceptance of outside help to be turned into a fulcrum by Russia's capitalistic enemies to upset the Soviet rule. This last-mentioned attitude explains Lenin's refusal to accept the food supplies pledged by the allied relief bodies through Dr. Fridtjof Nansen except on condition that their distribution be made under Soviet direction. It also explains the refusal to permit the International Relief Commission, backed by the allied nations, to send a committee of investigation prior to initiating measures of relief. To the Soviet the allied proposal to send such a committee, and to include in its personnel M. Joseph Noulens, charged with pro-ally propaganda while occupying a high diplomatic post for France in Russia, seemed apparently little less than derisive, and Litvinov so stated in the bluntest language.

The greatest effect of the famine disaster seems to have worked inward. It has done much to speed up the carrying through of Lenin's scheme of decentralization and his reform measures of free trade and the payment in kind. Moreover, the Soviet leaders seem to be developing a national Russian feeling, as opposed to a merely communist viewpoint, and are modifying the communist policy so that it is becoming almost unrecognizable. The Government has

worked feverishly, both in co-operation with the American relief officials and on its own initiative, to get food to the starving millions on the Volga; it has scrupulously kept its promise not to interfere with the American shipments and has done all in its power to expedite them. Furthermore, it has, after incredible exertions, succeeded in gathering corn enough to seed for the coming harvest. Imbued with the idea that the Government was straining every nerve to help the nation, all classes and factions have given their unreserved co-operation. Meanwhile all the main industries have been or are being decentralized, free trade is flourishing, many shops have reopened, thousands of idle Russians have found work, concessions to foreigners are offered, and the Soviet Government continues, with new energy, to work for the opening of commerce with the outside world. All this is interesting, and to those who accept the statements of some of the Soviet officials at their face value, portentous of a transformation of the communist régime, the opening wedge for which was the national disaster which at first seemed to the Kremlin rulers the beginning of the end of Soviet power.

Both Professor Vernon Kellogg and Colonel Haskell, leaders of the American organization, realize that the famine still offers colossal difficulties. The Hoover agents, by the end of September, had got 5,000 tons of food to Russia, and further supplies were being systematically forwarded. In the main the whole movement has narrowed down to a fight with time against the coming of Winter. It was stated on Sept. 9 that 900,000 children were foodless in the Tartar republic, and hundreds of men and women were facing starvation there. The first supplies went to Kazan, instead of to Saratov or Samara, for the situation at the first-named place was most deplorable. Prime Minister Mukh-

tarov and President Nobirov were giving their fullest co-operation. Eyewitnesses at Kazan, Samara and Saratov confirmed the grievous conditions prevailing at these main points. The sufferings of the population as reported to Europe were little less than heartrending. One of the relief officials stated that he had knowledge that 35,000,000 adults were starving in the famine district. Dr. Nansen stated in Paris early in October that \$25,000,000 must be raised before Christmas to save millions from dying during the coming Winter. [For the failure of Dr. Nansen's appeal to the League of Nations, see the article on the League Assembly meeting.] A ceaseless tide of wanderers about the country, destitute of all necessities of life, made the problem even more difficult. Russia, even in the times of the Czar, was a land of *brodiugi* (migrants), but the number of those now afoot has risen to an unprecedented degree. Every train is crowded with them; riding on the steps of the cars and on the couplings, and even the roofs of the cars. The Government, despite its altered attitude, faces almost insurmountable difficulties. M. Kalinin, President of the Russian General Committee for Famine Relief, made a tour by special train to the famine-stricken districts late in September. In all his speeches to the peasants and officials he repeated the same thing: "The Government has a burden almost greater than it can bear. You must help yourselves, and depend on Moscow as little as possible. Decentralize. Do it yourself!" This advice the Volga communities are following as far as possible. The large German population has worked on a self-help basis from the beginning. Meanwhile, outside the famine area free trade is increased and flourished, and there is no doubt that the people are pleased with the reform legislation.

Both Tchitcherin and Leonid Krassin explained the transformation of the Soviet economic policy on the ground of expediency. Tchitcherin said in August: "Our fundamental ideas are the same. But we cannot act the same way during a period of universal bloodshed as in the present period of slow evolution and eventual disintegration, as we believe, of capitalistic economy. Rome remained the same when its armies were commanded by Scipio and

when commanded by Fabius Cunctator. * * * Now we must appeal to the interest of the peasant; that is the basis of our new internal system. Taxes in kind will take what the Soviet Government needs and the remainder can be marketed by the farmers. The basis of my foreign policy is co-operation with the capitalistic States." * * * Krassin, who attained prominence as the Soviet trade envoy to Great Britain, developed this idea of co-operation with the Western nations still further in September. Factories, he explained, could now be opened under private management, but the undertakers would all be treated on the same basis, whether Russians or foreigners. Ownership would remain vested in the Soviet Government. Import and export would similarly remain in the hands of the Government, but foreign concessionaires would be allowed to import machinery, &c., and to export produce or manufactured goods. Goods from abroad could be imported by foreigners if paid for by foreign credits, and not by money taken out of Russia. The guiding principle would be an increase in production. Foreign debts remained subject to repudiation, but with France the Government would negotiate on a "consolidation basis."

Leo Kamenev, head of the Moscow Soviet, on Sept. 23 declared that all Russian industries would be returned to private ownership except four—railways, and metallurgical, textile and fuel resources. It was Kamenev who declared that Russia was on the eve of a complete transformation of her national and industrial life, which would include the revival of a large part of the capitalist machinery abolished in the revolutions of 1917. "All restrictions upon private, commercial and industrial activity," said Kamenev, "will be removed forthwith. We realize now that it has proved impossible to refashion society at one stroke. We never would have gone to such extremes if it had not been that war conditions, both civil and foreign, compelled iron measures to preserve the Soviet's existence. * * * For the first time since 1917 we now are able to pursue a policy of gradual evolution, infusing Socialist features as society adjusts itself to them."

Russia and Poland, after serious threats which imperiled peace between the two

countries, reached an agreement Oct. 8 by which the Soviet leaders made new pledges to carry out the terms of the Riga treaty. Poland on her part agreed to expel the "White Guard representatives" in Poland—the Ukrainian leader, Petlura and Boris Savinkov, who had been active in their hostility to the Soviet Government.

A flare-up with England occurred when the Soviet Government was accused of stirring up trouble in Persia and Afghanistan, but the Soviet Government answered the charges by asserting that the British Government had been deceived by anti-Soviet forgeries.

Canada announced in October that trade relations would be resumed with Russia. Norway signed a trade agreement Sept. 2.

Up to Oct. 15 Italy had failed to ratify its trade agreement. Germany and Japan opened negotiations in October for the resumption of trade relations.

There were no indications that the United States Government had abandoned its refusal to recognize the Soviet régime or to open trade relations with it. A note of the Washington Government, sent on Sept. 19 in reply to a request by the Far Eastern republic at Chita to be represented at the Washington Conference on Disarmament, made this clear. The principle of "moral trusteeship" enunciated and followed by the American Government, however, said the American note, would insure decisions acceptable to the people of Siberia and of Russia generally.

CHINA REFUSES DISCUSSION WITH JAPAN

Last hour proposals for a settlement of the Shantung controversy rejected flatly by the Peking Government—Both preparing for a struggle at Washington

[PERIOD ENDED OCT. 15, 1921]

ON the eve of the Washington conference for a reduction of armament Japan has offered, and China has again refused, a settlement of the long-pending controversy over the return of Shantung. Japan had long sought to lure the Chinese into negotiating, but the Chinese Government, since its instructed delegates at the Peace Conference declined to sign the Versailles Treaty because it gave Shantung to the Japanese, has never wavered in its attitude that negotiations were superfluous, and that it was China's right to receive back Shantung without conditions. The difficulty between the two nations has been precisely that Japan was willing to return Shantung, but only on conditions which China obstinately refuses to consider.

In a clearing house process envisaging the establishment of a fait accompli before the Washington conference opened, Japan made one last effort to reach a settlement with China over the long-dragging, and,

from the Japanese viewpoint, vexatious dispute. The terms which it offered were transmitted through diplomatic procedure to the Peking Government, and the Tokio leaders awaited with some anxiety the Chinese reply.

This reply came early in October. It was handed by Dr. Yen, the Chinese Foreign Minister, to the Japanese Ambassador in Peking on Oct. 6, and was made public in the Chinese capital on the following day. Its perusal brought chagrin to the Tokio Government, for, in diplomatic but inflexible language, it took up in detail the whole Japanese proposal, and rejected every part of it in toto. Japan had offered nothing "fundamentally acceptable" to China, and there was much in the new proposals "incompatible with the Chinese Government's repeated declarations, the Chinese people's hopes and aspirations and the principles laid down in Chinese treaties with foreign powers." An almost direct charge of "insincerity" did nothing to sweeten the medi-

cine which Japan found herself compelled to swallow.

TEXT OF CHINESE REPLY

After an introductory statement, the Chinese note takes up the Japanese proposals section by section. It does not, however, even deign to notice Section 4, which promised that Japan would relinquish preferential rights acquired by treaty in Kiao-Chau, or Section 8, which outlined the details of unacceptable proposals. The essential portions of the reply follow:

With reference to the important Shantung question which is now pending between China and Japan, China has indeed been most desirous of an early settlement for the restitution of her sovereign rights and territory. The reason why China has not until now been able to commence negotiations with Japan is because of the fact that the basis upon which Japan claims to negotiate are all of a nature either highly objectionable to the Chinese Government and the Chinese people, or such to which they have never given their recognition. Furthermore, in regard to the Shantung question, although Japan has made many vague declarations, she has in fact had no plan which is fundamentally acceptable. Therefore the case has been pending for many years, much to the unexpectation of China. On Sept. 7 Japan submitted certain proposals for the readjustment of the Shantung question in the form of a memorandum, together with a verbal statement by the Japanese Minister to the effect that in view of the great principle of Sino-Japanese friendship, Japan has decided upon this fair and just plan as her final concession, &c. After careful consideration the Chinese Government feels that much in Japan's new proposals is still incompatible with the repeated declarations of the Chinese Government, with the hopes and expectations of the entire Chinese people, and with the principles laid down in treaties between China and the foreign powers. If these proposals are to be considered the final concession on the part of Japan, they surely fall short to prove the sincerity of Japan's desire to settle the question. For instance:

PROPOSAL 1—The lease of Kiao-Chau expired immediately on China's declaration of war against Germany. Now that Japan is only in military occupation of the leased territory, the latter should be wholly returned to China without conditions. There can be no question of any leasehold.

PROPOSAL 2—As to the opening of Kiao-Chau Bay as a commercial port for the convenience of trade and residence of the nationals of all friendly powers, China has already on previous occasions communicated her intentions to do so to the powers, and there can be no necessity for the establishment of any purely foreign settlement again. Agricultural pursuits concern the fundamental means

of existence of the people of a country; and according to the usual practice of all countries, no foreigners are permitted to engage in them. The vested rights of foreigners obtained through lawful processes under the German régime shall, of course, be respected, but those obtained by force and compulsion during the period of Japanese military occupation and against law and treaties can in no wise be recognized. And again, although this same article in advocating the opening of cities and towns of Shantung as commercial ports agrees with China's intention and desire of developing commerce, the opening of such places should nevertheless be left to China's own judgment and selection in accordance with circumstances. As to the regulations governing the opening of such places, China will undoubtedly bear in mind the object of affording facilities to international trade and formulate them according to established precedents of self-opened ports and seers, therefore, no necessity in this matter for any previous negotiations.

PROPOSAL 3—The joint operation of the Shantung Railway, that is, the Kiao-Chau-Tsinan Line, by China and Japan is objected to by the entire Chinese people. It is because in all countries there ought to be a unified system of railways, and joint operation destroys unity of railway management and impairs the rights of sovereignty; and, in view of the evils of the previous cases of joint operation and the impossibility of correcting them, China can now no longer recognize it as a matter of principle. The whole line of the Shantung Railway, together with the right of control and management thereof, should be completely handed over to China; and after a just valuation of its capital and properties, one-half of the whole value of the line not returned shall be purchased back by China within a fixed period. As to the mines appurtenant to the Shantung Railway which were already operated by the Germans, their plan of operation shall be fixed in accordance with the Chinese mining laws.

PROPOSAL 5—With reference to the construction of the extension of the Shantung Railway, that is, the Tsinan-Shunteh and Kiao-Chau-Hsuechow lines, China will, as a matter of course, negotiate with international financial bodies. As to the Chefoo-Weihsien Railway, it is entirely a different case, and cannot be discussed in the same category.

PROPOSAL 6—The Custom House at Tsingtao was formerly situated in leased territory, and the system of administration differed slightly from others. When the leased territory is restored, the Custom House thereat should be placed under the complete control and management of the Chinese Government and should not be different from the other Custom Houses in its system of administration.

PROPOSAL 7—The extent of public properties is too wide to be limited only to that portion used for administrative purposes. The meaning of the statement in the Japanese memorandum that such property will in principle be transferred to China, &c., rather lacks clearness. If it is the sincere wish of Japan to return all the

public properties to China, she ought to hand over completely the various kinds of official, semi-official, municipal and other public properties and enterprises to China to be distributed, according to their nature and kind, to the administrations of the central and local authorities, to the municipal council and to the Chinese Customs, &c., as the case may be. Regarding this there is no necessity for any special arrangement.

PROPOSAL 9—The question of the withdrawal of Japanese troops from the Province of Shantung bears no connection with the restoration of the Kiao-Chau Leased Territory and the Chinese Government has repeatedly urged for its actual execution. It is only proper that the entire Japanese Army of Occupation should now be immediately evacuated. As to the policing of the Kiao-Chau-Tsinan Railway, China will immediately send a suitable force of Chinese Railway Police to take over the duties.

This statement gives only the main points which are unsatisfactory and concerning which the Chinese Government feels it absolutely necessary to make a clear declaration. Further, in view of the marked difference of opinion between the two countries, and apprehending that the case might long remain unsettled, China reserves to herself the freedom of seeking a solution of the question whenever a suitable occasion presents itself.

The language of this refusal was unmistakable. There was not even a basis of agreement, for China, from start to finish, insisted on her own absolute sovereignty and declined to accept as a gift with a string to it that to which she considered herself entitled of right. The final sentence also was ominous. The Japanese diplomats understood clearly enough that China would lay the Shantung controversy before the Washington conference. The Government leaders girded up their loins for this ultimate issue. The Shantung settlement was a part of the Versailles Treaty. If this or any other part of it were abrogated, they held, the whole treaty would be laid open to being riddled like a sieve. Toward the middle of October it was stated that Japan was preparing a counter-analysis of the entire dispute for presentation at Washington and that she believed she would find support by all the nations signatory to the Versailles compact. Meanwhile, the Japanese Government refused to take the Chinese "No" for an answer, and on Oct. 17, through Yukichi Obata, the Japanese Minister, asked the Peking Government to reconsider its rejection.

No answer had been received up to the time when these pages went to press. There

was little hope in Tokio of a favorable reply.

That the most solid and conservative elements of China were backing the Government in its attitude on Shantung was shown by a manifesto issued by the Chinese Bankers' Association, the strongest banking group in China, "for the guidance of the Chinese policy at the Washington conference," shortly prior to Oct. 9. This document was little less than a syllabus of Japan's various aggressions on China.

While the Chinese Government was thus taking strength for a coming struggle with Japan at Washington, Dr. Sun Yat-sen, President of the new Canton Republic, persisted in his hostility to the Peking Government and all its doings. In a vitriolic manifesto issued on Sept. 5, he charged that the Chinese President Hsu Shih-chang and his Government were dominated by Japanese influence, declared that Japan's twenty-one demands and the secret agreements between Peking and Tokio would block all settlement of Far Eastern questions at Washington, and served notice that if the Canton Government were not represented at the conference, all decisions taken in regard to China would be, so far as he was concerned, null and void. Not content with this, Dr. Sun, whose ardent patriotism is as uncontested as his hatred for the Central Government, decided to abandon words for deeds. Mr. Ma Soo, representative of Dr. Sun's Government at Washington, stated on Oct. 12 that the Canton President had declared war on the Peking militarists and was leading personally his southern Chinese troops on a drive through the Kwangsi province north, with Peking as his objective. Though specific information was meagre, the belief lies near at hand that the recent armed aggression of the northern General Wu Pei-fu on the southern provinces was one of the determining influences on Dr. Sun's campaign.

The Chinese Department of Communications on Sept. 19 signed a supplementary bond issue for completing the Federal Company's wireless contract signed last January. This meant that the American company would be able to proceed with the construction of a high-powered plant at Shanghai and at smaller stations despite the protest of Great Britain and Japan.

CANADA AND AUSTRALIA

[PERIOD ENDED OCT. 15, 1921]

TUESDAY, Dec. 6, has been officially designated as the date for the Canadian general elections, with nominations on Nov. 22. The new Parliament will meet on Jan. 17. All parties are picking their candidates rapidly, and the battle promises to be intense and full of excitement. Before proceeding with their selection the Liberals of one of the Ottawa ridings offered to nominate Lady Laurier, widow of Sir Wilfrid Laurier, a former Premier. She declined the honor.

Premier Meighen faces the country with a reorganized Cabinet. The Ministers who retired to make way for new blood were Sir George Foster, Hon. Messrs. P. E. Blondin, J. D. Reid, J. A. Calder, R. W. Wigmore and C. J. Doherty. The latter, it is understood, will be made a Judge. He is the Canadian Minister who, at the Peace Conference and in the recent Assembly of the League of Nations, strongly opposed the famous Article X. of the League of Nations Covenant. He has always contended that it is a barrier to the formation of a workable League and contains the germ of future troubles.

Of the retiring Ministers, Sir George Foster, who was head of the Department of Trade and Commerce, is the best known. He is now in his seventy-fourth year and has been continuously active in Canadian politics since 1882. For the greater part of that time he has been a member of the House of Commons, and when Conservative Governments were in power he usually was included in their membership. He has been made a member of the Senate, an appointive position in Canada, within the gift of the Government of the day. At present he is taking an active part in the campaign on behalf of Premier Meighen and his party, his great gifts as an orator with a caustic tongue making him much sought for as a platform attraction. During his long public career Sir George has been a strong supporter of all temperance movements.

Sir Robert Borden, the former Premier, who is to represent Canada at the Arms Limitation Conference, has been delivering a number of addresses in the University of Toronto on the status of Canada as a na-

tion. These culminated in a great mass meeting on the night of Oct. 8, which marked the first public gathering of the recently formed League of Nations Society in Canada. Sir Robert, who headed the Canadian delegation at the Imperial Conference and at the Peace Conference, presided. He is a great supporter and advocate of the League. In the course of his address he said:

We feel in this country, perhaps more than any other; that a very great loss has been sustained in the refusal of the great neighboring nation, the United States, to join in the covenant, and to consecrate its national purpose according to the methods which the League has devised; but I believe that there is no nation in the world whose people are more devoted to the ideals of peace.

An office for the League of Nations Society in Canada has been opened in Toronto and many people are joining from all parts of the country.

The Province of Ontario has now completed its machinery for the operation of what is popularly known as the rural credits scheme. Legally it is operating under a measure with a ponderous name relative to farm associations. There are a number of local boards working in conjunction with a central board, which, in turn, is directly responsible to the Minister of Agriculture. Short-term loans not exceeding \$1,000 are provided for, as well as long-term mortgages on the amortization plan, with maximum advances of \$12,000. The scheme has been well received. The Government has under consideration a proposal to expand it by going into the banking business. By the payment of interest at a somewhat higher rate than is now given by the chartered banks, it is argued that money enough could be obtained and loaned on a paying business, not only to meet the rural credits scheme, but to make loans to municipalities on approved debenture issues.

On Oct. 10 the Province of New Brunswick took a plebiscite on the continuance or otherwise of the importation of liquor for personal use. While only about one-third of the voters went to the polls, there was a large majority against importation. Only two counties and a very few of the

smaller towns voted "wet." The cities voted "dry." As a result of the vote, the law will be amended within the next three months so that the only legal sale of alcoholic liquor will be by prescription.

AUSTRALIA—Great interest is being aroused in Australia by the comprehensive plan of Sir Joseph Carruthers, former Premier of New South Wales, for settlements on millions of acres of the Crown lands in various parts of the country. It is proposed within twenty or twenty-five years to place 1,000,000 farmers on 1,000,000 farms, most of the settlers to be drawn from Great Britain. Sir Joseph plans to build railways, roads and waterworks wherever necessary, so that land shall be available for agriculturists as soon as they arrive. He has been touring Australia to raise a fund of £30,000,000 to start the work. Only 8 per cent. of the land has been sold. There are 1,740,000,000 acres of Crown lands, as against 163,000,000 in private hands. If only half of the idle lands can be developed, Sir Joseph says, it will give an area equal to the productive area of the United States.

Lord Northcliffe, before leaving Sydney for the Philippines on Oct. 1, issued an urgent appeal to Australians to encourage immigration by a broad and constructive policy, declaring that otherwise they were likely to be swamped by Asiatics.

Australia's magnitude and riches and the weakness of its garrison [he said] are known to all overcrowded and ambitious nations in the Near North. Moral right to territory is in itself no right at all. Within a fortnight's steam of your Commonwealth there are thousands of millions of people, all of whom are crowded and restless and some of them ambitious and powerful. Yet you continue your work and play as though the history of the world had not been the story of the overthrow of the weak by the strong. The world will not tolerate an empty, idle Australia. You cannot hold up a human flood by a restriction clause in an act of Parliament.

Premier Hughes, in addressing the Commonwealth House of Representatives on Sept. 29, said:

Frankly, I see no hope for success of the proposed disarmament conference at Washington until the Pacific problem is settled. Such a settlement is only possible through a *modus vivendi* satisfactory to Japan, Australia and the United States.

William Smith, Minister of the Navy, on Oct. 13 introduced the Commonwealth's

naval estimate, carrying only £3,180,000. He announced that Australia's seagoing fleet had been reduced to two light cruisers, one training cruiser, two sloops, four destroyers, and three submarines.

A great national public work, the third largest of its kind ever attempted in the world, is the Murray Waters irrigation scheme now being carried out in Australia. The Murray River rises in the Australian Alps in New South Wales and runs for 800 miles westward before entering South Australia, forming the boundary between New South Wales and Victoria. It was soon proved that irrigation interests in the river were far more important than those of navigation. The three States concerned have joined in a project to build an immense dam and reservoir large enough to hold 1,000,000 acre-feet of water at the junction of the Mitta Mitta River with the Murray a few miles out of Albury. Another storage reservoir of 500,000 acre-feet is planned at Lake Victoria, near the border of South Australia. The river drains an area of about 240,000 square miles, and the irrigation project is only inferior to similar undertakings on the Nile and the Mississippi. The cost will be about \$30,000,000, of which the Commonwealth has agreed to pay \$5,000,000, the three States sharing the rest of the payment equally.

Dispatches from New South Wales say the pearling industry is dead because of unsettled conditions throughout the world, according to James Clark of Brisbane, the Australian pearl king. All pearling boats at Thursday Island are laid up at Broome, Western Australia. Only about 100 out of 400 boats in the trade are working. Failure of Germany and Russia to purchase pearl shell is one cause, and another is that the Japanese are making buttons out of trochus shell and the Americans making them from fresh-water mussels in the Mississippi.

KENYA COLONY, BRITISH NORTH-EAST AFRICA—Contracts have been awarded by the British Government for the construction of a railroad from Nakuru to the Nasingisu plateau, north of Victoria Nyanza. This line will reach a higher point than any other railroad in the British Empire, the peak being more than 9,000 feet above sea level. The cost will be \$10,000,000.

RESTORING MEXICO'S CREDIT

Business relations reviving between American and Mexican interests, in spite of the attitude of Washington—President Obregon's efforts for recognition

[PERIOD ENDED OCT. 15, 1921]

MEXICO is desirous of re-establishing her foreign credit by payment of the defaulted interest on her external bonds, regardless of the question of recognition. International bankers have finally brought the matter to the point of discussion. Thomas W. Lamont of J. P. Morgan & Co. arrived in Mexico City on Oct. 5 for the purpose of considering how the proposed payments should be made. He is Acting Chairman of the International Committee of Bankers on Mexico, which was formed two years ago to act in behalf of investors who hold the Mexican Government's external bonds. British, French, Swiss, Dutch and Belgian bankers are on the committee, and asked Mr. Lamont to represent them. Before his leaving for Mexico City, the State Department was notified of the purpose of the visit and immediately made it clear that Mr. Lamont was acting in an entirely private capacity.

Mexico defaulted on the interest on her external bonds in 1914 and has paid nothing on them since. They total approximately \$190,000,000, and the interest in default is about \$50,000,000. French investors hold many of the bonds, and many are reported to be in Germany. An invitation was extended to James Speyer of Speyer & Co., as well as to Mr. Lamont, to visit Mexico. Mr. Speyer's firm has received deposits of securities representing some of the external obligations, while Mr. Lamont holds proxies for the International Committee.

Mr. Lamont held his first conference with Secretary de la Huerta on Oct. 6. One of the points under discussion was whether Mexico would assume the Victoriano Huerta debt. The Governments of Madero and Carranza refused to accept the loan made to Huerta on the ground that his Government was illegal. The bonds are chiefly held in France. There is also a loan made to Huerta by an American packing house in spite of the fact that the United States consistently refused to recognize Huerta on account of the method by which he became

President after the murder of Madero. Taken in connection with the settlement of the Mexican oil question (noted in CURRENT HISTORY for October, Page 170), Mr. Lamont's visit shows that Mexico is anxious to establish friendly relations, and that American business men are glad to cooperate. Judge Elbert H. Gary, Chairman of the United States Steel Corporation, and several other prominent American business men have recently visited Mexico. Samuel Vaucain, President of the Baldwin Locomotive Company, went there and demonstrated that it was not necessary to get the approval of Washington politicians to do business with Mexico; he returned with orders for sixty-five engines, four of which have now been delivered and are in service.

Recognition of Mexico is still barred in Washington by imposing conditions that few States would subscribe to. Under Secretary Fletcher insists on a treaty prior to recognition, in which Mexico must state in black and white that she will not rob American citizens by confiscation of their properties or by discriminatory taxes. The Under Secretary declared furthermore that the plea of State rights—that the Federal Government has no authority over the different Mexican States—must be abrogated, at least as far as the United States is concerned. It has authority over States and "must control the action of the States relative to American rights," he was quoted as saying to Representative Hudspeth of Texas on Oct. 1. In this attitude Mr. Fletcher has a precedent in the attitude of Italy when the United States disclaimed responsibility for damages by the New Orleans riots and also by the attitude of Japan in connection with legislation in California.

Profit-sharing, which has been introduced voluntarily by many large corporations in the United States for the benefit of their employes, has just been adopted in Mexico officially by the State of Vera Cruz and made compulsory. The share of profits

allotted to employes according to the law must not be less than 10 per cent. The law was made retroactive, applying to the period between Feb. 5, 1917, and Dec. 31, 1920. This feature aroused criticism, and a temporary injunction was granted by the Federal Supreme Court, so that the law is only partly in effect. It applies to oil workers and companies in the petroleum district of Northern Vera Cruz. A law identical in form is under consideration by the Legislature of the State of Puebla. The Federal Government will not intervene in an effort to have the law modified or annulled, according to Señor Calles, Secretary of the Interior, who declared that in such matters the States are sovereign. President Obregon is strongly in favor of the law.

The present Administration of Mexico is determined to prevent exploitation of the people, whether by Mexicans or foreigners. By standing pat with regard to its foreign policy it throws the burden of disturbance on other shoulders. Thus, the oil companies, despite the support of Washington, found it prudent to compromise on the question of taxes. The American Association of Mexico states that the following are the points of agreement:

The decree of June 7, imposing a tax of 38 cents a barrel, is suspended until December. The *ad valorem* tax under the decree of May 24, which amounts to approximately 12 cents a barrel, is allowed to stand, but becomes a production tax instead of an export tax, and is therefore paid on all oil in storage and sold in Mexico. The companies are paying this tax. In addition an export tax of 8 cents per barrel has been agreed upon. This lasts until Dec. 25, at which time taxes are to be adjusted.

The final text of the Supreme Court de-

cision that Article 27 of the Constitution is not retroactive was approved on Sept. 24.

France in September sent M. Jules Blondell to Mexico as *Chargé d'Affaires*. In an interview in the *Universal* on Sept. 25, he said:

The reason France does not recognize Mexico absolutely is because she is waiting for the other Allies, who may do so at any moment. France has lost no time in showing that she is desirous of recognizing Mexico and has always championed Mexico in the allied councils. Last January, France designated M. C. Pinchant as plenipotentiary and envoy to this republic. An Ambassador will come here from France as soon as possible. Meanwhile diplomatic relations need not be considered as broken.

The presence of a number of Latin-American diplomatists at the Mexican centennial festivities revived rumors of a formal federation of Mexico, Central and South America, but no definite action was taken. A union of Central America with Mexico was suggested on Sept. 29 by the new Costa Rican Consul in Mexico City, Rafael Cardona Jimenez, but it elicited only humorous comment. The Consul stated his opinion that the Central American Union might seek annexation to Mexico on account of the refusal of Nicaragua and Costa Rica to enter the new State.

Illiteracy in Mexico is decreasing slowly, with the aid of more than 1,500 voluntary teachers, who serve without pay. A good-roads convention was held in Mexico City in September and an organization effected to urge on the Federal Congress the improvement of the highways of the country. Immigration of Americans is increasing, partly owing to the centennial celebration. A definite improvement in the economic situation has apparently set in.

CENTRAL AMERICAN UNION IN ACTION

[PERIOD ENDED OCT. 15, 1921]

THE Union of Central America was formally constituted on Oct. 10, when the separate Governments of Honduras, Guatemala and Salvador ceased to function and a provisional Federal Council took charge at Tegucigalpa, the capital of the new federation. The Constitution had been signed on Sept. 10 by representatives of the three States. The Constituent Assembly se-

lected as the flag and coat of arms of Central America those of the old federation. The flag has three broad horizontal stripes, one white between two blue ones, and the coat of arms is a triangle bearing the motto "God, Union and Liberty." Elections for the Federal Council were set for Oct. 15.

Central America thus constituted has an area of nearly 100,000 square miles, about

twice the size of New York State, with a population less than two-fifths, or about 3,900,000. Its three component States are contiguous and it is bounded on the northeast by Mexico and the southwest by Nicaragua. Spanish is the common language; education is free and compulsory. The States are autonomous. The Federal Constitution is modeled in part on that of the United States. The executive power partly follows the Swiss system, consisting of a Federal Council of three, but it is popularly elected. Each State chooses one Councilman and one Alternate for a five-year term. The Alternates may deliberate, but have no vote. From among their number the three Councilmen elect one President and one Vice President to hold office for one year. They cannot immediately succeed themselves. The Australian ballot is adopted in all elections by the people.

NICARAGUA.—After the revolutionary movement on the Honduran frontier noted in *CURRENT HISTORY* for October, the Nicaraguan troops were rapidly demobilized, but a small force was again sent to the border in the eastern corner of the State, on the Pacific Coast, under General Masis, Minister of Public Works in 1909. He captured a number of rebels led by General Tobos, who began negotiations for surrender.

PANAMA — Panama's status was definitely settled on Oct. 13, when the treaty between the United States and Colombia was ratified by the Senate at Bogota. It had been already ratified at Washington on April 20 by a vote of 69 to 19. The treaty was practically the same as that presented to the Senate by President Wilson in 1914, except that an article was omitted expressing regret that anything should have occurred to mar the cordial relations of the two countries. It calls for the payment of \$25,000,000, of which \$5,000,000 is to be paid in six months and the rest in four annual instalments of a like amount. Colombian citizens, their products and mails are exempt from any duties or taxes in the Zone other than those paid by American citizens, and Colombia recognizes for the first time the complete independence of Panama. The full text of the treaty was published in *CURRENT HISTORY* for June, Pp. 542-543.

CANAL ZONE — The Zone Commission appointed by Secretary Weeks, headed by General William D. Connor, recently went to Panama to investigate labor conditions and administrative machinery in the Canal Zone, and returned with a report recommending thorough reorganization of administration and radical changes in policies affecting employment of labor, operation of the canal and railroad, pay of employes and other subjects. This report was made public in Washington on Oct. 6. It recommends that the Governor of the Zone deal with labor, not through the unions, but through committees of employes; favors the adoption of the open shop principle; the use of tropical native labor; discontinuance of free housing, light, heat and other perquisites, and separation of the operation of the canal, railway and steamship lines. The commission says it failed to find anything to justify continued expenditure of canal funds to maintain a naval base at the canal.

The report drew fire from Samuel Gompers, President of the American Federation of Labor, who described the labor recommendations as "nothing less than preposterous and affronting to the entire country." He especially objected to use of native labor.

Another dispute connected with the Panama Canal Zone was that regarding the exemption of American coastwise vessels from tolls, demanded by the Republican Party platform. Senator Borah introduced a bill to accord this exemption and President Harding is said to favor such action, but wants it delayed until after the disarmament conference. In spite of the President's desire for delay, the Senate passed the bill by a vote of 47 to 37 on Oct. 10, thirty-five Republicans voting for it to seventeen against, while twenty Democrats voted against the bill and twelve in favor of it.

While these disputes concerning the canal were in progress, the report of operations during the fiscal year ending June 30 was made public, showing a new high record for American tonnage passing through. Of the 2,892 ships traversing the waterway, 1,212 were American, exclusive of Government owned and chartered vessels, and they carried 5,179,000 tons. Great Britain was second with 970 ships and 3,722,000 tons.

SOUTH AMERICA'S UNIFICATION MOVEMENT

Growing unanimity manifested in Racial Day celebrations and in Pan-American parcel-post—Exaggerated reports of rejected American merchandise

[PERIOD ENDED OCT. 15, 1921]

THE celebration in all the capitals of South America of Racial Day, on Oct. 12, commemorating the anniversary of the discovery of the New World, stands as the culminant event of the month, by reason of its own significance as well as the unanimity inspiring the observance of this holiday. In Buenos Aires, in Santiago, in Lima, in Bogota and Quito, in every Latin American city of any importance, both the natives and foreign residents and the official representatives of Spain celebrated Columbus Day in the spirit of brotherhood befitting the descendants of the same race who continue to speak the same language and uphold similar traditions.

Until a short time ago Columbus Day was a minor local celebration throughout Latin America; but since 1910, when the more important countries celebrated the centennial of their independence, Oct. 12 has taken on a new significance, due mainly to the initiative of some intellectuals from the mother country and to the Spanish Government itself. Special embassies, such as those of the Infanta Isabella, an aunt of King Alfonso, and a more recent one presided over by the Infante Ferdinand of Bavaria, a cousin of the King of Spain, have visited South America with remarkable success.

The promised visit of King Alfonso himself to Uruguay, Argentina and Chile will go a long way in this movement toward co-operation of all the Spanish-speaking countries. This movement, begun as a mere rhetorical program, is daily taking a more substantial form through such conventions and agreements as those put forward by the Casa de America of Barcelona, the Postal Congress of Seville and the plans for celebration of a great international exposition in the latter city next year.

ARGENTINA—Shipments of merchandise packages weighing up to twenty-two pounds will be permitted under a parcel

post convention adopted by the Pan-American Postal Congress, gathered at Buenos Aires early this month. One of the provisions of the agreement is that there should be freedom of transit for parcel post through contracting countries. The parcel post agreement provides for the formation of a Pan-American Parcel Union embracing the United States and all the countries of Central and South America, including Mexico and the Caribbean republics. * * * President Irigoyen has signed and put into effect the new law designed to curb rent profiteering. Under the new law it is forbidden to raise rents over the average charged before Jan. 1, 1920. * * * The new works at Comodoro Rivadavia increased the production of oil during the last month to 20,324 cubic meters, making a total for the last seven months of 171,257 cubic meters. * * * A loan for \$50,000,000, bearing interest at 7 per cent. and maturing in two years, has been subscribed by the American financiers represented by the Chase National Bank. * * * A Spanish company, represented by the army engineer, Captain Herrera, is negotiating with the Argentinian Government for a subsidy to start an aerial navigation line from Cadiz to Buenos Aires. The airships would be of the Zeppelin type. * * * The Department of Statistics has published the data referring to Argentinian exports to the United States during the first six months of the year. According to those figures, the exports to North America have averaged 75 per cent. higher in volume than the figures given for the corresponding period during the five years previous to the war.

BOLIVIA—The firm of William and Spruille Braden has purchased a tract of 5,320,000 acres in the Department of Santa Cruz, in the southeastern part of the republic. Tests in the oil fields show that the oil is of paraffin base running as high as 45.8 Baume, and that it is perhaps one

of the highest grades of oil ever found, according to the purchasers. There has been keen competition for control of the field by European interests, particularly an English concern. * * * Bolivia has made tremendous gains as a tin producer during the past decade. In 1903 it was credited with less than 10,000 tons a year, while today it is the second largest tin-producing country of the world, and unofficial estimates give its output as 25 per cent. of the total. * * * A contract was signed with an American concern to construct a railway 128 miles long between Villazon and Atocha, which would unite the railroad systems of Bolivia and Argentina, making it possible to travel between Arica, on the Pacific, and Buenos Aires in two days less time than at present. The Bolivian Government is to issue bonds to cover the cost to the amount of \$7,000,000. * * * Jesse S. Cottrell of Tennessee has been nominated by President Harding as Minister to Bolivia. Mr. Cottrell is a newspaper man and a graduate of the University of his native State as well as of the Georgetown University School of Law.

BRAZIL—The North American Chamber of Commerce of Rio Janeiro makes public a resolution adopted declaring that reports which have been circulated in the United States and in Brazil regarding enormous amounts of rejected American merchandise in the Custom Houses of Rio and other Brazilian ports were "badly exaggerated." These reports, the resolution declares, constitute "a veritable propaganda against North American and Brazilian business interests, which is causing a profound impression upon the buying market, directly and indirectly affecting orders, shipments, acceptances and payments, and troubling exchange rates to a considerable extent." The resolution adds that abnormal stocks of goods do not exist in Brazil and there is "not the least probability of the dumping of cheap goods on the market either through so-called selling syndicates or Custom House auctions." * * * Imports in Brazil during the first half of 1921 amounted to £38,485,000, as against £72,763,000 in the last six months of 1920. * * * There has been an Emergency bill passed, intended to cope with the present crisis and the exchange depression. Up to

Oct. 31 all imported merchandise was freed of storage charges at the Custom Houses. The Government is exerting its influence with the railway companies to obtain a reduction in freight rates; also it is establishing warrants for the coffee left over from last year. The same law heavily punishes the selling of products manufactured in Brazil as imported goods. * * * With the Amazonian tour started by Dr. Nilo Pecanha in quest of popular support for his candidacy for the Presidency of the republic, the political campaign is in full swing. Dr. Pecanha, who was President of the country before the last two incumbents, has been holding political gatherings at Manaos, Belem, Bahia and Spiritu Sancto, at which places he had been preceded by Dr. J. J. Seabra, his running mate.

COLOMBIA—The proposals presented in the name of a North American syndicate by ex-Senator Lorimer of Illinois embrace the building of a railway between Bogota, Barranquilla and Bahia-Honda; the establishment of a line of steamers with the United States; agricultural colonization, and oil, coal and timber development. * * * The Tropical Company, operating 400 miles inland on the Magdalena River, has announced that gasoline for local consumption will shortly be sold to the public. This will be the first concern to put Colombian oil on the market. * * * Pedro Nel Ospina is the candidate of the major branch of the Conservative Party for President of the republic for the four-year period beginning August, 1922.

CHILE—A contract to supply the equipment to electrify the central section of the Chilean State Railway has been closed between the Chilean Government and the Westinghouse Company of Pittsburgh. The line about to be electrified is the most important in the country by reason of its linking the capital, Santiago, and the main port of Valparaiso with a branch to Los Andes, where it connects with the Trans-Andean Railway. The contract has a total value of \$7,000,000. Owing to the abundance of water power and the high value of fuel in Chile, all Chilean railways will eventually be electrified. * * * Negotiations are in progress toward the selling of a considerable quantity of nitrates to Germany through the pool established in London with

the co-operation of the Chilean Government. German interests are eager in the purchase of the Chilean fertilizer, mainly due to the unsatisfactory results obtained with the synthetic nitrate during the war, but serious difficulties are encountered, especially in the matter of the value of the mark. A splendid impression is reported to have been made in Government circles and also in public opinion by the personality and the utterances of the new American Ambassador, Mr. Collier, at his official reception by President Alessandri. Ambassador Collier dwelt on the mutual advantages of industrial and business investment and strongly declared himself in favor of continuing and furthering the interchange of professors and students already established between the United States and Chile.

ECUADOR—The Andes Corporation, recently formed with a capital of £2,000,000, has taken over the prospective oil properties of the Leonard Exploration Company, which include about 6,500,000 acres in Ecuador and other great tracts of oil land in Colombia and Venezuela.

PERU—A bill to create a Peruvian national bank was introduced in Congress by the Secretary of the Treasury, Rodriguez Dulanto. It provides that half the capital of £10,000,000 shall be subscribed by the Government and half by private capital. It authorizes the issuance of bank notes, half of which shall be secured by gold and Government bank notes on deposit, and half by commercial paper. Prompt passage of the bill is predicted. * * * Minister Wil-

liam E. Gonzales left Lima to board the steamer that would carry him to the United States at the end of October. His departure was marked by manifestations of friendliness on the part of the official element and of his colleagues of the diplomatic corps. * * * A group of American educators has arrived under contract with the Government to take charge of various official institution of public education, where North American methods will be established.

URUGUAY—The national budget anticipates expenses of 43,253,497 pesos as against an income of 36,535,475, therefore forestalling an expected deficit of more than six millions. * * * The loan of \$7,500,000 contracted for in the United States has been the subject of a debate in Parliament. There the representative of the Government declared, in answering the question raised by Dr. Bachini as to the correctness of the procedure, that the advantageous conditions under which the operation was presented to Uruguay by the American bankers is the best excuse for the summary discussion that resulted in acceptance by the Executive.

VENEZUELA—Besides the four radiographic stations of La Guaira, Puerto Cabello, Maracay and Maracaibo, two new stations are under construction at San Cristobal and Caracas. It is rumored that in a short time there will begin the construction of a station of sufficient power to establish direct communication with the United States and Europe.

EVENTS IN THE WEST INDIES

[PERIOD ENDED OCT. 15, 1921]

CONDITIONS in Cuba are gradually improving under the administration of President Zayas and the excellent advice of General Crowder, who was sent to the island by President Wilson to prevent civil war from growing out of last year's disputed election, and who has been continued in service there by President Harding. He was appointed a member of a Cuban commission to review the revenue situation, reduce ex-

penses, raise more Government funds and rewrite the Cuban tariff law. He has succeeded in reducing the Government budget from \$134,000,000 in the last year of Menocal's Administration to \$64,000,000 for next year. On his advice an internal loan of \$40,000,000 has been discarded, and one for \$50,000,000 is being sought from New York bankers. Representatives of six American banking houses went to Cuba early in Octo-

ber to compete for the privilege of handling the latter loan. There will be more or less supervision of the expenditure of the money by American interests. This loan, it was believed, would be sufficient to finance the new sugar crop, which is expected to be much smaller than this year's, owing to the omission of the customary 20 per cent. of replanting last Autumn and Spring and lack of cultivation of cane fields during the Summer. It is stated that of the 215 sugar mills on the island not more than 160 will operate. The amount of sugar in Cuba is about a million tons greater than in 1919 or 1920. This year's crop is estimated at about 3,000,000 tons. Germany's beet sugar crop has been reduced nearly one-tenth. Aside from Czechoslovakia, no European country is likely to have any appreciable quantity of sugar for export, and Europe will have to import from Cuba. The last of the 1919 crop of Cuban raw sugar was sold for 2½ cents, cost and freight, to New York early in October. One result of the surplus of sugar is that Havana taxicab drivers have reduced their rates 50 per cent. They have cut their automobile fuel costs by substituting commercial alcohol made from sugar cane for gasoline.

The Cuban Telephone Company has obtained a loan of \$4,000,000, secured by an issue of 7½ per cent. bonds due in 1941 and not redeemable before 1931. The Cuban corporation controls the telephone system of Cuba, and through an agreement with the American Telegraph and Telephone Company, by means of the three submarine cables recently put in operation between Havana and Key West, now has direct connection with all cities in the United States and Canada.

Aerial passenger service between New York and Havana was inaugurated in October, a flying boat leaving the Hudson River off Eighty-second Street with six passengers. There were two stops made, and the time was about forty hours. * * * Six hundred volunteers recruited in Cuba for service with the Spanish forces in Morocco left Havana for Spain on Sept. 20 on the Alfonso XII. * * * Señor Dominguez, former Cuban Minister to France, on Oct. 5 presented to Mayor Robin of Verdun a fund of 65,000 francs for the creation of an infant school in that city. The fund

was collected in Cuba by the newspapers of Havana.

HAITI—The Senate committee investigating conditions in Haiti learned from Rear Admiral Caperton that the revolutionary movement of Guillaume in 1915 to obtain the Presidency was in part financed by Germans residing in Port au Prince. The Admiral read a telegram from the Navy Department stating that the United States looked with favor upon the election of Dartiguenave because it was thought to "assure political integrity."

PORTO RICO—Governor Reily's Secretary in a letter to The New York Times explains the Governor's attitude on the language question in Porto Rico, denying that he wanted Spanish eliminated from the public schools. His recommendation merely was that English should be taught equally with Spanish in the schools, and that all other languages should be secondary. He has appointed Juan B. Huyke to be Commissioner of Education. Señor Huyke, who is the first Porto Rican to be appointed to the office, took the oath on Oct. 3. * * * The insular Chamber of Commerce has endorsed the efforts of Governor Reily to obtain another line of steamers to Spain. He has taken up with the Shipping Board the question of having some of its vessels now operated by the Ward Line out of New York stop in Porto Rico on the way to Spain in order to provide more frequent means of making coffee shipments.

BRITISH WEST INDIES — Bermuda, Barbados and a number of other islands in the British West Indies were visited by a terrific hurricane on Sept. 15. Three hotels in Bermuda were unroofed, and great damage was done to property. Storm loss at Grenada is put at \$500,000. Nutmeg and cocoa plantations were ruined. * * * Grenada, which asked for a larger measure of self-government, has been allowed to elect four of the fourteen members of the Legislative Council. St. Lucia sent to London T. G. Westall, a West Indian merchant, to petition for a similar measure of representative government, and was told that it had been decided to postpone consideration of the matter pending a visit which Mr. Wood, Under Secretary for the Colonies, hoped to make soon.

SPAIN'S VICTORIES IN MOROCCO

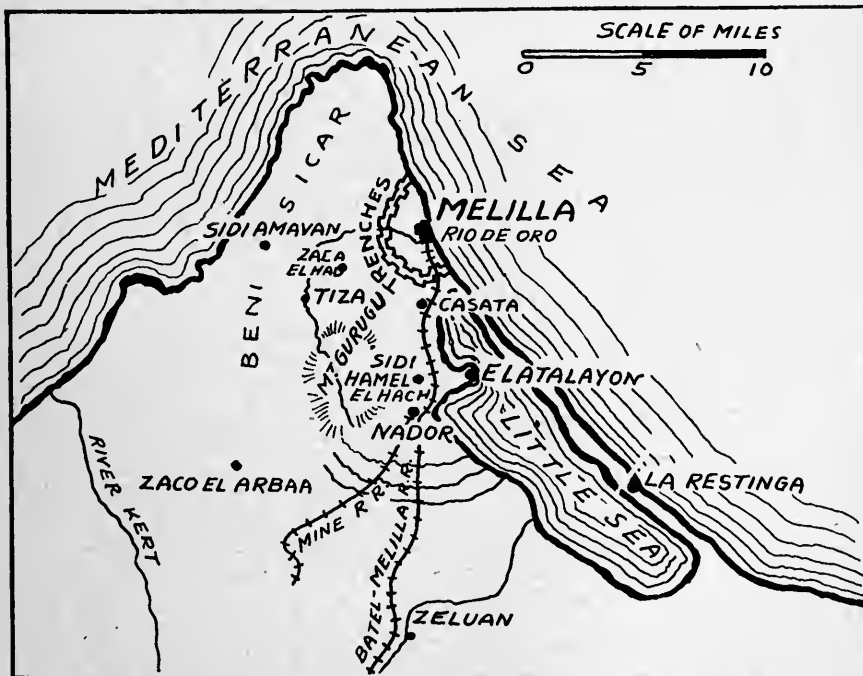

[PERIOD ENDED OCT. 15, 1921]

THE Spanish offensive with 60,000 active troops under the personal direction of General Berenguer, the High Commissioner, which began on Sept. 10, had achieved all its immediate objectives by Oct. 10. Then the King's troops captured in a succession of brilliant charges and rushes from hill to hill the enemy's positions on Mount Gurugu (in the dispatches "Gourougou," according to French spelling). Until then Gurugu had been bombarding the southern suburbs of Melilla and had obstructed all operations along the Mar Chica, or Little Sea, and the attempts to recover the Batel Railway running south from Melilla.

Meanwhile, the series of Spanish successes, added to the encouraging reports of Señor La Cierva, the Minister of War, who had been visiting Melilla, has caused the campaign to be viewed almost with enthusiasm in Spain. According to him, the losses suffered by General Silvestre's forces dur-

ing the first period of the revolt amounted to only 5,000 and not 25,000. The troops arriving at Melilla are said to be eager for combat, including 300 volunteers from the United States, Canada, Cuba and Mexico under the soldier of fortune, Captain Donald McGregor, who sailed from New York Sept. 13. There is also reassuring news from the west, where for a time the Riff chiefs had induced certain disbanded tribesmen of El Raisuli to attack Spanish outposts. But El Raisuli is himself a fugitive in French territory and many of his chiefs have sent in messengers announcing their loyalty to Spain.

But these chiefs are not loyal to the Sultan of Morocco, under whose authority, taken in connection with the Franco-Spanish Treaty, Spain is supposed to hold her mandate over the zone. The terms for peace offered by Abd-el-Krin, the leader of the insurgent Riff and Berber tribes, became known to the Spanish Government as

MAP SHOWING IN DETAIL SPAIN'S MILITARY OPERATIONS IN MOROCCO AROUND MELILLA WITH THE MORISH STRONGHOLD, MOUNT GURUGU

early as Sept. 20. To accept these terms, however, would cause Spain to be not only disloyal to the Sultan but also unfriendly to France, which has thoroughly pacified its own zone and re-established the authority of the Sultan. France could not remain neutral much less join Spain in an enterprise against the traditional, although now nominal, Government of the country.

So Don Antonio Maura, the Spanish Premier, has a difficult problem to solve. Many believe that it can be solved only by subduing the resourceful Abd-el-Krin by force of arms. This man's conditions of peace are on their face advantageous to Spain, were it not for the French contingency. He stipulates that Spain exercise a real protectorate over the Spanish zone without the authority of the Sultan, instead of merely controlling the zone by its influence. At the same time he proposes that the Riff territory shall receive autonomy under a separate Spanish protectorate, also of a direct nature without intervention of the Sultan's authority.

In return for these concessions Abd-el-Krin offers to hand over native chieftains responsible for cruelties toward Spanish prisoners. These, he declares, he discounted from the beginning, endeavoring to induce the various chieftains to hand over all the prisoners to his charge. It is not unlikely, in these circumstances, that a joint Franco-Spanish conference may take place.

Aside from the Spanish offensive, the situation in and around Melilla has been as follows: The city is entirely surrounded on the land side by some ten kilometers of protecting trenches. Outside this line the Spanish hold, by means of forts and block-houses, a line extending from Sidi Amaran and Zoco el Had in the Reni Sicar country to Sidi Hamet el Hach and Atalayan on the Mar Chica, an inland sea which communicates with the Mediterranean by an artificial outlet. All these forts are connected with Melilla by good roads. The railway follows the road to Nador, passing between the Spanish positions of Sidi Hamet and Atalayan. Near Nador a line branches off to the Riff mines, while the main line proceeds through a broad plain to Zeluan, some thirty kilometers from Melilla, and on to Batel, the terminus, twenty kilometers further south. The whole country between

Nador and Zoco el Had is occupied by the formidable Gurugu range, with its innumerable gullies, such as the Barranco del Lobo of 1909 fame.

It was not until Sept. 19 that details of the first stage of the offensive became publicly known in Madrid. Nador and its suburb Arboc on Sept. 17 were taken and held by a brigade under General Sanjurjo, but in order to achieve this the Spanish high command ran the risk of being flanked from the Gurugu range, which was full of hostile Moors with well placed artillery captured from the Spaniards. A strong column, under the command of General Berenguer, brother of the High Commissioner, was blocking the heads of the gorges leading down from Gurugu, while light batteries on Mar Chica and the guns of the Spanish fleet in the sea beyond shelled the sides of the mountain. Meanwhile, the cavalry of General Cabanellas was in a position at the further end of the Mar Chica to sweep the plains of Bu El Areg, and so Zeluan, with Mount Gurugu either covered or captured, could be approached from two sides. The Spanish engineers restored the railway to Nador four hours after the occupation of the town.

After Sept. 19 the vicinity of Nador was rapidly cleared. Two Spanish soldiers were found alive in a dry well where they had hidden themselves last July. On Sept. 24, while rumors had reached Paris through the Portsay correspondent of the *Intransigeant* that the offensive was a failure, fresh columns were debouching from Zoco and Nador and troops operating on the shore of the Mar Chica had occupied Mount Tauima and Pozos de Aograz, about five miles south of Nador.

On Oct. 2 the Spanish columns concentrated and captured in succession three strong posts in the vicinity of Segangan—Sebt, Ul-Ad-Daud and Danars—and early in the morning of Oct. 10 the highest peaks of the Gurugu range were taken. The Gurugu was that night converted into a great bonfire by burning the shelters and cantonments in which the Moors had been quartered. On Oct. 14 the capture of Zeluan was announced in Madrid. On the same day the Spaniards captured the position of Buguenzain and began to consolidate their positions.

BUSINESS THE CREATURE OF EVENTS

Analysis of the present situation, showing that the trouble is not overproduction but maladjustment of production—Only a nation or a statesman capable of taking a world view of it can hasten the solution—Diagnosis by a New York financier

WITH the United States, at this writing, facing what may prove to be the greatest railroad strike in history, with the German Cabinet on the point of disruption, England absorbed by the Irish question, France perplexed by the seeming hopelessness of balancing a budget which is carrying her daily more deeply into debt, it is not to be wondered at that the very men under whose leadership the world must some time be brought back to normal are temporarily unable calmly to fashion plans which require, as a foundation, a dispassionate survey of international scope. Their nearness magnifies the importance of domestic problems, already vast enough, and the task of bringing orderly prosperity back into the world is approached from many angles and in many ways, instead of from a single viewpoint big enough to include all the nations.

The world will ultimately shake itself into some sort of working organization, of course. Time alone is a cure for anything. But, if the orderly rearrangement of the world's activities is to be hastened, it seems clear that the working plans must be all-embracing and directed for the benefit of all the world, rather than any of its national divisions, great as any one may be.

The phrase "supply and demand" falls glibly from the lips of most of us. We attribute price changes and goods shortages to that so-called law. We are so familiar with the phenomenon of some commodity falling in price because the market is momentarily glutted, or of another rising in cost because of a shortage, that we lose sight of the essential fact that, taken in the aggregate, supply and demand must

always be equal, because they are, in fact, identical.

Dr. B. M. Anderson Jr., Economist of the Chase National Bank of New York, developed the point clearly when, in a recent speech before the American Manufacturers' Export Association, he remarked:

Wheat comes into the market as supply of wheat, but it also comes into the market as demand for sugar, for steel, for automobiles. Clothing comes into the market as supply of clothing, but it also constitutes demand for wheat, for meat, for moving-picture tickets, and for other things, since the motive lying behind the production of clothing on the part of its producers is to obtain the means with which to buy the other things they need. And so with every other commodity; it is supply of its own kind, but it is demand for other things.

So the welfare of the wheat grower depends on more than the size of his crop and of the motor-car manufacturer on more than the success of his factory processes. If the farmer's crop is not a success he has not the surplus with which to buy an automobile, and if he does not buy it, the maker of motor cars has less with which to buy the products of the farmer's labor. Every commodity enters into this relationship until the circle is completed in which every producer is also a consumer, and the success of the whole depends on the success of each component part.

Just so with the world today. Each nation, no matter how small, affects each other nation, and order and prosperity can return only when all the nations fall again into harmonious economic relations with one another. No nation is big enough to go it alone, and the troubles of the least of the newly formed political entities are as truly ours as theirs, and differently af-

RATIO OF FOREIGN TO DOMESTIC TRADE

Calendar Years.	Income of the American People.	Domestic Trade of United States Income Minus Imports at Retail Prices.	Foreign Trade of United States. Exports at Retail Prices.	Ratio of Foreign to Domestic Trade. P. C.
1910.....	\$30,500,000,000	\$28,200,000,000	\$2,800,000,000	9.9
1911.....	29,600,000,000	27,300,000,000	3,100,000,000	11.4
1912.....	33,800,000,000	31,100,000,000	3,600,000,000	11.6
1913.....	34,800,000,000	32,100,000,000	3,700,000,000	11.5
1914.....	32,600,000,000	29,900,000,000	3,200,000,000	10.7
1915.....	35,400,000,000	32,700,000,000	5,300,000,000	16.4
1919.....	67,700,000,000	61,800,000,000	11,900,000,000	19.3

fect us only in degree. A universally thorough comprehension of this would help, it would seem, to hasten the return of the world to so-called normal more than any other one idea. Failure to grasp the truth involved lies back of the often-expressed fears of German competition in world trade, of the embargoes which some countries have set upon the movement of gold, and here, in the United States, of the tariff problem.

What is the importance of foreign trade to the United States? In his speech Dr. Anderson quoted estimates of the ratio of foreign to domestic trade computed by him according to a method explained in his book, "The Value of Money," and explained again and tabulated in the last annual number of *The New York Times Annalist*. These estimates are given in the accompanying table.

In other words, foreign trade increased between 1909 and 1920 from one-eleventh of all the nation's business to one-sixth, truly a substantial growth, and one which fixes a high absolute value upon the worth of foreign trade. And yet its relative value, that is, the part it played in harmonizing the relations of the United States with the rest of the world, was probably of greater worth to the nation.

FOREIGN TRADE AND PROSPERITY

Export trade is the selling abroad of surplus products which domestic consumption does not demand, but there is no indication in the rising ratios of export trade that there has been overproduction in the United States. Rather, as Dr. Anderson took pains to point out, the trouble is one of maladjustment of production. The world is producing much less than it did before the war, and the reduction of produc-

tion has been, of course, in Europe, whose manufacturers can no longer use the world's raw materials in normal amount. The result is a glut of raw materials and reduced raw material prices, which react on the manufacturer, since producers of raw materials can no longer buy manufactured goods in normal quantities. The effect is world-wide and, as Dr. Anderson pointed out, while the depression of agricultural interests, copper interests and other raw material interests continues, the home market for manufactures will be a dwindling market. The situation in the foreign markets is clearly revealed by the records of September's trade for the United States and Great Britain shown in the accompanying tabulations. The relation of foreign trade to the prosperity of the United States was expounded by Dr. Anderson in words which are worth reproducing here. Said he:

There have been two opposing views emphasized in recent discussions of foreign trade, both of which, I think, are extreme. The one view is that our productive capacity has greatly outrun our ability to consume; that consequently a surplus, estimated sometimes as high as 25 per cent., is created, which we must dispose of abroad if we are to keep our business activity going. Adherents of this view regard export trade and an export surplus or "favorable trade balance" as absolutely essential to American prosperity. The rival view is that foreign trade is of minor importance; that the United States can be self-contained and work out its own salvation without much reference to the outside world. Adherents of this view have been disposed to minimize the magnitude of foreign trade as compared with domestic trade, and have at times offered figures designed to show that foreign trade is but a small percentage of domestic trade.

The first of these views involves a fundamental fallacy. It is impossible for a people to produce more than they can consume so long as they produce things that they want and produce them in right proportions.

Production and consumption grow together. It is out of production that the income of the country comes, and the income of the country is spent for goods and services. A people ought to produce more than it consumes in the sense of immediate consumption, since otherwise there could be no growth of capital. A people ought to devote part of its energies to the production of bridges, railroads, houses, highways, canals, machinery, and other things that will last a long time, and it ought to accumulate reserves of one or another kind to enable it to meet such emergencies as crop failures or other interruptions of production. If we substitute the word "utilize" for the word "consume," the proposition is strictly true that if the productive resources of a community are apportioned rightly and devoted to the right things, it is impossible to produce more than we can utilize, even though our current consumption may not take up the whole of our current production. The increase of capital in the form of durable, long-time goods is obviously a means of utilizing productive energies. If things are produced in right proportion, supply can never exceed demand. * * *

There can, however, be oversupply of particular things, gluts in particular markets, with deficiencies in other markets. And gluts in particular markets may so demoralize the whole industrial system as to lead to stagnation throughout. It is certainly true that there are particular commodities, notably copper and cotton, which we produce far in excess of our ability to consume in America alone. If we cannot have a foreign outlet for these commodities, a glut, with general disorganization, undoubtedly is created. We could, of course, given time enough, curtail our production of cotton and copper to an amount which the domestic market could absorb and release the labor and other resources employed in their production to other industries. On the other hand, if we did without foreign trade and had no imports, we should for a time have no coffee at all, a very inadequate supply of sugar, and great scarcities in many special manufacturing lines in which Europe excels. We could, however, in time, build up a coffee industry, using hothouses, if necessary, to produce the coffee, and with greater or less inconvenience produce most of the things which we normally import. The process of readjustment would be a slow and a painful one. We should have prolonged hard times in the process, but, ultimately, we could accomplish it.

I should deny, therefore, the extreme view that we must have a foreign market to dispose of a general surplus. I should insist upon our ability to utilize in the aggregate an amount equal to all that we can produce at home. I should deny that our prosperity depends upon what would virtually amount to the giving away of 25 per cent. of our

annual production. I say a virtual "giving away" because, if this doctrine is correct, we could never expect to be paid for this excess of exports. The only way in which we can, in the long run, receive pay for our exports is by admitting an excess of imports, and this view maintains that we must perpetually send out an excess of exports. If this view were correct, the more rational procedure would be to reduce hours of labor from eight to six per day and to enjoy more leisure. I do not know many people in the business world who are prepared to welcome this logical corollary of the view that we are overproducing!

CAUSE OF DISLOCATION

Dr. Anderson called attention to the fact that foreign and domestic trade are intimately interrelated, and that our industrial development had grown up adjusted to a larger world economy from which we were not now shut off. He added that, before the war, taking the world as a whole, goods were, by and large, produced in right proportions. Supply and demand were in a state of general equilibrium. There was an ebb and flow of production and consumption; here and there minor maladjustments occurred, but, on the whole, there was a fairly stable balance. If a temporary excess of some kind of commodity appeared, its price went down; that checked its production and increased its consumption. Labor was released from producing it to go into other industries where prices were higher and where scarcities were greater and the maladjustment quickly disappeared. The large general classes of goods, finished manufactures, foods, raw materials, and such services as transportation, were fairly well balanced and fairly well proportioned.

The war, said Dr. Anderson, broke this equilibrium. Europe used to be the world's great centre for manufacturing and the world's great market for foods and raw materials. During the war, and during our post-war boom, Europe, no longer producing in large quantity, continued to consume in great quantity, drawing in foods and finished manufactures on a great scale, though ceasing to draw in anything like the normal amount of raw materials. With the growing inability of the outside world, and particularly the United States, to supply Europe with goods on credit in view of the gigantic debt already piled up, a great disorder came.

The situation was immensely complicated

by the inability of the raw material countries, the United States, India, South America, and other parts of the non-European world, to dispose of their raw materials. Unable to find an outlet in Europe, the raw materials of the world were concentrated upon the United States. We produced them here, and the outside world poured them in upon us in unprecedented volume. Our manufacturing capacity, expanded though it had been by the war, was wholly inadequate to take care of so great a mass of raw materials, and there came a great collapse in raw material prices.

European revival since the war has been more manifest in agriculture than in manufacturing, and, in 1920, we exported far less of foods to Europe than we had been exporting in the years immediately preceding. The throwing back on our domestic markets of a great volume of food products broke the prices of foods also very violently. In due time the buying power of the producers of foods and raw materials was so greatly curtailed that they could not buy at prevailing prices anything like the volume of manufactured goods which even the reduced manufacturing capacity of the world was turning out, and there came a crisis for the manufacturer also.

The trouble was not, however, overproduction, insisted Dr. Anderson. The world was producing far less than it produced before the war in the aggregate, he

RECENT TRADE OF UNITED STATES

	Sept. 1921.	Aug. 1921.	Sept., 1920.
Exports ..	\$325,000,000	\$371,935,299	\$605,291,257

Nov., '20..	676,706,011	321,181,050	355,524,931
Oct., '20..	751,728,570	334,263,803	417,464,767

Export and import trade in merchandise for the nine months ended Sept. 30, 1921, compared with the same period in a series of years (000 omitted):

	Exports.	Imports.	Excess Exports.
1921.....	\$3,552,087	\$1,873,469	\$1,678,617
1920.....	6,080,990	4,358,405	1,722,585
1919.....	5,867,377	2,696,999	3,170,378
1918.....	4,539,104	2,322,533	2,236,551
1917.....	4,607,377	2,282,794	2,324,582
1916.....	3,950,426	1,831,174	2,119,251
1915.....	2,531,542	1,302,094	1,229,447
1914.....	1,467,686	1,410,450	57,236
1913.....	1,733,422	1,327,385	406,037

pointed out, and the trouble was maladjustment due to Europe's withdrawal from her position as the world's great producer of manufactures and as the world's great market for foods and raw materials. A really fundamental solution of the present

business problems, therefore, according to him, must involve aiding Europe to get back upon her feet and to resume her place as the great manufacturing centre. Dr. Anderson said he did not mean that 1914 conditions must be restored, and that it was probable we should continue to devote a greater proportion of our energies than before the war to manufacturing, and should absorb from the non-European world a greater proportion of raw materials than before the war. But we cannot, he added, begin to work up all the raw materials that the world is now producing. The raw material countries, with the exception of Russia, have been

RECENT TRADE OF GREAT BRITAIN

	1921.	1920.	1919.
Exports, British.....	£55,240,000	£117,455,913	£66,500,628
Re-exports, foreign.....	8,590,000	13,350,608	15,748,678
Total exports.....	£63,830,000	£130,806,521	£82,249,306

a Bank of Italy. Bank of Sicily and Bank of Naples combined.

b No adequate data reported.

c Not reported separately, but largely gold.

d Excluding Federal Reserve Bank notes.

e Cash reserves, including legal tender notes.

f Previous to March 18, 1921, the Federal Reserve Board used "net deposits" in computing the reserve ratio; on and after that date it used "total deposits." Consequently, the items in column 5 after March 18 are for "total deposits."

little injured by the war; many of them have been stimulated. The great damage of the war has been done in manufacturing centres, and the equilibrium is to be restored by bringing about a revival of those manufacturing centres. Dr. Anderson did not discuss measures that America could take to aid in the industrial rehabilitation of Europe, but he sounded this caution:

The domestic market for manufactures under existing conditions is a stationary, even a dwindling, market. With farmer and producers of raw materials unable to sell on profitable terms, they are also unable to buy in normal quantity. To surround this dwindling market by a high tariff wall so that American manufacturers may exclusively possess it is of no use to American manufacturers. If, however, a vigorous revival in Europe could be induced, with a resultant revival on the part of our farmers and producers of raw materials, our domestic market for finished manufactures would rapidly become an expanding market, and American manufacturers, sharing an expanding market with European competitors, would sell more goods and make more profits than they would if they had a stagnant market exclusively to themselves.

How to promote the revival of European industry, which logic seems to indicate as the proper course for the welfare of the United States, is a problem more easily stated than answered, however. Efforts have been made by many experts in international exchange to devise ways to finance such a revival. Among these the Ter Meulen plan is probably best known. As yet little progress has been made in this direction, however, and largely because of fear of Europe's solvency possessed by those who have funds to invest. This is not strange when it is realized that Europe owes the United States some \$16,000,000,000 already, and, so far as the United States will permit, is increasing instead of reducing this tremendous debt.

The table on page 373, derived from statistics gathered by the Statistical Service of the Harvard University Committee on Economic Research, shows the condition of the central banks in the chief countries of Europe, together with similar data for our own Federal Reserve system. The column showing the percentage of total metallic reserves to bank notes and deposits is of the most interest, since it shows the metal cover, chiefly gold, held against circula-

tion and quick liabilities. Germany, Italy and France make the worst showing among the former chief belligerents, as was, of course, to be expected. Great Britain has actually attained a higher percentage than in 1914, but, in connection with all the nations which engaged in the great war, with the exception of the United States, it is to be recalled that much of the gold now held by the central banks does not represent the acquisition of additional resources, but is gold which formerly was held in the purses of the people and which has now been gathered into the vaults of the banks. In the United States, on the contrary, the increased gold represents a real acquisition of the yellow metal, though whether this will ultimately be an advantage or a disadvantage remains to be seen.

BRITISH EXPORTS AND IMPORTS

Exports of British products during the last twelve months compare as follows:

	1921.	1920.	1919.
September	£55,240,000	£117,455,913	£66,500,628
August	51,346,307	114,903,335	74,773,597
July	43,170,000	137,451,904	65,315,691

(© Harris & Ewing)

The four women members of the American Advisory Commission of twenty-one, selected by President Harding to co-operate with the Disarmament Conference. Left to right: Mrs. Charles Sumner Bird, Mrs. Thomas G. Winter, Mrs. Eleanor Franklin Egan and Mrs. Katherine Phillips Edson

It should be added that this proposal immediately concerns the British Empire, Japan and the United States. In view of the extraordinary conditions, due to the World War, affecting the existing strength of the navies of France and Italy, it is not thought to be necessary to discuss at this stage of the proceedings the tonnage allowance of these nations, but the United States proposes that this matter be reserved for the later consideration of the conference.

In making the present proposal the United States is most solicitous to deal with the question upon an entirely reasonable and practicable basis to the end that the just interests of all shall be adequately guarded, and the national security and defense shall be maintained. Four general principles have been applied:

1. That all capital shipbuilding programs, either actual or projected, should be abandoned.
2. That further reduction should be made through the scrapping of certain of the older ships.
3. That in general regard should be had to the existing naval strength of the powers concerned.
4. That the capital ship tonnage should be used as the measurement of strength for navies, and a proportionate allowance of auxiliary combatant craft prescribed.

THE AMERICAN PROPOSALS

The principal features of the proposed agreement are as follows:

United States

The United States is now completing its program of 1916 calling for ten new battleships and six battle cruisers. One battle-

ship has been completed. The others are in various stages of construction; in some cases from 60 to 80 per cent. of the construction has been done. On these fifteen capital ships now being built over \$330,000,000 have been spent. Still the United States is willing, in the interest of an immediate limitation of naval armament, to scrap all these ships.

The United States proposes if this plan is accepted:

1. To scrap all capital ships now under construction. This includes six battle cruisers and seven battleships on the ways and in the course of building, and two battleships launched.

The total number of new capital ships thus to be scrapped is fifteen. The total tonnage of the new capital ships when completed would be 618,000 tons.

2. To scrap all of the older battleships up to but not including the Delaware and North Dakota. The number of these old battleships to be scrapped is fifteen. Their total tonnage is 227,740 tons.

Thus the number of capital ships to be scrapped by the United States, if this plan is accepted, is thirty, with an aggregate tonnage (including that of ships in construction, if completed) of 845,740 tons.

Great Britain

The plan contemplates that Great Britain and Japan shall take action which is fairly commensurate with this action on the part of the United States.

It is proposed that Great Britain:

1. Shall stop further construction of the four new Hoods, the new capital ships not laid down, but upon which money has been spent. The four ships, if completed, would

have a tonnage displacement of 172,000 tons.

2. Shall, in addition, scrap her pre-dreadnoughts, second line battleships and first line battleships up to but not including the King George V. class.

These, with certain pre-dreadnoughts which it is understood have already been scrapped, would amount to nineteen capital ships and a tonnage reduction of 411,375 tons.

The total tonnage of ships thus to be scrapped by Great Britain (including the tonnage of the four Hoods, if completed) would be 583,375 tons.

Japan

It is proposed that Japan:

1. Shall abandon her program of ships not yet laid down, viz., the K-11, Owari, No. 7 and No. 8, battleships, and Nos. 5, 6, 7 and 8, battle cruisers.

It should be observed that this does not involve the stopping of construction, as the construction of none of these ships has been begun.

2. Shall scrap three capital ships (the Mutsu, launched; the Tosa, the Kago, in course of building), and four battle cruisers (the Amagi and Akagi, in course of building, and the Atoga and Takao, not yet laid down, but for which certain material has been assembled).

The total number of new capital ships to be scrapped under this paragraph is seven. The total tonnage of these new capital ships when completed would be 289,130 tons.

3. Shall scrap all pre-dreadnoughts and battleships of the second line. This would include the scrapping of all ships up to but not including the Settsu; that is, the scrapping of ten old ships, with a total tonnage of 159,828 tons.

The total reduction of tonnage on vessels existing, laid down or for which material has been assembled (taking the tonnage of the new ships when completed) would be 448,928 tons.

Thus, under this plan, there would be immediately destroyed, of the navies of the three powers, sixty-six capital fighting ships, built and building, with a total tonnage of 1,878,043 tons.

Limit for Three Navies

It is proposed that it should be agreed by the United States, Great Britain and Japan that their navies, with respect to capital ships, within three months after the making of the agreement, shall consist of certain ships, designated in the proposal, and number for the United States 18, for Great Britain 22, for Japan 10.

The tonnage of these ships would be as follows: Of the United States 500,650, of Great Britain 604,450, of Japan 299,700. In reaching this result the age factor in the

case of the respective navies has received appropriate consideration.

Replacement

With respect to replacement, the United States proposes:

(1) That it be agreed that the first replacement tonnage shall not be laid down until ten years from the date of the agreement.

(2) That replacements be limited by an agreed maximum of capital ship tonnage as follows:

For the United States, 500,000 tons.

For Great Britain, 500,000 tons.

For Japan, 300,000.

(3) That, subject to the ten-year limitation above fixed and the maximum standards, capital ships may be replaced when they are twenty years old by new capital ship construction.

(4) That no capital ship shall be built in replacement with a tonnage displacement of more than 35,000 tons.

I have sketched the proposal only in outline, leaving the technical details to be supplied by the formal proposition, which is ready for submission to the delegates.

The plan includes provision for the limitation of auxiliary surface combatant craft. This term embraces three classes, that is:

(1) Auxiliary surface combatant craft, such as cruisers (exclusive of battle cruisers), flotilla leaders, destroyers and various surface types; (2) submarines and (3) airplane carriers.

I shall not attempt to review the proposals for these various classes, as they bear a definite relation to the provisions for capital fighting ships.

With the acceptance of this plan, the burden of meeting the demands of competition in naval armament will be lifted. Enormous sums will be released to aid the progress of civilization. At the same time the proper demands of national defense will be adequately met, and the nations will have ample opportunity during the naval holiday of ten years to consider their future course. Preparation for future naval war shall stop now. I shall not attempt at this time to take up the other topics which have been listed on the tentative agenda proposed in anticipation of the conference.

HOW THE SPEECH WAS RECEIVED

Mr. Louis Seibold, in his account of the proceedings for The New York Herald, wrote thus of the address of Secretary Hughes: When the Secretary really settled down to his job the representatives of foreign Governments shed their air of indifference and became suddenly attentive.

(© Harris & Ewing)

British delegates at the Disarmament Conference, departing from the first plenary session in cheerful mood. Left to right: Sir Auckland Geddes, British Ambassador to the United States; Sir Maurice Hankey, Secretary General to the British delegation; Hon. Arthur J. Balfour, Lord President of the Council, and Lord Lee of Fareham.

They looked at each other with something approaching amazement, as the Secretary without the slightest show of emotion, or lifting of voice, said in cold and measured tones: 'We can no longer content ourselves with investigation, with statistics, with reports, with the circumlocution of inquiry. * * * The world wants a practical program which shall at once be put into execution.' This declaration was greeted with a storm of applause from the members of Congress, which in itself was so unusual a feature of international gatherings that the delegates from both European and Asiatic countries looked with something suggesting alarm at the statesmen above them, who had risen to their feet and were clapping their hands with resounding force.

Mr. Balfour alone appeared to hold to his habitual poise. Premier Briand appeared to find gratification in the statements of the American Foreign Secretary, which he followed in the

French text placed before him. There was no discounting the surprise of Prince Tokugawa, Baron Kato and Ambassador Shidehara, the delegates from Japan. The Italian, Portuguese and Belgian envoys appeared to be greatly pleased, if a trifle startled, at the directness with which Mr. Hughes was stating his case.

ENTHUSIASM OF DELEGATES

From this time the Secretary was interrupted at almost every sentence by applause from the gallery and among the spectators hemming in the delegates and technical advisers. The representatives responded joyously in applauding the Secretary's statement that the naval program now under way can be given up without heavy loss and his further declaration that the evil of armament will continue as long as the competition continues among nations.

Perhaps the statement that provoked the greatest applause and sur-

prise to the foreign delegates was his declaration that delegates of the United States, acting under the instructions of the President, would submit a concrete proposal for an agreement for the limitation of naval arms. He looked directly at Mr. Balfour at his left and Prince Tokugawa, half way down the side table on his right, as he said in even tones: "It should be added that this proposal immediately concerns the British Empire, Japan and the United States."

When the Secretary got down to details and set about revealing the exact terms for limiting armament on the part of the three countries he named, the Japanese delegates and the impressive array of Admirals and other naval representatives of that country, manifested the keenest interest. They looked at each other as if wondering where Mr. Hughes had secured such definite information regarding their naval establishments, including facts unknown to most of the people of Japan.

The figures and facts regarding specific units of the British and Japanese Navies permitted no doubt as to the complete accuracy of them. While the Secretary was reading them and enumerating the methods by which they could be dispensed with, one could have heard a pin drop in the vast assembly hall. His knowledge of naval conditions, which had previously been worked out with mathematical exactness, was fully sustained by the nods of the naval experts of not only Great Britain and Japan, but of those representing France and Italy.

That the Secretary had more complete information at hand was revealed by his announcement that the technical details of the formal proposal that the United States would submit would be immediately furnished to the delegates. His final announcement provoked a storm of applause.

Mr. Hughes, as Chairman, then proposed the election of John W. Gar-

rett of Baltimore, former Minister to the Netherlands, as Secretary General of the conference. The proposal was accepted. He then proposed that the heads of delegations of the great powers or alternates selected by them should form a Committee on Armament Limitation, and that the heads of all the delegations should name members to sit on the Far Eastern Committee. These proposals were carried.

REMARKS BY OTHER LEADERS

Mr. Hughes followed with a suggestion that the first session then adjourn until Tuesday, Nov. 15, but there came shouts from the group of United States Senators present:

"Briand, Briand, Briand!"

Mr. Hughes bowed to the French Premier, who rose and spoke in French. His remarks were translated as follows:

If it is possible to obtain the security which she is entitled to expect, if it is only a question of making sacrifices, France is ready to consent. France has defended her liberty, and, I think, at the same time, the liberty of the world, and if the necessary precautions are taken in order to insure her life and safety, France, like you gentlemen, is ready to say "Down arms!"

There were cries then from the Senators for "Japan." Seemingly the Senators hesitated over the name of Prince Tokugawa, who rose and, adjusting his spectacles, said:

The world needs peace. It calls for political and economic stability, and to co-operate with the powers here so worthily represented for the accomplishment of such a lofty end, under the guidance of the distinguished presiding officer, will be for Japan a source of the greatest pleasure.

Successively, then, the Senators called for and heard responses from the representatives of Italy, China, Belgium, Holland and Portugal. Dr. Sze's hands trembled so that the paper in his hands rustled between them as he read. Finally some of the Senators called for a speech from their colleague, Mr. Lodge. The Senator rose, and instead of addressing the assemblage, murmured to Mr. Hughes:

"I move an adjournment."
And the conference then adjourned.

OFFICIAL TEXT OF AMERICAN NAVAL PROPOSALS

The American proposals for limitation of world armaments, as laid before the Conference by Secretary Hughes, called for suspension of all capital ship building programs, present and prospective, and for the scrapping of thousands of tons already built or being constructed. Under this part of the proposals the United States would sacrifice a total of 845,740 tons, Great Britain 583,375 tons, and Japan 448,928 tons. Each nation would pledge itself not to build any new capital warships for a period of ten years. The only exception to this would lie in indispensable replacement building, and limitations were set to this as follows: United States, 500,000 tons; Great Britain, 500,000 tons; Japan, 300,000 tons. The proposals name specifically the warships which each nation would possess after the execution of the whole plan. A special section of the proposals is devoted to auxiliary craft, certain categories of these being made exempt, and a definite limit of less than 500,000 tons being laid down for the United States and Great Britain, Japan following with a limited tonnage of 270,000 tons. The full official text of the American proposals follows:

The proposal of the United States for a limitation of naval armaments.

The United States proposes the following plan for a limitation of the naval armaments of the conferring nations. The United States believes that this plan safely guards the interests of all concerned.

In working out this proposal the United States has been guided by four general principles:

- (a) The elimination of all capital shipbuilding programs, either actual or projected.
- (b) Further reduction through the scrapping of certain of the older ships.
- (c) That regard should be had to the existing naval strength of the conferring powers.
- (d) The use of capital ship tonnage as the measurement of strength for navies and a proportionate allowance of auxiliary combatant craft prescribed.

Proposal for a limitation of naval armaments.

CAPITAL SHIPS—UNITED STATES

1. The United States to scrap all new capital ships now under construction and on their way to completion. This includes six battle cruisers and seven battleships on the ways and building and two battleships launched.

(Note—Paragraph 1 involves a reduction of fifteen new capital ships under construction, with a total tonnage when completed of 618,000 tons. Total amount of money already spent on fifteen capital ships, \$332,000,000.)

2. The United States to scrap all battleships up to but not including the Delaware and North Dakota.

(Note—The number of old battleships scrapped under Paragraph 2 is fifteen; their total tonnage is 227,740 tons. The grand total of capital ships to be scrapped is thirty, aggregating 845,740 tons.)

GREAT BRITAIN

3. Great Britain to stop further construction on the four new Hoods.

(Note—Paragraph 3 involves a reduction of four new capital ships not yet laid down, but upon which money has been spent, with a total tonnage when completed of 172,000 tons.)

4. In addition to the four Hoods, Great Britain to scrap her pre-dreadnoughts, second line battleships and first line battleships up to but not including the King George V. class.

(Note—Paragraph 4 involves the disposition of nineteen capital ships, certain of which have already been scrapped, with a tonnage reduction of 411,375 tons. The grand total tonnage of ships scrapped under this agreement will be 583,375 tons.)

JAPAN

5. Japan to abandon her program of ships not yet laid down, viz.: The Kii Owari, No. 7, No. 8, battleships, and Nos. 5, 6, 7 and 8, battle cruisers.

(Note—Paragraph 5 does not involve the stopping of construction on any ship upon which construction has begun.)

6. Japan to scrap three battleships: The Mutsu, launched; the Tosa and Kaga, building, and four battle cruisers, the Amagi and Akagi, building, and the Atago and Takao, not yet laid down, but for which certain material has been assembled.

(Note—Paragraph 6 involves a reduction of seven new capital ships under construction, with a total tonnage when completed of 288,100 tons.)

7. Japan to scrap all pre-dreadnoughts and capital ships of the second line. This to include the scrapping of all ships up to but not including the Settsu.

(Note—Paragraph 7 involves the scrapping of ten older ships with a total tonnage of 159,828 tons. The grand total reduction of tonnage on vessels existing, laid down, or for which material has been assembled is 448,928 tons.

FRANCE AND ITALY

8. In view of certain extraordinary conditions due to the World War affecting the existing strength of the navies of France and Italy, the United States does not consider necessary the discussion at this stage of the proceedings of the tonnage allowance of these nations, but proposes it be reserved for the later consideration of the conference.

OTHER NEW CONSTRUCTION.

9. No other new capital ships shall be constructed during the period of this agreement except replacement tonnage as provided hereinafter.

10. If the terms of this proposal are agreed to, then the United States, Great Britain and Japan agree that their navies, three months after the making of this agreement, shall consist of the following capital ships:

LIST OF CAPITAL SHIPS

United States

Maryland,	Arizona,	Arkansas,
California,	Pennsylvania,	Wyoming,
Tennessee,	Oklahoma,	Utah,
Idaho,	Nevada,	Florida,
Mississippi,	Texas,	North Dakota,
New Mexico,	New York,	Delaware,
Total, 18. Total tonnage, 500,650.		

Great Britain

Royal Sovereign,	Barham,	King George V.
Royal Oak,	Malaya,	Centurion,
Resolution,	Benbow,	Ajax,
Ramillies,	Emperor of	Hood,
Revenge,	India,	Renown,
Queen Elizabeth	Iron Duke,	Repulse,
Warspite,	Marlborough,	Tiger.
Valliant,	Erin,	
Total, 22. Total tonnage, 604,450.		

Japan

Nagato,	Fu-So,	Hi-Yei,
Hiuga,	Settsu,	Kongo.
Ise,	Kirishima,	
Yamashiro,	Haruna,	
Total, 10. Total tonnage, 299,700.		

DISPOSITION OF OLD AND NEW CONSTRUCTION

11. Capital ships shall be disposed of in accordance with methods to be agreed upon.

REPLACEMENTS

12. (a) The tonnage basis for capital ship replacement under this proposal to be as follows:

United States, 500,000 tons.
Great Britain, 500,000 tons.
Japan, 300,000 tons.

(b) Capital ships twenty years from date of completion may be replaced by new capital ship construction, but the keels of such new construction shall not be laid until the tonnage which it is to replace is seventeen years of age from date of completion. Provided, however, that the first replacement tonnage shall not be laid down until ten years from the date of the signing of this agreement.

(c) The scrapping of capital ships replaced by new construction shall be undertaken not later than the date of completion of the new construction, and shall be completed within three months of the date of completion of new con-

struction, or, if the date of completion of new construction be delayed, then within four years of the laying of the keels of such new construction.

(d) No capital ships shall be laid down during the term of this agreement whose tonnage displacement exceeds 35,000 tons.

(e) The same rules for determining tonnage of capital ships shall apply to the ships of each of the powers party to this agreement.

(f) Each of the powers party to this agreement agrees to inform promptly all the other powers party to this agreement concerning:

(1) The names of the capital ships to be replaced by new construction.

(2) The date of authorization of replacement tonnage.

(3) The dates of laying the keels of replacement tonnage.

(4) The displacement tonnage of each new ship to be laid down.

(5) The actual date of completion of each new ship.

(6) The fact and date of the scrapping of ships replaced.

(g) No fabricated parts of capital ships, including parts of hulls, engines and ordnance, shall be constructed previous to the date of authorization of replacement tonnage. A list of such parts will be furnished all powers party to this agreement.

(h) In case of the loss or accidental destruction of capital ships, they may be replaced by new capital ship construction in conformity with the foregoing rules.

AUXILIARY COMBATANT CRAFT

13. In treating this subject auxiliary combatant craft have been divided into three classes:

(a) Auxiliary surface combatant craft.

(b) Submarines.

(c) Airplane carriers and aircraft.

14. The term auxiliary surface combatant craft includes cruisers (exclusive of battle cruisers), flotilla leaders, destroyers, and all other surface types except those specifically exempted in the following paragraph:

15. Existing monitors, unarmored surface craft as specified in Paragraph 16, under 3,000 tons, fuel ships, supply ships, tenders, repair ships, tugs, mine sweepers and vessels readily convertible from merchant vessels are exempt from the terms of this agreement.

Comparison of naval tonnage of United States, Great Britain and Japan, which it is proposed to scrap

United States battleship South Carolina, one of the largest war ships in actual commission to be scrapped according to the Hughes program. The vessel is 452 feet long, 80 wide, and has a displacement of 16,000 tons. Its main battery consists of eight 12-inch guns

16. No new auxiliary combatant craft may be built exempt from this agreement regarding limitation of naval armaments that exceed 3,000 tons displacement and fifteen knots speed, and carry more than four 5-inch guns.

17. It is proposed that the total tonnage of cruisers, flotilla leaders and destroyers allowed each power shall be as follows:

For the United States, 450,000 tons.

For Great Britain, 450,000 tons.

For Japan, 270,000 tons.

Provided, however, that no power party to this agreement whose total tonnage in auxiliary surface combatant craft on Nov. 11, 1921, exceeds the prescribed tonnage shall be required to scrap such excess tonnage until replacements begin, at which time the total tonnage of auxiliary combatant craft for each nation shall be reduced to the prescribed allowance as herein stated.

LIMITATION OF NEW CONSTRUCTION

18. (A) All auxiliary surface combatant craft whose keels have been laid down by Nov. 11, 1921, may be carried to completion.

(B) No new construction in auxiliary surface combatant craft except replacement tonnage as provided hereinafter shall be laid down during the period of this agreement, provided, however, that such nations as have not reached the auxiliary surface combatant craft tonnage allowances hereinbefore stated may construct tonnage up to the limit of their allowance.

SCRAPPING OF OLD CONSTRUCTION

19. (A) Auxiliary surface combatant craft shall be scrapped in accordance with methods to be agreed upon.

(B) Submarines.

20. It is proposed that the total tonnage of submarines allowed each power shall be as follows:

For the United States, 90,000 tons.

For Great Britain, 90,000 tons.

For Japan, 54,000 tons.

Provided, however, that no power party to this agreement whose total tonnage in submarines on Nov. 11, 1921, exceeds the prescribed tonnage shall be required to scrap such excess tonnage until replacements begin, at which time the total tonnage of submarines for each nation shall be reduced to the prescribed allowance as herein stated.

LIMITATION OF NEW CONSTRUCTION

21. (A) All submarines whose keels have been laid down by Nov. 11, 1921, may be carried to completion.

(B) No new submarine tonnage except replacement tonnage as provided hereinafter shall be laid down during the period of this agreement, provided, however, that such nations as have not reached the submarine tonnage allowance hereinbefore stated may construct tonnage up to the limit of their allowance.

SCRAPPING OF OLD CONSTRUCTION

22. Submarines shall be scrapped in accordance with methods to be agreed upon.

(C)—AIRPLANE CARRIERS AND AIRCRAFT

23. It is proposed that the total tonnage of airplane carriers allowed each power shall be as follows: United States, 80,000 tons; Great Britain, 80,000 tons; Japan, 48,000 tons.

Provided, however, that no power party to this agreement whose

Comparative sizes of the three navies if Secretary Hughes's reduction proposal is adopted

total tonnage in airplane carriers on Nov. 11, 1921, exceeds the prescribed tonnage shall be required to scrap such excess tonnage until replacements begin, at which time the total tonnage of airplane carriers for each nation shall be reduced to the prescribed allowance as herein stated.

LIMITATION OF NEW CONSTRUCTION, AIRPLANE CARRIERS.

24. (a) All airplane carriers whose keels have been laid down by Nov. 11, 1921, may be carried to completion.

(b) No new airplane carrier tonnage except replacement tonnage as provided herein shall be laid down during the period of this agreement, provided, however, that such nations as have not reached the airplane carrier tonnage hereinbefore stated may construct tonnage up to the limit of their allowance.

SCRAPPING OF OLD CONSTRUCTION

25. Airplane carriers shall be scrapped in accordance with methods to be agreed upon.

AUXILIARY COMBAT CRAFT, REPLACEMENTS

26. (a) Cruisers seventeen years of age from date of completion may be replaced by new construction. The keels for such new construction shall not be laid until the tonnage is intended to replace is fifteen years of age from date of completion.

(b) Destroyers and flotilla leaders twelve years of age from date of completion may be replaced by new construction. The keels of such new construction shall not be laid until the tonnage is intended to replace is eleven years of age from date of completion.

(c) Submarines twelve years of age from date of completion may be replaced by new submarine construction, but the keels of such new construction shall not be laid until the tonnage which the new tonnage is to replace is eleven years of age from date of completion.

(d) Airplane carriers twenty years of age from date of completion may be replaced by new airplane carrier construction, but the keels of such new construction shall not be laid until the tonnage which it is to replace is seventeen years of age from date of completion.

(e) No surface vessels carrying guns of calibre greater than eight inches shall be laid down as replacement tonnage for auxiliary combatant surface craft.

(f) The same rules for determining tonnage of auxiliary combatant craft shall apply to the ships of each of the powers party to this agreement.

(g) The scrapping of ships replaced by new construction shall be undertaken not later than the date of completion of the new construction and shall be completed within three months of the date of completion of the new construction, or, if the completion of new tonnage is delayed, then within four years of the laying of the keels of such new construction.

(h) Each of the powers party to this agreement agrees to inform all the other parties to this agreement concerning:

(1) The names or numbers of the ships to be replaced by new construction.

(2) The date of authorization of replacement tonnage.

(3) The dates of laying the keels of replacement tonnage.

(4) The displacement tonnage of each new ship to be laid down.

(5) The actual date of completion of each new ship.

(6) The fact and date of the scrapping of ships replaced.

(i) No fabricated parts of auxiliary combatant craft, including parts of hulls, engines and ordnance, will be constructed previous to the date of authorization of replacement tonnage. A list of such parts will be furnished all powers party to this agreement.

(j) In case of the loss or accidental destruction of ships of this class they may be replaced by new construction in combatant vessels of any class in such a manner that they later may become combatant vessels in another navy. They bind themselves further not to acquire combatant vessels from any foreign source.

29. No capital ship tonnage nor auxiliary combatant craft tonnage for foreign account shall be constructed within the jurisdiction of any one of the powers party to this agreement during the term of this agreement.

MERCHANT MARINE.

30. As the importance of the merchant marine is in inverse ratio to the size of naval armaments, regulations must be provided to govern its conversion features for war purposes.

SECOND PLENARY SESSION

Scarcely had the bold and concrete American proposals ceased to echo around the world when approval and acceptance came from the Governments concerned. This was the second dramatic surprise of the conference, and one with perhaps even a deeper thrill in its significance. It marked the end of one era in world history and the beginning of another.

The second plenary session of the conference had met in Continental Hall on Tuesday morning, Nov. 15, and before the assembled delegates stood a white-haired man, his shoulders bowed as if weighed down by the responsibility he bore, and declared in the name of Great Britain the abandonment of her traditional policy of supremacy on the sea and her willingness to accept a status of naval equality with another nation—the United States of America. Supported in his words by a cablegram from Premier Lloyd George, Mr. Bal-

four said of the Hughes naval limitation plan: "We think the limitation is reasonable; we think it should be accepted; we firmly believe that it will be accepted." Then a short, spare man with inky hair stood up and in the name of Japan pledged his Government to reduce its fleet, disavowing all ambitions to rival the navies of America and England, and pledging his country against aggressiveness on the sea. Admiral Baron Kato was speaking by authority of instructions both from the dead Premier Hara and from the new Japanese Premier, Baron Takahashi. France and Italy, though not directly affected by the cutting down of navies, gave hearty endorsement. Thus was the great drama played at Washington by the representatives of many millions of men and women.

Sitting there beneath the spell of mighty events, as a correspondent wrote, the impression swept over one that, after all, it was Great Britain who was giving up the biggest thing—something she might have lost some time, but not just yet—a claim to glory which might have been hers for some time to come. America was called on to give up something within sight, something she might achieve, but something not yet hers. But Great Britain was laying down something which had been hers for a century. The world's encyclopedias for 1916 set down the naval policy of Great Britain as that of having a fleet as great as any other two nations. That is her policy no more. That chapter in the world's history was closed on Nov. 15, 1921. The new chapter which was begun that day is America's chapter in history. Thus has fate left the United States as the great victor in the World War.

Promptly on the hour Secretary Hughes, as Chairman of the conference, called the meeting to order and announced the formation of the two Committees of the Whole, one of five nations on armaments and another of all nine nations at the conference on

Far Eastern questions. He explained that the plan was for these committees to consider in private all matters presented and report to plenary sessions of the conference. The plan was approved by common consent.

MR. BALFOUR'S ADDRESS

Mr. Balfour then took the floor. He was greeted with a round of applause. As is his habit, he had no prepared speech, only a few notes on several crumpled sheets of paper, which he held crushed in his hand and referred to at only rare intervals. Following is the full official text of his historic speech:

Mr. Chairman: You have invited those who desire to continue the discussion which began on Saturday last. I think it would be very unfortunate if we were to allow the events of Saturday to pass without some further observation on the part of those to whom you, Mr. Chairman, addressed your speech, and if, for any reason which I shall venture to explain in a moment, I am the first to take up the challenge, it is because of all the powers here assembled the country which I represent is, as everybody knows, the most intimately interested in naval questions.

Statesmen of all countries are beginning to discover that the labors and difficulties of peace are almost as arduous and require almost as great qualities as those which are demanded for the conduct of a successful war.

These struggles to restore the world to the condition of equilibrium, so violently interfered with by five years of war, is one that taxes and must tax the efforts of everybody. And I congratulate you, if I may, Mr. Chairman, on the fact that you have added the new anniversary which will henceforth be celebrated in connection with this movement toward reconstruction in the same spirit in which we welcomed the anniversary celebrated only a few hours ago, on the day on which hostilities came to an end. If the 11th of November in the minds of the allied and associated powers, in the minds perhaps not less of all the neutrals—if that is a date imprinted on grateful hearts, I think Nov. 12 will also prove to be an anniversary welcomed and thought of in a grateful spirit by those who in the future shall look back upon the arduous struggle now being made by the civilized nations of the world, not merely to restore pre-war conditions, but to see that war conditions shall never again exist.

A GREAT HISTORICAL EVENT

I count myself among the fortunate of the earth in that I was present, and to that

extent had a share in the proceedings of last Saturday. They were memorable, indeed. The secret was admirably kept. I hope that all the secrets, so long as they ought to be secrets, of our discussions will be as well kept. In my less sanguine mood I have doubts. But, however that may be, the secret in this case was most admirably kept, and I listened to a speech which I thought eloquent, appropriate, in every way a fitting prelude to the work of the conference which was about to open, or which, indeed, had been opened by the President, without supposing that anything very dramatic lay behind. And suddenly I became aware, as I suppose all present became aware, that they were assisting not merely at an eloquent and admirable speech, but at a great historical event. It was led up to with such art, the transition seemed so natural, that when the blow fell, when the speaker uttered the memorable words which have now gone round and found echo in every quarter of the civilized world, it came as a shock of profound surprise; it excited the sort of emotions we have when some wholly new event springs into view, and we felt that a new chapter in the history of world reconstruction had been warily opened.

Mr. Chairman, the absolute simplicity of the procedure, the easy transition and the great dramatic climax were the perfection of art, which shows that the highest art and the most perfect simplicity are very often, indeed very commonly, combined.

Now, I said I would explain, if I was allowed, why I venture to rise first today to deal with the subject which is in all our hearts. As I have hinted, it is because the British Empire and Great Britain, these two together, are more profoundly concerned with all that touches matters naval than it is possible for any other nation to be, and this not, believe me, for any reasons of ambition, not for any reasons drawn from history or tradition, but from the hard, brutal necessities of claims and obvious facts.

There never has been in the history of the world a great empire constituted as the British Empire is: It is a fact no doubt familiar to everybody whom I am addressing at the present moment, but has everybody whom I am addressing imaginatively conceived precisely what the situation of the British Empire is in this connection?

Most of my audience are citizens of the United States. The United States stands solid, impregnable, self-sufficient, all its lines of communication protected, doubly protected, completely protected from any conceivable hostile act. It is not merely that you are 110,000,000 of population; it is not that you are the wealthiest country in the world; it is that the whole configuration of your country, the geographical position of your country, is such that you are wholly immune from the particular perils to which, from the nature of the case, the British Empire is subjected.

BRITAIN'S SPECIAL NEEDS

Supposing, for example, that your Western States, for whose safety you are responsible, were suddenly removed 10,000 miles across the sea. Supposing that you found that the very heart of your empire, the very heart of this great State, was a small, a crowded island depending for over-sea trade not merely, not chiefly, for its luxuries, but depending upon overseas communication for the raw material of those manufactures by which its superabundant population lives; depending upon the same over-sea communication for the food upon which they subsist. Supposing it was a familiar thought in your minds that there never was at any moment of the year within the limits of your State more than seven weeks' food for the population, and that that food had to be replenished by over-sea communication. Then, if you will draw that picture, and if you will see all what it implies and all that it carries with it, you will understand why it is that every citizen of the British Empire, whether he comes from the far dominions of the Pacific or whether he lives in the small island in the North Sea, never can forget that it is by sea communication that he lives and that without sea communication he and the empire to which he belongs would perish.

Now, ladies and gentlemen, do not suppose that I am uttering laments over the weakness of my empire. Far from it. We are strong, I hope, in the vigorous life of its constituent parts. We are strong, I hope, in the ardent patriotism which binds us all together. But this strategic weakness is obvious to everybody who reflects; it is present in the minds of our enemies, if we have enemies. Do not let it be forgotten by our friends.

These reflections, with your kindness, I have indulged in in order to explain why it is that I am addressing you at the present time. We have had to consider, and we have considered, the great scheme laid before you by our Chairman. We have considered it with admiration and approval. We agree with it in spirit and in principle. We look to it as being the basis of the greatest reform in the matter of armament and preparation for war that has ever been conceived or carried out by the courage and patriotism of statesmen. I do not pretend, of course—it would be folly to pretend—that this or any other scheme, by whatever genius it may have been contrived, can deal with every subject; can cover the whole ground of international reconstruction. It would be folly to make the attempt and it would be folly to pretend that the attempt has yet been made in any single scheme as was clearly explained by the Secretary of State on Saturday. The scheme deals, and deals only, with three nations which own the largest fleets at present in the world. It therefore, of necessity, omits all consideration for the time being of those Euro-

pean nations who have diminished their fleets, and who at present have no desire, and I hope never will have any desire, to own fleets beyond the necessities that national honor and national defense require.

Again, it does not touch a question which every man coming from Europe must feel to be a question of immense and almost paramount importance. I mean the heavy burden of land armaments. That is left on one side, to be dealt with by other schemes and in other ways.

ENGLAND'S ENDORSEMENT

What it does is surely one of the biggest things that have ever yet been done by constructive statesmanship. It does deal with the three great fleets of the world, and in the broad spirit in which it deals with those fleets, in the proportion of disarmament which it lays down for those fleets, the Government of the country which I represent is in the fullest and the heartiest sympathy with the policy which the United States has brought before us for our consideration. They have, as we think most rightly, taken the battle fleet as the aggressive unit which they have in the main to consider; and in the battle fleet you must include those auxiliary ships without which a modern battle fleet has neither eyes nor ears, has little power of defense against certain forms of attack, and little power of observation; little power of dealing with any equal foe to which it may be opposed.

Taking those two as really belonging to one subject, namely, the battle fleet, taking those two, the battleships themselves and the vessels auxiliary and necessary to a battle fleet, we think that the proportion between these various countries is acceptable, we think the limitation of amounts is reasonable; we think it should be accepted, we firmly believe that it will be accepted.

In my view, the message which has been sent around the world on Saturday is not a message which is going to be received by those most concerned with cool approbation. I believe it is going to be received by them with warm, hearty approval, and with every effort at full, loyal and complete co-operation.

I think it would be ill-fitting on such an occasion as this if I were to attempt to go into any details. There are questions—and I have no doubt that the Secretary of State, our Chairman, would be the first to tell us that there are details which can only be adequately dealt with in committee. At the first glance, for example, and I give it merely as an example, our experts are inclined to think that perhaps too large an amount of tonnage has been permitted for submarines. Submarines are a class of vessels most easily abused in their use, and which, in fact, in the late war, were most grossly abused. We quite admit that probably the submarine is the defensive weapon, properly used, of the weak, and that it

would be impossible, or, if possible, it might well be thought undesirable, to abolish them altogether. But the amount of submarine tonnage permitted by the new scheme is far in excess, I believe, of the tonnage possessed by any nation at the present moment, and I only throw it out as a suggestion that it may be well worth considering whether that tonnage should not be further limited, and whether, in addition to limiting the amount of the tonnage, it might not be practicable, and, if practicable, desirable, to forbid altogether the construction of those submarines of great size which are not intended for defense, which are not the weapon of the weaker party, whose whole purpose is attack and whose whole purpose is probably attack by methods which civilized nations would regard with horror.

ALL ESSENTIALS ACCEPTED

However, there may be other questions of detail, questions connected with replacement, questions connected with cruisers, which are not connected with or required for fleet action. But those are matters for consideration by the technical experts, and, however they be decided, they do not touch the main outline of the structure which the United States Government desires erected and which we earnestly wish to help it in erecting.

That structure stands, as it seems to me, clear and firm, and I cannot help thinking that in the broad outline, whatever may happen in the course of these discussions during the next few weeks, that structure will remain, as it was presented by its original architects, for the admiration and for the use of mankind.

I have little more to say except this: It is easy to estimate in dollars or in pounds, shillings and pence the saving to the taxpayer of each of the nations concerned which the adoption of this scheme will give. It is easy to show that the relief is great. It is easy to show that indirectly it will, as I hope and believe, greatly stimulate industry, national and international, and do much to diminish the difficulties under which every civilized Government is at this time laboring. All that can be weighed, measured, counted; all that is a matter of figures. But there is something in this scheme which is above and beyond numerical calculation. There is something which goes to the root, which is concerned with the highest international morality.

This scheme after all—what does it do? It makes idealism a practical proposition. It takes hold of the dream which reformers, poets, publicists, even potentates, as we heard the other day, have from time to time put before mankind as the goal to which human endeavor should aspire.

A narrative of all the attempts made, of all the schemes advanced, for diminishing the sorrows of war, is a melancholy one. Some fragments were laid before you by

our Chairman on Saturday. They were not exhilarating. They showed how easy it is to make professions and how difficult it is to carry those professions into effect.

CABLE FROM LLOYD GEORGE

What makes this scheme a landmark is that, combined with the profession is the practice, that in addition to the expression, the eloquent expression of good intentions, in which the speeches of men of all nations have been rich, that a way has been found in which, in the most striking fashion, in a manner which must touch the imagination of everybody, which must come home to the dullest brain and the hardest heart, the Government of the United States has shown its intention not merely to say that peace is a very good thing, that war is horrible, but there is a way by which wars can really be diminished, by which the burdens of peace, almost as intolerable as the burdens of war, can really be lightened for the populations of the world. And in doing that, in doing it in the manner in which they have done it, in striking the imagination not merely of the audience they were addressing, not merely of the great people to whom they belonged, but of the whole civilized world, in doing that they have, believe me, made the first and opening day of this congress one of the landmarks in human civilization.

I have said all that I propose to say, but if you will allow me I will read a telegram put into my hands just as I reached this meeting, this congress, from the British Prime Minister:

Following for Mr. Balfour from Mr. Lloyd George:

Many thanks for your telegram. If you think it will serve useful purpose to let them know, message might be published, as follows:

"Government have followed proceedings at opening session of conference with profound appreciation, and whole-heartedly indorse your opinion that speeches made by President Harding and Secretary of State were bold and statesmanlike utterances, pregnant with infinite possibilities. Nothing could augur better for ultimate success of conference. Please convey to both our most sincere congratulations."

When Mr. Balfour, referring to the proposal that scraps half of Britain's mighty fleet and lays down a permanent proportion of five-five-three for the sea strength of England, America and Japan, called it "one of the best things ever done by constructive statesmanship," the audience rose to their feet in a great demonstration of enthusiasm, and there was a similar outburst of admiration and approval when he announced his firm belief that Great Britain would accept it.

THE VOICE OF JAPAN

It was next the turn of Admiral Baron Kato of the Japanese delegation. As he rose and began speaking in his own language a hush of puzzled interest fell upon the assemblage, for few indeed of his hearers could understand Japanese. Yet as he proceeded they easily divined from his manner and gestures that he was adding Japan's indorsement to the Hughes program of naval limitation. The official translation of his statement is as follows:

Japan deeply appreciates the sincerity of purpose evident in the plan of the American Government for the limitation of armaments. She is satisfied that the proposed plan will materially relieve the nations of wasteful expenditures and cannot fail to make for the peace of the world.

She cannot remain unmoved by the high aims which have actuated the American project. Gladly accepting, therefore, the proposal in principle, Japan is ready to proceed with determination to a sweeping reduction in her naval armament.

It will be universally admitted that a nation must be provided with such armaments as are essential to its security. This requirement must be fully weighed in the examination of the plan. With this requirement in view, certain modifications will be proposed with regard to the tonnage basis for replacement of the various classes of vessels. This subject should be referred to special consideration by naval experts. When such modifications are proposed, I know that the American and other delegations will consider them with the same desire to meet our ideas as we have to meet theirs.

Japan has never claimed or had any intention of claiming to have a general establishment equal in strength to that of either the United States or the British Empire. Her existing plan will show conclusively that she never had in view preparations for offensive war.

ITALY'S OFFICIAL APPROVAL

Senator Carlo Schanzer, the blond-bearded delegate from Italy, then addressed the delegates, expressing the satisfaction of his Government over the progress made, and suggesting that the conference consider also the fleets of Italy and France. He spoke as follows:

The time has come and this conference has been called not for general resolutions and for mutual advice, but for action. You proved at once that you mean to carry out your suggestions into practical execution.

[American Cartoon]

—New York Tribune

IT ISN'T THE FIRST COST OF A CAR; IT'S THE UPKEEP THAT COUNTS

The first impression made by your statement concerning the limitation of naval armament is one of great sincerity, great force, great courage. You stated clearly and unhesitatingly to the conference and to the public opinion of the entire world the question of the limitation of naval armament as concerns especially the great naval powers, and you did it with precision of facts and of figures, thus affording a solid basis for discussion.

We shall not consider the technical side of the question which concerns especially the great naval powers. We only wish to express in the name of the Italian delegation our great satisfaction in the proposals of general order. We hope that your proposal when accepted will be the source of the most beneficent economic consequences. The peace of the world cannot be permanently maintained if you do not consider the ways and means to re-establish the economic balance of the world.

Modern civilization is an economic civilization, and the modern world, in spite of the distance and natural barriers, cannot be conceived except as a single great economic system. This economic system has been shattered by the war. It is necessary now to revise it and get it into motion again.

We think that your proposal is the first effective step toward giving the world a release of such nature as to enable it to start the work of its economic reconstruction.

In respect to Mr. Balfour's reference to the question of French and Italian naval forces, may I be allowed to say a few words?

I think it rather difficult to separate the question of Italian and French naval armament limitation from the general question of the limitation of naval armaments of the world. Certainly, as you have stated, Mr. Chairman, in your address, the question concerning the great naval powers must be considered in the first place, and you have

stated that the United States proposes that this matter be left for the later consideration of the conference. So we wish and feel sure in accordance with your statement that the French and Italian naval question will be considered by the conference before concluding the question involved in your proposal.

In conclusion, Mr. Chairman, I express in the name of the Italian delegation the most fervent wish that the conference, taking your proposal as its working basis, may lead to a result which would be extremely happy not only for the powers directly interested but for the entire world.

PREMIER'S BRIAND'S SPEECH

Aristide Briand, head of the French delegation—and the only Premier who succeeded in attending the Washington conference—was greeted with applause as his shaggy head appeared above the line of chairs. The audience listened with delight to the flood of pure French that flowed from his lips with no apparent effort. He urged the necessity of adopting definite rules of procedure and said he would welcome any opportunity to explain the problems of France in regard to land armaments. The official translation of his speech follows:

Mr. Chairman: I fully concur with what the President of the British delegation has just said, when at the beginning of his eloquent statement he said that this conference would be one of the great landmarks in the history of the world and of civilization. While I do not quite agree with him, at least not to the same extent, as to his feelings, as expressed, when he first heard the statement made by the representative of the United States, I may say, for my own part, that when coming here I felt quite sure that a great people like the United States could not have begun such a momentous initiative without having some definite, clear-cut purpose. I think, gentlemen, that we have no longer the right in those questions of peace and war—when we undertake to promise to the world that there shall be no more war; that there shall be everlasting peace after the painful struggle from which we have just emerged—we have no right to

[American Cartoon]

—San Francisco Chronicle

HIS HANDS FULL

let the people of the world hope for a final peace unless we have made up our minds to prepare and to decide upon the means that are most appropriate in order to realize these hopes.

Many conferences and congresses have already met in order to try to carry out this noble idea, and Mr. Balfour was quite right when he pointed out the great danger there was in looking at this question through the glass of idealism. But, Mr. Secretary, you have shown us the way; you have shown that it was no longer a question of groping for a way out of the difficulty; you have struck out boldly: the opportunity for us by setting the example. I may say that we are back of you, Mr. Secretary.

Of course, during these difficult, arduous examinations of the details of the subject, upon which, after all, depends the practical realization, if it happens that we are taken out of the straight way and feel the temptation of using the devious paths, we, on the part of France, are ready to join our efforts to those of other men of good-will and help in returning to the fair, straight road that would take us to our goal.

The question with which we have first to deal here is, of course, one that mainly concerns the great naval powers; but I may

[American Cartoon]

—San Francisco Chronicle

CAN THE CONFERENCE FIND THE ANSWER

say for my part that I have listened with great joy to the very large, broad and general adhesion given in principle by the Governments of Great Britain and Japan. It is not that France feels entirely disinterested in this question. We shall have, I hope, an opportunity of saying this and showing it, but I may say now—and this will be carried out later on by figures and by demonstration—that we have already entered upon the right way, and that we have already done something in the direction you indicate. The war has kept us down to a certain level, of course. It has prevented us from carrying out our plans for a weak fleet, perhaps too weak for the necessities of national defense.

REDUCTION OF ARMIES

But I will not dwell on this subject. I rather turn to another side of the problem to which Mr. Balfour has alluded, and I thank him for this. Is it only a question here of economy? Is it only a question of estimates and budgets? If it were so, if that were the only purpose you have in view, it would be really unworthy of the great nation that has called us here.

So, the main question, the crucial question, which is to be discussed here is to know if the peoples of the world will be at last able to come to an understanding in

order to avoid the atrocities of war. And then, gentlemen, when it comes on the agenda, as it will inevitably come, to the question of land armament, a question particularly delicate for France, as you are all aware, we have no intention to eschew this. We shall answer your appeal, fully conscious that this is a question of grave and serious nature for us.

The question will be raised—it has been raised, gentlemen—and if there is a country that desires, that demands, that the question of land armaments should be raised, it is France. It will come in due time before the conference, and I hope that I shall enjoy the opportunity and that I shall be able to state publicly in one of the meetings of this conference what the position of France is, so that the United States and the world may fully know; and when I have tried to prove this, when you have listened to this demonstration, I am quite sure that you will be convinced, gentlemen, that France, after the necessities of safety and life have been adequately secured, harbors no thought whatever of disturbing the peace of the world. The time will come for this demonstration.

Today I will simply record, with great feelings of joy, the agreement that has already been reached here on this first great problem of the conference, and express the wish that we shall come to a similar agreement upon all the other questions that await the conference.

CLOSING WORDS BY MR. HUGHES

Chairman Hughes brought the session to a close by assuring M. Briand that he would have full opportunity to present the case of France, and by summing up the situation in the following words:

Gentlemen: We have listened not only with gratification, but I may say with profound emotion, to these expressions, so cordial, of agreement in principle with the proposal that has been made on behalf of the United States with respect to the limitation of naval armament. It will now be in order to consider the many details which must be associated with an exact agreement for that purpose.

There are subjects, it has been suggested here, which will appropriately be examined by naval experts, and it is the desire of the American Government that what has been proposed by that Government, with the

suggestions that have been made by Mr. Balfour on behalf of the British Government, by Admiral Kato on behalf of the Government of Japan, and any other suggestions by way of modification or emendation or criticism that may be proper, shall all be thoroughly considered, to the end that after the most mature and careful deliberation we may accomplish the great purpose which this conference in this matter has been assembled to achieve.

But while the time is now opportune for the consideration of these details, the great first step has been taken in this notable expression of approval in principle of what has been suggested by the American Government. And do I go too far in saying that we may commit this matter to a technical examination with the assurance, which I am very certain will be gratifying to the hearts of our people, that there will come out of this conference an appropriate agreement for satisfactory, important, essential reduction of naval armament, to the end that offensive naval warfare will be no more and this great advance will be made to the accomplishment of an enduring peace?

If it is not desired to have further discussion of the matter which has been brought before us, I suppose it will be in order to adjourn to give opportunity for the consideration of the project to which I have referred. And may I add that I have no doubt that I express the wish of the conference that at an opportune time M. Briand will enjoy the opportunity of presenting to the conference most fully the views of France with regard to the subject of land armaments, which we must discuss?

On motion of M. Briand the conference then adjourned subject to call by the Chairman.

FIRST WORK OF COMMITTEES

It had been announced formally by Secretary Hughes, at the opening session of Nov. 15, that the work of the conference would be done through two Committees of the Whole, one composed of the delegates of the five main nations, viz., Great Britain, France, Italy, Japan and the United States, to deal with limitation of armament, the other of all nine nations, including China, Belgium, Holland and Portugal, whose duty it would be to deal with details of program and procedure on all matters affecting the Pacific and the Far East. It had been agreed that meetings of these committees and of their sub-committees should be held in the

Pan American Building and should not be open to the public.

The first meeting of the Pacific Committee had been held in the afternoon of Nov. 14. The action taken was officially given out in this communique:

The Committee on Program and Procedure with respect to Pacific and Far Eastern questions, appointed by the conference in its session of Nov. 12, met at 3 P. M. Monday, Nov. 14, at the Pan-American Union, there being present the following delegates: Messrs. Hughes (Chairman), de Cartier de Marchienne, Balfour, Sze, Briand, Schanzer, Shidehara, Van Karnebeek and D'Alte, with their respective secretaries.

It was decided to recommend to the conference the appointment of a committee composed of all the plenipotentiary delegates of the United States, Belgium, the British Empire, China, France, Italy, Japan, Netherlands and Portugal, to examine and report to the full conference with respect to Pacific and Far Eastern questions, and with power to set up such sub-committees as it might from time to time deem desirable. Mr. Hughes, as Chairman of the committee and of the conference, undertook to submit this proposal to the conference.

J. Butler Wright was nominated as secretary to the Committee on Program and Procedure, with respect to Pacific and Far Eastern questions.

The Committee of the whole on Limitation of Armament met in the afternoon of the 15th and, after some discussion, appointed a sub-committee of expert advisers instructed to report on each detail of the arms limitation plan as soon as agreement had been reached on it. The committee's anxiety to make progress was seen in the decision to sanction all such accepted details without waiting for agreement on the whole. Theodore Roosevelt, as head of the American technical advisers on naval affairs, was elected Chairman of this special sub-committee. The official report of the meeting of the committee was as follows:

The first meeting of the Committee on Limitation of Armament was held in the Pan American Building Tuesday, Nov. 15, 1921. There were present the delegates of the United States of America, the British Empire, France, Italy and Japan, with a Secretary for each delegation, and the Secretary General of the conference, who was chosen Secretary of the committee.

A subcommittee, composed of one technical naval adviser for each of the five powers,

[American Cartoon]

UNCLE SAM: "And that's the shirt I was to wear at the party!"

was constituted to take under immediate advisement the questions raised by the proposal of the United States for a limitation of naval armament, and to report to the committee from time to time the program of their deliberations. The subcommittee is composed of the following: Colonel Roosevelt, Admiral Beatty, Vice Admiral Le Bon, Vice Admiral Action and Vice Admiral Kato, with full power of substitution for each adviser. At the suggestion of Mr. Balfour, it was agreed that Colonel Roosevelt should act as Chairman of this subcommittee. The committee adjourned to meet at the call of the Chairman.

The Advisory Committee of the American delegation, consisting of twenty-one prominent men and women appointed previously by President Harding to serve under the general direction of Secretary Hughes, held a special meeting on Nov. 14, at which Theodore Roosevelt, Assistant Secretary of the Navy, explained the disarmament program of the United States and declared that its execution would mean a saving of more than \$200,000,000 on construction. A discussion followed (Chairman Sutherland presiding), in which the committee showed complete unanimity in backing this program. Six sub-com-

mittees were appointed at that time. On Nov. 16 the Executive Committee met at Washington and began to formulate its plans for helping the arms conference. The Sub-committee on Far Eastern Questions also began its work on similar lines. [The full membership of the Advisory Committee will be found in the list of delegates at the end of this article.]

CHINA'S TEN POINTS

The disarmament conference met in private session on Nov. 16 as a Committee of the Whole on Pacific problems. Here the opening gun on that front, so to speak, was fired by China in the form of ten

official demands or proposals drawn up for China by Minister Sze. In general these proposals laid down certain principles on which the whole coming diplomatic battle should—in the opinion of the country most concerned—be conducted. They called for the complete removal of all political, jurisdictional and administrative restrictions upon the Chinese Republic. The United States, Great Britain and Japan all had indicated their willingness to start the debate on bases presented by the Chinese, and Mr. Sze accordingly had formulated the broad lines of his country's desires, notifying the conference at the same time that it was the intention of his delegation to bring forward more detailed plans later. His statement in full is as follows:

In view of the fact that China must necessarily play an important part in the deliberations of the conference with reference to the political situation in the Far East, the Chinese delegation has thought it proper that they should take the first opportunity to state certain general principles which, in their opinion, should guide the conference in the determinations which it is to make. Certain of the specific applica-

tions of the principles which it is expected that the conference will make it is our intention later to bring forward, but at the present time it is deemed sufficient simply to propose the principles which I shall presently read.

In formulating these principles the purpose has been kept steadily in view of obtaining rules in accordance with which existing and possible future political and economic problems in the Far East and the Pacific may be most justly settled and with due regard to the rights and legitimate interests of all the powers concerned. Thus it has been sought to harmonize the particular interests of China with the general interests of all the world.

China is anxious to play her part not only in maintaining peace, but in promoting the material advancement and the cultural development of all the nations. She wishes to make her vast natural resources available to all peoples who need them, and in return to receive the benefits of free and equal intercourse with them. In order that she may do this, it is necessary that she should have every possible opportunity to develop her political institutions in accordance with the genius and needs of her own people. China is now contending with certain difficult problems which necessarily arise when any country makes a radical change in her form of government.

These problems she will be able to solve if given the opportunity to do so. This means not only that she should be freed from the danger or threat of foreign aggression, but that, so far as circumstances will possibly permit, she be relieved from limitations which now deprive her of autonomous administrative action and prevent her from securing adequate public revenues.

In conformity with the agenda of the conference, the Chinese Government proposes for the consideration of and adoption by the conference the following general principles to be applied in the determination of the questions relating to China:

1. (a)—The powers engage to respect and observe the territorial integrity and political and administrative independence of the Chinese Republic. (b) China upon her part is prepared to give an undertaking not to alienate or lease any portion of her territory or littoral to any power.

2. China, being in full accord with the principle of the so-called open door, or equal opportunity for the commerce and industry of all nations having treaty relations with China, is prepared to accept and apply it in all parts of the Chinese Republic without exception.

3. With a view to strengthening mutual confidence and maintaining peace in the Pacific and the Far East the powers agree not to conclude between themselves any treaty or agreement directly affecting China or the general peace in these regions

without previously notifying China and giving to her an opportunity to participate.

4. All special rights, privileges, immunities or commitments, whatever their character or contractual basis, claimed by any of the powers in or relating to China, are to be declared, and all such or future claims not so made known are to be deemed null and void. The rights, privileges, immunities and commitments, now known or to be declared, are to be examined with a view to determining their scope and validity and, if valid, to harmonize them with one another and with the principles declared by this conference.

5. Immediately, or as soon as circumstances will permit, existing limitations upon China's political, jurisdictional and administrative freedom of action are to be removed.

6. Reasonable, definite terms of duration are to be attached to China's present commitments which are without time limits.

7. In the interpretation of instruments granting special rights or privileges, the well established principle of construction that such grants shall be strictly construed in favor of the grantors is to be observed.

8. China's rights as a neutral are to be fully respected in future wars to which she is not a party.

9. Provision is to be made for the peaceful settlement of international disputes in the Pacific and the Far East.

10. Provision is to be made for future conferences to be held from time to time for the discussion of international questions relative to the Pacific and the Far East, as a basis for the determination of common policies of the signatory powers in relation thereto.

It was noted at once that some of these principles would be deemed debatable by one or more of the other countries concerned. General agreement could be expected upon the open door, which the United States regards as vital and which Great Britain also supports. Point 5 was the one most likely to raise protracted discussion, as it not only involved the abolishing of extra-territorial jurisdiction but was so sweeping that it might be construed to mean the surrender of certain guarantees which perhaps none of the powers would be ready to abandon. The abolishment of the zone of influence system was regarded as presenting fewer difficulties, as most of the powers had already given up the rights claimed under the old arrangement. The plan, of course, involves the Japanese departure from Shan-

tung, including Kiao-Chau, as well as the departure of other nations from leased ports, if the principle should be applied to its limit. The demand in Point 4 that all nations having secret agreements with regard to China must publish them or throw them away is in line with the Chinese view that the whole question of the relation of China to the rest of the world should be opened up to sunlight and revised. The Anglo-Japanese alliance itself is closely related to this subject. The program as a whole does not mean that China wishes to denounce all agreements she has with outside countries, as, for instance, for the conduct of her railroads and post offices; but she wants these agreements limited and placed on a more businesslike basis. The whole question of Siberia, however, is involved. All in all, the "ten points" of China bade fair to open up one of the most far-reaching and complicated debates in diplomatic history. Nor was the situation simplified by the fact that not a majority vote but absolute agreement of all parties was necessary for a decision.

COMMENT ON PROPOSALS

The immediate effect of the proposals made by Secretary Hughes regarding naval limitation at the first session of the conference was electrifying. The emotion shown even by the reticent Japanese delegates was typical of the impression produced. "The words which the President and the Secretary of State spoke yesterday," said Prince Tokugawa on Nov. 13, "have thrilled us no less than they have thrilled the nations of Europe and America." Baron Kato declared that the proposals of Secretary Hughes had "clarified the situation," and that with fears eliminated on both sides, "an agreement, so far as Japan and the United States are concerned, cannot fail to come."

The comment in England, France, Italy and Japan, to say nothing of Holland and Belgium, combined a large amount of enthusiasm with considerations of just how far the con-

ference would go toward disarmament, and the immediate consequences to each of the nations involved. These national reactions were reflected in most cases by the foreign observers at Washington. The British correspondents found their enthusiasm tempered by the question of Great Britain's need of imperial defense. Lieut. Col. Repington, for instance, correspondent of The London Telegraph, wrote on Nov. 14:

The natural inclination of all here is to be somewhat carried off our feet by the grandiose character of the plan, and the historic aspect of the world-moving conference. America is self-contained, and not liable to serious attack from any power. Japan's army renders her secure at home. But England is not self-contained, nor has she a great army. She has a scattered empire, oceanic in character, so the preservation of the maritime routes is indispensable to her existence.

In view of these conditions, declared Colonel Repington, it would scarcely be reasonable to ask Great Britain to ascribe to the same standard of auxiliary cruisers, especially in view of the fact that such British cruisers serving on distant stations would not be able to co-operate with the main fleet. Nor could the British tie their hands for ten years, as the American plan proposed, unless they received guarantees against the danger from secondary navies (such as that of France or Italy) or a combination of them. All in all, this British observer implied, the adhesion by Great Britain to the plan would mean a great deal more sacrifice than in the case of other nations, and the special interests of Great Britain must be considered.

J. H. Hamilton, correspondent of The London Chronicle, pointed out particularly the rival claims of Great Britain and the United States to submarine equipment in view of coast-line extension. The Americans, he intimated, had been somewhat disconcerted by the demand of the British delegates that the maximum of submarine tonnage be made the same for both, and had emphasized the length of the American coast line and the

necessity of protecting the Panama Canal. But, he declared, the coast of Great Britain as an empire must be considered, and all the British narrow waters and the Suez Canal must also be taken into account.

French observers, such as "Perlinax," the correspondent of the *Echo de Paris*, saw in the United States policy the formulation of an Anglo-American entente, under which England would get the lion's share.

"Washington has conceded her the most powerful navy," he said. "Undoubtedly as replacements are effected the United States will rise to the same level, but Great Britain had always declared that she would be satisfied to be on that level." Later he added:

We are witnessing a great British diplomatic victory, the result of the preparation carried out by Sir Auckland Geddes [British Ambassador at Washington] with infinite care and political acumen. On the one hand, Great Britain successfully enforces her claim to the possession of the greatest share of maritime power. On the other, she solves the grave problem arising out of the existence of the Anglo-Japanese alliance, and out of the strength of the American resentment.

This feeling that France was faced at the conference by an Anglo-American combination, from which England was deriving superior advantage, was clearly expressed in the French press three days after the conference had begun. The effervescing enthusiasm of the first reaction from Secretary Hughes's dramatic proposal was succeeded by a mood of doubt and pessimism. The *Homme Libre*, from the front page of which the name of Clemenceau, its founder, has now disappeared, said:

Everything is changed. Yesterday there was enthusiasm. Today there is quibbling. And naturally it is our good friends, the English, who are the promoters of this change. Mr. Balfour is a great diplomat. The whole question of naval disarmament and all questions of the Far East lie for him in the dismantling of France in face of Germany, which his Prime Minister and he have failed to disarm completely.

Even the conservative papers emphasized the special necessity of

France to retain sufficient armament to give her protection against new aggressions from Germany. The Temps admitted that the British demands might be necessary for the British Empire's safety, and declined to admit that the Hughes program was "already a triumph for England," which would imply that it was a disaster for some other country. The Temps laid down two formulas. The first was summed up as follows:

Under the régime of limited armaments such as that of which Mr. Hughes has defined the basis, each State has a right to possess forces proportionate to the dangers to which, in the opinion of all the other contracting parties, it can reasonably believe itself exposed. [Both the British suggestion for eliminating big submarines and the Japanese request for non-fortification of Pacific islands are taken as examples of this right.]

The Temps then laid down its second formula. In case agreement could not be reached as to such dangers by all the other powers, those powers fall under obligation to give protection if the apprehended dangers materialize into realities. "A nation attacked or menaced can then say to the other contracting parties: 'Help me to meet the peril, which exceeds the powers of the arms to which you have invited me to consent.'" The Journal des Debats more definitely combated Mr. Balfour's plea for the limitation of submarines, saying:

The figure of 90,000 tons may be quite enough for the British, who will have a powerful fleet even on a reduced scale, but it will not be enough for France, which must compensate for her weakness in capital ships. If the Balfour suggestion is adopted, then France must revise her naval program, and add to her fleet.

Premier Briand himself said on Nov. 16:

France being isolated—for she is isolated—is in a different position from America, Great Britain and Japan in the limitation of naval armaments. * * * France is not in such a relation to Germany. Consequently France is bound to make such provision for her security as seems to her sufficient. Germany is in a situation where she can with great rapidity mobilize five or six millions of men who have had service in her armies. We must be able to put

immediately into action a force adequate to delay or prevent rapid mobilization.

Admiral Kato's speech before the session of Nov. 16 showed similarly that, although Japan had subscribed "in principle" to the American proposals and was willing to agree to a "sweeping reduction" of naval armament, she would nevertheless insist on retaining a sufficient force for national security. The reaction in Japan to the whole proposal was, with few exceptions, favorable in the extreme, the prospect of a lightening of taxes being welcomed by all classes.

The Japanese delegates received China's ten demands with apparent composure, but Dr. H. Shimomura, Director of the Osaka-Asahi Shimbun, called these demands a second "bomb-shell," the full effect of which would be that any "foreign rights, any foreign interests on or in Manchuria, Wei-hai-Wei, Kiao-Chau, Indo-China or Hongkong would be scrapped, and China would be freed from what they call the foreign yoke." The attitude of China toward the conference was one of determination to secure to the full her national rights. Mr. P. Y. Chien, representative of the Social Welfare, published in Tientsin and Peking, wrote on Nov. 16:

The Chinese delegates came with the whole nation at their back, to fight not against one or a number of foreign powers, but for principles, long established, generally recognized, but never carried out and once more undermined by the Versailles Treaty. Those principles foreshadow the peace of the Pacific and the destiny of the world. To uplift them by preserving the integrity and sovereignty of China is, besides preventing the dangerous aggrandizement of a certain empire to the detriment of the whole world, to preserve the peace of the world and to prevent the repetition of war.

JAPAN WANTS MORE SHIPS

Japanese opposition to the five-five-three ratio of capital ships took definite form on Nov. 17 when Baron Tomosaburo Kato, the Japanese Minister of Marine, who was the spokesman for his delegation, called together the press representatives and issued this statement:

Because of her geographical position, Japan deems it only fair at the present time that the other interested countries should agree that she maintain a proportion in general tonnage slightly greater than 60 per cent., and, in a type of vessel of strictly defensive character, she might desire even to approximate that of the greater navies.

Inquiries as to the exact meaning of this statement brought out the fact that instead of the 60 per cent. ratio of capital ships allowed by the Hughes program, Japan desired something more like 70 per cent. Baron Kato also indicated that he had light cruisers in mind when he referred to "a type of vessel of strictly defensive character," which he thought Japan should possess to an extent approximately as great as that of America and Great Britain. It was made known the next day that the American delegation was opposed to any such modification of the program, and that the British would support the Americans. The British delegates also made it plain that before they signed a tripartite agreement on naval limitation they desired a provision for the limitation of the navies of France and Italy.

Great Britain's sincerity in accepting the Hughes program in principle was indicated in a practical way on Nov. 18 when the Admiralty announced that it had notified the Clyde contractors to suspend all work on the four new capital ships of the super-Hood type, which had been authorized by Parliament, and on which work had been begun two weeks before. These four battleships were to have cost \$160,000,000. While the canceling of the contracts meant some relief for the British taxpayer, it also meant the canceling of work and wages for 4,000 men and 200 firms.

The subcommittee on Far Eastern questions met on the morning of Nov. 17 and decided to recommend to the full committee a general discussion of China's ten principles jointly with a general consideration of the American agenda. The meeting of the full committee, however, was postponed for two days at the request of Japan.

Following is the communique that was issued:

A meeting was held this morning at the Pan-American Building of the subcommittee appointed to outline a course of procedure for the discussion of the Pacific and Far Eastern questions on the part of the full committee of the delegates appointed by the conference to deal with these subjects.

The subcommittee, consisting of the heads of the delegations of the powers, decided to recommend that at a meeting of the full committee of the delegates there should be first an opportunity for a general discussion of the questions relating to China and then there should be a discussion of the various particular topics in the order listed in the tentative agenda which had been submitted by the American Government, with a consideration of the proposals submitted on behalf of the Chinese delegation in connection with the appropriate heads to which the several proposals relate.

The subcommittee then adjourned. The full committee is to be convened at a time found to be convenient for the members of the delegations.

RESPONSES TO THE CHINESE DEMANDS

The conference reassembled Nov. 19 as a committee on Far Eastern Affairs to receive the statements of the heads of the various delegations in response to the demands of the Chinese delegates, which were previously presented and are printed on full. The following was the official communique of the proceedings:

The Committee on Pacific and Far Eastern Questions held its second meeting in the Columbus Room of the Pan-American Building this morning at 11 o'clock. All plenipotentiary delegates were present, excepting Baron Shidehara for Japan, Ambassador Jusserand for France, and Mr. Meda for Italy.

Admiral Baron Kato, on behalf of Japan, made the following statement:

1—It seems to the Japanese delegation that existing difficulties in China lie no less in her domestic situation than in her external relations. We are anxious to see peace and unity re-established at the earliest possible moment, but we want to avoid all action that may be construed as an intervention in the internal affairs of China. All that this conference can achieve is, it seems to us, to adjust China's foreign relations, leaving her domestic situation to be worked out by the Chinese themselves.

2—The Japanese delegation wishes to assure the Chinese delegation and the whole conference that Japan has every desire to cultivate the happiest relations with China. We are solicitous of making whatever contributions we are capable of toward China's realization of her just and legitimate aspirations. We are entirely uninfluenced by any policy of territorial aggrandizement in any part of China. We adhere without condition or reservation to the principle of "The Open Door and Equal Opportunity" in China. We look to China in particular for the supply of raw materials essential to our industrial life and for foodstuffs as well. In the purchase of such materials from China, as in all our trade relations with that country, we do not claim any special rights or privileges and we welcome fair and honest competition with all nations.

With regard to the question of abolition of extraterritoriality, which is perhaps one of the most important questions proposed by the Chinese delegation, it is our intention to join with other delegations in the endeavor to come to an arrangement in a manner fair and satisfactory to all parties.

We have come to this conference, not to advance our own selfish interests; we have come to co-operate with all nations interested for the purpose of assuring peace in the Far East and friendship among nations.

3—The Japanese delegation understands that the principal object of the conference is to establish in common accord policies and principles which are to guide the future actions of the nations here represented. Although we are ready to explain or discuss any problem which in the wisdom of the conference is taken up, we should regret undue protraction of the discussions by detailed examination of innumerable minor matters.

Baron de Cartier, speaking for Belgium, Mr. Balfour for the British Empire, and Senator Schanzer for Italy, then made the statements that follow:

Baron de Cartier, Belgium:

I believe it advisable to briefly point to the spirit in which Belgium takes up the examination of the questions relating to the Far East.

She is happy to subscribe to the noble sentiments that inspired the words of the Secretary of State at the opening session of the work of our committee.

In so far as China is concerned, my country has for many years maintained important relations with her, and has been among the first to contribute to the development of the natural resources of China through the large part she has taken in the construction of its railroad system. It has

also established there industrial and financial enterprises of importance.

The personal experience that I have been able to acquire through sojourns in China during the last twenty-five years, the evidences of the progress that she has made during that period, the manner in which she has been able to overcome her internal crises, inspire me with great confidence for her future.

Belgium will take part willingly in all the measures that this conference may adopt to insure the territorial integrity of China, and to furnish her with the means to overcome her present difficulties. She is convinced that the support of the action of the Government is the necessary condition of all progress, and of the fruitful application of such rules as this conference might lay down in accord with the Government of the Chinese Republic.

Belgium will unreservedly favor the policy of the open door. She desires to see assured to the industry and commerce of all the nations the possibility of sharing on a footing of complete and genuine equality the development of the resources of China to the greatest benefit of the Chinese people and of all humanity.

She has heard with satisfaction the statement of the representatives of the Chinese Republic that that country is ready to apply the policy of commercial liberty in all parts of its territory without exception. This commercial liberty will not produce its full effect unless the nationals of the powers obtain the rights and privileges which are a necessary condition of the full development of economic interests.

Belgium, in accord with the powers concerned, is ready to consent to a fair increase in the customs duties.

She will align herself willingly on the side of the countries which are disposed to accept the gradual abandonment of their rights of jurisdiction as soon as the Chinese Government shall have completed the work that it has undertaken and shall be in a position to give assurance of the many guarantees that the proper administration of justice demands.

GREAT BRITAIN

Mr. Balfour's statement:

Mr. Balfour said that he thought it unnecessary to add one word to what had been said by his colleagues in regard to the question of a general order, which had been raised. His reason for saying this was that he had nothing to add to the frequent declarations of the Government he had the honor to represent on all these questions; for example, the "open door" in China, the integrity of China and the desirability of leaving China to work out its own salvation and to maintain control over its own affairs, and of substituting, when circum-

stances warranted, the normal processes of law for extraterritoriality. All these principles had been formulated over and over again in explicit terms by the Government which he represented.

ITALY

Senator Schanzer's statement:

I have the honor to state in the name of the Italian delegation that we fully subscribe to the noble sentiments that have been expressed by the orators who have preceded me. The Italian delegation is ready to examine, together with the other delegations, with the greatest care and in a spirit of sincere sympathy, the questions relating to China. It will give its support to the solutions that shall appear to be best suited to assure the free development of China and to guarantee an equality in footing of the different nations in their efforts to promote the progress of China and of commerce with that country.

FRANCE

M. Briand expressed the warm sympathy that France feels for China, with which she has a common frontier about 1,500 kilometers long. The French delegation is disposed to consider in the most favorable light the Chinese claims in their entirety. But in order to reach a practical result it will be necessary to make a thorough examination of each claim.

HOLLAND

Jonkheer van Karnebeek remarked that, in the present phase of the discussion, there is not much for him to say of a general character and at the same time of material importance.

He wished, however, to seize this occasion to say, as the representative of one of China's neighbors, that the Netherlands delegation will be happy to consider the principles which China has laid down and the problems themselves from the standpoint of the world's general welfare, and to examine them in a spirit of sympathy and friendship toward China. Holland, Jonkheer van Karnebeek said, has old friends along the shores of the Pacific; China knows that it is one of them.

If China avails herself of the opportunity now afforded by this conference to assert her rights, to declare her position and to define her wishes, she may count on Holland's good-will and its willingness to aid her in the realization of legitimate

aspirations and in her endeavors toward a consolidation and stabilization of her domestic affairs which are connected with the problem affecting the Pacific.

PORTUGAL

Viscount d'Alte said that the Portuguese delegation saw with pleasure that the delegates of the other nations represented at the conference had expressed nearly identical views as to the desirability, in the interests of all, of a prosperous and united China. He gladly associated himself with his colleagues in the expression of this desire.

Mr. Sze expressed on behalf of the Chinese delegation his sincere appreciation for the united sympathy and friendship of the delegations here for China and her proposals. Of course, many of the proposals will be considered in connection with their applications. He would desire to reserve to the Chinese delegation the right of discussing them in detail then. But he was sure that the friendly sentiments as expressed and the general spirit of accord thereby presented would be greatly conducive to the success of this conference.

After a general discussion the meeting adjourned until Monday, Nov. 21, at 4 P. M.

DR. KOO CONSULTS MR. ROOT

After the committee adjourned Dr. Koo went directly to the offices in the Navy Building and held a conference of more than half an hour with Elihu Root. Mr. Root said later that Dr. Koo had explained in detail the situation with regard to China.

In response to questions concerning how far the ten points presented by China several days ago represented the American policy with regard to China, Mr. Root said that some of the ten points were well recognized as American policy, some of them were new and had never brought forth an expression, and others would be subject to a technical exposition. It was understood that some of the latter points formed the subject of Dr. Koo's meeting with Mr. Root.

Great Britain is officially on record as willing to abandon spheres of in-

fluence and exclusive territorial privileges in China. Attention was directed by the British spokesman to a statement made in the House of Commons by Under Secretary Harmsworth of the Foreign Office in the following language: "The policy of spheres of influence in China has been superseded by one of international co-operation, and the further development of this policy will no doubt form one of the subjects of discussion at Washington." This formal statement is regarded by the British delegates as of the utmost importance in its bearing upon the proceedings of the conference.

SESSION OF NOV. 21

The open plenary session of the conference held on Nov. 21 was devoted to a discussion of the attitude of France in respect to the size of her army. Premier Briand delivered a notable address, full of stirring eloquence and forceful logic, in which he elaborated the position of his country and the necessity of making provision against a hostile Germany. At the conclusion of his address the chief delegates of each of the powers replied in terms which were tantamount to a pledge that France would not be isolated if she were again attacked—that in such event her former allies were ready to give her not only their sympathy but their material aid. Mr. Briand announced in the course of his address that the term of service in the French Army would be cut in two, thus reducing the army to one-half its present size.

Secretary Hughes opened the session with this statement:

It is a pleasure to be able to state that gratifying progress has been made in the work of the conference. The proposals of the American Government with respect to the limitation of naval armament have been under consideration by the committee of the plenipotentiary delegates of the five powers, and, aided by a subcommittee of naval experts, that matter is progressing favorably.

You will recall the appointment of a committee consisting of the plenipotentiary delegates of the nine powers to consider questions relating to the Pacific and the Far East. In the course of the delibera-

tions of that committee most important declarations have been made on behalf of the represented countries, and while there is nothing at the moment to report to the plenary session with respect to either of these topics, I think I am justified in saying that our expectations with respect to the expedition and thoroughness of our consideration on these matters have already been more than realized.

There remains another subject which so far has not engaged our attention, and that is the subject of land armament or military forces.

So far as the army of the United States is concerned, no question is presented. It has always been the policy of the United States (it is its traditional policy) to have the regular military establishments upon the smallest possible basis. At the time of the armistice there were in the field and in training in the American Army upward of 4,200,000 men. At once, upon the signing of the armistice, demobilization began and it was practically completed in the course of the following year, and today our regular establishment numbers less than 160,000 men.

While, however, we have this gratifying condition with respect to the military forces in the United States, we fully recognize the special difficulties that exist with respect to military forces abroad. We fully understand the apprehensions that exist, their bases and also the essential conditions of national security which must appeal to all the powers that are here represented.

It is regarded as fitting at this time that there should be the freest opportunity for the presentation of views upon this subject of land armament or military forces by the delegates present, and it is the wish of all delegates that full explanation of all the conditions that bear upon the matter should be had, and that all the delegates of the Governments represented here should have opportunity to present fully the matters which they think should be understood by the conference and the world.

BRIAND'S ADDRESS ON LAND ARMAMENTS

Premier Briand then followed with his address. It was delivered in French by sections, each portion being translated into English as he proceeded. It created a profound impression. The address in full is as follows:

Gentlemen, you will readily admit that I, as a delegate of France, should feel moved when rising to speak from this full-sounding platform, whence every word that is said goes to the attentive and anxious ear of the world and of all civilized people.

I wish, first of all; to thank my colleagues of the conference who, on the opening of this public meeting, so kindly allowed me to speak as the representative of my country.

I shall endeavor to make it appear to your eyes and to the eyes of the world with its true genuine face, as it is; that will show you that she is ready, and I might say perhaps more ready than any other country, to direct her attention and her earnest will to whatever steps may be thought desirable in order to insure final peace for the world. Nothing for my colleagues and myself would be more pleasant than to be about to tell you this: We bring here sacrifices to the fullest extent possible. We have our own security insured. We lay down arms.

We should be so happy to be able to make that gesture in order to participate in the final disarmament of the world.

Unfortunately, we cannot speak in this way. I say also, unfortunately, we have not the right to do so. I shall briefly explain later on for what reasons. I shall tell you, for France, that she wants to make peace. If you want to make peace there must be two people, yourself and the neighbor opposite. To make peace—I am speaking, of course, of land armament—it is not sufficient to reduce effectives and decrease war material. That is the physical side, a physical aspect of things.

WANTS MORAL DISARMAMENT

There is another consideration which we have no right to neglect in such a problem that touches vital questions which are of the most serious character for the country concerned. It is necessary that besides this physical disarmament there should be in those same circles what I shall call a general atmosphere of peace. In other words, a moral disarmament is as necessary as the material one.

I have the right to say this, and I hope to be able to prove it to you. And I have the right to say to you that in Europe, as it is at present, there are serious elements of instability, there are such conditions prevailing that France is obliged to face them and to contemplate the necessary matters from the point of view of her own security.

I am now staying in a country many of the men of which have already enjoyed the opportunity of seeing France and knowing exactly what she is. They came to us in the most critical time of the war. They came and shed their blood—mingled their blood—with ours, and they shared our life, and they have seen France and they know what France is. And certainly these men have contributed to enlighten their own countrymen, and they have done everything to dispel and drive away those noxious gases which have been spread about and under which certain people have been trying to mask and to conceal the true face of France.

Here in this country you are living among States which do not know the entangled barriers and frontiers of Europe. Here you live in an immense expanse of space. You do not know any factions in your own land. You have nothing to fear. So that it is rather difficult for some of you—it must be difficult for some of you—to realize what are the conditions at present prevailing in Europe, after war and after victory.

I quite admit that every citizen of the United States might come and tell me this: "The war is won. Peace is signed. Germany has reduced her army to a great extent. Most of her war material has been destroyed. What is it that prevents peace from now reigning in Europe? Why is it that France keeps such a considerable army, abundantly provided with war material?"

SPURNS SUSPICION OF FRANCE

Of course, in saying this only certain people have got something at the back of their minds. They suggest that France also has some hidden thought—some hidden design. It has been said that France wanted to install in Europe a sort of military supremacy, and that after all she wanted to do so simply to take the place Germany occupied before the war.

Gentlemen, perhaps this is the most painful, heartrending and cruel thing that a Frenchman can hear.

And for them to say it, after the direful war from which we have just emerged—unprovoked war which we had to undergo—to be again in the cruel necessity to give to the world only the appearance that we have perfidious intentions and military design—this, gentlemen, constitutes I may say the most disheartening thing for us.

If we had not the full confidence of those that know my country, those that have seen it—they can testify that not one word of it is true. If there is a country that has deliberately turned her steps toward peace, that wants peace with all her heart, believes in it with her entire faith—if there is a country that does this, gentlemen, it is France.

Since the armistice we have had many disappointments. France has had to wait for certain realizations which she has not been able to get. She has seen Germany digress—haggle over the signature which had been given. Germany has refused to stand by her pledged word. She has refused to pay compensation due for the devastated regions. She has declined to make the gesture of chastisement that after all, every man of sense would expect after the horrors that we have witnessed. Germany has refused to disarm.

At that time France was strong and Germany could not resist. Public opinion in France was naturally impatient, while under this provocation France remained per-

fectly cool. There was not one gesture on her part to aggravate the situation. I may say here emphatically in the face of the world, we have no hatred in our hearts, and France will do everything she can. She will use every means to prevent between Germany and herself a recurrence of these bloody conflicts. She wishes for nothing else but that the two peoples should be able to live side by side in the normal conditions of peace.

But after all we have no right to forget. We have no right to abandon ourselves. We have no right to weaken our position; and were it only because we must avoid giving rise in the bosom that would only be ready to take advantage of it, to give rise to certain hopes that would be encouraged by our weakness.

PART OF GERMANY WARLIKE STILL

Gentlemen, I spoke a few moments ago of the moral aspect of disarmament, and I referred in my remarks to Germany. I do not want to be unjust; nothing is further from my mind. But we know there is in Germany—there is one part of Germany that is for peace. There are many people, especially among the working classes, who want to work, who have had enough of this war, who have had enough of war altogether and are most anxious to settle down in peace, and also to set to work. We shall do everything to help that Germany, and if she wants to restore her balance in the bosom of a pacific republic and democratic institutions, then we can help her, and we shall all be able to contemplate the future with feelings of security.

But, gentlemen, there is another Germany, a Germany which has not changed her mind and to which the last war has taught no lesson. That Germany keeps thoughts in the back of her mind; she has the same designs which she entertained before the war; she has kept the same pre-occupations and she cherishes the same ambitions as the Hohenzollerns did. And how can we close our eyes to this? How can we ignore this state of things? This, gentlemen, is happening at our very doors; we have only got to look: This is happening but a few miles from us, and we follow the thoughts of the Germans, or certain Germans, and the evolution which is taking place. And more than that, we have witnessed certain attempts to return to the old state of things.

Nobody could be mistaken about the real bearing of what was called the Kapp Putsch. We know very well that if it had succeeded Germany would have returned to her pre-war state, and we do not know what might have happened—or rather we know too well what would have been the consequences of such a state of things.

READS FROM LUDENDORFF BOOK

Gentlemen, a volume has been published by no less a man than Field Marshal Lu-

dendorff, who still enjoys great authority in many German circles, and who is followed by a great part of the élite in Germany—professors, philosophers, writers, &c. What do we read in this book? Gentlemen, I should not like to make too many quotations. I should not like to prolong this speech, and perhaps draw too much of your attention, but this is part of my brief, and if you are, like me; convinced that the moral element is of the utmost importance, you will allow me to read just two or three passages. This is the first quotation:

"It is necessary that we should learn to understand that we live in a warlike time; that struggle will remain forever, for the single individual as for the State, a natural phenomenon; and that the struggle is equally on the divine order in the world."

In the same book Marshal Ludendorff produces these terrible words of von Moltke on the 11th of December, 1919:

"Eternal peace is a dream. It is not even a beautiful dream, and war is one of the parts of the order of the world, such as it has been created by God. It is by war that are developed the noblest virtues of man, courage, disinterestedness, devotion to duty and the spirit of sacrifice, up to the abandonment of one's own life. Without war the world would sink in the morass of materialism."

And further—this is Marshal Ludendorff himself speaking now:

"It is for the political education of the German people, and it is an indispensable notion with the knowledge of this fact, that in the future war will be the last and the only decisive means of policy; that thought, completed by the virile life of war, the Entente shall not be able to forbid the German people to entertain, although they are trying to take it away from us. War is the cornerstone of all intelligent policy. It is the cornerstone of every form of future even, and chiefly of the future of the German people."

And, lastly, Marshal Ludendorff says this:

"The warlike qualities of the Prussian and German army have been put to the proof on the bloody battlefields. The German people need no other qualities for their moral renovation. The spirit of the former army must be the germ which will allow this renovation to take place."

Such, gentlemen, are the words used by the highest German authorities who have preserved—and I can quite understand it, the full part, the great part at least—of the confidence of the German people, and that is what we are listening to now. After a war that has caused the death of millions of men, after the sore wounds that have been inflicted and that are still bleeding in the sides of the countries of Europe, that is the sort of thing that is being taught at the very door of France. How can you expect that France should close her eyes to such words?

GERMANY'S POTENTIAL SOLDIERS

RECOGNIZES WIRTH'S GOOD-WILL

I now come to the physical aspects of disarmament. I can quite understand that somebody might say it is not sufficient to harbor evil designs, to make war one must have appropriate means, because when it is a question of war enormous effectives are necessary; you must have the officers and noncommissioned officers, you must have plentiful material—rifles, guns, machine guns, artillery, &c.—and Germany has no longer any of these.

Germany, from the point of view of effectives, just emerging from the war, from a war where her men have been fighting for four years—and I should be the last to underestimate the valor of her soldiers—our soldiers have had to face and to fight the German soldiers, and they know to what point the German soldier is able to carry his heroism; but Germany, just issuing from the war, still has 7,000,000 men who have fought through and survived the war. Of course you will say they are not actually serving under the flag; they are not living in barracks. Certainly. Have these men any officers and noncommissioned officers ready to be marshaled to the field? Is it possible to mobilize such an army tomorrow?

To this question I answer "Yes," and I am going to explain it. Since the war, since the moment peace was signed, Germany has constituted a force, a so-called police force, which was intended for the maintenance of public order. That force is called the Reichswehr. It is to include 100,000 men, and in fact does include 100,000 men. But what men? They are nearly all officers or noncommissioned officers. I mean, gentlemen, regulars, all having served in or having belonged to the old army. Therefore, the cadres are ready there; the officers and noncommissioned officers are ready to marshal the army of tomorrow.

And what is that army? Is it in conformity with the requirements of the peace treaty? Is it only for purposes of public order? No. There are a certain number of those of which I have to express the state of facts as they are.

According to secret instructions issued by the military authorities the Reichswehr is to prepare not only for police purposes, but also for war, and is to train for war, with the necessary rehearsals and manoeuvres.

There is something more. Germany has another denomination. There is another group called *Einwohnerwehr*. This group includes almost all the men of good-will who are ready to serve their country in time of need, and instead of using it only to preserve internal order, it might be used for other purposes.

The danger was so real that the Allies were obliged to send an ultimatum to Germany to demand that this force should be disarmed.

At another moment, under an organization called the *Orgesch*, which is the organization of war, the *Einwohnerwehr* acquired such strength and became such a threat that the Prime Minister of Bavaria, animated by a spirit of revolt, informed the world that he had at his disposal and he could raise in a short time an army of 300,000, plentifully provided with rifles, machine guns and artillery. Well, that force has been disorganized. The German Government has done its duty, and nobody more than myself is ready to recognize it.

It is only a duty on my part, a mere duty; a mere sense of fair play. I stated it in my own parliament. I am ready to recognize that the German chancellor, Chancellor Wirth, is a man of good-will, animated by fair purposes, loyal and frank, and that he has applied every endeavor, acting with no small merit on his part, in order to really realize a state of peace, and honor the signature of Germany.

But this Government in Germany is weak. It is being watched. Snares are laid in its path and it might fall at any moment. I may say that on our side we are ready to do everything in order to allow this great people to return to normal conditions of peace, and the German Government, as I said, dissolves the *Einwohnerwehr*.

There is something else, gentlemen. There is another force, which is called the *Sicherheits Politzei*. That is also a police force. It includes 150,000 men. These are enlisted men. The force is composed almost exclusively of regulars, officers, and noncommissioned officers or at least noncommissioned officers ready to undergo a new period of military service. We demand the dissolution of this force, but what happened? The *Sicherheits Politzei* disappeared, but another appeared in its place—*Schutz Politzei*; but it was just the same. That included 150,000 men. So that instead of its being a local police force, it became a general police force at the disposal of the Central Government that could be used anywhere on German territory; so that we come to a total of 250,000 men, and enough men that are real officers, ready to marshal the troops who are training to be ready instantly in case of war. These men are constantly watched by the Government.

The Government keeps them under its hand. These 7,000,000 men have not returned to civil life, to civil occupations entirely. They are grouped together, in this marvelously ingenious way which the German people always have when they want to achieve their purposes. They are called *Frei Corps*, or former combatants' associations, and what not. Any day, any anniversary—and Germans are rather fond of anniversaries—is favorable in order to convene these men and marshal them to see

that you have got them under your hand ready to do the work that is to be done.

MOBILIZATION FOR SILESIA

We are Frenchmen. We know this. It is happening at our door. And I will only give you an example to show you how rapidly these organizations might be put on a war footing. Just one second. When the Upper Silesian question reached a somewhat acute stage recently, within a few weeks, I might almost say within a few days, there were, out of these *Frei Corps* or other bodies, about 40,000 men ready with guns, machine guns, rifles, armored trains, and with most perfect military instruments, so that this force should have its full combatant value.

These are facts, gentlemen. I am not noticing them and bringing them here just to make my case better. They are facts that have been verified, and that everybody can ascertain for himself. Therefore, as a question of fact and from the point of view of effectives, Germany can rise in a few weeks, and perhaps almost in a few days, and can begin to raise her 6,000,000 or 7,000,000 men with their officers again and the noncommissioned officers are ready to do the work.

Now I must ask the great people of the United States, so fond of justice, so noble in their purposes, to answer me when I tell them this: Suppose by your side, oh, American people, a nation which has been for years and centuries in bloody conflict with you; and suppose that this nation, you feel, is still ready, morally and materially, to enter into a new struggle. What would you do?

Would you turn away your eyes? Would you close your eyes to a danger that was threatening you? You that are said to be such a positive, such a precise people, would you close your eyes? Would you not desire to do everything in your power in order to safeguard your life, and, what is more, your honor? Would you do anything to weaken yourselves? No. There is not one citizen in the whole United States who would not answer me: "No; never in the world."

France is looking upon what is happening. France does not exaggerate. She is only watching and waiting.

I now come to the question of war material. We have been told that there was no more war material. It is true; the commission of control in Germany have done admirable work. A great many guns—artillery, I mean—have been destroyed. Some of the destruction has been supervised by the allied officers. It is real.

Other destruction has taken place, as we have been told. We might have a doubt. We are not quite certain. But we must give the opponents the benefit of the doubt, and we believe the destruction on that side is practically completed.

WAR INDUSTRIES AVAILABLE

But the problem of war material is one that can easily be solved. You have seen, in the war, with what promptitude—and that was lucky, because if the help had not come so quickly we might have been down, finally—you have seen how quickly immense armies have come over to us, provided with the most modern material, and fought on our sides upon the battlefields.

Well, what is Germany but a vast country or industry—industrially organized? Germany always had two aims. The first was trade, commerce. And that is only natural. The second was war. All her industries, all her manufactures, have been working to the full during the war, and they have developed since.

Everything is ready in Germany. The plans, the designs and calibre. Everything is there ready to insure a steady manufacturing of guns, machine guns and rifles. Suppose that during a period of diplomatic tension, purposely protracted for a number of weeks, certain of the manufacturers, certain of the works, begin to fabricate, just at the beginning, just to start the war, just to set the war going, and then go on manufacturing guns and rifles and artillery; what would happen? It is not only in Germany that industry can work to the full. You can make preparations outside. In fact, preparations have actually taken place. In fact, great captains of industry or great industrial magnates have bought important firms in Scandinavia and in other parts of Europe.

It is easy enough to fabricate these guns without our seeing it, outside of our supervision. You know very well that it is possible to build great railroads. You know very well that it is impossible to bring here the proof that Germany is not actually making or purchasing war materials.

It is different from the navy. It is rather difficult to lay the keel of a ship in the stocks, to prepare the dockyards without the world knowing it. But suppose that was possible. Do you think you could launch a capital ship without somebody being on the spot and knowing what was happening? But the guns, the rifles, the machine guns—any instruments used on the field of battle—they can be manufactured and cannot be controlled with any measure of certainty.

Ah, gentlemen, this is not the first time in history that France has had to face a situation of this kind. We have known Prussia disarmed. And disarmed by whom? By Napoleon. Well, that Prussia, which seemed practically disarmed, which was harmless to all intents and purposes, we found her again on the battlefield and we were nearly bled white. How can we forget that?

"DIREFUL LESSON" REMAINS

Of course, we know what is often said of the French people. It is often said that

we are a frivolous nation and that naturally when the danger is passed we turn our minds to other things—just as befits a frivolous people. Evidently, gentlemen, we are not the sort of men to keep our eyes steadily fixed on whatever is sad and depressing.

We have not been doing that since the war, but we have been too deeply wounded, I might almost say murdered, to forget the direful lesson which has just been taught us. Gentlemen, there are too many homes in mourning in the country, there are too many men in the streets that are disabled and maimed. Even if we wanted to forget, we could not.

Therefore we have not the right and we do not intend to leave France defenseless. France must, to all intents and purposes, protect herself.

Such is the situation as far as we are concerned. You will grant me, gentlemen, that it is serious enough. But that is not all. What about the rest of Europe? Apparently Europe is at peace, although here and there on the ground certain volumes of smoke just arising seem to indicate that the fire is not extinguished everywhere. I might say that this fire is smoldering in certain parts of Europe, and if France had not had an army war would already have broken out in Europe again.

I will just draw your attention to one subject to which I may refer later on, and that is the subject of Russia. Russia is a country of 120,000,000 men, which is actually boiling over with anarchy. They have an enormous standing army, which is in theory 1,500,000 men, but which has a practical strength of 600,000 men. What will Russia do? Who can say what will happen on that side?

About a year and a half ago there was a wild rush of Russia on Europe. Russia tried to rush Poland, and through Poland to reach Germany, where some people were beckoning to her. Gentlemen, we had at that time terribly anxious hours in France. If the barrier had not held good, if that anarchic army had been able to join the people who were calling them on the other side, what would have happened? Where would France be, and where would the rest of Europe be? Happily, there was the French army, which was the soldier of order for its own account and for the sake of the world.

The situation in Russia is far from being settled. It is a sort of permanent anxiety to everybody. What will become of that enormous army? What could, or might, Germany do in order to equip Russia and exploit her? We know not. There are so many problems, economic, financial, &c., with which we have to deal that really, gentlemen, we do not know to which to turn, but the greatest problem of all, the greatest question, is life.

First of all we must be able to live. That is a sort of a question mark in France.

Thanks to our allies, to whom our gratitude will remain everlasting—thanks to their efforts we have been able altogether to insure the life, liberty and dignity of men, but, gentlemen, I trust you will certainly feel the weight of my argument and recognize that we are faced with a terribly serious situation.

When we say we contemplate a reduction of naval armaments, when we discuss it with ourselves, heart to heart, we could have nothing in our minds. We were speaking between friends. There is no threat of war; if there is any menace to peace it is so far distant that you can hardly conceive it, and yet you have not assumed the right of ignoring this danger altogether. You intend to keep your navies to the extent necessary to defend your liberties and insure your life.

FOR PEACE BUT NOT PERIL

If you do that, gentlemen, on the sea, what shall we do when the danger is there at our doors and hanging over our heads. I may say that I have always been in favor of peace; I have assumed power for the sake of peace in very difficult conditions. Where my country was feeling natural impatience at the state of things, I formally attached myself to the cause of peace. I fastened my heart on that noble task, and I may say that if ever peace is to be disturbed in the world, I shall not be the one to disturb it. But, gentlemen, precisely because I have urged everybody on the road of peace, because I have done everything in my power in order to obtain peace, I feel all the more the great weight of the responsibility which I have assumed, and if tomorrow, because I had been too optimistic, I saw my country again attacked, trampled under foot, bleeding because I had weakened her, gentlemen, I should be a most despicable traitor.

It is that situation which we have got to take into account, gentlemen, and the weight of the responsibilities with which we are burdened.

Only the other day the course of events turned in such a way that it certainly became acute, as you know, in Upper Silesia. I have already referred to this subject. Germany, which did not think the French people were ready to undertake a military operation, suddenly informed us that she was going to send the Reichswehr to the spot in Upper Silesia in order to preserve order.

These were momentous times for us, and although I have been through many critical times in my life, I may say that no hour was perhaps of more importance than that, and that I clearly and definitely made up my mind, and I told Germany that such a thing was not possible, and that if Germany undertook a thing of the sort she would have to bear the consequences and the language was understood.

But, gentlemen, if I had spoken without having the French army back of me, what would my words have availed? And if the event had actually taken place, what would have become of Europe itself? Europe is still in a troublous state. It is composed of young States, newly come to life. Who could say to what such conflict might have led?

That is the problem and that was the problem, and the struggle did not take place because it was felt that there was still a sufficient force in Europe and in France to preserve order.

Quite recently another attempt has been made, a certain attempt at the restoring of the old order of things in the centre of Europe, that might have set fire to the powder magazine again. Nothing happened because the Allies were in perfect understanding and the incident was peaceably settled.

Gentlemen, I give you these reflections for you to ponder over. You will see that there is nothing in that that would draw us aside from the path that leads to final peace. I apologize for having been with you so long and for having so trespassed upon your attention. Perhaps at another time the President will be less inclined to allow me to speak.

ARMY TO BE CUT BY HALF

The thought of reducing the armaments, which was the noble purpose of this conference, is not one from which we would feel disinterested from the point of view of land armaments. We have shown it already. Immediately after the armistice demobilization began, and demobilization began as rapidly and as completely as possible. According to the military laws of France there are to be three classes of men: that is, three generations of young men under the flag. That law is still extant; that law is still valid. It has not been abrogated yet, and the Government has taken the responsibility to reduce to two years the time spent under the flag, and instead of three classes—three generations of young men—we have only two undergoing military service.

It is, therefore, an immediate reduction by one-third that has already taken place in the effectives—and I am speaking of the normal effectives of the metropolis, leaving aside troops needed for colonial occupation or obligation imposed by treaty in the Rhineland or other countries and plebiscites.

We do not think that endeavor was sufficient, and in the future we have plans in order to restrict further the extent of our armies. In a few days it is certain that the proposals of the Government will be passed in the chamber, in order to reduce further the military service by half. That is to say, there will be only one class and a half actually serving. The metropolitan French army would be, therefore, reduced by half, but if anybody asks us to go fur-

ther, to consent to other reductions, I should have to answer clearly and definitely that it would be impossible for us to do it without exposing ourselves to a most serious danger.

You might possibly come and tell us "this danger that you are exposed to, we see it, we realize it and we are going to share it with you. We are going to offer you all means—put all means at your disposal in order to secure your safety."

Immediately, if we heard those words, of course, we would strike upon another plan. We should be only too pleased to demonstrate the sincerity of our purpose. But we understand the difficulties and the necessities of the statesmen of other countries. We understand the position of other peoples who have also to face difficult and troublous situations.

We are not selfish enough to ask other peoples to give a part of their sovereign national independence in order to turn it to our benefit and come to our help. We do not expect it; but here I am appealing to your consciences, if France is to remain alone, facing the situation such as I have described, and without any exaggeration—you must not deny her what she wants in order to insure her security. You must let her do what she has to do, if the need arises and if the time comes.

I should be the last one here to try to restrict the noble endeavors which are being made here in order to limit armament in the conference which has been convened, with such noble purposes in view; and I should like to be able to say that I foresee no limit, no restriction to your labors and to the results which you may achieve. Any question here can be debated and can be resolved upon, but I must draw your attention to one thing: moral disarmament of France would be very dangerous.

SHUNS MORAL ISOLATION

Allow me to say it will be most unjust. We do not enjoy the sufficient condition. We should be ready to do it, but the time has not come yet to give up our defense for the sake of final peace in Europe.

We have to know, however, that France is not morally isolated; that she still has with her the men of good-will, and the hearts of all people who have fought with her on the same battlefields. The true condition of a moral disarmament in Germany—I mean to say I am referring to these noxious elements of which I have already spoken—the true condition at this time of disarmament in Germany lies in the fact that it should be known over there that France is not alone, and then I feel quite sure that the poisonous propaganda of which I have spoken will simply run up dead against the wall; that it will not be able to go through, and that nobody anywhere will believe in it.

If those that still harbor evil designs know that, and if those that entertain

happy ideas of peace—this working class that wants to return to a normal state of peace—if it is known in Germany that France is not morally alone, peace will come back much quicker; and the words of anger, the words of revenge, will be simply preached in the wilderness. It will be impossible for Germany to reconstruct a defensive army, and she will be able to install democratic institutions, and then we can all hope for final conditions of peace.

Everything that France can do in this direction, she will do. In fact, she has already done much. She did not hesitate to open conversations with the German Government in order to settle this painful question of reparation for the devastated regions. Everything has been done and will be done in order to restore normal conditions, and the hour will come when everything will be settled, but the hour has not come yet.

If by direction given to the labors of the conference it were possible somewhere over there in Europe—if it were possible to say that the outcome of this conference is indirect blame and opprobrium cast upon France—if it were possible to point out France as the only country in the world that is still imperialistic, as the only country that opposes final disarmament, then, gentlemen, indeed this conference would have dealt us a severe blow; but I am quite sure that nothing is further from your minds and from your intentions.

If after listening to this argument, after weighing the reasons which you have just heard, you consider it then as valid, then, gentlemen, you will still be with us and you will agree with me and say that France cannot possibly do anything but what she has actually done.

MR. BALFOUR'S RESPONSE

At the close of M. Briand's address the leaders of each of the powers followed with brief speeches pledging sympathy and aid to France in certain eventualities. Mr. Balfour first spoke for Great Britain, saying:

Mr. Chairman:—Evidently this is not a fitting moment to deal at length or in detail with the great speech which has just come to its conclusion. It has been your privilege, and my privilege, to hear one of the great masters of parliamentary oratory. We have heard him with admiration, we have heard him with a full measure of sympathy; but we have done much more, I think, than merely been the auditors of a great artistic performance. We have heard something more than a great speech; we have heard a perfectly candid, perfectly lucid, perfectly unmistakable exposition of the inmost thoughts of the Prime Minister of our great ally.

He has told us, I believe without reserve, what are the anxieties, what are the pre-occupations, of the country over whose destinies he presides. He has told us what they fear and why they fear it. And nothing can be more useful, nothing can be more instructive to us of other nations, than to have this full revelation of the inner thoughts of one of our allied and associated statesmen.

We live under very different conditions from the French citizens, for whom M. Briand has so eloquently spoken. In the secure homes of America no terrors exist or can exist comparable to those which inevitably haunt the thoughts, waking and sleeping, of the leaders of French politics. For they have what neither you in America have nor we in England have. I do not venture to speak for the other nations represented around the table.

They have at their very doors the great country that was their enemy—great in spite of defeat, powerful in spite of losses; and of its policy, of the course which it means to pursue in the future, they necessarily remain in anxious doubt.

It is good for us all, I venture to say, from whatever nation we may be drawn, from whatever part of the great continent we come, that we should be initiated, as we have been initiated this morning, into the inner sanctuary of French policy.

It must be acknowledged, sorrowfully acknowledged, that the speech to which we have just listened is not hopeful for any immediate solution of the great problem of land armaments. And why is it—why is it that there is this great difference between land armaments and sea armaments? Why is it that we all here look forward with a confidence, which I think is not overrated, a serene confidence, to bringing about as a result of our deliberations some great measure, and under the guidance of the program laid before you by the United States Government? Why is it we are hopeful of coming to some solution of the great naval problem?

It is because, in the language of M. Briand, there has been, in matters maritime, a moral disarmament, and it is on the basis of the moral disarmament that the physical and material disarmament is going to be built. That is why we are hopeful about the naval question.

And why are we less hopeful about at least any immediate settlement of the military questions? It is because, as M. Briand has explained to you, in that case there has not been moral disarmament, because we have no assurance, or because the French Government, who watch these things closely, have no assurance either in Russia or in Germany that moral disarmament has made the degree of progress which would make material disarmament an immediate possibility.

I do not venture to offer an opinion of my own upon this question. I leave you to judge of the facts, as they have been expounded by one who has profoundly studied them and whose gifts of exposition cannot be excelled.

Only this I would say, for I need hardly tell you that I am not going to make a speech: M. Briand appears to have some fears lest France should feel herself in moral isolation. That would be a tragedy, indeed.

That the liberties of Europe and the world in general, and of France in particular, should be maintained and guarded against the dominating policy of her Eastern neighbor is the cause for which the British Empire fought and in which the British Empire still believes. Killed on the field of battle, we lost nearly a million men. I am talking of the British Empire now. We lost nearly a million men. We lost well over two million men in addition, maimed and wounded.

We grieve over the sacrifice; we do not repent it. And if the cause of international liberty was worthy of this immense sacrifice from one of the allied powers—I speak not of others, it is not my right to speak for them—if it deserved and required this sacrifice from one of the allied and associated powers, and if we at all events have not changed our views, either as to the righteousness of the war or as to its necessity, how can it be otherwise than that if a similar necessity should again arise, if again the lust of domination, which has been the curse of Europe for so many generations, should threaten the peace, the independence, the self-development of our neighbors and allies, how should it be possible that the sympathies, once so warm, should become refrigerated, should become cold, and that we who had done so much for the great cause of international liberty, should see that cause perish before our eyes rather than make further sacrifices in its defense?

Those are the thoughts which rise in my mind after hearing the great speech of M. Briand. I should only be interfering, I should only be weakening, its effect, were I to dwell further upon it, and I will content myself, therefore, with thanking M. Briand for the admirable and candid account which he has given of the policy of his country, and wishing him and his country every success and every forward step in that path of unaggressive prosperity which I hope and believe they are now entering.

SENATOR SCHANZER'S SPEECH

Signor Carlo Schanzer then spoke for Italy, as follows:

Gentlemen: I am going to use the French language because I wish that the thought of the Italian delegation should arrive direct, and without the short delay of trans-

lation, direct to the French delegation across the table.

Gentlemen, we have listened with almost religious silence to the magnificent speech which M. Briand has delivered with warm eloquence to explain the position of France and the French point of view.

We are united to France, certainly, not only by the bonds of affinity and common race, but also by the brotherhood in art, by the fraternity of a long and glorious war which received a new and unforgettable consecration when the two peoples fought together on the same battlefields for the sacred defense of national liberty and for the cause of justice.

We listened with the greatest attention to the figures and documents quoted by M. Briand, and we found with great pleasure that France, in spite of the great difficulties, and within the limits of probability, was ready to contemplate the principle of limitation of land armament.

It is far from my mind to discuss what France considers indispensable for her national safety. That safety is as dear to us as it may be to them, and we are still morally by the side of our allies of yesterday and our friends of today.

I wanted to say this only: may I be allowed to express the wish and the hope that the general limitation of land armament may become a reality within the shortest possible space of time? Italy has fought the war for the highest aims which a country can seek, but Italy is in her soul a peace-loving nation. I shall not repeat what I had the honor to state at the first meeting of the conference, but I should like to emphasize again that Italy is one of the surest factors of the world's peace; that she has no reason whatsoever of conflict with any other country; that she is following and putting constantly into action a policy inspired by the principle of maintaining peace among all nations.

Italy has succeeded in coming to a direct understanding with the Serb, Croat and Slovene people, and in order to attain such an end has made considerable sacrifices for the interest of the peace of Europe. Italy has pursued toward the successor countries to her former enemies a policy not only of pacification, but of assistance, and when a conflict arose between Austria and Hungary, a conflict which might have dragged into war the Danubian peoples, offered to the two countries in conflict her friendly help in order to settle the dispute. Italy has succeeded and in so doing has actively contributed to the peace of Europe.

Moreover, Italy has acted similarly within her own frontiers and has reduced her armed forces in the largest possible measure. She has considerably curtailed her navy expenditures in comparison to the pre-war time. The total amount of her armed forces does not exceed 200,000 men, and a further reduction to 175,000 men is already planned, and 35,000 colored troops.

Our ordinary war budget for the present financial year amounts to \$52,000,000, including \$11,000,000 expenses for police forces; the extraordinary part of the war budget, representing expenses dependent for the liquidation of the war, expenses therefore of a purely transitory character, amounts to \$62,000,000.

However, although we have all reduced our armaments to the greatest possible extent, we consider it necessary, for a complete solution of the problem of limitation of armament in Europe, to take into consideration the armaments of the countries either created or transformed as a result of the war. The problem is not a simple one. It must be considered as a whole. It is a serious and urgent problem, for which a solution at no far distant day is necessary.

Gentlemen, I trust I have said all that is necessary to explain the Italian point of view. The United States in calling this conference has taken a great and noble initiative, with the aim of creating sound guarantees for the safeguarding of the peace of the world.

In conclusion, may I express the desire and the hope that the conference, while taking into account the present difficulties, should give attention also to the problem of the limitation of land armaments, the solution of which is an essential condition for promoting throughout the world that atmosphere of peace which M. Briand has so clearly explained and without which it would be hopeless to anticipate that the economic and social reconstruction of the nations which have suffered most severely during and after the war may be fulfilled?

JAPAN'S ATTITUDE

Baron Kato expressed Japan's sympathy for France in words that were translated as follows:

It is needless for me to assure M. Briand that Japan has nothing but a most profound sympathy for the peculiarly difficult position which has been so clearly and so eloquently presented to us this morning. May I venture also to add Japan's appreciation of and sympathies for the great sacrifices in men and wealth made by France, the British Empire, Italy and the United States in the great war for the cause of peace, justice and harmony?

I would like to say this morning just a few words on land armament limitation. Japan is quite ready to announce her hearty approval of the principle which aims to relieve a people of heavy burdens by limiting land armaments to those which are necessary for national security and the maintenance of order within the territory.

The size of the land armaments of each State should be determined by its peculiar geographical situation and other circumstances, and these basic factors are so divergent and complicated that an effort to

draw final comparisons is hardly possible. If I may venture to say it, it is not an easy task to lay down a general scheme for the limitation of land armaments, as in the case of limitation of naval armaments. Nevertheless, Japan has not the slightest intention of maintaining land armaments which are in excess of those which are absolutely necessary for purely defensive purposes, necessitated by the Far Eastern situation.

BELGIUM'S POINT OF VIEW

Baron de Cartier de Marchienne spoke thus for Belgium:

Mr. President: Being still under the spell of the thrilling and convincing speech delivered by M. Briand, I would just like to state briefly the point of view of Belgium on the question of limitation of land armaments.

Belgium, trusting in the undertaking given by the powers that guaranteed her neutrality, remained for three-quarters of a century faithful to a policy of peace and limitation of armament. The tragical events of 1914 were for her a terrible awakener. While she was aspiring to nothing but peace, while she was only anxious to accomplish her duties as a neutral State, war was carried on her own territory by the two powers that had not only taken the engagements with regard to neutrality, but had pledged themselves to see that neutrality should be respected.

Devastation, fire, wanton devastation of her industries, murdering and wounding of her inhabitants, deportation of civilian population, heavy losses in her armies, were the reward of her peaceful policy and of the fulfillment of her international obligations.

The Treaty of Versailles put an end to this régime, which events had proved to be worthless and dangerous for her. Owing to her special geographical position and to her situation, Belgium is forced to remain in a certain position, and in 1920 she concluded with France a military agreement purely for defensive purposes, and in case of new, unprovoked aggression on the part of Germany. She keeps her army down to a level that is strictly consistent with the requirements of her national security and she could not possibly proceed to a further reduction of her armament. And yet there is perhaps no State that is more sincerely peace loving. We have no hatred whatever, and we do not want to see war, which has inflicted such painful sufferings upon us.

If I may refer to the words which King Albert of the Belgians, in his message to President Harding, used, I will say that the Belgian Nation calls with her earnest wishes for the moment where the general situation will allow us to enter upon the path of limitation of armaments. She admires the initiative taken by the Government of the United States and wishes every

success to the conference for the greater benefit of the whole world.

AMERICA'S FRIENDSHIP

Secretary Hughes closed the session with this sympathetic comment on the situation of France:

I shall detain you, gentlemen, but a moment. It would not do justice to my own sentiment or to that of my colleagues of the American delegation if I did not, in a word, take part in this expression of the sense of privilege which has been felt in listening to this brilliant, eloquent, comprehensive and instructive address stating the position and policy of France.

No words ever spoken by France have fallen upon deaf ears in the United States. The heart of America was thrilled by her valor and her sacrifice, and the memory of her stand for liberty is imperishable in this country, devoted to the institutions of liberty.

It is evident from what M. Briand has said that what is essential at this time, in order that we may achieve the great ideal, is the will to peace. And there can be no hope of a will to peace until institutions of liberty and justice are secure among all peace-loving people.

May I say, in response to a word which challenged us all as it was uttered by M. Briand, that there is no moral isolation for the defenders of liberty and justice? We understand the difficulties; what has been said will be read throughout this broad land by a people that desires to understand.

The essential condition of progress toward a mutual understanding and a maintenance of the peace of the world is that we should know exactly the difficulties which each nation has to consider, that we should be able justly to appraise them, that we should have the most candid and complete statement of all that is involved in them, and then, with that full appreciation of the apprehensions, of the dangers, of all that may create obstacles in the path of the policy that we are most anxious to pursue, we should then plan to meet the case to the utmost practicable extent; and thus the will to peace may have effective expression.

We cannot go into a statement of detail now. Apparently the conference is so organized that this matter may have an appropriate place in our discussion. We cannot foresee at the moment what practical measures may be available, but the expressions that we have heard from the representatives of the powers engaged in this conference make us confident that here will be generated that disposition which is essential to national security, the final assurance of security which armies and officers and men and material can never supply, that is, the disposition of a world conscious of its mutual interests and of the dependence upon the fact that if they desire,

most ardently and wholly desire it, peace will be enduring among our people.

Is it the desire of the delegates that the matters suggested by the addresses that have been made and the subject itself of land armament should now be committed for the consideration of the Committee on Armament, consisting of the plenipotentiary delegates of the five powers? Assent is manifested, and it will be so ordered.

Is it now in accordance with your wish that we should adjourn subject to the call of the Chair?

Adjourned.

SOLVING THE CHINESE PROBLEM

A meeting of the Committee on Pacific and Far Eastern Questions was held Nov. 21, when resolutions were unanimously adopted which, in the main, accept the ten principles formulated by China [see page xxviii.] and are believed to point out the way to a definite solution of the whole Pacific problem. The resolutions, which were drawn by Elihu Root on behalf of the American delegation, are as follows:

It is the firm intention of the powers attending this conference hereinafter mentioned, to wit, the United States of America, Belgium, the British Empire, France, Italy, Japan, the Netherlands and Portugal:

1. To respect the sovereignty, the independence and the territorial and administrative integrity of China.

2. To provide the fullest and most unembarrassed opportunity to China to develop and maintain for herself an effective and stable Government.

3. To use their influence for the purpose of effectually establishing and maintaining the principle of equal opportunity for the commerce and industry of all nations throughout the territory of China.

4. To refrain from taking advantage of the present conditions in order to seek special rights or privileges which would abridge the rights of the subjects or citizens of friendly States and from countenancing action inimical to the security of such States.

China did not participate in the adoption of the Root resolutions because they represent the attitude of the powers toward herself. Her delegates regard them as a step nearer the realization of the doctrines included in the ten principles submitted by the Chinese delegation.

The two features of the declaration attracting widest attention were the clause approving "administrative in-

tegrity" for China and that under which the powers agreed not to seek "special rights" within Chinese territory. Previous declarations of policy regarding Chinese integrity have stopped with "territorial integrity," commonly construed as a much narrower term than "administrative integrity." The "special rights" agreement was considered generally a direct contravention of the policy of "spheres of influence."

The formula adopted differs essentially in its wording from what the Chinese asked. It deals broadly with "China" rather than with the "Chinese Republic." To have adopted the first of the principles proposed by the Chinese would have pledged the eight powers to respect and observe the territorial integrity and political and administrative independence of the "Chinese Republic."

CHINESE QUESTION DISCUSSED

Discussion of the Chinese question occupied the full time of the Committee of the Whole on the Pacific questions of the conference, Nov. 22, when it was decided to appoint a subcommittee to study Chinese fiscal affairs. This committee is to consider China's proposal for restoration of tariff autonomy, which would remove the present restriction limiting to 5 per cent. the duty collectable on China's imports.

China's undertaking in Paragraph B of the first point in her set of principles, not to alienate or lease any portion of her territory or littoral to any power, was touched upon in a general way at the meeting, and it was understood that this would be one of the problems to be discussed at the next meeting. Shantung was not discussed, nor were Manchuria or Mongolia or any specific proposals other than fiscal. The territorial issue was greatly clarified at the meeting by a statement of Baron Kato that Japan regarded Manchuria as part of China.

The plea of China that the arrangement entered into in 1842—by which

China has ever since been prohibited from exacting more than a 5 per cent. duty on imports—so that China may increase her revenues, to a great extent was responsible for consideration of the tariff question. Chinese delegates represented that the lifting of existing restrictions by foreigners on her commerce would bring to her \$300,000,000 additional annually.

GERMANY ANSWERS BRIAND

Freiherr Edmund von Thermann arrived in Washington on Nov. 20 to prepare the new German Embassy, ultimately to become its counselor. Following the publication of Premier Briand's speech, Herr von Thermann, who at the time was speaking officially for the German people, announced himself through The United Press as in accord with a public statement of Herr George Bernhard, editor in chief of the influential newspaper Vossische Zeitung, Berlin, who spoke as follows regarding the Briand address:

If the French people think it would be possible to avoid any danger of future war between France and Germany by our giving guarantees, the German Government, I believe, would be ready to give any further guarantees possible to any international tribunal as a sign of its good faith and peaceful intentions.

Herr von Thermann said he wanted to avoid anything that might be taken as "German propaganda" in America, and specifically wanted to steer clear of a controversy with M. Briand.

"Tell me, then, how Germany regards Ludendorff, quite apart from any remarks Briand made about him," the questioner asked.

"Ludendorff," Thermann replied, "has no influence upon the Government or on the people. He scarcely dares to go to Berlin; the fact that he sits in Bavaria writing books and has associations with some of the old clique is no sign that he is a factor today."

The German Government on Nov. 22 issued an official denial of M.

Briand's charges. The state ment said:

M. Briand's assertion that the Reichswehr is composed exclusively of officers and non-commissioned officers of the old army is incorrect; on the contrary, the bulk of the Reichswehr is made up of youths between the ages of 19 and 21, recruited since the war.

The "Protection Police (Schuetzpolizei) was created at the bidding of the Entente. The Reichswehr is wholly unaffiliated with the Schuetzpolizei, which took the place of the security police (Sicherheitspolizei) when the Entente ordered the latter's dissolution. The Schuetzpolizei is primarily an agency to maintain law and order, and is not subject to the authority of the Ministry of Defense. It takes orders solely from the civilian Ministries of the federated States. Its numerical strength and its composition with reference to the ratio of officers and men are designated and supervised by the Entente Control Commission. The number of rifles and small arms it is permitted to have is carefully specified. It does not possess heavy-calibred arms suitable to convert into a unit of fighting troops. The Einwohnerwehr, or civilian guards, referred to by M. Briand, have been dissolved, and their arms have been surrendered and destroyed.

The statement disputed M. Briand's assertion that Germany still possessed numerous arsenals equipped to turn out war materials, and asserted that these plants are now limited to two or three required to keep the German Army supplied and that their output is carefully supervised by the Entente Control Commission.

PERSONNEL OF THE DELEGATIONS

Previous to the opening day, the United States Government gave out a complete official list of all the delegations. This list was as follows:

UNITED STATES

PRINCIPAL DELEGATES

Charles Evans Hughes, Secretary of State.

Elihu Root, former Senator and ex-Secretary of State.

[American Cartoon]

—New York World
FIRST BLOOD!

Henry Cabot Lodge, Senator from Massachusetts.

Oscar W. Underwood, Senator from Alabama.

ADVISORY COMMITTEE

George Sutherland of Utah, ex-Senator, who is to be appointed a Justice of the United States Supreme Court when a vacancy occurs.

Herbert C. Hoover of California, Secretary of Commerce.

General John J. Pershing, Chief of Staff of the Army.

Rear Admiral W. L. Rodgers of the navy.

Stephen G. Porter of Pennsylvania, Representative in Congress and Chairman of the House Committee on Foreign Affairs.

Governor John M. Parker of Louisiana, former Progressive, now a Democrat.

Henry P. Fletcher of Pennsylvania, Assistant Secretary of State.

Colonel J. M. Wainwright of New York, Assistant Secretary of War.

Colonel Theodore Roosevelt of New York, Assistant Secretary of the Navy.

Mrs. Charles Sumner Bird of Massachusetts.

Mrs. Katherine Phillips Edson of California.

Mrs. Eleanor Franklin Egan of New York, a writer, who has resided in the Far East.

Mrs. Thomas G. Winter of Minnesota, President General of the Federation of Women's Clubs.

William Boyce Thompson of New York,

financier and close political friend of President Harding.

Willard Saulsbury of Delaware, ex-Senator.

Samuel Gompers of the District of Columbia, President of the American Federation of Labor.

John L. Lewis of Indiana, President of the United Mine Workers of America.

Walter George Smith of Pennsylvania, lawyer and publicist.

Carmi Thompson of Ohio, former Treasurer of the United States.

Charles S. Barrett of Georgia, President of the National Farm Bureau.

Harold M. Sewell of Maine, former Minister to Hawaii and Consul General in Samoa.

TECHNICAL STAFF GENERAL

John Van A. MacMurray, Chief, Division of Far Eastern Affairs, Department of State.

D. C. Poole, Chief, Division of Russian Affairs, Department of State.

Professor E. T. Williams, Former Chief, Division of Far Eastern Affairs, Department of State.

J. Butler Wright, counselor of embassy, now at London.

Leland Harrison, counselor of embassy.

Edward Bell, counselor of embassy, recently at Tokio.

Prof. G. H. Blakeslee, Clark University.

W. S. Rogers, Department of State, expert in cable communications.

Nelson T. Johnson, Department of State.

E. L. Neville, Department of State.

S. W. Stratton, Director, Bureau of Standards, Department of Commerce.

J. H. Dillinger, Department of Commerce.

Professor Edgar F. Smith, University of Pennsylvania.

William S. Culbertson, United States Tariff Commission.

Frederick K. Nielsen, solicitor, Department of State.

Chandler P. Anderson, former counselor, Department of State.

J. Reuben Clark, former solicitor, Department of State.

Professor George G. Wilson, Harvard University.

FOR THE ARMY

Major Gen. James G. Harbord, Executive Assistant Chief of Staff.

Major Gen. George O. Squier, Chief Signal Officer.

Major Gen. C. C. Williams, Chief of Ordnance.

Brig. Gen. William Mitchell, Assistant Chief of the Air Service.

Brig. Gen. Amos E. Fries, Chief of the Chemical Warfare Section.

Colonel John McA. Palmer.

Colonel B. H. Wells.

Lieut. Col. Stuart Heintzelman, Chief of Military Intelligence.

Louis Cohen.

FOR THE NAVY

Admiral Robert E. Koontz, Chief of Naval Operations.

Rear Admiral William A. Moffatt, Chief of the Naval Air Service.

Captain William V. Pratt.

Captain Frank H. Schofield.

Captain Luke McNamee, Chief of the Office of Naval Intelligence.

Captain Samuel W. Bryant.

L. W. Austin.

BRITISH

PRINCIPAL DELEGATES

The Right Hon. Arthur J. Balfour, O. M., Lord President of the Council.

The Right Hon. the Lord Lee of Fareham, G. B. E., K. C. B., First Lord of the Admiralty.

Sir Robert Borden, G. C. M. G., K. C., M. P., former Prime Minister of Canada, for Canada.

Senator the Hon. George F. Pearce, J. P., Australian Minister for Defense, for Australia.

Mr. V. S. Srinivasa Sastri, member of the Vice Regal Council of the Government of India, for India.

Sir J. W. Salmond, Judge of the Supreme Court of New Zealand, for New Zealand.

The Right Hon. Sir Auckland Geddes, K. C. B., the British Ambassador at Washington, will act as a delegate in the absence of the Prime Minister or of any other delegate.

TECHNICAL ADVISERS

Lieut. Gen. the Earl of Cavan will head the military staff.

Admiral of the Fleet Lord Beatty will head the naval technical staff.

There are many other army, naval and other technical advisers.

SECRETARY GENERAL

R. Leslie Craigie, Secretary of the British Embassy, Washington.

FRENCH

PRINCIPAL DELEGATES

M. Aristide Briand, Prime Minister and Minister of Foreign Affairs.

M. René Viviani, former Prime Minister.

M. Albert Sarraut, Minister of Colonies.

M. Jules Jusserand, French Ambassador at Washington.

SECRETARY GENERAL

M. Philippe Berthelot of the French Foreign Office.

PRINCIPAL TECHNICAL EXPERTS

Marshal Ferdinand Foch.

General Buat, for military questions.

Admiral Debon, for naval questions.

M. Fromageot, for legal questions.
M. Kammerer and M. Leger, for political questions.

M. Casenave and M. Cheysson, for financial and economic questions.

M. Duchesne, for colonial questions.

M. Girardeau, for questions concerning cables and communications.

M. Ponsot and M. Corbin, for the press.

INTERPRETERS

M. Camerlynck, M. Denaint.

JAPANESE

PRINCIPAL DELEGATES

Prince Iyesato Tokugawa, President of House of Peers.

Admiral Tomosaburo Kato, Minister of Marine.

Baron Kijuro Shidehara, Japanese Ambassador to United States.

PRINCIPAL ADVISERS

Sennosuke Yokota, Director of the Legislative Bureau.

Masanao Hanihara, Vice Minister for Foreign Affairs.

Tsuneo Matsudaira, Director of the European and American Bureau, Foreign Office.

Kiroku Hayashi, Councilor of the Foreign Office.

Toru Takao, Consul General.

SECRETARIES OF THE FOREIGN OFFICE

Eiichi Kimura,	Tohhio Shiratori,
Yotaro Sugimura,	Eiji Kishida,
Shuichi Sako,	Isago Gomyo,
Eiji Amau,	Hirofumi Terajima.
Yoshio Iwate,	

TRANSLATORS

Tsunetaro Yamamoto, Chuichiro Harada,
Tsuneo Yoniyama, Jotaro Takayanagi

CHANCELLORS

Yokichi Okajima, Thuruya Tamaki.

SPECIAL APPOINTEES OF THE FOREIGN OFFICE

Sakutaro Tate, Eigo Fukai,
Katsuji Inahara.

SECRETARIES OF THE DEPARTMENT OF FINANCE

Takeo Kawagoe. Tsunetaka Komuchi.

THIRD SECRETARY OF EMBASSY

Yutaro Tomita, Secretary, Department of Finance, and Secretary, Foreign Office.

Major Gen. Kunishike Tanaka.
Lieut. Col. of Artillery Noboru Morita.
Major Kanichiro Tashiro, Infantry.
Major of Infantry Tanehide Ferujo.
Major of Infantry Kanichi Nishihara.
Captain of Artillery Takamasu Iseki.

Kanichiro Morishima, Surgeon.

Vice Admiral Kanji Kato.

Captain Katsuroshin Yamanashi.

Captain Nobumasa Suyetsuger.

Captain Yoshi Takeueda.

Captain Kichisaburo Nomura.

Commander Teikichi Hori.

Lieut. Commander Akira Kuragano.

Lieutenant Torao Kuwahara.

Engineer Lieutenant Yoshihiko Mito.

Paymaster Lieut. Commander Daisuke Takei.

Naval Constructor Kasushi Taji.

Juji Enomoto, Councilor of Navy Department.

Shinichiro Matsumura, Councilor Legislative Bureau.

Katsji Debuchi, Counselor of Embassy.

Sadqua Saburi, Counselor of Embassy.

Yotaro Suzuki, First Secretary of Embassy.

Hachiro Arita, First Secretary of Embassy.

Hiroshi Saito, Consul.

Shigeru Kuriyama, Second Secretary of Embassy.

Masaharu Shibatsu.

Renzo Sawada.

Itaro Ishii.

Shu Tomii.

Shoichi Nakayama.

Takanobu Mitsuya.

Canzo Shiosaki.

Tadakazu Ohashi.

Tatsuo Kanobu Kawai.

Renkei Tsuda.

Morindo Morishima, Attaché.

Akira Omi, Attaché.

Hoshiaki Miura, Secretary, Foreign Office.

Takero Ishii, Telegraphist.

Joshiro Sugiyama, Consular Assistant.

Issaku Okamoto, Chancellor.

Sawaji Otake, Major General.

Hatsutaru Haraguchi, Major General.

Uaruji Tatekawa, Lieutenant Colonel, Cavalry.

Tsunenari Hara, Major, Cavalry.

Harumi Mizuno, Naval Captain.

Oasaharu Hibine, Naval Captain.

Massabaru Kojima, Surgeon.

Tadashi Negishi, Instructor Tokyo University of Commerce.

Toyoki Nagakawa, Secretary Department Communications.

Kiyoshi Kanai, Councilor Railway Bureau.

Baron Naibu Kanda, Member House of Peers.

Masunosuke Odagiri, Director Yokohama Specie Bank.

Yasuji Seko, Secretary House of Peers.

ITALIAN

PRINCIPAL DELEGATES

His Excellency Carlo Schanzer, ex-Minister of Treasury, Chairman.

His Excellency Vittorio Rolandi Ricci, Italian Ambassador to the United States.

His Excellency Filippo Meda, ex-Minister of Treasury.

Senator Luigi Albertini.

EXPERTS FROM THE VARIOUS MINISTRIES

General Vaccari, Chief of Staff, Royal Army.

Admiral Acton, Chief of Staff of the Navy.

Marquis Visconti Venosta and Mr. Pogliano for the Ministry of Foreign Affairs.

Commander Ruspoli, for the Ministry of the Navy.

Mr. Catastini, for the Ministry of Colonies.

Mr. Gidoni for the Bank of Italy.

Mr. Pora and Mr. Giannini for the Italian Embassy at London.

DUTCH

PRINCIPAL DELEGATES

Jonkheer H. A. van Karnebeek, Minister of Foreign Affairs.

Jonkheer F. Beelaerts van Blokland, Chief of Political Division of the Ministry of Foreign Affairs.

Dr. E. Moresco, Secretary general of Ministry for the Colonies.

ALTERNATE DELEGATES

Dr. J. C. A. Everwijn, Netherlands Minister in Washington.

Jonkheer W. H. de Beaufort, Counselor of Legation, Washington.

TECHNICAL ADVISERS

Jonkheer O. Six, Chief of Division, Ministry for Colonies.

Mr. van Wettum, former Chief of Opium Monopoly Service in Dutch East Indies.

Mr. de Kat Angelino, Adviser for Chinese Affairs, Dutch East Indian Government.

G. J. W. Putnam Cramer, Captain, Royal Netherland Navy.

SECRETARIES

Jonkheer M. van Haersma de With, Counselor of Legation.

Jonkheer A. Tjarda van Starkenborgh, Secretary of Legation.

Jonkheer C. van Breugel Douglas, Attaché of Legation.

BELGIAN

PRINCIPAL DELEGATE

Barton de Cartier de Marchienne, Ambassador at Washington.

TECHNICAL COUNSELORS

M. Felicien Cattier.

M. Jules Jadot.

Chevalier Emmanuel de Wouters d'Oplinter.

CHINESE

PRINCIPAL DELEGATES

Dr. S. Alfred Sze, Minister to the United States.

V. K. Wellington Koo, Minister to Great Britain.

Wang Chung-hui, Chief Justice of Supreme Court.

SUPERIOR ADVISERS

Chow Tsu-ch'i, recently Minister of Finance.

M. T. Liang, ex-Minister of Foreign Affairs.

ADVISERS

Admiral Tsai Ting-kan, Associated Director of the Revenue Council.

Hwang Fu, Adviser in the President's Office.

Wang Hsia-jui, Secretary of Bureau of Engraving and Printing of the Cabinet.

Lo Wen-kan, Vice Director of Law Codification Bureau, former Chief of Peking Procurator's Court.

Dr. P. C. King, President of Tsing Hua College.

Tang En-liang, Chief of Bureau of Roads and Waterways, Shantung.

Hsu Hsu-jen, clerk, Bureau of Foreign Affairs, Tsinan.

COUNSELORS

Liu Yen, ex-Secretary of the Cabinet.

Wang Chung-yu, brother of Wang Chung-hui.

Chung Wen-yao, Directorate of Shanghai Mint.

Hsu Tung-fan, Secretary in the Foreign Office and Shantung Government's Office.

Wu Nan-ju, editor the newspaper New Society.

Wang Ta-chen, translator in the Foreign Office.

Yang Tien-chi, Secretary in the Ministry of Finance.

CHIEF SECRETARY OF THE DELEGATION

Philip Tyau, recently senior counselor of Foreign Office, now Minister to Cuba.

ASSISTANT CHIEF SECRETARY

Sao Yun-Hsiang, counselor of Foreign Office.

MILITARY MEMBERS OF DELEGATION

Lieut. Gen. Lee Chung-lo, Chief of the Department of Operations in the War Department.

Colonel Chen Ting-chia, counselor in War Department.

NAVAL MEMBERS OF DELEGATION

(in addition to Admiral Tsai above mentioned.)

Admiral Lee Ching-Hsi, Chief of the Department of Naval Education, acting as Naval Technical Delegate.

HONORARY ADVISERS

Ho Hsiao-sheng and Wen Shih-chen.

PORTUGUESE

Viscount d'Alte and delegation.

THE MURDERED JAPANESE PREMIER AND HIS SUCCESSOR

THE overshadowing event of the month in Japan was the assassination of the liberal Premier, Takashi Hara, at a Tokio railway station on Nov. 4, 1921. The assassin, a youth named Ryichi Nakoka, a station switchman, leaped upon the Premier from behind a railway blackboard, and stabbed him repeatedly with a short sword. Nakoka was apprehended, together with the station master. Mr. Hara, mortally wounded, was brought to his home, where he expired shortly afterward. The news of his untimely end filled Japan with grief and consternation. The Hara Government had been subjected during the last year to merciless criticism, particularly of its Shantung and Siberian policy, and several anonymous threats had been made to kill the Premier and other high officials, including even the Japanese delegates to the Washington conference. The late Premier bore the responsibility for many acts that were really due to the military party. Hara stood pre-eminently for harmony. It

BARON KOREKIYO TAKAHASHI
*New Premier of Japan, succeeding Hara, in
whose Cabinet he had been
Minister of Finance*

TAKASHI HARA
*Late Premier of Japan, assassinated at Tokio
on Nov. 4, 1921*

was he who framed the policy of conciliation which dictated the reaching of a settlement with China and with the Far Eastern Russian Republic at Dairen, both of which attempts proved unsuccessful. The same spirit was shown by him in regard to the California issue. The Japanese delegates brought many of his ideals with them to Washington.

Baron Korekiyo Takahashi, Minister of Finance in the Hara Cabinet, was named as the new Premier on Nov. 12. He is 67 years old, is an eminent banker of wide foreign interests, and has twice visited the United States. Like the late Premier, he has always opposed the military element. On Nov. 17 he sent a message to America declaring himself in full sympathy with the Disarmament Conference.

JAPAN, ENGLAND AND WORLD PEACE

BY STEPHEN BONSAI

Because the militarists of Japan still control the Government's foreign policy, and because the Anglo-Japanese Alliance is still a weapon in their hands, permanent peace is difficult of attainment—The late Premier Hara and his problems

THE practice of thousands of years has imbedded militarism deep in the souls of the Japanese people. The tenets of Bushido have long been taught as the ideal of life. The Emperor, the army, the nation from immemorial times have been set up as the trinity which all Japanese must worship. Energized by this spirit, the military caste has created a machine which holds the dominating position, and the military policy is dictated by the General Staff, which is entirely independent of every agency of Government and is only subject to the will of the Emperor himself. Indeed, by its practical veto upon the appointment of Ministers abroad and its exclusive control of the military and naval attachés all over the world, the General Staff completely dominates Japanese diplomacy. As to army organization and expenditure, the General Staff makes its plans without the slightest consultation with any other branch of the Government. When these plans reach him bearing the legend—and, indeed, it is often a legend—"Approved by the Emperor," the helpless Prime Minister, with the wreckage of his predecessors floating on the political seas all about him, if he wishes to retain power and to carry out some of his plans which the people ask for and which the militarists may tolerate, knows where he has to sign, on the dotted line.

Even the gallant Hara, who has fallen a victim to the assassin's knife,

had to conciliate the omnipotent power whose existence is known to everyone in Japan. Although opposed to militarism and probably engaged constantly in undermining it, Hara had to give sops to Cerberus. In many ways he was very democratic and was continually calling upon the people to assert their dormant powers. In addressing the Diet he no longer referred to himself pompously as all his predecessors had done as "This Imperial Minister," but simply as "I." He abolished the bodyguard of uniformed police who had always guarded the Prime Minister; and this, though a step in the right direction, now proves to have been a mistake. He would not have the street traffic in the capital stopped when the Emperor passed, and he permitted discussions of socialism in public meetings. To the amazement of many, he did not suppress the visit of Bertrand Russell. He was very lax in executing the laws restricting the formation of labor unions, and, to the disgust of the *narikin*, or war millionaires, he openly favored the revision of the factory laws.

These same *narikin*, or war profiteers, should not be lost sight of as an important and adverse factor in the situation today. Out of the war with China came Fujita and Okura, who profited largely by selling munitions. Out of the Russo-Japanese War, Baron Furukawa, the copper king, emerged with untold millions. The greatest and perhaps the most

unhealthy of these war growths is the Suzuki Company, which made colossal sums by cornering the sugar crop of Formosa during the great war. These men, together with the Mitsuis and the Iwasakis, control the finances and the industry of the nation, and while they differ as to details at times, they generally have a very smooth-working agreement with the militaristic group.

THE REAL TAKASHI HARA

Takashi Hara, the late Premier, whose untimely and tragic end is everywhere lamented, was a secretary at the conference in Shimonoseki, where the treaty ending the Sino-Japanese war was concluded; he acted there as the joint secretary of Mr. Mutsu and of Marquis Ito, who afterward attained princely rank and also fell by the hand of an assassin. Mr. Hara was entirely without fortune and without influential friends, and everything he accomplished in life he owed to his unaided efforts.

He was never, at least in his academic years, noted as an industrious student. Not because he wanted to, but because he had been urged to do so, he matriculated in the late eighties at a mushroom law college in Tokio which had a record for the ease of its examinations and the shortness of its terms. While ostensibly studying here, Mr. Hara really worked as a reporter on the *Hochi*, and in this capacity laid the foundation of his profound knowledge of the realities of Japanese politics—a knowledge that was later to stand him in good stead. However, the inevitable hour of the final examinations approached, and Mr. Hara, his professors and his fellow-students were quite confident that he would fail. But three days before the examinations were due, the mushroom law school went into bankruptcy, and the examinations were never held. Mr. Hara was wont to dramatize this story and dwell upon it from many and most amusing angles, but the moral lesson he drew from it was this: "Even if you are sure to

fail, perhaps the other fellow will fail first."

After this adventure, in which he flattered himself that he came out with flying colors, Mr. Hara went to Korea on a special mission with Count Inouye. Inouye appreciated the young man's ability and succeeded in placing him in the Consular Service, in which he spent some years in Tientsin and in Paris. He was called home to act as private secretary to Inouye when this elder statesman, then in the prime of life, became Minister of Agriculture. Inouye was soon succeeded by Count Mutsu, and when Mutsu returned to the foreign office he took his invaluable assistant with him in recognition of his services at Shimonoseki; thus Hara in 1895 became Under Secretary or Vice Minister for Foreign Affairs. I can testify from what I saw at Shimonoseki that though Hara was the junior of all the other Japanese delegates, he proved himself to be at once the leading spirit and the wheel horse of the Japanese delegation. As further reward he was appointed Minister to Korea.

I often fancied that Mr. Hara was not an ardent admirer of the Korean policy which his Government was then developing. Perhaps, however, it was merely the restraint of diplomatic life that proved irksome to him. Be this as it may, early in 1897 he resigned his position and became the editor of the *Osaka Mianichi*, a great liberal organ. The following three years were the most fruitful of his career. His editorial work and his frequent speeches on timely topics gained him great prominence. He and Mr. Hoshi Toru were naturally selected as Prince Ito's active lieutenants when in 1900 the Prince raised the standard of liberalism, separating from his former affiliations, and founded the *Seiyu Party*. Mr. Hoshi, after having been Japanese Minister at Washington, where he distinguished himself by his careful study of American machine politics, had run a some-

what radical course as Deputy in the Diet from Utsonomiya. He then became Lord Mayor of Tokio and was shortly afterward assassinated by a reactionary fanatic. Indeed, it is a noteworthy fact that the founder of the liberal party, the great Ito, and his two ablest lieutenants, Hoshi and Hara, all came to their end at the hands of assassins. All are dead now, including Mr. Mutsu, and of the early leaders only Marquis Saionji, who served as the senior delegate of the Japanese Mission at Paris, remains. If he had assumed the reins of power it would have been a temporary and a nominal leadership at best. Marquis Saionji is very old and quite infirm. In Paris during the peace conference it was with great difficulty that he performed the duties that were incumbent upon him. He played a prominent part in the Restoration struggle in Japan as far back as 1868, and, as M. Clemenceau loved to recall, Saionji was the only representative of Asia who fought for liberty on the barricades of Paris in the terrible year of 1870. His active career is now finished.

Prime Minister Hara formed his Cabinet and assumed responsibility and the reins of power in 1918, after the fall of the Terauchi Ministry. On several occasions later he made statements quite in harmony with his attacks on the Okuma-Kato Ministry in 1915, but the expected, and indeed promised, reversal of the militarists' policy has not been realized. Admittedly Mr. Hara was not an imperialist and not a "Prussian." Still, it must be conceded that as regards foreign affairs of the East his policy did not come up to the liberal expectations which were not without justification. In the general election that was held in May, 1920, the Seiyu-Kai, as the ministerial party, received a great popular endorsement, and the election conducted a few months before for the provincial assemblies gave equally satisfactory results. It is certain that Mr. Hara's efforts to lower the franchise and to broaden the electorate proved highly favor-

able to the representatives of his party and the allied progressive groups. But I cannot recall a single instance of that constructive assistance to China which was promised, or a single demand of the Imperialist Party that was actually reversed while the late Prime Minister was in power.

THE ANGLO-JAPANESE ALLIANCE

With the centre of world interests and of world alarm shifting from Europe to the Pacific, there is no factor of the complex situation more vital to us than exact knowledge of the present relations between England and those sovereign States, her overseas dominions. We are frequently comforted with the suggestion—sometimes it even amounts to a semi-official assurance—that as far as the overseas dominions are concerned the Anglo-Japanese alliance has for all practical purposes been denounced, or in any event may be regarded today as void and of no effect. Unfortunately, there is little or no justification for this comforting delusion. Before these lines are published Washington may well be more concerned as to what the British dominions are going to do in the light of possible contingencies than even what Japan is going to do. This new imperial policy promising a distinct change in methods was initiated by Sir Robert Borden, the Premier of Canada, during the Peace Conference in Paris, and resulted in the following memorandum, by which it was thought a new theory of constitutional relations was laid down:

1. The Dominion Prime Ministers, after careful consideration, have reached the conclusion that all the treaties and conventions resulting from the peace conference should be drafted so as to enable the dominions to become parties and signatories thereto. This procedure will be a suitable recognition of the part played at the peace table by the British Commonwealth as a whole, and will at the same time record the status attained there by the dominions.

2. The procedure is in consonance with the principles of constitutional government that obtain throughout the empire. The Crown is the supreme executive in the United Kingdom and in all the dominions, but it acts on the advice of different Minis-

ters within different constitutional units; and under Resolution IX. of the Imperial War Conference [1917] the organization of the empire is to be based upon equality of nationhood.

Australia has gone somewhat further. An Order in Council has been passed in Australia "praying his Majesty to issue letters patent appointing plenipotentiaries in respect of the Commonwealth of Australia" to facilitate the signing and the ratification of peace treaties. At the imperial conference in London last June, however, Mr. Hughes, Australian Prime Minister, advocated the renewal of the Anglo-Japanese alliance as a means of eliminating possible causes of war, coupling his advocacy, nevertheless, with two notable reservations: "(1) That no treaty must impair the White Australia policy; or (2) in any way endanger Australian friendship and understanding with the United States."

Mr. Hughes's course at the imperial conference subsequently received the general support of the Australian Parliament, though it was far from unanimous. Mr. Ryan, a leader of the Laborite opposition, moved an amendment forbidding the Prime Minister to make Australia a party to any Anglo-Japanese treaty without the consent of the Australian Parliament, and he argued at some length that in spite of the reservations made by Mr. Hughes the Anglo-Japanese alliance, if renewed, would almost necessarily give offense to the United States. Mr. Ryan provoked by his frank words storms of approval as well as of disapproval, but Prime Minister Hughes met the situation and weathered the storm by pledging himself to bring before Parliament "questions of naval and military defense and any scheme for adjustment of foreign policies together with the terms of the Anglo-Japanese Alliance—if it should be renewed."

Apparently this solution is regarded as fairly satisfactory in Australia. It is thought that the new status of the dominions, as manifested at the Peace Conference in Paris through their separate representation and by their separate membership in the League of Nations, is fully safeguarded. And so it may be for the future, but the dominions are still bound by the Anglo-Japanese alliance and by the secret Shantung Treaty of 1917, just as they were before the new procedure was adopted. As I have stated before, the Anglo-Japanese Treaty, which is the bulwark of Japan in Shantung and the main danger to the integrity of China, is self-continuing. In time of war it cannot be denounced at all, and in time of peace a notice of twelve months in advance of termination is required. Down to the present writing no such notice has been given. Today the Anglo-Japanese Treaty is in full force and its unhappy influence is of world-wide effect. It is estranging the English-speaking peoples in the East as well as in the West.

The practical effect of the present policy is to let the treaty continue terminable at any time, as long as peace prevails, upon twelve months' notice. This drifting course may be satisfactory to the Australian and perhaps even to the Canadian, although I doubt it; but it is—and this fact should be emphasized—increasingly unsatisfactory to the people of the United States. While we are drifting along in this way a treaty is in full force that is endangering "Australian friendship and understanding with the United States." In the shadow of this misunderstanding more progress is being made by those who for a variety of reasons oppose the association of England and America for the upholding of world peace and progressive civilization than ever before.

A FRANK OFFICIAL STATEMENT FOR JAPAN

BY BARON MIJURO SHIDEHARA

Japanese Ambassador to the United States and Minister Plenipotentiary to the Arms Conference

Policy of Japan in the Far East, and its bearing on arms limitation, stated authoritatively by the Japanese Ambassador—Attitude regarding China and the Philippines—War against United States would be “national suicide”—Baseless suspicions

I AM glad to comply with the request of CURRENT HISTORY for a statement of the Japanese position at the Washington conference. In the first place, Japan welcomes the opportunity afforded by the conference to make clear her policy, which has been either misunderstood or misrepresented too frequently. We have as a principal article in our conference creed the belief that by a frank interchange of views, a straightforward statement of ideas without concealment or indirection, much of the international suspicion and distrust which now make understandings difficult will be removed, and a substantial measure of success will be achieved.

The primary object of the conference is, of course, limitation of naval armament. To what extent this reduction of expense may be carried is naturally impossible now to state exactly; too many factors are involved. But in a general way there should be little difficulty in reaching an agreement, for there are practically only three powers concerned, and only three navies. Each of the three is separated from the others by broad oceans, and none of them has vital interests conflicting with the others. Thus it is only by a display of the most obtuse obstructionism that the great purpose can be defeated, for the peoples of every country are demanding with profound earnestness a relief that can be afforded now only by agreement in the conference. None of the delegations can afford to go home to confess failure.

There are some obstacles in the way, but they exist chiefly in the mind of the public, or in its attitude toward us. Many Americans see the pathway toward an agreement blocked by the “Far Eastern problems.” As a frank discussion is the only safe way to understanding, I shall venture to point out the simple character of these problems, and the unsoundness of the contentions that have been advanced here by those who expect the conference to fail and by those whose interest opposes its success.

There is the fear that Japan might attack America.

The World War left America unassailable. No nation could make war on the United States without risking national suicide. Europe contains no threat to you, over the 2,500 miles that separate you. European countries are too keenly alive to the fact that they must look to you for the help they so urgently need in this period of dreadful exhaustion. You are the living, vigorous example of the fact that national power resides, not in the extent of armed establishment, but in the perfection and extent of industrial organization.

But Japan, with a land too small to feed its population and facing a transformation into an industrial nation, dependent on the rest of the world for both its markets and its supplies of material, is divided from your continent by an ocean twice as broad as the Atlantic. If she had the will to attack America, the circumstances being what they are, can you

conceive that she would be so foolish as to attempt it?

NO DESIRE FOR PHILIPPINES

The alarmists, however, do not confine themselves to that argument. They assert that Japan could take the Philippines. But Japan does not want them, nor does she want Hong-kong, or French Indo-China and other Eastern possessions of the Western nations. Japan does not want them, and although she could well consider them a threat against herself if they were in the hands of enemies, she is content with the assurance that none of those nations has designs against her.

Japan's unfriendly critics, however, also charge her with a plan to control and organize China into an immense yellow threat. That vicious phrase, "the Yellow Peril," was, if you remember, coined by Wilhelm II. of Germany in his abortive attempt to stir up antagonism between our countries and to turn America's eyes from his war. If that idea still survives in America, the fact proves that you do not realize, what Japan recognizes clearly, that such a project is impossible of attainment.

First, an attempt to carry it out would bring us directly into conflict with all the other nations already holding great interests in the Far East. Next, we should have not only to organize and train, but to control China politically. There are centuries of history to show the impossibility of it. China has been invaded and conquered, and the unvarying end of the adventure has been the absorption of the "conqueror" into the mass of China. Besides, a conquered people can never be an asset in war; and Japan needs peace and friends, not war and enemies.

The big blessing for Japan would be a prosperous, stable China, organized to produce and able to buy. The Open Door and equal opportunity in China mean economy, if not actual salvation, for Japan. Every million of dollars or pounds sterling or francs that goes into the development of

Chinese resources is a direct saving of the equivalent in yen. It means prosperity to China—increase of her purchasing and producing power—without expense to Japan. It means good business for Japan.

JAPAN'S AIMS IN CHINA

But equal opportunity to help China and in that way to help ourselves is not to be denied us. We are not self-sustaining, rich in natural resources, like the United States. Nor have we an empire like the British, broadcast over the world, to supply our needs. We have an area about equal to your State of Montana, and a population of 60,000,000. Like England, we must obtain our sustenance abroad, and our products must go to foreign markets. China's markets and materials mean to other countries only more trade; to Japan they are vital necessities.

We have reached the stage of development where we must industrialize in order to preserve our existence. Continental Asia has the materials for our trade. We demand the right to equal opportunities there, secure in the knowledge that in competing with other countries we need no advantages beyond our geographical position. We ask only an adoption by all concerned of the "live and let live" policy.

In developing these resources and markets of China we should deprive—according to our opponents—the Chinese of their native rights. But the contrary is true. By such development, whether it should be the result of Japanese, British or American enterprise and capital, the chief gainer would be China. There are, it must be confessed, unscrupulous rogues among the traders in China as on any trade frontier. There is keen competition in dishonesty among many nationals; it is not a Japanese monopoly. An unorganized and backward country is invariably victimized by such persons, either of its own or other nationalities. But the Asian Continentals are always the first to benefit by any industrial or agricul-

tural development made possible by foreigners.

Along the line of the South Manchurian Railway, for example, in a region where the native population was so harassed by brigands—before the Japanese control of the railway—that it was being driven out of the country, a régime of law and order has now so stabilized conditions of life and property that the Chinese have flocked to the new prosperity. A district that was threatened with extinction as a human habitation, by becoming a part of the barren Mongolian Desert, has become a place of prosperity, producing crops so great in volume that there is an influx of farm laborers each harvest season. Hundreds of thousands of Chinese cross over each year from the Provinces of Shantung and Chi-li to gather the crops and then go back with their wages to winter at home in comfort.

Wherever development is undertaken the resulting activities benefit the whole world. At present America does with Japan many times the volume of business that she does with China, whose size and natural wealth are so vast. In China, America may have lost part of her piece-goods trade to England, but she has taken in exchange a business in textile machinery.

REGARDING SHANTUNG

Japan is charged with having deprived China of the Province of Shantung. What are the facts in that case?

When Japan, in the great war, assumed the duty of protecting allied interests in the Far East, she was obliged to remove the existing threat of the German military base in Tsingtao. She made the necessary military effort—together with a British contingent—and took the place. Japan then occupied Tsingtao and the Tsingtao-Tsinan-fu Railway, formerly held by Germany under a ninety-nine-year lease, in order to prevent a recrudescence of enemy influence from that focus. This leased

territory of Kiao-Chau is about two hundred square miles in extent—the Province of Shantung is two hundred times greater—and contained about fifty or sixty thousand persons who had gathered there to trade with the Germans and who remained there to do business with the Japanese. The population of the Province of Shantung is estimated at forty millions.

Japan had no intention of retaining the former German leased rights, and after the war she repeated her original offer to turn them back to China, suggesting that the former leased territory be made a free port for the trade of all nations on equal terms, and that the section of the German railway which she held be made a joint Sino-Japanese enterprise.

China has refused this offered arrangement, contending that all the former German rights automatically reverted to China when she declared war against Germany. But that declaration of war was made a full year before China arranged with Japan a loan—and accepted payment under it—recognizing the principle of the joint working of the former German railway.

Japan maintains troops along the railway line in Shantung to police the line. Together with the contingent in Tsingtao—the port—the detachment numbers about two thousand officers and men. Twice that number of troops are maintained by the great powers, including the United States, in the neighboring Province of Chi-li to police the railway from the coast to the capital and to guard the legations in Peking. Moreover, the former German preferential rights, to supply capital for further railway development, are to be turned over—if the Japanese suggestion is followed—to the present International Financial Consortium, composed of American, Belgian, British, French and Japanese banking groups, supported by their Governments.

So it is evident that there is really little truth to support the charge of

Japanese aggression in Shantung. Now all this has to do with naval armament limitation. For if it can be demonstrated that there is no vital conflict of interest among the conferring nations, and therefore no threat of aggression to arm against, the solution becomes merely a matter of degree.

And again, frankly, Japan comes to the conference recognizing that there is in America suspicion and distrust to be overcome, though Japan feels no such distrust regarding America; her delegates come hoping and trusting that this cloud will be cleared away when the facts are made known. She hopes to demonstrate the facts, her needs, and the justice of her policies. She is ready to har-

ken to advice and to co-operate with the others to her utmost.

As Admiral Baron Kato, the Minister of Marine, has stated, Japan is prepared to agree to limitation of naval armament so far as may be consistent with her national security. Details of proper proportionate reductions of building programs belong to the technicians.

Japan is an island empire dependent on sea-borne commerce, but she believes that relief can be obtained by armament limitation, and that armament limitation can be achieved by a genuine co-operation based on mutual knowledge. She is here prepared to spread her facts on the table, knowing that she has nothing to conceal and much to gain.

CHINA AT THE WORLD COUNCIL

BY SAO-KE ALFRED SZE

Minister of China to the United States and Ambassador Plenipotentiary to the Washington Conference

Representatives of the Peking Government at the Arms Conference seek only a full recognition of China's sovereign rights—Covetous eyes of other nations turned upon her undeveloped resources—Need of a definite understanding on Pacific questions

CHINA gave immediate and wholehearted acceptance to the invitation of the United States to participate in the conference for the par-cussion of political questions in the Pacific, for no nation is more desirous than is China that world peace—especially peace in the Pacific—should be preserved.

The Chinese Government is convinced that it is possible to establish and maintain, by friendly agreement among the nations, a régime in which the legitimate interests of every nation may be recognized and advanced. In other words, the Chinese Govern-

ment believes that there is an essential harmony between the true interests of all nations, and that the Washington conference offers an opportunity to determine, as far as the Pacific is concerned, the basis upon which such harmony may be more securely maintained.

China is all the more glad to enter this conference because she is in the fortunate position of seeking only a full recognition of her rights as a member of the family of nations. She has no acts of aggression on her part to explain to anybody. She will ask only that the conference give its for-

mal recognition to principles of international conduct which the world will recognize as just and calculated to advance the interests of all the peoples of the Far East and of those nations of the West which have political or economic interests in the Pacific.

At the same time that China is thus able and disposed to co-operate for the attainment of the common ends for which the conference has convened she is confident that her own interests will be greatly advanced. She expects that as the result of the conference she will be freed in future from the assaults that in the past have been made upon her territorial and administrative integrity, and that thus she will be able to concentrate her efforts upon the improvement of her domestic conditions—the extension of her railways, the reorganization of certain of her public services and the adoption of a permanent Constitution whose provisions will meet the political needs of the country as they have been disclosed since the establishment, ten years ago, of a republican form of Government.

We must all admit that the world is poorer because of the World War through which we have just passed. Untold destruction was wrought in the fields of wealth and man-power, and many years will be required for various nations to get on their feet again. Many nations are so impoverished that it may require half a century for them to return to the condition of prosperity that existed before the war, and, to make matters worse, the war has left in its wake problems of social readjustment that make the economic readjustment much more difficult. Even the nations of the American continents have not escaped the consequences of six years of destruction in Europe.

CHINA IN THE WAR

The Republic of China took part in the World War. It broke off relations with the Central Powers, largely because of the fine example of the United States of America. China

did not send soldiers to the western front, but she did send an army of more than 150,000 laborers, artisans and mechanics, and these men did yeoman service for the allied cause. In France they mingled with the American and British and French and Belgian soldiers, and their enthusiasm for the cause was just as patriotic as the spirit that animated the doughboy, the Tommy and the poilu. In Archangel and Murmansk several regiments of Chinese volunteered for the firing line, donned British and French uniforms and helped to hold the trenches against Bolshevik advance. Chinese laborers were also found with British expeditionary forces to Southern Russia and Mesopotamia.

China was affected by the World War in other ways: Two great and powerful nations of Europe, Germany and Russia, both of which at various times in the past constituted a menace to China, were eliminated as military powers and placed in a new position in respect to their relations with China. China was also affected vitally by the territorial arrangement growing out of the war settlement—a territorial arrangement that must be righted to the just consideration of our people before we can ever have permanent world peace. And then there was another change wrought in China by the World War—a change in the minds and thoughts of our people that may ultimately be the most far-reaching of all. I believe I am stating the case exactly when I say that the people of China were more deeply stirred by the war and its consequences than by any other event in our recent history, with the possible exception of the change from a monarchy to our present republic.

The Republic of China has a territory approximately one-sixth larger than the continental United States, and we have a population about four times as great as the United States. We have always been an agricultural people, producing largely for our own needs, with a small surplus for export.

In recent years we have had the beginnings of industrial development, and this process of transition was hastened by the war. In many ways we are going through the same transition stages that the United States passed through in its industrial development. You found a virgin, undeveloped land. First, you conquered the land to agriculture. You borrowed large sums of money abroad, and with the money you developed your railroads, waterways and industries. We are trying to do the same thing, and in our new development we are trying to benefit by your experience.

UNDEVELOPED RESOURCES

We see a great deal in the press these days about the financial situation in China. The Banque Industrielle de Chine, one of the largest banks in China, recently failed after many years of operation. This was not a Chinese failure, but was a part of the financial stress that all countries are feeling. The Banque Industrielle de Chine had always been managed by foreigners, never by Chinese; and when it failed it was the Chinese bankers who came to the rescue and averted a general financial collapse.

Our difficulty has been that we have not had the free opportunity for development that you have had. Our great, undeveloped resources, coupled with our weakness in national defense, have made China the object of the covetous eyes of more powerful nations. This has handicapped our development and has produced a situation in China that is generally recognized to constitute a menace to the world's future peace and prosperity. Whether this condition is to continue or not depends largely upon the attitude of the various nations now gathered in Washington to consider the limitation of armaments and the settlement of the Far Eastern problems.

The World War produced tremendous changes in the relative standing of nations—changes which we are only now beginning to realize. China, although weak economically, is in the position of a going concern. China at the present time constitutes a market for practically everything that the Western World produces. Although our country is the most densely populated section of the earth, we have vacant spaces in the hinterlands of China that are unmatched by any other world areas save the great western part of the United States, which you have made so productive. It has been stated by competent authorities that Germany, in order to carry her after-the-war burdens, will have to produce six or eight times as much as she did before the war. In relation to the problem of German production, think what it would mean to the present prosperity of the world if China could be helped to produce just twice as much as she now does. It would set your factories to going almost overnight, and your problem of unemployment would disappear as if by magic.

China comes to this conference with confidence that her own sovereign rights and legitimate national interests will be recognized and respected. Her delegates will gladly support any conclusions which may be reached, the purpose and result of which will be to enable the other nations of the Pacific to maintain their sovereign rights and legitimate interests.

So far as China will ask for a correction of conditions which she deems unjust and burdensome, she will not do so solely or primarily for her own benefit, but in order that thus the relations of other powers with herself may be simplified and harmonized, and that thus international concord and co-operation may be maintained and international peace made more certain.

SOUTH CHINA'S WARNING

BY MA SOO*

Representative of the Canton Government at Washington

*President Sun Yat-sen's envoy at Washington declares that the greatest Pacific problem cannot be solved by the Disarmament Conference if South China is denied a voice in the settlement—
Bitter criticism of Japan and powers that have exploited China*

CHINA'S importance to the world seems not to have been generally realized until the wreck of the more highly organized trade and commercial systems of the West brought about by war's upheaval forced attention more acutely upon the vast potential resources awaiting development in the East. Now, because of its natural resources and the quality and unlimited units of its man-power, China has suddenly sprung into prominence and seems destined to play a rôle of vast importance in the future development of the world. It is this very vastness of natural resources and man-power which is partly responsible for the predicament in which China finds herself today.

There are two things which the world powers demand today, and which they must have: markets and natural resources. Both of these exist in China. Nowhere in the world are there greater resources of undeveloped material. The soil of China has been farmed for centuries and shows no signs of exhaustion. The agricultural wealth of the land is supplemented by vast deposits of coal and iron, two minerals essential to the industries of the world. To these may be added deposits of tin, quicksilver, copper, antimony and other minerals essential to industry. And with this vast store of natural wealth China has an extensive sea coast, unsurpassed harbors, and rivers which form practical transportation routes from the coast to the undeveloped

fields so rich in material now demanded by the world. Add to this store of wealth a population of some four hundred million people who have produced a civilization which has endured for four thousand years and compares favorably with the civilization of any race on earth, a population which is frugal, industrious, patient, peaceful and intelligent, and you have a large section of the world wherein exist the greatest possibilities of history. All this the nations of the West now realize. The result is that, together with Japan, they are marking China for their own exploitation. They are turning to the last great storehouse in a mad scramble to be first in dipping the greedy hand of the West into the treasure-chest of the East.

Long before the nations of the West began to take a serious interest in China as a possible source of trade development and raw materials, Japan realized the commercial possibilities dormant in her great neighbor. Systematically, and not always honestly, Japan set about gaining control of these resources, as she is poorly supplied with the things that are

*Mr. Ma Soo, like his chief, President Sun Yat-sen, is a Chinese statesman and scholar of the new school, having received his education in the United States and Europe. He has been chosen by the President of the Canton Government—which is seeking to overthrow the Peking Government on the ground that it is corrupt—to serve as Chinese Minister at Washington, but thus far the United States Government has not given him official recognition. In the intervals of his diplomatic duties Mr. Ma Soo recently lectured at Columbia University, his American Alma Mater, on "The Development of Chinese Civilization."—EDITOR.

so abundant in China. When the World War broke out, Japan at once saw that either group of powers engaged in the struggle would be willing to pay well for such services as she could render. Especially would they be willing to pay, as the price would not be demanded from their own coffers, but from the people of China. Japan realized that her supreme chance had come. She acted accordingly. Already in a strong natural position with regard to China, she saw that she could so strengthen her hold as to obtain great quantities of the raw materials which she required, and in exchange she could make payment in manufactured articles to her own advantage. Japan entered the war, and she was astute enough to enter upon the winning side.

Although China later entered the war as an ally of Japan and of Japan's allies, the attitude of the Japanese Government toward China was never that of an ally. It is probable that Japan honestly desired in 1914—and that she desires today—to cement the Far East into one great productive organization, with herself at the head. Nevertheless, her methods with regard to China have not been such as to win the confidence of the Chinese people. The attitude of Japan is resented by the Chinese, and, instead of drawing the two Eastern nations into closer mutual relations, is driving them further and further apart.

The policy of Japan was clearly disclosed in the now famous Twenty-one Demands. These were withheld from the world at the time they were forced upon China—a course that was not surprising in the light of their nature. Had China acceded to these demands she would have become a mere bondman for Japan; in fact, they were designed to give Japan a protectorate over China. It is well for the rest of the world that at this critical time the people of China, rising in their seldom-used might, forced the Government at Peking to balk Japan's plan for gain-

ing control of the wealth and manpower of China.

THE OPEN DOOR

Japan is making hay in Shantung today by reason of her economic and governing status there. The nations of the West see what is going on, and they sense further Japanese inroads in China, especially into the Chinese market; they are anxious, therefore, to proclaim anew and very loudly the policy of the open door in China, in order that all of the plums may not fall into Japan's basket.

The commercial nations of the West have come to realize that one of their greatest needs today is a market for their manufactured products and a source from which to draw raw materials. They see both of these in the great, awakening and resourceful land of China. In the old days, before war was made so stupendous and so horrible—and so expensive as to become unpopular with the mass of the people who bear its burdens—nations would unhesitatingly have fought for what they desire from China. Today the competition in armaments necessary for expansion by means of war is becoming too expensive. Nations bent upon acquiring special privileges, spheres of influence, concessions, &c., are today engaged not in fighting for these things, but in talking for them. The present idea of some of the nations of the West, in fact, is to talk Japan into giving them some of the plums she stole from China while the rest of the world was busy with war in Europe.

It is quite apparent that one main cause for the calling of the Washington conference is the desire to share in the great development of China. The world has seen what wealth there is behind the curtain which has so long shrouded the Far East, and it wants a share of the treasure without a fight.

In these calculations the West seems to have overlooked the Chinese people. The millions who inhabit the land where the natural riches are stored, the millions who will make

possible a great trade expansion in the Orient, cannot be ignored. Nations which fail to consider the Chinese people, which do not co-operate with them in the development of natural resources, planning for the benefit of the Chinese people as well as for that of the rest of the world, will never solve the problem of the Far East. The rights of the Chinese people in their own country cannot be successfully ignored.

China is quite aware that in her past dealings with other nations she has not always, not very often, in fact, been accorded strict justice. Suspicion of the motives of foreign nations is but natural in a land which has been so largely exploited as has China. There is only one way in which this suspicion can be removed by those nations which have enriched themselves at China's expense, and that is by giving up their ill-gotten and often extorted concessions and so-called "rights." To prove their honesty of purpose beyond any doubt, Japan, Great Britain and France should give up their "spheres of influence," and there should be established in China but one "sphere of influence"—that of the sovereign people of the Republic of China.

CORRUPT PEKING GOVERNMENT

There is one other important consideration in regard to rehabilitating China and making her what she should become, the greatest producing and buying nation on earth, and that is the stabilizing of her Government. The people of China are awake to this essential. They understand that success cannot be obtained so long as the powers persist in backing corrupt government in China in order to gain concessions and authority. The powers must realize that, in spite of temporary advantages to be gained from corrupt officials, they must ultimately deal with the Chinese people as a whole. It is a well-known fact that, before the Republic of China was recognized, Great Britain made it a condition of recognition that a new treaty giving Britain increased rights

in Tibet be drawn. It has been the practice of the powers to support corrupt government in Peking in order to feather their own nests at the expense of the Chinese people. They supported Yuan Shih-kai financially and morally—Yuan Shih-kai, the man who would have made himself Emperor, who betrayed the Chinese people, and who was destroyed by the people because he wished to destroy the republic.

Unfortunately, the lesson with regard to Yuan Shih-kai was not a warning to the powers. Today they are supporting an equally corrupt Government in Peking headed by Hsu Shih-chang, who is dominated by the pro-Japanese Tuchuns, the militarist chieftains of the North. Unless such a policy as this is discontinued, there can be no lasting success in stabilizing government in China.

Another great cause for the failure to stabilize China, perhaps the greatest cause working in the interest of eventual disintegration, is the continued ignoring of the pleas of the Canton Government, the only real and legal Government functioning in China, for recognition. The Canton Government is headed by patriotic, progressive men who have made the greatest sacrifices for their country, instead of exploiting it for their own profit, as others have done. Inviting representatives of the Peking Government to the Washington conference and ignoring the Canton Government cannot but result in failure in the settlement of Chinese questions. Peking no longer represents China. It is merely representative of a small clique of militarists who retain power by force. It is obvious that this clique cannot represent the Chinese people, nor can its delegates to the conference speak in any way for China.

SUN YAT-SEN'S DECLARATION

President Sun Yat-sen, the chief executive of the Republic of China, has set forth the case as it is seen by a large portion of the Chinese people in the following declaration made at

the time invitations to the conference were sent to the Peking Government and withheld from the Canton Government:

The President of the United States has invited China to participate in the discussions of Pacific and Far Eastern questions at the conference to be held at Washington.

The Government of the Republic of China, of which I am the duly constituted Chief Executive, affirms that no settlement of these questions is possible so long as China is not freed from policies which are defined and elaborated in the Twenty-one Demands and Treaties, and further worked out in the series of secret agreements, loans, concessions concluded and granted by Hsu Shih-chang's Administration in favor of Japan. All other questions are subordinate to these menacing policies, the unchecked prosecution of which involves an alien domination of China, with her man power and natural resources.

To secure her release from this policy of domination China must be represented at the conference by a delegation under the direction of an Administration that is not only the legal Government in China but is not committed and not compromised by dealings and relations with the foreign power pursuing that policy.

Hsu Shih-chang and his Administration are so committed and so compromised. He was the Secretary of State of the Administration which mismanaged the negotiations connected with the Twenty-one Demands, and in consequence sacrificed vital Chinese rights. He and his Administration concluded the secret agreements of Sept. 24 and Sept. 28, 1918, and other secret transactions impairing the independence and integrity of China and subjecting Chinese economic resources to an exploitation subserving the same policies of domination. Besides this moral incompetency of the Administration, Hsu Shih-chang is illegal. He was elected by an illegal Parliament, which was set up in violation of the Chinese Constitution, and which he himself had to dissolve in the Autumn of last year as unconstitutional.

On the other hand, this Government is entirely free and stands uncommitted vis-à-vis any foreign power. It is also the legal Government of the Republic of China, because it has been established in pursuance of government-making power vested by the Constitution in Parliament.

The moral disqualification of Hsu Shih-chang and his Administration to state China's cause is a difficulty that goes to the root of the Chinese representation at the conference. This difficulty cannot be solved by any paper scheme for political unification of China. It is a stern reality

that must be faced if China is to secure a minimum of justice at the conference.

Therefore I, in the name of and on behalf of the Government and the people of the Republic of China, hereby declare that unless a delegation under the direction of this Government attends and takes part in the work of the Washington conference, none of the decisions of the conference relating to China shall be recognized as having any validity or force.

Whatever influence the Peking Government has is the influence of Japan. This influence is at work in Peking today. It will be at work at the conference. It will be felt at Washington, even though some of the Peking delegates may find their instructions from Peking distasteful. The grip of Japan is upon the throat of Peking, and it cannot be shaken off, even though Peking is gasping and dying from the strangle-hold.

The Canton Government has made its stand perfectly clear in the above declaration of its President, and it will abide by its position. Nothing that the conference may do will change the patriotic attitude of these men who, above all other considerations, place the well-being and the future sovereignty of their country first.

There can be no solution of the "Problem of the Pacific," there can be no permanent basis for disarmament in the Far East—and that means, of course, that there can be no disarmament anywhere—until the sovereign rights of China are fully restored to her, until she has control of her own resources, railroads, customs, waterways and internal and external relations. There may not even be a start made toward the stabilization of China until the powers recognize the legal Government set up by the Chinese people in accordance with their Constitution and their desires, and give over dealing with a fictitious Government maintained in the interest of militaristic overlords willing to sell the rights of the Chinese people to the highest bidder in order to maintain their own fleeting authority and line their own pockets.

General Pershing laying a wreath at the Cenotaph in Whitehall, London, as America's tribute to Britain's Unknown Soldier

BRITAIN'S UNKNOWN WARRIOR HONORED BY AMERICA

CERTAINLY the most impressive event of the month in England was the ceremony attending the decoration of the grave of the unknown British warrior in Westminster Abbey, Oct. 17, with the American Congressional Medal of Honor. As a special military representative for the occasion, General Pershing arrived from Paris, escorted by a detachment of 500 American troops from the Rhine zone.

At the north door of the abbey the Prime Minister, with several of his Cabinet, joined the dean and clergy to receive General Pershing. Upon the American General's arrival a procession was formed to escort him to the unknown warrior's grave by the west door. American soldiers lined the passage.

General Pershing walked immediately behind the dean, with George Harvey, the American Ambassador, at his side. After them came Admiral Niblack, U. S. N., other naval and military officers, and the British Ministers. Near the grave were grouped a brilliant gathering of Field Marshals and other high dignitaries. After the chanting of a hymn, the American Ambassador be-

gan an address. In a dramatic passage Mr. Harvey typified the two armies in two soldiers, different in race, but one in patriotism, fidelity, honor and courage; one recumbent in the grave, "the other, equally noble and equally well beloved, by my side. Both live, and will ever live, in the hearts of their countrymen." General Pershing followed with an appropriate speech, in which he said:

As we fondly gather about this sepulchre, the hearts of the American people join in this tribute to their English-speaking kinsman. And now, in this holy sanctuary, in the name of the President and the people of the United States, I place upon his tomb the Medal of Honor conferred upon him by special act of the American Congress, in commemoration of the sacrifices of our British comrade and his fellow-countrymen, and as a slight token of our gratitude and affection toward his people.

General Pershing stooped to one knee, and, with reverence, deposited the wreath with eyes still riveted upon the hallowed spot, and standing out alone, he gave a soldier's salute. Intense stillness prevailed throughout all the multitude the abbey at that moment sheltered.

THE MONTH IN THE UNITED STATES

Burial of America's "Unknown Soldier" in Arlington National Cemetery—Visit of Marshal Foch and other distinguished men—Ratification of peace between the United States and the Central Powers—Army and navy developments—Noteworthy speeches

[PERIOD ENDED NOV. 10, 1921]

SELDOM has the soul of the nation been more deeply stirred than on the occasion of the burial of the "Unknown Soldier," which took place with solemn ceremonies at Arlington National Cemetery, Washington, on Nov. 11, the third anniversary of the signing of the armistice that ended active fighting in the World War.

Great care had been taken to assure that the identity of this soldier should remain forever unknown. The

choosing of the body took place at the City Hall of Chalons-sur-Marne, France, Oct. 24. Four earth-stained coffins lay in a row in a flag-decorated room. They had been brought there, one from each of the four American military cemeteries—Bel-leau, Bony, Thiaucourt and Romagne. While French and American comrades stood at attention, Sergeant Younger of the Fifty-ninth Infantry, who had been selected to make the choice, walked slowly past the hon-

ored row, a bunch of white roses in his hand. Through a door floated the strains of a dirge played by the band of the 106th French infantry. Twice the Sergeant made a tour of the room, and then gently placed the roses on the coffin at the right, looking toward the door. The coffin was placed in a casket, which bore the inscription: "An unknown American soldier who gave his life in the great war." The casket was then taken to Havre and placed on board the *Olympia*, the old flagship of Admiral Dewey, which conveyed the remains to America, arriving at Washington on Nov. 9.

The casket was conveyed under a guard of honor to the rotunda of the Capitol, where it lay in state on the same catafalque that had borne the bodies of Lincoln, Garfield and McKinley. Under the vast, shadowy dome had gathered the most eminent men of the nation. A broad white ribbon was laid over the casket by Mrs. Harding, and then the President stepped forward and pinned to the ribbon a silver shield, on which were forty-eight gold stars, representing the States of the Union—a symbol of the heart of the nation which went with the soldier to his tomb.

Until the morning of Nov. 11 the body lay in state and thousands passed before it in silent homage. Flowers and wreaths were brought by individuals and organizations. Representatives of foreign countries brought tributes from their nations. The Earl of Cavan placed upon the catafalque the wreath from King George, which bore a card with the royal crest and, in the King's own handwriting, the message:

"As unknown and yet well known,
As dying, and, behold, we live."
Nov. 11, 1921. GEORGE, R. I.

Mr. Balfour brought a wreath from Premier Lloyd George, which carried a card reading: "Nameless, yet his name liveth forever." Canada's wreath of maple leaves bore this sentence, chosen by Sir Robert Borden from "The Pilgrim's Progress":

"But that which put glory of grace in all he did was that he did it out of pure love to his country." France, Belgium and a host of other nations brought tributes of similar eloquence and appropriateness.

It was at 8:30 in the morning of Nov. 11 that the body of the unknown was lifted from its resting place in the rotunda and borne tenderly down the broad steps of the Capitol to the caisson waiting below, while the band played "Nearer, My God, to Thee." The pallbearers were eight men from the army and navy, chosen for this duty as examples of the finest types of soldier and sailor.

The President of the United States and an ex-President walked with the mourners, while another ex-President, Mr. Wilson, owing to his shattered health, rode in a carriage. The ranking General of the American Armies, war veterans whose valor had won for them the Congressional Medal of Honor, Cabinet members, Justices of the Supreme Court, Senators, Representatives and Governors were in the cortege.

At the Amphitheatre in Arlington Cemetery an immense throng had assembled. Hymns were sung and psalms recited. Decorations were placed on the casket by Marshal Foch, General Diaz and other representatives of foreign nations. Secretary of War Weeks spoke briefly, and then President Harding made a notable address, which was marked by deep emotion. As the body was lowered into the tomb, "taps" was sounded, and a battery began the national salute of twenty-one guns.

By means of telephone amplifiers, every word of the President's address, every note of song or bugle at Arlington, was heard distinctly by tens of thousands of ex-soldiers and their friends assembled in New York and San Francisco, and the same emotion that swept the vast concourse in Washington moved these far distant listeners to tears at the same moment. The day was observed as a solemn holiday throughout the nation.

DISTINGUISHED VISITORS

The period under review was notable because of the great influx of distinguished foreign visitors. Most of these were comprised in the delega-

SHAKE!

tions of the Governments invited by President Harding to participate in the Conference on the Limitation of Armaments. Many military and naval leaders came, ostensibly as the guests of the American Legion at its annual convention in Kansas City, but their visits were so timed that they could act as advisers to their respective delegations at the conference.

The welcome extended to these eminent guests of the nation was most cordial. Marshal Foch of France, General Diaz of Italy, Admiral Beatty of Great Britain and General Jacques of Belgium were greeted with great ovations. To most of them the freedom of the City of New York was given, immediately on landing,

and at Washington, Kansas City, St. Louis and Chicago the population turned out almost en masse to do them honor. The journey of Marshal Foch especially resembled a triumphal progress. Honors, decorations and degrees were showered on him everywhere, and cities vied with each other in showing the former Generalissimo of the allied forces how high a place he held in their gratitude and affection.

Less demonstrative, but very friendly, were the welcomes given to the eminent statesmen of the various countries represented at the conference. Prominent among these were Briand and Viviani of France, Balfour of Great Britain, Tokugawa, Kato and Tanaka of Japan, Schanzer of Italy, d'Oplinter of Belgium, Van Karnebeek of Holland and Wellington Koo of China. The warmth of the greeting extended to them was significant of the deep interest the nation took in the conference and the hopes it held regarding the result. [The text of Marshal Foch's address at Kansas City will be found on page 413.]

PEACE TREATIES RATIFIED

The treaties negotiated by the Harding Administration to end the war of the United States with Germany, Austria and Hungary were ratified by the Senate on Oct. 18. The treaty of Berlin, ending our war with Germany, was first acted upon, the vote for ratification being 66 to 20, or a fraction more than eight votes in excess of the required two-thirds majority. The Administration victory was due to Democratic support. Thirteen Senators on the minority side joined Senator Underwood, their leader, in support of the treaty. Had the Democrats voted as a unit, ratification would have been defeated. The Wilson leaders in the Senate, Glass of Virginia, Heflin of Alabama, Williams of Mississippi and others who favor the Treaty of Versailles fought against it to the end.

The Austrian treaty was ratified by the same vote as the German compact, while the Hungarian treaty was approved by a vote of 66 to 17.

The Democratic vote in support of the Administration surpassed all expectations. At no time had any of the treaty advocates claimed more than twelve votes from the minority side. The final count showed sixteen Democrats for the treaty, for in addition to the fourteen who voted for it, two others—Smith of South Carolina and Hitchcock of Nebraska—were paired in its favor.

Ratifications of the American-German peace treaty were exchanged in Berlin on Nov. 11, and the next day President Harding formally proclaimed peace. On the 16th he nominated Ellis Loring Dresel of Boston—who had negotiated the treaty—to be American Charge d'Affaires at Berlin. On Nov. 18 peace with Austria was formally proclaimed.

HARVEY'S LIVERPOOL SPEECH

A significant utterance bearing on the foreign policy of the United States was made in England by Ambassador Harvey on Nov. 3, in a speech delivered to the Liverpool Chamber of Commerce. He referred to a speech made by Lord Derby in Paris, in which the latter had expressed his judgment that a definite alliance of Great Britain and France would be wholly desirable in the interest of peace, at the same time voicing the hope that in the near future the United States might join the combination. To this proposition Ambassador Harvey replied:

I feel impelled to say frankly that the hope voiced by Lord Derby must be regarded as futile. Our first President, George Washington, with the acquiescence of famous contemporary statesmen of the young Republic, fixed the foreign policy of the United States clearly and unequivocally when he adjured his countrymen never under any circumstances to enter into a permanent alliance with any other power. This policy has been reaffirmed by practically all his successors. It was reiterated with great positiveness in our latest national campaign by our present President, and was confirmed by a majority of the people so great as to be beyond the pale of comparison.

[American Cartoon]

TO STRUGGLE ALONG ON
BORROWED LEGS

In view of these circumstances, and without considering the wisdom and advisability of a continuance of this definite policy and unbroken practice, am I doing more than stating a wholly obvious and unescapable fact when I pronounce the entrance of the United States into any permanent alliance, however desirable that action may seem to be, an utter impossibility? May it not be then the part of wisdom to avoid the discussion or even the suggestion of a proposal which, however praiseworthy it may be, could hardly serve any purpose other than to feed the enemies and distress the friends of both Great Britain and France who live in America?

A warm reaffirmation of the friendship and unity of interest between Great Britain and the United States was made by the President in a speech at Yorktown, Va., Oct. 19, the occasion being the 140th anniversary of the surrender of the forces of Cornwallis to Washington. The United States and Great Britain, the President declared, had consecrated a long-time friendship by association in the common sacrifices of the World War, and found themselves arrayed together in a "trusteeship for the preservation of civilization."

[German Cartoon]

—*Fliegende Blaetter, Munich*

THE PEACE PIPE

"Well, Fritz, what do you think of my peace pipe?"

"Well, as you kept it back so long, you might have put a better tobacco in it."

He spoke also a word of gratitude for the aid given by France in the Revolution, and said that the time had come for world-wide co-operation and amity between nations. In the general discussion of world relations that followed, the President declared American participation in world affairs "inevitable" and voiced a hope that general co-operation "for the common good" would usher in a new day of international relationship. He sounded a warning, however, against impairment of national sovereignty in the name of international unity.

EQUALITY FOR THE NEGRO

In a speech at Birmingham, Ala., Oct. 26, before a great audience of white and colored people in Capitol Park, President Harding declared that the negro was entitled to full economic and political rights as an American citizen. He added that this did not mean "social equality." The white man and the negro also should stand, he asserted, uncompromisingly against "every suggestion of social

equality." Racial amalgamation, he added, could never come in America. The race problem, the President declared, was no longer a sectional question, applicable only to the Southern States, but a national question, which must be met as such. In recent years, he pointed out, great numbers of negroes had left the South to seek homes in the North and West, and as a result of this migration the "race problem" had been brought closer to the people of those sections. "I believe," he added, "that it has served to modify somewhat the views of those sections on this question."

ARMY BELOW 150,000

Latest official statistics on recruiting, prepared by the War Department for possible use at the pending arms conference, showed that new enlistments in the United States Army during recent weeks had not been sufficient to offset normal discharges and other "casualties." As a result, it was said, the regular army was below the minimum peace strength set by Congress. The official total was 138,000 on Oct. 31. In October 2,834 men left the service, while only 2,800 men were signed as recruits.

It was announced by the Secretary of War on Oct. 22 that the Government had decided to retain approximately 5,600 officers and men of the army in the occupied region of Germany for an indefinite period, pending determination of whether the United States should participate in the permanent occupation of German territory. About 8,000 of the 13,000 American soldiers now in Germany were to be brought home, but as only two transports had been assigned to this duty, the reduction would not be fully accomplished until March, 1922.

In the annual report of the Red Cross Society, issued Oct. 29, it was disclosed that the organization had spent \$10,000,000 in the last fiscal year to aid disabled veterans of the World War. The report showed that at the close of the fiscal year on June 30 there were 26,300 disabled men in

the 1,692 Public Health Service, contract and other Government hospitals and soldiers' homes. This number, the report added, was increasing at the rate of 1,000 a month, and the Red Cross had been told by Government officials that the peak would not be reached before 1925.

The work done by the Red Cross was varied, and consisted in obtaining medical treatment, compensation and vocational training for veterans, in furnishing financial aid and care for their families and in providing recreation and assistance of every sort while the men were receiving treatment and training.

NAVAL AFFAIRS

President Harding on Oct. 29 nominated Captains Sumner E. W. Kittelle, William V. Pratt and Louis M. Nulton to be Rear Admirals. Captain Kittelle was graduated from the Naval Academy in 1889, and had served as Commander of the battleships Georgia and Maryland. Captain Pratt served as Assistant Chief of Naval Operations from 1917 to 1919. He will be one of the naval advisers to the American delegates at the arms conference. Captain Nulton has been in command of a number of naval vessels, including the battleship Pennsylvania.

It was stated in Washington on Nov. 6 that a new type of submarine motive plant, a combination of gas and electric propulsion, would be put in three American submarines of the V type, two of which had just been laid down at the Portsmouth (N. H.) Navy Yard. Naval engineers were said to be watching the construction with great interest, because of their expectation that improved operation of submersible war craft would result from the new power plant. A cruising radius of 10,000 miles was said to be a possibility.

The newest submarines are to be 2,025-ton boats, 300 feet long and equipped with electric engines of 6,500 horsepower. They are designed for a surface speed of twenty-one and a submerged speed of from

[American Cartoon]

—© New York Tribune

WELL, THEY CAN'T SAY THE SIGNAL
WASN'T WORKING

nine to ten knots an hour. When completed in 1923, each of the new submarines will be armed with a 5-inch gun set in a "wet" mount forward of the conning tower. The gun is designed to remain in the water when the boat is submerged, and can be trained almost in a complete circle or elevated as an anti-aircraft weapon. Machine guns will be mounted on the conning tower bridge. Forward will be four torpedo tubes and aft two others, all of the 21-inch size. Storage space is planned for sixteen torpedoes.

LOSS ON MERCHANT SHIPS

The United States Shipping Board, it was stated on Oct. 18, had had an inventory made of all surplus material and supplies left over from its war activities, and had authorized the removal of all restrictions placed on the sale of general materials and supplies.

The cost value of the material covered by the appraisal and inventory was \$389,780,000 and its value at present is estimated at approximately

[American Cartoon]

—Tacoma News-Tribune

OPENING THE TUNNEL WOULD HELP
A LOT

\$75,000,000, exclusive of the real estate at 45 Broadway, New York, fuel oil stations all over the world, and ships and drydocks under construction, on which no appraisal value has been set. The supplies and material available for immediate sale were bought for \$125,000,000, and their present appraisal value is \$35,000,000.

Whole towns were also slated to be sold regardless of cost. Contracts were signed on Nov. 1 by the Shipping Board through the Emergency Fleet Corporation to sell about 2,000 houses erected by the Government during the war for occupancy by the officers and employees of the ship-building yards.

TAX REVISION BILL

The Senate on Nov. 8 passed the tax revision bill after a continuous session of more than fifteen hours. The measure then went to conference between the Senate and the House for final agreement on the amendments made by the Senate. The bill passed the Senate by a vote of 38 to 24. Senator Broussard of Louisiana was the

only Democrat who supported it, while Senators LaFollette, Norris and Moses, Republicans, voted against it. The soldiers' bonus amendment was brought forward twice, but was rejected both times.

Somewhat unexpectedly, the Senate adopted an amendment which taxes gifts that exceed in monetary or property value \$20,000, the purpose being, it was stated, to check the practice by which it was possible for a man to reduce his tax bill by transferring parts of his taxable property to members of his family, other persons or institutions. The amendment, which was offered by Senator Walsh of Massachusetts, provided for a graduated tax, beginning with 1 per cent on gifts between \$20,000 and \$50,000, and ending with 25 per cent. on all gifts that exceed \$10,000,000.

Outstanding features of the bill were provisions for repeal of the excess profits tax and of all the transportation taxes on Jan. 1, 1922, and a reduction of the surtax rate all along the line, with the maximum rate reduced from 65 per cent. to 50 per cent.

RAILWAY RATE DECISION

A decision of far-reaching importance to railroads, shippers and the public was handed down by the Interstate Commerce Commission on Oct. 22. The commission not only directed reduction of freight rates on certain commodities, but revived a principle of rate-making believed to be of greater consequence than any enunciated for a decade past. The principle was that the commission, instead of making its freight rates applicable to the operating costs of the railroads, would be guided in future by the reasonableness and justice of freight rates, leaving to the railroads the readjustment of their expenses to conform to the income which the commission's rate-fixing rulings permitted. The special case in question involved interstate rates on grain, grain products and hay in carload lots between points in the Western and Mountain-Pacific

groups of railroads, and the reduction on the commodities named averaged 16 per cent.

STRIKE ORDER NULLIFIED

The threatened strike of railway employes against the decision of the Railroad Labor Board reducing wages, which was scheduled to go into effect on Oct. 30, was called off on Oct. 27 after a four-hour conference of the "Big Five" Brotherhood heads at Chicago. It had been made clear by the Labor Board that it "would deal with the unions with ungloved hands" in its attempt to prevent a walkout of the union members, and the contest had virtually narrowed down to one between the union leaders and the Government itself. Under these circumstances, the leaders felt that a further fight would be useless.

The resolutions annulling the strike went extensively into the history of the controversy, and pointed out that the "Big Five" groups based the cancellation of the strike order upon (1) the assurance given by the railway executives that no carrier would seek changes in wages of working schedules except through the legal agency of the Labor Board, and upon (2) the policy of the board as enunciated in the memorandum it had adopted.

That memorandum stated as a policy that the Labor Board would not take up for consideration any request for further wage cuts for any class of employes until it had finished with the matter of rules and working conditions for that class. The board held that it thus eliminated both contingencies which influenced the vote to strike against the July wage cut itself.

FOREIGN LIQUOR BARRED

In a decision handed down Oct. 21, Judge Julius M. Mayer of the United States District Court held that the transshipment of liquor through the United States from one country to another was prohibited by the Eight-

[American Cartoon]

—New York Evening Mail

IN ONE EAR AND OUT THE OTHER

eenth Amendment and the Volstead act. The pronouncement of the Court was in a test case brought by the Anchor Steamship Line to restrain George W. Aldridge, Collector of the Port of New York, and other Government officials from interfering with a shipment of five cases of Scotch whisky through the Port of New York. Had Judge Mayer upheld the contention of the plaintiff company, it would have been lawful for liquor originating in Canada, for instance, to be shipped across the country to Mexico, and for liquor originating in Europe to be shipped across the United States for export from a Pacific Coast port.

Internal Revenue Commissioner Blair announced in Washington on Nov. 1 that letters were to be sent to brewers, advising them that beer already manufactured and held in stock could be sold for medical purposes under the new Treasury regulations. Sale of this beer, Mr. Blair declared, could begin at once under the proper permits. The whole status of this question was changed a week later, however, by the passage of the anti-beer bill by Congress. Details of that measure will appear in next month's CURRENT HISTORY.

MARSHAL FOCH'S ADDRESS TO THE AMERICAN LEGION

Full text of the historic speech at Kansas City, in which the greatest living soldier of France extolled the brave deeds of Americans in the World War

FERDINAND FOCH, Marshal of France, probably touched the supreme moment of his visit to the United States when, on Nov. 1, 1921, he and other distinguished World War leaders led a parade of 25,000 ex-soldiers of the American Legion through the streets of Kansas City, Mo., and when, in reply to a speech of welcome by General Pershing, he delivered in French the address which is here translated:

Officers, non-commissioned officers and soldiers of the great American Army, my dear comrades of the American Legion:

I cannot tell you how great is my satisfaction at finding myself among you, valiant soldiers of 1918, to live again our glorious memories. Three years ago, on the first of November, 1918, the entire American army in France took up vigorously the pursuit of the defeated enemy and did not halt until the German surrender. Hour of glory for the American Army, a proper culmination for a military effort, prodigious alike in its intensity as in its rapidity. One and all you have had your share in it. You may well be proud!

In responding in mass to the call to arms of your Government, in equipping, training and organizing yourselves as rapidly as possible, you had in view only the purpose to take your place as soon as possible in the line of battle.

In numbers—Eighteen months after the declaration of war by the United States on Germany the American Army had passed from effectives of 9,500 officers and 125,000 men to 180,000 officers and 3,500,000 men.

Effort of organization—If, in the month of March, 1918, you had in France but six divisions, six months later you had forty-one, of which thirty-one engaged in battle.

Effort in instruction—In order to have officers, non-commissioned officers and men rapidly trained, you multiplied in America, as in France, your schools and camps, which became centres of prodigious activity. In order to arm you and encamp you the American manufactories worked without respite and supplied all your needs.

Admirable effort also in transportation—You swept away every obstacle which interfered with bringing your units from the centres of instruction to the ports of embarkation. In France, you improved the ports of debarkation, created new installations, increased the traffic of the railroad system by work of all kinds and multiplied your store houses and hospitals.

Your shipyards were organized for intensive production in such a way that when the war ended you utilized for your ocean transporta-

tion almost four millions of marine tonnage, instead of 94,000 available at the beginning of the war. And meanwhile your splendid war fleet, thanks to its vigilance and its fine military qualities, protected, with an efficiency to which I am happy to pay tribute here, the transportation of your troops and material.

A prodigious effort on the part of your entire nation's intelligence, will power and energy! A prodigious effort which has filled your associates with admiration and gratitude and confounded your enemy!

This splendid spirit of an entire nation we find again on the battlefields of France, where it was blazoned in the admirable virtues of bravery and heroism. It was the spirit of the Second and Third American Army Divisions which, one month later, took part in the second battle of the Marne and distinguished themselves immediately in the operations around Château-Thierry and in Belleau Wood. Again it was the spirit of those five divisions which, on July 18, participated in the victorious counter-offensive of the Tenth and Sixth French Armies, between the Aisne and the Marne, and contributed in great measure to that victory.

Finally, it was that spirit which animated all the American Army when, on July 24, General Pershing formed your splendid units under his own direct command. On Sept. 12, 1918, the First American Army delivered its first battle on the soil of France. It dislodged the enemy from the St. Mihiel salient, where he had entrenched himself for nearly four years, and threw him back beyond the foot of the hills of the Meuse. From the very first the American Army entered into glory. How many further laurels was it yet to win?

The St. Mihiel operation was nearly ended when the American Army attacked on a new front. On Sept. 25 it was engaged on the right wing of the vast allied offensive. The point of direction assigned to it was Mezières, on the Meuse. Deployed from the left bank of the Meuse to the eastern confines of Champagne, it had three army corps in line on a front of nearly forty kilometers. Before it stretched the region of the Argonne, formidable emplacement of the German defense, a wooded terrain, rugged, difficult in its very nature, and rendered more so by all the defensive organizations which had been accumulated there during the last four years.

Nothing could discourage or check your army. It threw itself with generous ardor into the immense mêlée. The task was a rude one, but it was carried out to a thorough finish. Fighting without respite night and day for a month, advancing in spite of the pitfalls and the counter-attacks of the enemy, it succeeded, by pure

force of tenacity and heroism, in liberating the wild region of the Argonne. After St. Mihiel, it could now inscribe proudly upon its banners the name of the Argonne!

On the 16th of October this great task was finished; it joined hands with the Fourth French Army in the defile of Grand Pré. In consequence of this, the enemy's resistance was severely shaken; the moment had arrived to give him the final blow.

On Nov. 1, just three years ago today, the First American Army again attacked and, in a splendid advance, reached Buzancy, penetrating the German line for more than ten kilometers. The enemy this time retired definitely; the Stars and Stripes at once took up the pursuit and, six days later, floated victoriously over the Meuse reconquered. After St. Mihiel, after the Argonne, the American banners now bore the name of Meuse! In a few months you had taken 45,000 prisoners and 1,400 cannon from the enemy.

Glory to the First American Army! Glory also to those of your divisions which, distributed among the French and British armies, contributed in great measure to the final success, whether with the Fifth French Army to the northwest of Rheims or with the Fourth French Army, in which they carried, in magnificent assault, the strong positions of Orfeulles; or,

again, with the British armies for the capture of the famous Hindenburg line, or with the group of armies of Flanders, pursuing the enemy on the road to Brussels.

During this time your Second Army impatiently waited to attack in its turn in the direction of Metz, which already was stretching her arms to us for deliverance; but, harassed and defeated, the enemy laid down his arms! A solemn hour, which compensated for all the sacrifices freely consented to for the cause of right.

It is you who have made these sacrifices. More than 75,000 of your countrymen were buried in the soil of France. May they rest in peace! Your French brothers in arms watch over them. Glory to you who survive them and who enjoy victorious peace! You may well be proud of your past exploits. Your country had asked of you to lay low a redoubtable enemy. You have placed him at your mercy, and, after having assured every guarantee for the liberty of our peoples, you have imposed upon him the peace which our Governments have dictated. Has not your task been completely fulfilled?

As for me, the great honor of my life will be to have guided along the road of victory the American Army of 1918, which was a real grand army, beginning with its commander.

ONE REASON WHY THE HAPSBURGS WISH FOR RESTORATION

A DISPATCH from Paris in September stated that an American syndicate had arranged with the Archduke Friedrich, Commander-in-Chief of the Austro-Hungarian Armies, for the recovery of his family's pre-war property from the succession States which have confiscated it. If the efforts of such a syndicate should be successful, it would mean much to the old Austrian and Hungarian aristocracy, whose properties, for the most part, are situated in Slovakia, where the people are demanding the speeding-up of the Land Reform measures which are intended to furnish full economic liberation from the old régime. The property involved had a direct bearing on the complete failure of ex-Emperor Charles to regain his throne.

Recent statistics issued by the Czechoslovak Minister of Agriculture show how vast an amount of land was held by the aristocratic exiles. The following tables are illuminating. They show the percentage of the total land area held by the aristocracy and by other classes:

CZECHOSLOVAK REPUBLIC

	Land Holding Per Cent.
Aristocracy	55
Imperial estates	10
Catholic Church	8
People	15
Communities	12
BOHEMIA, MORAVIA, SILESIA	
Aristocracy	71
Imperial estates	5.5
Catholic Church	9
People	9
Communities	5.5

SLOVAKIA

Aristocracy	36
Imperial estates	16
Catholic Church	6
People and Communities	22

Thus it will be seen that the aristocrats and the former rulers of these countries held and are trying still to hold 65 per cent., 76.5 per cent. and 52 per cent. of all the lands. Thirty-three noblemen in Bohemia hold 846,000 hectares of the soil, which is one-sixth of all Bohemia. And it is the best and richest soil; the poorest soil is held by the people and the communities.

OUR PART IN THE STRATEGY OF THE WORLD WAR

BY THOMAS G. FROTHINGHAM

Captain United States Reserves

War effort of the United States defined by an expert as the furnishing of a reinforcement against a contained enemy at a well-defined crisis, thus adding a sudden definite element to the strength of the Entente—The task faced by our armies in France

ANY ONE attempting to estimate the influence of the United States upon the World War should first of all realize that America became a part of a military situation which differed from any that had gone before. In the history of the strategy of the war the United States will be given its place as providing a reinforcement against a contained enemy at a well-defined crisis. For this reason, in any true narrative of the war, the effort of America must be described as a separate strategic factor. That our nation's service should stand out in this way does not imply undue praise, nor any comparison with the continued efforts of the Entente Allies. It simply means that the function of the United States must be characterized as a thing apart, as will become evident in reviewing the strategy of the war.

In 1914 the supposedly infallible German superman was not long in showing ordinary human lack of understanding the initial strategic problem of Germany, and this soon neutralized the results of long years of German preparation. For Germany, at the outset, there existed an advantageous strategic situation that was thought to be a sure promise of victory. The Teutonic allies possessed a central and concentrated position against separated antagonists. This was the result of events in preceding years, as Russia had been shut off from Great Britain and France.

With this established condition—

that their enemies would be separated—the Germans were enabled to plan to attack the Entente Allies in detail—first France, then Russia. This was the strategy of the German General Staff, and it was to be carried out by the Schlieffen plan of war “on two fronts.” * This plan had been determined years in advance, and it had been elaborated with rigidly fixed details, to the exclusion of all other solutions. Its strategy obsessed the Germans. It was the product of the hierarchy of Clausewitz, Moltke, and Schlieffen—and that it would fail was thought impossible.

Of this German plan of war, it should be stated at once that it violated a fundamental of warfare, in that it was essentially a military plan and neglected to make full use of the navy arm. Admiral Tirpitz unqualifiedly says that the navy's plan of operations “had not been arranged in advance with the army.” For the Germans to allow themselves to be absorbed in this military plan was an error, but at the outbreak of war German strategy must be studied as restricted to the Schlieffen military plan—to overwhelm France by “forcing a speedy decision,” while Russia was to be contained.

The elaborate encircling movement through Belgium, to which the German General Staff had thus committed the powerful German armies, failed to produce the essential result of imposing these German armies in

*Bethmann Hollweg.

destructive contact upon the allied armies, until after the Allies had gathered sufficient force to fight an equal battle—and, in the words of Falkenhayn, “the intention of forcing a speedy decision, which had hitherto been the foundation of the German plan of campaign, had failed.” At the same time the Central Powers had failed to contain the Russians.

SITUATION AFTER THE MARNE

Consequently the middle of September, 1914, saw the failure of German strategy to win decisive results with the great forces that had been prepared through so many years. The Moltke regime was ended, though this fact was kept secret to prevent “further ostensible proof of the completeness of the victory obtained on the Marne.”* Then and there the decision was forced that the World War was not to be a quick, overwhelming victory won by Germany’s long-prepared military strength. Not only had the perfected strategy of the Schlieffen school failed to win the victory which had been thought certain, but also great harm had been done to the prospects of Germany by the moral effect of the invasion of Belgium. Moral forces are of actual strategic value in war—and there is no question of the fact that the violation of Belgium† arrayed strong moral forces against Germany.

By this defeat of the German war plan of 1914 a complete change had been brought about in the strategic situation. The Central Powers had quickly lost the offensive, and military events had already shaped the war into a new form—a long, protracted struggle to gather strength enough for one side or the other to force a decision.

The initial blow of the carefully prepared strength of Germany had failed, but its great proportions had already fixed the scale of the war at

a magnitude undreamed before. There were about two million and a quarter men engaged in the Battle of the Marne. At the Battle of Leipsic, the “Battle of the Nations,” the culmination of the forces evoked by the Napoleonic wars, the number of troops of all armies was 430,000. (Battle of Leipsic, Oct. 16-19, 1813.) It had taken many years devoted to the production of armies to furnish the numbers at Leipsic, and that was a decisive battle resulting in the overthrow of Napoleon. In 1914, a few short weeks formed armies of many times this number, facing one another with no possibility of an immediate decision.

From this time the war became an unending effort to maintain and strengthen these huge armies in the long struggle which followed, each side attempting to gain a superiority that would win a decision, and all the warring nations involved in expenditures that were unprecedented. As soon as the war reached this stage the influence of sea power began to have an effect. Armies on the battlefields maintain their positions by being replenished with men and supplied with material. Even where recruits do not have to be transported by sea, the sea is the one greatest means of moving supplies, and the nation cut off from the sea has always sooner or later felt the results of this deprivation.

This was the case with Germany in the World War. The Germans had failed to win the quick decision which they had thought would surely be obtained by their armies alone. After this failure, throughout the war, the central allies were to feel more and more the ill effects of the control of the sea by their enemies. The strategic situation brought about thus early in the war by sea power should always remain in the mind of the student of the history of the World War—and the foundation of this power lay in the British Navy. It meant that the Entente Allies possessed the waterways of the world as secure means of transporting men

*Falkenhayn.

†“Our greatest disaster: the German entry into Belgium”—Count Czernin, “In the World War.”

and supplies, to maintain their armies, their peoples and their industries. It also meant that the Central Powers were shut off from the use of these invaluable means of carrying on the war.

GERMAN MILITARY STRENGTH

Yet, in spite of the relentless pressure of sea power upon the Central Powers, the military preparations of Germany had developed so great a strength that for three years the war remained a desperate struggle, with each of the great nations of the Entente suffering the constant strain of maintaining the contest. The year 1917 ended with Russia in military collapse, and the Italian armies so shattered that they had become a drain upon Britain and France, at a time when the British and French armies had been woefully depleted by the losses in the battles of 1917 on the western front.

It was true that the Central Powers had failed to win their expected decision through unrestricted submarine warfare, but the beginning of 1918 found them enabled to concentrate the full German strength upon the western front, without any danger of a diversion elsewhere, as Russia had been put out of the war and the Italians could not undertake an early offensive. This ability to move troops from the east gave the Germans an actual superiority in numbers,* as the British and French resources in man-power had been drained in the costly and unsuccessful battles of 1917 to such an extent that it had become a hard task to fill the ranks of the British and French armies. There was no hope of an increase to offset the German reinforcements from the east.†

Holding this assured superiority,‡

*"Numerically we had never been so strong in comparison with our enemies."—Ludendorff.

†"Allied resources in man-power at home were low and there was little prospect of increasing their armed strength."—General Pershing.

‡"When on March 21, 1918, the German army on the western front began its series of offensives, it was by far the most formidable force the world has ever seen."—General Pershing.

the Germans were able to plan their great offensive in 1918 without any danger of counterattacks. Ludendorff had become the controlling power in the German General Staff. His strategy was a return to the direct methods of concentration of forces against a chosen point of attack, and new tactics had been devised by which many divisions were grouped against the chosen point, insuring successive streams of troops which infiltrated the enemy positions and dislocated the defenders.

These new tactics were surprisingly effective against the Allies, and at the beginning of July, 1918, this formidable German offensive, in a series of overwhelming attacks, had so smashed and dislocated the allied armies, even after they had at last been united under the command of Foch, that it is difficult to see how the situation could have been saved except by a strong reinforcement for the Allies, and this could be furnished only by the American troops. To define this critical military situation explicitly, it is only necessary to quote the following statement of the Versailles Conference, June 12, 1918:

General Foch has presented to us a statement of the utmost gravity * * * as there is no possibility of the British and French increasing the numbers of their divisions * * * there is a great danger of the war being lost unless the numerical inferiority of the Allies can be remedied as rapidly as possible by the advent of American troops. * * * We are satisfied that General Foch * * * is not overestimating the needs of the case. * * *

D. LLOYD GEORGE.
CLEMENCEAU,
ORLANDO.

It is not often in history that a crisis has been put on record in such unmistakable terms by the highest authority, and it is a matter for thanksgiving that the United States was able to provide the reinforcement needed at this time.

TASK OF UNITED STATES

There is no longer any question of the fact that the German Headquarters made their calculation that it was utterly out of the question for

the United States to exert any physical force upon the war.* The German leaders had on occasions yielded to keep us out of the war—to avoid having our resources at the service of the Allies—but the Germans applied their own formulas to our nation, and, following these, it was held a military impossibility for an adequate American army to appear upon the fighting front. It must also be said that this was the prevailing opinion among European military experts of all countries† and from the European point of view a military impossibility was accomplished when our troops performed their part in the war.

Our strategic problem was an operation against a contained enemy with the great advantage for us of freedom from danger of being attacked. But it was complicated by the condition that transportation overseas, which would normally have been provided by allied shipping, had been impaired by the submarines to so great an extent that we were compelled to provide a large share of the transportation ourselves. The submarine menace, and its diversion of allied naval forces, also made it imperative for us to provide a great proportion of the necessary naval protection. There was the added urgent necessity of haste, or the war would be lost.‡

This crisis demanded an effort on

the part of the United States that would comprise: Raising and training an army; transporting a great part of that army overseas; providing supplies and transporting them overseas; giving naval protection; providing terminals and bases overseas to receive and handle the troops and supplies. All this must be done in haste, and at the outset on the vast scale set by the unprecedented demands of the World War. There was no time for the gradual development of forces.

This was the task which the United States must perform in a race with an emergency. It is needless to point out that this service of America necessarily implied intensive effort for a short time, and the function of the United States in the strategy of the war differed in this respect from that of any nation of the Entente. This service was accomplished by giving and taking material and munitions, but in a strategic sense the force exerted by America should be looked upon as a sudden definite element added to the strength of the Entente. Consequently the effort of the United States must be treated as an episode by itself in the strategy of the war.

As has been said, this condition implies that the account of the American effort must stand out, in a way, in any history of the strategy of the World War. On the other hand, the services of Great Britain and France comprise the history of the whole war; as they are intertwined with its events from the beginning to the end. The fact that America had its own important part, which must be told en bloc, does not mean any comparison with the long ordeals of effort which extended throughout the war.

*"Would she appear in time to snatch the victor's laurels from our brows? That, and that only, was the decisive question! I believed I could answer it in the negative."—Hindenburg.

†"Joffre, in an interview with the Secretary of War in May, 1917, said that 400,000 would be our limit, and that one French port would be sufficient to receive them."—Admiral Gleaves, "History of the Cruiser and Transport Force."

‡"The Allies are very weak and we must come to their aid this year, 1918. The year after may be too late."—General Pershing, 1917.

THE FUTURE OF POISON GAS

BY BRIG. GEN. AMOS A. FRIES, U. S. A.

Revolution in war methods due to the use of poison gas on the battlefields of France—How the nations now face a new set of problems in defensive warfare—A step toward world peace

Introductory Note by Carl W. Ackerman.

Contrary to the accepted view, Germany did not discover poison gas or "invent" chemical warfare. Although the German Army was the first to use poisonous and suffocating gases during the World War, history credits the Spartans with the discovery of this "new agency of warfare." More than 2,300 years ago they saturated wood with pitch and sulphur, and burned it under the walls of Plataea and Belium. Furthermore, in 1855, a British Admiral, Lord Dundonald, suggested to Lord Palmerston that the British use the fumes of sulphur from Sicily in attacking Sebastopol. The publication of Lord Dundonald's reports in 1908 is said to have given the German military leaders the idea of utilizing poisonous gases in a European war.

From the time of the first gas attack upon the Canadians until the close of the war, chemical warfare had progressed so rapidly that in the American Army alone 4,066 commissioned officers and 44,615 enlisted men were assigned to this branch of the service. Military experts state today that when the armistice was signed the war was 55 per cent. chemical. Twenty-eight different chemicals were being used by the belligerents and sixteen combinations of poisons, making a total of forty-four varieties of poisonous and suffocating gases. Of this number the Germans used seventeen, the French thirteen, the British six and our own army five different kinds of gases, not to mention TNT and "common smoke" used in smoke screens.

When it is recalled that in one night alone, late in the war, 50,000 gas shells were fired into Nieuport, some containing as much as three gallons of mustard gas, it is possible to realize the extent to which poisonous gases will be used in a future war. During the brief period we were in the war the United States manufactured 22,257,070 pounds of poison gas, including over 5,000,000 pounds of liquid chlorine and another 5,000,000 of chloropicrin. Of this amount we shipped in bulk 8,556,000 pounds to France, and among the 400,000 gas shells received by the Chemical Warfare Service in France from this country "not a single leaky shell" was found.

The United States is today experimenting on a large scale with poison gases. These experiments take in every phase of warfare,

because chemical warfare is the most universal of all methods of waging war.

England, Italy, France and Japan, all realizing the possibilities of future uses of gases obtained from coal-tar products, have protected their own chemical industries from German dumping, and are experimenting and studying on a large scale the "new agencies of warfare," which, as is pointed out in the following article by Brig. Gen. Fries, are revolutionizing armaments and methods of offense and defense in war.

Brig. Gen. Fries is the leading authority in the United States on poison gas. In August, 1917, he was made chief of the Chemical Warfare Service of the United States Army in France. He made our chemical warfare service what it is today, and he is still directing this branch of the service for the War Department in Washington. He is the co-author with Major Clarence J. West of "Chemical Warfare," the first authoritative book on the subject of poison gas to be published in the United States.

WAR is today at the beginning of a complete change in armament. New forces discovered in coal-tar products and the application of these to military and naval strategy have produced new agencies of warfare which are causing a revolution in armaments.

Greater progress has been made since the close of the war in perfecting and developing poison gas bombs than any nation foresaw three years ago. Poison gas, in this very brief period of time, has become the biggest potential military and naval problem of the world, and some of its future possibilities were indicated by the recent bombing tests off the Atlantic coast. These tests demonstrated that our coasts are almost impregnable against a foreign enemy who has to cross the ocean. If bombs containing poison gases can be dropped from airplanes upon or

around enemy warships, if submarines can lay mines containing gases, and if gases in solid form, which will burn on water as well as on land, can be utilized to protect our coasts, chemical warfare is bound to have a great influence upon our methods of defense.

The most expensive forms of armament are those most readily visible. Thus battleships, huge guns carried on railroad mounts, permanent fortifications, submarines, airplanes and numbers of soldiers themselves, are items that cannot be maintained or developed secretly in peace. All are subject to easy inspection, which will at once reveal whether or not a nation is keeping its agreement. But limitation of armament is not disarmament, nor is it necessarily abolition of war. Expensive and easily visible items of armament may be kept down, but preparation, which is really a part of the peace life of a nation, can be neither successfully supervised nor repressed.

It is true that chemical warfare materials as well as high explosives, being so fundamentally bound up with the synthetic organic chemical industry, present at once the most difficult method of preparation to supervise, and the cheapest and most effective for defense. Indeed, the outstanding result of the bombing tests carried on during the last year has been the realization that the defense of the seacoast against an enemy that must cross the ocean has become immeasurably strengthened.

THE NEW WARFARE

For nearly forty years it has been realized that the battleship could not successfully cope with the gun on shore. In order to keep those battleships at a distance, fortifications were built on the most seaward points of land in order to keep ships from shelling harbors and cities. In those days fleets contemplated and practiced the "run-by." The "run-by" was simply what Farragut did at New Orleans when he steamed his vessels past the fortifications below

that city. Today such an attempt would be suicidal. With submarines and bombing planes inside harbors, the defender of a port could ask for nothing better than that enemy ships should come inside.

Prior to the World War the submarine had already made the old-fashioned blockade of a port impossible. Today and in the future, with the submarine augmented by the airplane and chemical warfare materials, fleets cannot approach a coast with safety at all unless they can carry sufficient airplanes to overcome the land air force. This means that war is today at the beginning of a great change in armament. The limitation of armaments will but hasten that change—a change which war would in time itself produce.

That the change will not take place at once is proved by the battle of the Monitor and Merrimac on March 8, 1862, which doomed at once and forever the wooden ship. The single gun of the Monitor, with its protection of steel and all-round fire from a turret, was more than a match for the 140 guns of the great wooden battleship of that day. And yet it was twenty-five years or more before the last of the wooden ships disappeared from the sea. The change in the present instance will come faster, but even then we shall probably have the mingling of the ancient and the modern for a decade and more to come.

The last year has seen also the absolute triumph of the most scientific nations over the savage, through the development of chemical warfare and aviation. No longer can an uprising in any country on the globe amount to anything unless those in control of it are supplied with the necessary aviation and chemical warfare materials.

It may now be said that the development of aviation and chemical warfare materials has made defense of the homeland cheaper and easier. Particularly is this true of a country separated from other powerful countries by water. With the realization of this power of defense has come also the realization that great mili-

tary power in the future will be measured far less by numbers of soldiers than in the past. The nation which has a coal supply sufficient to furnish power and coal tar products can make all the high explosives and war gases needed, or that can be used, by any nation. With the development of an air service she can with comparatively small numbers of men defend her shores against any enemy.

CHEMISTRY IN FUTURE WARS

The last year has been remarkable for the growth of understanding of the fundamental importance of chemistry in peace and war. With this has come a realization that the activities of peace and those of war are no longer capable of complete segregation.

The war of today and of the future will involve every activity of a nation and of every inhabitant of that nation. The development of sanitation and preventive medicine, which has made possible the continual growth of great cities, has made possible also the maintenance in the field of numbers of men limited only by the man power of nations.

Although some of the chemicals developed for use in war prior to the armistice have been made known to the world, a number of others have not. Every nation of first-class importance, moreover, has continued to pursue the study of chemical warfare. These studies will continue, and we must expect that new gases, new methods of turning them loose and new tactical uses will be developed. Gas is the only substance used in war which can be counted upon to do its work as efficiently at night as in the daytime. Chemical warfare has come to stay, and just in proportion as the United States gives chemical warfare its proper place in its military establishment, just in that proportion will the United States be ready to meet any or all comers in the future, for the United States has incomparable resources in the shape of crude materials that are necessary in the manufacture of gases.

So long as wars were carried on solely by men trained in peace for that purpose—in other words, by a standing army—definite rules of warfare could be enforced. In other words, so long as the numbers of each nation not engaged in a war were much larger than the forces engaged, there was a sufficient force to make armies live up more or less well to fixed rules of carrying on warfare. When, however, whole nations became involved in war, and the fate of the entire nation hung in the balance, it became evident to thoughtful men that no set rules of warfare could be guaranteed. In other words, a nation fighting for its life will use any means that offer a chance to win.

This must be accepted as fundamental and axiomatic, and all plans for future defense should be based thereon.* Thus, no method of warfare that promises results can be abolished by agreement, unless all warfare can be so abolished. The last year, however, has been remarkable for the growth of feeling that the burden of preparation for war is too great, and with the growth of that opinion has come the feeling that expensive forms of armament might safely be reduced by agreement.

War is like dueling. So long as it was a safe sport for Kings, noblemen and statesmen to engage in, dueling prospered. So long as the leaders of nations could carry on wars for years without harm to themselves, war was a sport. But today, with the development of chemical bombs and airplanes, no statesman or ruler is any more immune from attack than

*An English authority, Major Victor Lefebure, in a book called "The Riddle of the Rhine: Chemical Strategy in Peace and War," treats the same subject, and reaches practically the same conclusions. Poison gas as a powerful military weapon, he intimates, has come to stay, and will tend to revolutionize all future international warfare. He studies the use the Germans made of it in France, showing the advantage it gave them with the great chemical equipment which they had ready at hand, until the Allies, caught unprepared, were able to establish chemical plants for the same purpose. In the March offensive of 1918 German guns fired more than 50 per cent. of gas and war chemicals, which they got mainly from the great Essen works, still the world power in chemical enterprise.

a private soldier. The one thing that killed dueling in the United States was not public sentiment, but fear on the part of combatants. A gentleman who thought his honor was impeached challenged another to a duel. Being challenged, the second party had the right to choose weapons, time, place and conditions. He selected butcher knives, a dark room with all doors locked—and the duel was never fought. So it will be with chemical bombs. They have not only made coasts impregnable, but they have

vastly decreased the possibilities of another long war.

Every development of science that makes warfare more universal and more scientific makes for permanent peace by making war intolerable; and I, for one, believe that all nations should be given to understand that if we are forced into a war we shall use every known chemical method of warfare against hostile forces wherever they are located. That would be our permanent guarantee against attack.

COST OF THE LEAGUE OF NATIONS

HOW much does the League of Nations cost? A recent report by Sir Rennell Rodd, an active member of the League Finance Committee, gives authoritative information on this subject.

The estimated cost of the League for 1922 was to have been 23,768,846 gold francs (21 gold francs equal £1 gold, or \$5). Of this sum Great Britain and France were to have paid 2,291,242 francs each. The estimated total was cut down subsequently to 20,758,945 gold francs, of which 6,135,610 go to the International Labor Bureau. Thus the quota of each member State was reduced by 18 per cent. This was tidings of great joy to some of the smaller States, on whom the cost of the League has weighed heavily; States like Poland, which complained that its quota was one-third of what it spends on its foreign office; or Salvador, which has paid nothing so far, on the plea of "Non possumus!" The delegates of various nations have further complained bitterly of the high cost of living in Geneva, which makes all Conference sojourns unreasonably expensive. Unfortunately, the League has

bought, not rented, the former Hotel National in Geneva, and the loss by sale and removed would be considerable.

There has also been criticism of the high salaries paid the League officials. These salaries were fixed on the basis of the British Civil Service. Italy has pointed out that there are secondary officials of the League who get more than the 25,000 lire which Signor Giolitti received as salary for governing Italy! The salary of Sir Eric Drummond, Permanent Secretary of the Council of the League, was cut from 84,000 gold francs—£4,000 plus £6,000 for representation expense—to £6,500 by reducing the representation expenses. A reduction in printing estimates was also made. The printing cost for 1921 was 250,000 gold francs; it was estimated at 415,000 for 1922, and was cut to 311,250 francs. Extra-expensive meetings at far distant points like Barcelona and San Sebastian will probably not occur again. The contemplated opening of a branch League Office in South America will also reduce the hitherto heavy cable costs.

GROWTH OF THE CHEMICAL INDUSTRY

BY CHARLES FREDERICK CARTER

Remarkable results of the World War in creating a vast new business in the United States—Our manufacture of chemicals and dyes increased 247 per cent. in five years—How former German plants are contributing to American enterprise

GRANTING that Jonah's gourd grew as fast as has been alleged; its achievement must still seem tame when compared with the remarkable development of the American chemical industry in recent years. According to Census Bureau figures, the aggregate value of products manufactured by the chemical industry of the United States in 1919 was \$694,643,000 as compared with \$200,195,800 in 1914, an increase of 247 per cent. in five years.

Such statistics take a part of the sting out of memories of our late abject dependence on Germany for dyes and chemicals. It was only seven years ago that Germany's production of dyes, drugs and the like was more than twice that of all the rest of the world and more than twenty-one times that of the United States, a nation with a population approximately 50 per cent. larger than that of Germany. And it does help forget that dole of dyes condescendingly delivered by submarine

and accepted with due humility in 1916, to learn that our exports of dyes increased from a paltry \$400,000 in 1914 to \$29,823,776 in 1920, which was nearly double the 1919 figure.

While on the subject of dyes, the fact may be mentioned that in the calendar year 1920 eighty-two manufacturers reported a total production of 88,263,776 pounds of dyes valued at \$95,613,749. This quantity represents an increase of 40 per cent. over 1919 and exceeds the imports of 1914 by 92 per cent. The dyes used in large quantities were made in amounts sufficient to supply American needs. A number of these dyes were made in considerable excess of our needs and so were exported, as already related. An interesting feature of the year was the production of 18,178,231 pounds of indigo valued at \$13,497,981. This quantity exceeds by 105 per cent. the production of 1919 and is 116 per cent. greater than the importation in 1914.

Synthetic tanning materials pro-

The value of the chemical products of the United States in 1919 was nearly three and a half times that of 1914

The exports of dyes from the United States in 1920 were nearly seventy-five times as great as those of 1914

duced in 1920 totaled 3,142,861 pounds, a marked increase over 1919. Synthetic tans made by the condensation of certain coal-tar derivatives with formaldehyde in the presence of an acid are of recent development. The large expansion in this new branch of the coal-tar chemical industry is one of the conspicuous events of 1920.

The output of coal-tar medicinals in 1920 was 5,184,989 pounds valued at \$5,726,776. The production of coal-tar flavors and perfumes in 1920 was 99,740 pounds, valued at \$332,008, a gain of 138 per cent. over 1919, while the variety produced was increased from 24 to 41. Perhaps these figures may suffice to visualize the reality of the material development of our new chemical industry. Unfortunately, during 1921 the chemical industry slowed down in sympathy with other business.

PROGRESS IN RESEARCH

Still more gratifying is the discovery that growth has been scientific as well as financial, intellectual as much as material. Dr. John E. Teeple, Chairman of the New York Section of the American Chemical Society, in the course of an address at the sixty-second meeting of the society in September, said:

We are gradually mastering Nature. New products are coming so fast we can scarcely keep abreast even of the records of their discoveries. It is a very great privilege to have a part in this work of mastery. * * * Our brothers in science and its application, the physicists and the engineers, can do wonderful things in the erection of buildings, bridges, railroads, telegraphs and other means of locomotion and communication, but their hands fall to their sides unless chemists can furnish materials of construction necessary, the iron and steels of many kinds, the alloys and the other metals of various kinds. No one of these exists in Nature in a form suitable for use. In every case we must take something that Nature furnishes and transform it by chemical process into something else which is suitable for construction material.

Yet only two years ago Dr. J. R. Angell, then Chairman of the National Research Council, declared that

"Research in industry is astonishingly backward (in America) as compared with Germany and even with England." The good doctor spoke in the present tense probably because he did not have the heart to refer to the dark ages of American chemistry.

Although a few great corporations had signified their appreciation of the importance of chemistry by establishing laboratories for the control of processes and for research to improve their products before the war, the mobilization of two thousand American chemists at the Government experiment station in Washington by the Chemical Warfare Service when America entered the war may be said to have marked the real beginning of our chemical industry. The rate of progress now should satisfy even Dr. Angell.

Yale University, of which Dr. Angell is now the head, is building a chemical laboratory to cost \$3,500,000, which will be the "finest in the world," if that overworked superlative conveys any meaning. Yale is also establishing chairs of research which will be free from the labor of teaching. Harvard and Princeton are following suit by extending materially their activities in chemistry. Cornell has appropriated \$500,000 for a chemical laboratory. Altogether American universities in 1921 appropriated more than \$30,000,000 to promote the study of chemistry. Leland Stanford University has an endowment for research studies in the chemistry of food.

The Carnegie Foundation has made a grant of \$5,000,000 for a building and an endowment for the National Research Council. The Rockefeller Foundation has made a grant of \$500,000 to be expended within five years to promote fundamental research in physics and chemistry at educational institutions in the United States and to found fifteen or twenty research fellowships. A philanthropist as yet unnamed has announced his intention of establishing an institution to insure proper research in plant life.

On this showing the outlook for the future of the American chemical industry would appear to be encouraging.

To return to the present, the American Chemical Society has 15,000 members holding regular meetings in fifty-five local sections scattered throughout the country. The Chemists' Club, although a New York corporation, is national in scope. In 1898 it had 89 members; today it has 1,800. It is housed in a fine building of its own in a desirable location.

GERMANY'S UNWILLING AID

More potent for progress than any other organization is "The Chemical Foundation," through which Germany, however unwillingly, is making reparation to the United States. To understand this it is necessary again to refer to the war, from which everything in chemistry seems to date.

It seems that various investigating agencies of the American Government disclosed the fact that the chemical industry, being then in the hands of Germans, was a natural centre for espionage, propaganda and direct governmental activity during the early period of the war. To cite a single example, representatives of German dye houses working with representatives of their Government were completely successful for a time in efforts to prevent the use of American-made phenol in the manufacture of explosives.

The result of this discovery was the seizure by the Alien Property Custodian of all German dye and chemical patents, numbering approximately 4,500, and covering a very wide field, the classification including metallurgy, fertilizers, fixation of nitrogen, hydrogenization of oils and many other things.

At the suggestion of the Alien Property Custodian a Delaware corporation called "The Chemical Foundation" was formed by members of the American Dyes Institute, the American Manufacturing Chemists Association and others engaged in

various branches of the chemical industries, to buy from the Alien Property Custodian and hold for the chemical industries and the country at large the German-owned United States Chemical and allied patents which he had taken over under the Trading with the Enemy act. The foundation is capitalized at \$500,000, of which \$400,000 is preferred and \$100,000 common stock, only the latter having voting power. The preferred stock is to be redeemed at the pleasure of the Board of Directors whenever the accumulated surplus amounts to 100 per cent. of the issue. Dividends are limited to 6 per cent. The common stock is issued under an agreement to deposit it in a voting trust which is to continue to Jan. 1, 1936. In order to render it certain that the control of the foundation can never be vested in any small group of interested parties, the stock is being distributed as widely as possible among the chemical and allied industries, no one subscriber being allowed to hold more than two shares, or possibly only one.

Having taken all possible precautions against a monopoly under any of these former German patents, the foundation issues non-exclusive licenses under them on reasonable and equal terms to manufacturers whose Americanism and competence are unquestioned. It will also prosecute any who may attempt to import any infringing product. As many of the seized patents are for products, the foundation should be able to exclude infringing goods from any source whatever and should thus be able to give at least a partial protection to the young American dye industry.

CHEMICAL FOUNDATION'S WORK

In addition to the patents the enemy trademarks taken over have also been sold to the foundation; and American manufacturers will be licensed to use them, provided it shall appear upon examination by the foundation that the goods to which the trademarks are attached are equal or superior to those of the original

owner. Such trademarks thus become a guarantee of quality furnished by an impartial body, and thus give American manufacturers an important advantage over foreign competitors. The foundation also purchased from the Custodian the German copyrights covering some of the indispensable literature of science, thus rendering vastly more accessible than at present many of the necessary scientific publications. The foundation also has power under its charter to purchase new patents, a provision which should stimulate chemical invention. It will also be a feature valuable to the public at large, as all inventions purchased will be available for immediate use by any suitable manufacturer, and cannot be suppressed.

The chief usefulness of the Chemical Foundation is expected to be as a centre of research. After the preferred stock has been redeemed and the nominal dividend of 6 per cent. has been paid on the common stock, the free net earnings are to be devoted to the development and advancement of chemistry and allied sciences in the useful arts and manufactures of the United States. It is expected that a considerable income will thus become available for research. The foundation will be in a position to bring about in America the co-operation between the laboratories of the universities and those of the dye works as close as that which accomplished so much in Germany. By taking a laboratory census of the country, a thing never before attempted, the foundation will be able to create a bureau of information where any scientist at the start of an important research may be able to ascertain where the facilities he needs are obtainable and what institution has already made progress along similar lines. The bureau should also be able to bring together those who wish to undertake, and those who are interested, in such researches. These activities will furnish valuable aid in what is perhaps the most important work before the country, namely, the

advancement of chemical science in the industries, and particularly in medicine.

One of the most important events of 1921 in the chemical industry was the completion of a large plant at Syracuse for the fixation of nitrogen from the atmosphere by the Haber process, which was one of the patents referred to as having been seized by the Alien Property Custodian and sold to the Chemical Foundation.

GREAT CORPORATIONS

A significant development from conditions indicated in the foregoing was the formation early in the year of the Allied Chemical and Dye Corporation by the consolidation of five leading chemical corporations of the United States having an aggregate authorized capitalization of \$159,000,000, which is equivalent to 40 per cent. of the capitalization of the gigantic German cartel, embracing the entire chemical industry of the late unlamented empire, built up by many years of effort for the purpose of dominating the chemical trade of the world. The new combination, through its constituent companies, covers the entire field of coal-tar products from the mine to finished dyes, drugs and other chemicals. This combination being the first really big one in a field which has so recently won recognition, a few facts about its constituent companies may be of interest.

The Barrett Company of New Jersey has an authorized capitalization of \$37,500,000. It has 40 plants covering an area of 314 acres on which there are 574 buildings, giving employment to 7,000. Its products include roofing and building paper, roofing and paving pitch, tarvia, carbolic acid, benzol, naphtha and all coal-tar derivatives.

The General Chemical Company, with an authorized capitalization of \$40,000,000, manufactures heavy chemicals and groceries in a number of plants scattered from Bayonne, N. J., to Bay Point, Cal.

The National Aniline and Chemical

Company, with an authorized capitalization of \$25,500,000, in numerous plants from Brooklyn to Buffalo—one of which is the largest aniline factory in the country—covers the entire process of converting coal into dyes and drugs. The Semet-Solvay Company, with an authorized capitalization of \$20,000,000, manufactures—in addition to gas—acids, explosives and chemicals, iron, steel, coke, copper and lumber.

The Solvay Process Company, with a capital of \$36,000,000, makes soda and alkalis and their by-products, and operates by-product coke ovens. One feature not without interest in connection with these big chemical corporations is that they have become addicted to the dividend-paying habit, rates in some instances being 20 per cent. To forestall misunderstanding the fact should be mentioned that the five concerns named, comprising the first big combination, are by no means the only important ones among the 1,274 chemical establishments listed by the Census Bureau in 1919. There are many big concerns—such as the Newport Chemical Works, with an enormous plant near Milwaukee—of which the public never hears, but which play an important part in the industry.

PRACTICAL USES OF CHEMISTRY

Chemistry, which is the science of the transformation of matter, plays a part in the industrial life of today so important as to be beyond the comprehension of all but those whose business it is to be informed on the subject. Chemistry is principally applied to the control of industrial processes; but it is being applied to such a vast extent that it may be said to touch almost every stage in manufacturing. Chemistry makes possible the scientific control of such widely diversified industries as agriculture and steel making. It governs the transformation of elements of the soil into wheat, corn, vegetables and fruits as well as the transformation of iron ore, coke and limestone into steel of any degree of hardness, elas-

ticity or strength that may be desired. In exactly the same way it governs the various processes in the transformation of cotton, silk and other fibres into textiles, and so on throughout the interminable list of manufactures. It is to chemistry, by the way, that the farmers of the South look for help in overcoming the boll weevil, which now threatens the total destruction of the cotton crop in the near future.

OUR ARMY OF CHEMISTS

Some five hundred of the larger manufacturing corporations of the United States maintain laboratories, partly for the control of industrial processes and partly for research for the further development of their products. In these five hundred laboratories are employed a total of five thousand chemists, physicists, other scientific specialists and their assistants, the total outlay for salaries, materials and maintenance being between fifteen and twenty million dollars a year.

One of the finest examples of corporation research laboratories is that maintained for a number of years by the General Electric Company at Schenectady, at the head of which is Dr. Willis R. Whitney, who rendered such distinguished service in the war, and who was the 1921 recipient of the Perkin medal, awarded for distinguished achievement in chemistry. Here 225 men are employed. As another example, the E. I. du Pont de Nemours Company maintains four laboratories employing a total of 1,189 men on problems relating to the manufacturing operations of the company, including miscellaneous chemical dyes and intermediates, explosives, coated fabric, plastics, pyroxylin solutions, lacquers, paints, varnish, mineral acid, nitrates of soda and miscellaneous products.

Chemists play a vital part in the live stock industry, although the stockman may never have met a chemist in his life. It was the chemist who made it possible for the packer actually to pay more for a

steer than he can sell the beef from that steer for. Less than thirty years ago there was no such thing as a chemical laboratory at the stockyards. When the first one was established the venturesome Chicago packer who did it was the subject of patronizing derision by his competitors. His own faith was so weak that the solitary chemist employed found it expedient to put in a vacuum pan for making beef extract, though that was not a laboratory process, to cover his intrusion upon the pay-roll until he could have an opportunity to demonstrate his true worth. Now that same packer employs nearly a hundred chemists in his laboratory, while his skeptical competitors have followed his example.

It was the collective work of the chemists which long ago gave rise to that venerable witticism about utilizing everything about the hog but his squeal. The work of their chemists has not only led the packers into practically every branch of the food-preserving industry, but it has also ventured far into pharmacy and medicine. At first pepsin was the only pharmaceutical product of the packing house; now thirty-five different pharmaceutical and medicinal products are manufactured by the packers. Practically every gland in the animals slaughtered is collected and its active principle segregated and purified. Extracts of all the ductless glands, all the digestive

ferments and enzymes, hemoglobin and the like are prepared. In addition to all this the chemist now draws specifications for every operation and for every department of the industry. Chemists draw specifications for the purchase of all raw materials, from brass journal bearings for refrigerator cars to the strength of the attar of roses for the finest grades of soap.

The field of chemical industries embraces sugar making and refining, the manufacture and proper application of fertilizers, the manufacture of cement, paints, varnishes, leather, textiles, bleaching and dyeing, paper and pulp manufacture, rubber, metals, oils, soaps, extracts, glass, food preparation, and a great many other things in addition to the enormous output of chemicals and acids themselves. In all these things the processes are necessarily under the direction and control of chemists, whose work in turning out the finished product is constantly being developed and improved by the great experimental and research army working in technical schools and in industrial plant laboratories.

So large a part of our natural resources has been wasted by ignorance and recklessness in the past that henceforth the chemist will be obliged to find the means of existence for the nation. And, judging by his past performances, the chemist is quite equal to the task.

THE TRADE COURT IDEA

THE first Court of Commercial Arbitration established in the United States is in full swing at Chicago; in the last four months it has heard and decided some forty cases. This court, functioning as an arm of the Chicago Association of Commerce, and headed by J. Kent Greene as Manager and Judge, was founded, after strenuous opposition by certain elements of the bar and the established courts of law, with the object of settling by direct and specific

action all commercial disputes of a given State or locality. The work done has been so valuable in taking from the regular courts a mass of litigation which interfered with important criminal cases, and in securing quick decisions, that it is now planned to extend this innovation throughout the country. One of the departments at Washington is studying the feasibility of such a step in co-operation with the Chicago Association of Commerce.

EDUCATION IN THE ARMY

BY ELERIDGE COLBY

Captain of Infantry, United States Army

Little-known facts about the vast new system of instruction by which the United States Army is not only training men to be soldiers, but is educating them to be successful in any walk of life—Creating strength of character

Behind the gun is the schoolbook.—ELIHU ROOT

THE Army of the United States has embarked upon a huge educational project which few people understand or appreciate. It is doing three things: It is training troops, training officers, training men. These three kinds of training are necessary to the success of the army as a military organization, and all fit together into a well-rounded educational program that will have very valuable results, not only for national defense, but also for the furtherance of national ideals and national economic strength.

The United States Army not only trains men as efficient fighting units, but also develops their bodies and directs their morals. It creates a morale and makes loyal Americans of men who never before knew the meaning of the ideal of service. It also trains civilians, through the National Guard, the Organized Reserves, the Citizens' Military Training Camps and the Reserve Officers' Training Corps units, so that when the next war comes those called into service can be converted into brigades and divisions with a rapidity and an efficiency that will put to shame our best efforts of 1917-18. Nor is this training merely mechanical; it does more than create the habit of prompt response to set commands.

There was a time when an army was a machine directed by a single brain. In Civil War days, a colonel

led his regiment into battle and even gave the commands for loading and firing, thus directing the entire unit in person. Now it is different. When the officers of the army were asked to state, from their experience in the recent war, what was the largest number of troops that could be directly controlled by one man under modern conditions, 87 per cent replied: "Eight men." This contrast merely emphasizes the change that has come to pass—a change evidenced by the altered drill regulations. A colonel used to command his regiment by word of mouth for the simultaneous execution of movements; later it was the major and his battalion; and now the captain with a company is the highest officer who gives such commands. With this decrease in the size of units that can be handled efficiently by one man a new method of military training has been instituted.

Our army now trains its soldiers to think as well as to do. They have to learn the manual of arms and troop marching, for purposes of control and order and ease in moving bodies of men. They have to learn the mechanism and the manipulation of their weapons, which are nowadays neither simple nor few. But this is all preliminary. They must next appreciate the characteristics of these weapons, the possibilities of their power and the limitations of their

use. A soldier is taught how a machine gun works; he is taught to fire it accurately and steadily, making repairs and readjustments instantaneously; and he is trained to use his weapon in co-operation with other soldiers for the furtherance of the common plan. The real purpose is to teach him how to think in a military way, along sound tactical lines. A purely mechanical mind is of small value in the army. The army man must learn how to use his judgment when handling his military *materiel*. In many respects our training of troops is similar, in its principles and methods, to the education of the schools; indeed, it has been laid down as doctrine by the Infantry School that above all things an army officer must be a teacher and trainer of men.

There are certain facts to be learned. Then the mind must be taught to think on the basis of those facts. It must be trained to remember details, to seek information, to evaluate conflicting factors, to arrive at a decision, and finally to act with force and vigor. This is the method for all army men, down to the lowest private, who must in time of peace be trained to become a corporal and lead his eight-man squad himself in time of war. According to the latest tables of organization we shall need non-commissioned officers and specialists in such numbers as to require an intelligence of "above average" or better in 37.9 per cent of our enlisted personnel. These men must have intelligence, but they must also have instruction that will give them—in addition to a purely military knowledge—something real and tangible in the way of character, initiative, decisiveness, aggressiveness and a sense of responsibility. This is the true military training. The *materiel* is military; but, since the conditions prescribed by modern weapons have changed warfare from the old frontal clash of long lines of solid masses into the co-operation of separated units, the *essence* is the development of sound thinking and individual responsibility. This is our army edu-

cation. It is a type which builds men.

TRAINING OFFICERS

The army trains officers not as it did this during the war, hurriedly, frantically, and insufficiently, in three-months' camps. It is now done much more thoroughly and in a manner more worthy of the seriousness and dignity of the profession of arms. When an officer is commissioned, he has just begun his education. There is a complete system of higher education through which all officers have to go. Each branch of the army has its special service school, as, for instance, the Infantry School at Camp Benning, Ga., the Cavalry School at Fort Riley, Kan., and the Field Artillery School at Camp Knox, Ky. Each of these gives three full-year courses which all officers of each branch have to take when their turns come. Then there are the General Service Schools, each comprising a full-year course: the School of the Line and the Staff School at Fort Leavenworth, and the Staff College at Washington. Six years! This is higher education with a vengeance. And our officers are trained not only in military technique, but as leaders of men, particularly as instructors who shall in turn train our next National Army. Further than that, these schools train not only officers of the Regular Army, but also National Guardsmen and Reserve officers. And, not by any means to be overlooked, the Reserve Officers' Training Corps schools and colleges train those youths who will be the platoon and company commanders in our next war.

What, then, is the nature of this training? It is not merely military, with only drills and ceremonies, as the laymen seem to imagine, any more than is our training of troops. We teach military history, modern diplomatic history, international law, educational psychology, and a clear-cut, practical form of logical thinking. In our officer schools, in our non-commissioned officer schools,

and in our garrison schools we inculcate the spirit of discipline, and discipline does not mean punishment, nor are its symbols the guard-house and a court-martial. Discipline is a state of mind, a loyalty, a habit of action which enables leaders to obtain orderly and efficient results even without the giving of commands. Rigid attention to detail, careful exchange of military courtesies, upright bearing, and uncomplaining obedience to instructions are required of every officer and every soldier. "The ultimate aim of disciplinary training," says the War Department, "is to enable a man in battle, under heavy fire, when separated by wide intervals from his comrades on either side, to stick to his task, to utilize intelligently the weapons with which he has been trained; and to obey such orders as may be signaled or otherwise transmitted to him by his superiors, or in their absence properly to carry on his mission in the light of his own judgment." This is army training, based on the development of sound leadership, beginning with the squad and going on to the higher units. This is more than military mechanics. It is education of a high order.

THE TRAINING OF MEN

The army trains men. In the educational and vocational schools for enlisted men it offers courses on a par with, if not superior to, those offered by trade schools, business colleges, and municipal night schools. Such subjects as the following are taught:

Arithmetic.	English for illiterates.
Algebra.	Tractor driving.
Geometry.	Auto and truck repairing.
Trigonometry.	Tractor repairing.
General history.	Motorcycle repairing.
United States history.	Locomotive engineering.
Geography.	Storage batteries.
Penmanship.	Motion-picture operation.
Spelling.	Music.
Automobile driving.	Clerical work.
Motorcycle driving.	Stenography.
English grammar.	Typewriting.

There were, before the army was reduced by Congressional resolution,

120,000 men taking courses such as these.*

Here the lad who has been forced by family circumstances or by economic pressure to leave the day schools can continue to improve himself while solving the problem of self-support. He can learn grammar and history and mathematics, or he can learn a trade. He can also work his way through school, earning his living while he learns. And let no one imagine that this educational and vocational system is Federal philanthropy, or Federal competition with the public schools of our cities, or a mere trick of the peace-time army to get recruits. This system is of immense value to the individuals who take the courses, to be sure, and we must not forget that in a group in the Second Corps Area, where "no attempt was made to 'sell' vocational training to the men," 90 per cent of the recruits elected courses "of their own free will and accord." This system is of value to the country as a whole in increasing educational facilities, reducing illiteracy, and providing skilled labor of a well disciplined and patriotic mind; and we must not forget that 24.9 per cent of the young citizens enlisted and inducted during the last war were actually illiterate. But this system is likewise of great utility to the army itself in a purely military sense.

During the recent war we had to hold schools to teach our privates the English language, and finally, pressed for time, we organized various "foreign legion" units at Camp Gordon. We had to start courses to develop specialists in subjects which the men might have learned before enlistment, and we taught 1,250,000 men in this way. It is now being planned to give many of these courses in correspondence work to members of the National Guard and Organized Reserves. This is considered an urgent matter, in a military sense. It has been found

*This list is from the courses given at one of our smaller posts, and thus is thoroughly representative. A still greater variety of subjects is offered at the larger camps.

that, though we require 37.9 per cent of our enlisted men to demonstrate intelligence "above average" or better, we have only 34.8 per cent with that intelligence, and that the proportion of that intelligence in the civilian population, according to all estimates, is even less. This has recently been pointed out by Professor McDougall in his book, "Is America Safe for Democracy?" The others must be developed, and this is being done through our military schools. "Intelligence" is an innate quality; but it can and must be developed by means of education. The education is being provided. Though this is being done for purely military purposes, the country at large must recognize that the army is at the same time educating the uneducated, developing the intelligence of the nation and making better citizens.

METHODS AND RESULTS

Every man who has worn the uniform in our present-day army is now a more useful citizen when he gets his discharge than he was the day he enlisted. He is able to take up the rifle and bayonet in time of war for the execution of the primary mission of our army—national defense; but he is also better educated in a general way and better trained to work at a trade.

The army teaches by what is called the "applicatory method," which was developed by the School of the Line and is designed to train the type of soldier required in modern warfare. In the words of C. R. Mann, "Since every soldier in battle is almost certain at some time to be placed in a position requiring independent action and qualities of leadership, it is essential that the training system of the army should develop in every man, as far as possible, independence, initiative, resourcefulness, and powers of quick and sound judgment. There are two fundamental principles underlying the applicatory method. The first is that the best method of training men to think is

to place them in real situations which challenge their abilities and make thinking necessary. The second is that progress is best measured by objective standards which reveal what a man can actually do." The army teachers begin with an explanation; then they have a demonstration; then an application. All the psychological aids of the laws of association are utilized; both oral and visual means of presentation are employed. The principles taught are then put to immediate practice, forcing the mind of the man under instruction to work immediately in and around the facts taught—thus fixing the instruction practically and indelibly.

The army instructor meets many of the same problems that are met by civilian educators. Indeed, we feel that in a few particulars we have answered questions which the civilians have not been able to answer; we have new methods which they might well study; for we as well as they have on our hands the vital issue of national education. We teach illiterates, for instance, how to read and write by having them study and copy out such sentences as these:

It is a big job to learn to read and write.
A good American soldier likes a big job.
We are American soldiers.
Theodore Roosevelt wrote letters to his children and his children wrote letters to him.

My sergeant can read, write and use a gun.

My sergeant is a good soldier.

I have learned to brush my teeth, to keep my head and shoulders up, and to keep my uniform neat and clean.
The army is a good place for any man.

I learned what our flag means.
Uncle Sam is good to us.

They read of the lives of great Americans, and every biography emphasizes the value of education to Washington, Jefferson, Grant, Franklin, Roosevelt, Lincoln. They are always taught patriotism, whatever the subject of instruction. They are taught self-reliance, obedience to duty, self-respect. After their service, they can intelligently function as

citizens to the best interests of the nation in social, economic, and political affairs, just as in a military sense they have been trained to act on the field of battle, with or without orders, for the success of the army as a whole. That is the army's aim—to turn out good citizens. We are trying to develop in this country skilled labor, minds that do not run to radicalism and the red flag, educated men who can work at their specific business with the interests of

the nation at heart, fine upstanding youths who are a credit to the army and the nation. Nor should we ever forget, whether we are dressed in khaki uniform or in academic cap and gown, or in the sack suit of the man-in-the-street, that, as Steinmetz says: "When God holds His assizes and hurls the nations against one another in battle, there is no single element of physical, moral, or intellectual worth which does not weigh in the balance."

THE UNMARRIED MOTHER

BY FRANCIS HAFFKINE SNOW

The situation with respect to a growing evil and to the medieval laws that still exist with regard to it—What Great Britain and the United States are doing to remedy the injustice of the ages—Russia's radical change in regard to children born out of wedlock

DOWN through the ages the long procession of "unmarried mothers" has come—a pale and spectral line of figures whose faces are stamped with suffering. Behind them come their children—born out of wedlock—a wan and ghostly pageant, on whose pinched features are reflected the agony and bitterness of their mothers. Little martyrs are these, whose wistful eyes are too big for the thin faces, and whose narrow temples, like those of the child Saint Dmitri, are stained with the crimson wounds of their martyrdom.

Among all races, among all peoples, from the time, many thousands of years ago, when marriage was established as an institution, and the bride was brought to the house of the bridegroom amid the music of hymeneal feasts, the problem of birth outside of marriage has been always present: A problem, like a stream flowing to the sea, that ever widened and deepened, and, like the sea, ever a waste of salt bitterness. For mar-

riage, from being merely a protection to woman, grew into a legal device to perpetuate private property and inheritance rights. When this stage was reached, the stigma on the child not born in wedlock became greater, and greater also became the dangers to which the offspring were subjected.

But the stream never ceased flowing. Down through the dark years of the Middle Ages it came, a gloom-wrapped, tortuous current, flowing mostly underground, unseen and unrealized by the multitudes of happy mothers who could look in the eyes of their newborn children without shame or self-reproach. The solemn lawgivers realized that it existed, when they had to punish, often with death, the guilty mothers brought before them for the crime of infanticide. The Church also knew it as well as, if not better than, the civil authorities, and when the State deprived the proscribed children of their civil rights, the Church took

from them also their ecclesiastical rights. Theirs not the joy of absolution or of burial in consecrated ground. Those that survived were branded for all their span of life—branded even before they were born; by the agonies suffered by the mother when she knew her disgrace; branded by all her nervous reactions and dread, her pain and humiliation. One of the most pathetic figures in literature—Marguerite in Goethe's "Faust"—will remain immortal as a picture painted by the hand of genius of the mental, moral and physical agonies endured by such unwedded mothers.

If this were all there was to it—if it were merely a question of suffering—the self-righteous and pitiless world would have no immediate concern. On the contrary, as the social history of the world has demonstrated, it would allow the process of suffering to go on forever, strong in its entrenched belief that sin must find its punishment. "As ye have made your bed—!" The moral castigation of the community is necessary, for otherwise sin would be encouraged; the illicit mother, far from being helped, must be cast out forever, as a warning to all those who refuse to accept the convention and who refuse to recognize the sanctity of the marriage code. Furthermore, the rights of the legal child over the illegal child must be maintained. A curious state of affairs it would be, have thought the men who gave the world its social legislation, if the child born out of wedlock were admitted to have rights on an equality with the child born in wedlock!

The result of this attitude toward the unmarried mother has been that the laws relating to this subject are stamped with an inherent cruelty which has done nothing to mitigate the evil, while adding to the sufferings of the transgressing women and their offspring, and hence ultimately to the aggregate of the sufferings of humanity. If the erring woman, driven to desperation by shame and poverty, committed infanticide—and

infanticides have been frequent from the medieval to the modern epoch—she was tried by the inexorable majesty of the law, and duly punished without regard to psychological complexities or relative judgments. And the father of her child has remained immune from all responsibility. All the anguish and disgrace have fallen upon the mother. An inevitable result has been that the children have suffered by reaction. They have been born in large ratio abnormal, the victims of nervous and psychological disorders; the mortality among them has been twice that of legitimate offspring, and of those that survived, the social records existing indicate that many were defectives, tending to become burdens on the community or to drift on the easy stream leading down to criminality.

THE PRESENT SITUATION

What is the world situation in our modern times? Study of an authoritative source—the *Annuaire International de Statistique*, published by the permanent Bureau of the International Institute of Statistics at The Hague, 1917—shows that the great underground stream is still flowing. The table on the following page giving the number of unlegalized births in the various countries of Europe is based almost wholly upon figures from that source. (This and the two tables near the end of the article are taken from the study published by the United States Department of Labor referred to on Page 436.) Blanks indicate that no figures are available for the periods shown.

It will be noted from this table that the average for the period 1910-14 shows almost everywhere an increase over the preceding period tabulated, and that the figures given for 1915, 1916 and even 1917, where available, show a similar increase.

That there is a great evil here which the world has tolerated for too many hundreds of years there can be no question. An average of 9 per cent. of fatherless children in the world's population equals an enormous

NUMBER AND PERCENTAGE OF ILLEGAL BIRTHS IN EUROPE

Country.	Illegitimate Live Births, 1914.		Per Cent of Live Births Illegitimate.

aggregate of human misery. A certain element of earnest men and women who have awakened to the evil, and sought its remedy, have banded together in various countries to work for better legislation. Efforts have been made in a number of countries to fasten responsibility on the father, to help the mother, to care for the child; but the ponderous inertia of the law has made most of these efforts as futile as the impact of a pebble on a granite cliff. It has taken the frightful consequences of the World War, in respect of depopulation, to bring the problem home to the legislators of Europe.

A bill to protect and aid the unmarried mother and her child—the second of its kind—is now pending in England. France, in co-operation with the International Child Welfare Association, is seeking to fix legal responsibility upon the father—a far cry from the provision in Napoleon's famous code which prohibited any inquiry into the paternity of such a child. The Scandinavian countries are legislating to assure the child's

future. Soviet Russia has made the rights of the non-legal child equal with those of the legitimate. A number of States in our own country have enacted similar legislation.

The child—the world's most enlightened thought revolves around this centre. For the child is the future man or woman, and whatever may be the sins of the parents, it is innocent. This conclusion, simple and obvious to all high-minded people to-day, has been accepted as axiomatic only within the last few decades; but the great majority of communities, even if they accept this conclusion when it is brought to their attention, rarely, if at all, think of the problem and of what shall be done to solve it. They scarcely, indeed, realize that it is serious. The statistics of European nations, so far as available, are eloquent.

THE NEW LAW IN RUSSIA

One country for which statistics have failed for a number of years is Russia. The 2.3 per cent. recorded up to 1909, however, is far below the

facts. Any one who has lived in Russia knows this. Here, where the so-called "grazhdanski brak" or "civil marriage" was an institution no less recognized than legal marriage, and where thousands of men and women were living together outside the institution of marriage, all over the vast empire, the percentage of illegitimate issue was enormous. The Bolsheviks, whatever crimes may be laid at their door politically or otherwise, must be given credit for the passage of enlightened legislation on this subject. It has remained for Soviet Russia to make the rights of the child born out of wedlock absolutely equal to those of the child born in wedlock; to compel the mother to reveal the name of the father three months before her confinement, and to force the father to recognize and support the offspring. In cases where the prospective mother's relations have been such as to make the paternity of the child doubtful, all those named are held to proportionate contributions for support. Ten clauses of the new marriage law of Soviet Russia embody this new legislation. The two introductory paragraphs ring like a clarion of challenge to the still medievalized legislation of the Western World. This is what they say:

The basis of the family shall be actual parentage; no distinction shall be established between natural parentage and legitimate parentage.

Children not born in matrimony shall have the same rights as children born to persons whose marriage has been registered.

It is easy for those entrenched within the puritan moral code to point to the statement made by Karl Kautsky, the German Socialist leader, "the complete equality of rights between all children, without distinction of parentage, is a measure of social psychology preparing the way for applying the care of the community to all children, removing the last foundations of bourgeois marriage," as ground for the assumption that this new legislation of the Soviets is intended to do away with marriage as

an institution, and to realize the Socialist dream of breaking up the family as a social unit. To those who have studied the grinding of the pitiless laws of Western nations, notably of Great Britain—and not excluding the United States—the few simple words quoted above have in them that sublimity found everywhere in Russian life and Russian literature, and crystallized in Tolstoy's "Resurrection." Here, if anywhere, is the spirit of "the great White Christ who comes out of Russia."

ENGLISH REFORM MEASURES

Coming more closely to our own sins of omission and commission, the bare statement of the situation as regards unmarried mothers in the two great English-speaking countries of the world—Great Britain and the United States—will serve to show how necessary it is for the so-called Anglo-Saxon nations to take heed, not only of the present, but of the future. Mrs. C. Gasquoine-Hartley in the *Nineteenth Century* for September, 1921 (pp. 511-520), makes the following statement, based on official statistics:

The births registered in Great Britain in 1919 (the last year for which the complete figures had been published) include 41,876 illegitimate births, an increase of 424 upon the numbers of 1918. In one year nearly 42,000 children born out of wedlock in this land of ours! Try to realize what these figures mean. In the course of a single generation of twenty-five years, 1,000,000 shame-branded little ones are born—branded because their parents have acted illegitimately.

The situation in the United States is scarcely less serious. An estimate made in the same year by the Children's Bureau of the United States Department of Labor ["Illegitimacy As a Child-Welfare Problem." By Emma C. Lundberg and Katharine F. Lenroot] makes it certain that at least 32,000 white children are born out of wedlock each year. If this indicates a percentage a little lower than that for Great Britain, it should be remembered that the proportion of unregistered illegitimate births here is much

greater than that of unregistered legitimate births, as many of our States and cities fail to compile separate statistics for the first category. From all the figures obtainable, the problem is as serious here as in Europe.

What is being done to lighten this gigantic burden of suffering, both of the thousands of unwilling mothers and of their unwanted, socially handicapped and unhappy children?

In England, Mrs. Gasquoine-Hartley tells us, a National Council for the Unmarried Mother and Her Child was formed in London on Feb. 14, 1918. This council "is composed of representatives appointed by public authorities, as well as representatives of national voluntary organizations, and to these are added individual members. In this way the co-ordination of efforts so greatly needed is gained. Much admirable work has been done, especially in educating public opinion." English public opinion is generally awakening to the peril of this growing evil. The actual percentage of illegitimate births is much greater than the available figures show. "In England, unfortunately," says Mrs. Gasquoine-Hartley, "still-born births need not be registered; were they recorded the illegitimate birth rate would be much higher. In those countries where the records are kept the number of still-born illegitimate births is always very high—sometimes twice as high as it is for children born under the protection of marriage." The most enlightened British public opinion is uniting in believing that the laws known by that old and opprobrious term of insult and reproach, the "Bastardy Laws," must be so amended as to protect the child, to help the mother, and to fasten responsibility upon the father.

This awakening of public opinion has crystallized in an attempt to introduce new legislation. In May, 1920, Mr. Neville Chamberlain, representing the National Council, presented to the House of Commons a bill devised to give every child born out of wedlock two parents instead of

one. It encountered great opposition, especially to the provision aimed to settle the question of paternity from the outset, and also to the provision seeking to protect the children by placing them under public guardianship as wards of court under the Children's Act of 1902. Pruned and amended to the point where its own sponsor could scarcely recognize it, this bill, "the most rational and thoroughgoing attack on irresponsible parenthood that has ever been attempted in this country" [ibid. p. 514], was finally successfully shelved, but the English workers would not be silenced. This year another bill was brought forward by Captain Bowyer, based on the uncontested clauses of the Chamberlain bill, and it has passed both readings in the House without opposition. Its title, "Children of Unmarried Parents bill," shows the revolution that has taken place in the English attitude. If this bill is finally made law, it will compel the father to support his child. It will further do away with that monstrous feature of (English) law which says that a child born out of wedlock must remain so for all time, even though the parents marry in order to give the child legitimacy. In Scotland this brutal injustice has never been perpetrated by the law.

The position of unmarried mothers, always bad, has been made worse by the conditions arising from the war. The unwilling mothers, usually very young, often weak-minded, of poor physique, untrained, and hence low wage-earners, struggle against heavy odds. Their bitter cry is: "Help me to get rid of my baby!" Forced to go out to work, they must necessarily neglect their offspring, a fact which helps to explain the high mortality among these children. Defective nutrition, bad home conditions and lack of care combine to lessen the child's chances of survival; but for these conditions, implies Mrs. Gasquoine-Hartley, the criminal negligence and indifference of the social order is primarily responsible, not the unwedded

mother. It is all very well for society to say that the mother must be punished for her sin, but in saying this, and in dealing with the girl-mother harshly, as it has done in the past, society has lost sight of the fact that it is penalizing itself in wastage of child life, to say nothing of the embitterment and anti-social instincts which such treatment develops in those that survive. It all comes down to this: the mother must be helped, not pushed lower; her child must be put under the guardianship of the State, and its physical, mental and moral well-being, so far as possible, secured.

IN THE UNITED STATES

The figures available show that the conditions observable in Great Britain are duplicated on this side of the Atlantic. The estimate of 32,000 unsanctioned yearly births has been already referred to. The figures given on the opposite page are drawn with but one exception from information furnished by State departments of health and bureaus of vital statistics. That the table covers only sixteen States is explained by the difficulty of obtaining differentiated data, special registration laws, &c. Figures for the negro population of the country, which are very high, are excluded, as representing a special problem in themselves. The situation is shown in certain States and cities.

Incomplete and unsatisfactory as are these figures, they are serious when weighed as a whole, and especially when one considers the uncounted and unknown percentages of the States not recorded. Equally unrepresentative of the country as a whole and equally serious in its implications is the tabulation for cities of over 100,000 population where figures are available. For some cities, the percentage runs up to 4 or 5 per cent.

The official records show that the majority of the mothers are young, irresponsible morally and often men-

tally weak and of bad heredity. The rate of mortality among the illegitimate issue, large numbers of which are already under the care of social agencies, is alarmingly high. In Baltimore, in 1915, white children of legitimate birth died at a rate of 95.9 per thousand, says Katharine F. Lenroot (*Annals of the American Academy of Political and Social Science*, Sept. 3, 1921), while the infant mortality rate for white children of illegitimate birth was 315.5, or 3.3 times as great. In Milwaukee, during the two-year period, 1916-17, the death rate was 236.8 per thousand, or 2.25 times greater than for children of legitimate birth. In Boston, in 1914, the rate was 95 for legitimate, 281 for illegitimate births—nearly three times greater. Miss Lenroot says in this connection:

Early separation of the mother and child, and the consequent difficulties in feeding, undoubtedly accounted in large part for this excessive rate, though the rate for diseases of early infancy, closely associated with pre-natal and natal conditions, was in Boston nearly three times as high as the corresponding rate for children of legitimate birth. * * * Recognizing the relation between separation from the mother and infant mortality, the laws of two States (Maryland and North Carolina) forbid the separation of mothers and babies under 6 months of age, while in another State (Minnesota) and in the largest city of a fourth (Milwaukee), the same purpose is attempted through regulation by official bodies.

Other figures show that a majority of the children born in this country out of wedlock receive no financial support by the fathers. Boston records show that of 2,178 such children cared for by social agencies, only 674—not quite one-third—received any assistance. Philadelphia records show two-fifths as an average for 629 children, Milwaukee a three-tenths average for 271, and this only for partial and inadequate support. In most States, up to the present time, it has been found incompatible with the interests of the legal family to place the child of illegitimate birth upon an equality—as regards his claims upon the father—with the child born in wedlock. lation passed in 1917, and Arizona in 1921, became exceptions. Iowa, Wisconsin and Missouri give rights of limited inheritance from a father whose paternity has been proved during his lifetime. In some States special legislation has decreed a share of support so small as to be ludicrous. There is a tendency in some States toward liberalization. The obligation of the father was increased in Massachusetts in 1913. The Minnesota law of 1917 is one of the most liberal laws on the statute books of any State.

Best of all in the hope it brings of amelioration of the modern world's greatest social injustice was the for-

mation of the Children's Bureau of the United States Department of Labor established to deal with this whole problem. At the request of the Intercity Conference on Illegitimacy, this bureau in 1920 held two regional conferences, one in New York, the other in Chicago, for the purpose of securing a standard of legal protection for children born out of wedlock. A report which included a first tentative draft of a uniform illegitimacy act was drawn up by the National Conference of Commissioners on Uniform State Laws in 1920; as a direct result of the action of the Children's Bureau, this was presented to the

National Conference in 1921, and was laid over for one year for consideration. If this bill eventually goes through, it will be no less effective than the English bill now pending in fixing the father's responsibility for support. Thus far, however, the situation is far from satisfactory, and calls for action devised to safeguard the rights of the unwedded mother, of her child, and of society. The ex-

isting legislation on this subject in most of the so-called civilized countries is virtually medieval. The innocent child is still penalized at its mother's breast, and for all its life, if it survives. As to the parents, the whole punishment still falls upon the head of only one of the guilty parties. This, from the standpoint of our Anglo-Saxon principles, is not "fair play."

IS THE RADIUM SUPPLY VANISHING

BY THOMAS C. JEFFERIES

THERE is little or no warrant for statements that have recently been made declaring that the supply of the world's radium is vanishing; that the supply is now alarmingly small, and that no new deposits of radium-bearing ore have been discovered for several years. An investigation recently made shows that about seventy-five new radium claims are discovered every year, and that this average has been maintained for the past five or six years. About fifty of these annual locations are made in Colorado, the rest in Utah. One of the leading scientific representatives of radium interests—John I. Mullen—in charge of the radium operations for the Standard Chemical Company in Colorado and Utah, has definitely stated that there will never be a shortage of radium in the world, although the cost may increase because of the higher cost of mining. "God Almighty," he added, "jeweled the works of Nature with this precious substance in such a way that individuals cannot control it, and human beings cannot dig it out in a short period. The pockets are scarce and far between, but as long as capital is willing to spend the money for moving rock, so long can capital produce radium."

Among other theories that have been exploded by the scientific and exploratory operations conducted by the Standard Chemical Company is the so-called "rim theory." Certain Government geologists and others were of the opinion that carnotite ore could be found only on the rims of deep canyons of the carnotite areas, and that such ore would extend into the hill

but a few feet. When this theory was generally accepted throughout the world, great alarm resulted; in America, hearings were held before certain Congressional committees. In the Fall of 1917, however, it was definitely proved that the largest bodies of carnotite ore were to be found some distance back from the rims, generally from half a mile to a mile.

Large bodies of ore have been found with even twenty to seventy-five feet of over-burden. This discovery has led to a greater feeling of optimism regarding the supply of radium that may be expected from future mining operations.

Of especial interest in this connection is the Yellow Jacket Flat in Hieroglyphic Camp Canyon in Montrose County, Colorado. A few years ago there was opened up in this section a claim which at first appeared to be merely an outcropping of carnotite ore, and quarrying operations yielded a satisfactory production of good quality ore. At that time it was expected that probably the usual average number of 100, 200 or 300 sacks of ore might be extracted from the claim, but up to July 1, 1921, 18,000 tons of good ore had been mined from this flat, and mining operations are continuing to produce about 800 tons a month.

Some large bodies of ore are being mined half a mile from the rim, and the ore has an over-burden of about forty feet. The Standard Chemical Company, capitalized at half a million dollars, produced approximately ten times the value of its capital in radium. At the present time it has 240 men working, and continues to produce.

THE KNIGHTS OF COLUMBUS HISTORY MOVEMENT

BY JOHN B. KENNEDY

Editor of *Columbia*, a publication devoted to Knights of Columbus matters

An official explanation of the reasons for the new organization to revise United States history and of the objects to be attained

THE Knights of Columbus movement to revive interest in the origins and progress of American history constitutes, by itself, no unimportant item of current history. Launched at the San Francisco international convention, it was there officially announced that the aim of the movement was not to rewrite American history, but "to encourage investigation into the origins, the achievements and the problems of the United States; to interpret and perpetuate the American principles of liberty, popular sovereignty and government by consent of the governed; to promote American solidarity and to exalt the American ideal."

A broad program, an ambitious program, but one not incapable of fulfillment by an organization of 800,000 men that proved its title to public confidence by the successful fulfillment of an amazingly large and detailed program of welfare and reconstruction work during the war. To have managed an organization of 5,000 workers and to have provided creature comforts and recreation for 5,000,000 embattled men during the war, on a fund of \$40,000,000, and yet to have had a balance of sufficient size to operate employment bureaus that placed approximately 400,000 veterans in jobs, provided for the college education of more than 400 others and created a chain of 130 evening trade schools by which 250,000 others have benefited and still are benefiting, besides maintaining an intensive welfare service in all Government and military and marine hospitals—that is achievement.

When, therefore, the Knights of Columbus state that their history movement is non-religious, non-racial, simply and purely pro-American, they can rely on close national acquaintance with their record to credit them. They do not, as some have held, seek to impose a Knights of Columbus history, or a Catholic history, upon America. An American history is all that Americans need, and American history is all that the Knights of Columbus seek to promote.

There has been increasing evidence, especially since this country's entry into the war, of aims, some of them arising from unquestionably honest motives, to set the War of the Revolution in a new light before the youth of America, who must accept their history as it is given to them. The War of 1812, the Monroe Doctrine, and, in fact, the entire range of American foreign relations has been subjected by several well-known authors to a revision in conflict with previously written stories of incidents and personages concerned with these great landmarks of American history. Henry Clay has been set down in revised history as a "gambler" and a "bluffer," Polk as a "blusterer," Blaine as "superficial," and "a blatant hawk after votes," Cleveland as "guilty of unpardonable rudeness" and Knox as "a dollar diplomat." These and similar expressions contain a partisan flavor. Unquestionably the men using them are entitled to their opinions, and it is equally unquestionable that opinion does not constitute history. A com-

parison of the editions of Barnes's history used in our schools forty years ago with the new editions in use today will reveal the discrepancies between the old and new estimates of important events and personages that explain the necessity of the Knights of Columbus movement. Epithets exchanged between the partisans of statesmen in the heat of campaigning are no fair estimate of such statesmen's contribution to national development; yet these estimates are now finding record in many textbooks.

But the object of the Knights of Columbus American history movement is not so much negative—the opposing of errors in history, and their correction—as the positive promotion of research into original sources of American history and the analysis of the results of this research distributed in millions of pamphlets throughout the country. The Knights have offered \$7,500 in prizes to stimulate interest in the movement—\$3,000 for professors of history, \$2,000 for school superintendents and school teachers, \$1,000 each for students in Mexico, Central and South America, and overseas, who have facilities for studying archives and American history relations, and \$500 for students in colleges in the United States. It is estimated that with the completion and distribution of a cycle of some score of monographs, with the vast clerical and expert work involved, the movement will involve an expenditure of approximately \$1,000,000.

Edward F. McSweeney of Boston is Chairman of the Knights of Columbus Commission, and serving with him are Rear Admiral William S. Benson, former Chief of Naval Operations and Chairman of the United States Shipping Board; Professor Henry Jones Ford of Princeton University; Hon. Maurice Francis Egan, former United States Minister to Denmark; Hon. Hannis Taylor, former United States Minister to Spain; Professor Charles S. McCarthy of the Catholic University of

America, and Professor Hermann Derry of Union College. The Board of Judges in the American history contest comprises Gaillard Hunt, Chief Archivist of the United States Department of State, Chairman; Pro-

EDWARD F. MCSWEENEY
Chairman of the Knights of Columbus History Commission

fessor David A. McCabe of Princeton University; Professor William Cleveland of Boston University, and Frank I. Cobb, a well-known New York editor.

Headquarters for the commission have been established at 199 Massachusetts Avenue, Boston, where the campaign is directed to enroll 100,000 teachers and students in the movement, behind which the Knights of Columbus have thrown their organized strength.

The breadth of the subjects to be studied, embracing the period from the discovery to the Pilgrim settlement, from the origin of Colonial Charters to the Arms Conference, indicates the possibilities of the movement as a stimulant to interest in the history of the Republic's strides to international greatness. The promi-

nence and acknowledged scholarship of the men serving on the commission and the board of judges are a guarantee that every monograph judged by them and published by the organization will be authoritative.

In their citizenship promotion work, carried on, not only in the chain of Knights of Columbus evening schools or the innumerable open forums on social questions maintained by the Knights every Fall and Winter, and supplied by them with expert sociological lecturers, but through each of the 2,000 Knights of Columbus councils in the United States, the Knights have learned how comparatively small is the knowledge of American history possessed by those seeking citizenship here and how ignominiously inaccurate, as a rule,

is the information of native citizens regarding vital events of the story of America.

As in their opposition to the anti-Jewish campaign and in their support of the anti-tuberculosis fight, both of which have been acclaimed as vital and enduring factors for the national benefit by authorities in no way affiliated with our organization, so the Knights of Columbus intend that their fostering of this new movement to stimulate interest in accurate American history shall be no ephemeral activity, but a steady, persistent endeavor to aid in supplying that background of correct and complete knowledge of the national genesis and evolution without which citizenship must ever remain spiritually imperfect.

THE FATE OF RUSSIA'S WAR PRISONERS

AN article published by the Japan Weekly Chronicle on Sept. 15, 1921, not only shatters optimism regarding the chance of repatriation of the war prisoners still remaining in Russia, but paints a picture of the treatment meted out by imperial Russia to all her war prisoners so tragic as to transcend anything laid at the door of Germany. According to Dr. Kerner, a Hungarian who held a responsible position in Budapest before the war, and who was taken prisoner and sent to Siberia soon after the conflict started, there are still about 50,000 war prisoners left in Russia. All these unfortunates must resign themselves to spending a third Winter on alien soil, and their chances of survival, under the famine conditions prevailing, are extremely slim. The record given by Dr. Kerner from authoritative figures of the fate of the 2,406,000 unfortunate soldiers taken prisoners by the Russian Army during the war is justly characterized by the editor of the Japan Chronicle as "appalling." The following figures are eloquent:

The number of war prisoners taken up to 1917 approximated 2,406,000 men, divided as follows: Austro-Hungarians, 2,000,000; Germans, 200,000; Turks, 200,000; Bulgarians, 6,000. Of all these prisoners, inclusive of the nationalities mentioned, and others, there died in prison up to the end of 1917 no fewer than 128,000 Turks,

or 80 per cent. of the total; 50,000 Germans, 112,500 Austro-Germans, 90,000 Hungarians, 166,500 Jews, Armenians and Persians; 183,838 Slavs, Czechs, Poles, Serbs, etc., and 183,838 Bulgaro-Rumanians. The total number killed off by starvation and disease was 768,838.

Many of these prisoners were captured in 1914 and 1915. They were sent to Siberia, where "they were herded into concentration camps, insufficiently supplied with food and clothing, and subjected to the control of heartless Czarist military officers." Dr. Kerner calls the terrific mortality that resulted "wanton destruction . . . because it could not, did not, serve any purpose whatever, save the pure desire to kill. About 40 per cent. of all the prisoners perished in captivity."

A considerable number of the starving, half insane remainder escaped during the February revolution. A trifle over 681,000 remained in the concentration camps in May, 1918. Red Guard and other recruitments took a few thousand. Since the beginning of 1919 about 100,000 have been repatriated by the German, Austro-Hungarian and Red Cross missions.

Exiled, abandoned by the world, scattered, dispersed, forgotten, facing death by starvation and disease, these men stare drearily up at the gray, inexorable Russian skies, "pod Bogom," in the Russian phrase ("under God," at the mercy of fate), and ponder the cruelty of nations and Governments, dreaming meanwhile of home and kindred, which most of them, in every probability, are destined never to see again.

Birdseye view of the Gatun Lock, Panama Canal, showing, in the middle west chamber, the United States dreadnought Tennessee, one of the newest and largest battle units of the American Navy.

PANAMA CANAL FINANCES

By JOHN K. BAXTER

Latest figures for the great waterway, showing how its income, though encouraging, is still insufficient to pay interest on the capital invested—Why the exemption of American shipping from the payment of tolls is a financial mistake

THE revenues of the Panama Canal from Aug. 15, 1914, when it was opened to navigation, to June 30, 1921, were \$46,466,791.98, and the expenses of operation and maintenance during the same period were \$45,986,067.03, leaving net revenues of \$480,724.95. The operation of the canal to date, therefore, has cost the United States nothing. In 1915 income and expense nearly balanced; there was a deficit in 1916 and 1917; in 1918 there was a surplus of income over expense; and this surplus has increased annually. For the fiscal year 1921 it amounted to \$2,711,816.56.

The canal has not for the last four years, and should never again, require maintenance appropriations to

supplement its own current revenues; it should, on the contrary, turn an annually increasing surplus into the United States Treasury. It is not yet, however, on a paying basis, since the surplus revenue does not suffice to pay interest on the capital invested or to provide for its amortization. If the canal were a commercial enterprise, it could not pay a stock dividend, nor could it, if bonded for the cost of construction, meet the interest on the bonds even at the minimum rate of 3 per cent.

An estimate of the revenue needed to make the canal self-supporting was made in 1915 by Professor Emery R. Johnson, in a paper presented by him to the International Engineering Congress at San Fran-

cisco. The estimate was worked out as follows:

Operation, maintenance, sanitation and government	\$5,000,000
Annuity payable to the Republic of Panama	250,000
Interest at 3 per cent. on the cost of the canal	12,000,000
Amortization of the investment ($\frac{3}{4}$ of 1 per cent.)	3,000,000
Total	\$20,250,000

The revenue for 1921 (\$12,040,-116.70) fell short of the required minimum, as estimated by Professor Johnson, by more than \$8,000,000; and although revenues are increasing rapidly, it will be some years before they attain to \$20,250,000. In the meantime the estimate itself requires revision.

Professor Johnson assumed the capital cost of the canal to be \$400,-000,000, and estimated the annual cost of operation and maintenance at \$5,000,000. This latter figure was based on pre-war wages and material prices. The actual expenses of operation and maintenance for the fiscal year 1921, when wages were at their highest and the supplies used were purchased at the peak of the market, aggregated \$9,328,300.14. The average for seven years was \$6,569,-438.14. It is certain that future costs will be lower than those of 1921, but it is not probable that we shall get back again to pre-war conditions. A reasonable estimate of future expenses of operation and maintenance would be \$7,000,000. As to the capital cost, the auditor of the Panama Canal in a memorandum submitted to the Special Panama Canal Commission in June, 1921, offered the following figures:

Net cost of Panama Canal to June 30, 1920	\$357,175,822.86
Interest on above	114,038,607.27
Total	\$471,214,430.13

These figures do not include fortifications, the cost of municipal improvements in the cities of Panama and Colon—a charge which is now being repaid with interest by the Republic of Panama—or the value of the plant transferred to the Army and the Alaskan Railroad Commission, all items which are not properly

chargeable to the canal as a commercial enterprise. The figures also do not include certain auxiliary equipment. The auditor estimates the total capital cost of the canal with equipment up to June 30, 1920, at \$485,000,000.

Professor Johnson's estimate of the revenues required to put the canal on a commercially sound basis may, therefore, be revised as follows:

Operation, maintenance, sanitation and government	\$7,000,000
Annuity payable to the Republic of Panama	250,000
Interest at 3 per cent. on the cost of the canal	14,550,000
Amortization of the investment ($\frac{3}{4}$ of 1 per cent.)	3,637,500
Total	\$25,437,500

SOURCES OF REVENUE

Although the revenues for 1921 were less than half of the required total, the canal can undoubtedly be made to pay, if it is administered with that end in view.

It was estimated, after a very careful study of the normal growth of maritime trade, that the traffic through the canal would increase at the rate of 60 per cent. per decade. In spite of the war and post-war conditions, the traffic to date has exceeded that rate of increase. The tolls, if they are maintained, will eventually yield the required revenue.

Apart from tolls, which are the main source of revenue, the canal derives some income from auxiliary business operations, notably repair shops, dry docks, fuel oil plants, ship chandlery stores, fresh water supply, hotels and restaurants. The net income from these sources, included in the total revenue for 1921 of \$12,040,-116.70, was \$778,197.39.

The net profits of the Panama Railroad Company might also logically be added to the revenues derived from the operation of the canal, although this has never been done, and the company, so far as its finances are concerned, has been treated as an entirely separate entity. The railroad and steamship line were purchased from the French Canal Company in 1904, together with that company's other

plant and franchises, for which the United States paid a lump sum of \$40,000,000, charged against the construction cost of the canal. The net income of the Panama Railroad Company from 1904 to 1920, after paying all charges, was \$27,400,151.03. This has been invested in the development of the property. The capital assets, consisting of steamships, rolling stock, other plant and real estate, increased from \$12,669,821.62 in 1904 to \$34,365,170.32 in 1920. The net income on capital invested has been at the rate of 7.5 per cent. per annum.

The activities of the Panama Railroad Company are inextricably involved with those of the Panama Canal, and there is no clear division of functions. Though the fuel oil plants are operated by the canal, the coaling plants are operated by the railroad. The canal supplies ships with marine hardware, cordage, paints, &c., and the railroad furnishes ships with provisions. All but one of the docks at the Cristobal terminal were built with railroad funds, and all but one of the docks at the Balboa terminal with canal funds. The Hotel Tivoli at Ancon is operated by the canal, and the Hotel Washington at Colon by the railroad. The Governor of the Panama Canal is President of the Panama Railroad Company. The Panama Railroad Company is, in fact, an auxiliary of the Panama Canal, or a subsidiary corporation, and its net income might properly be included in the revenues of the canal. If this income does not fall below the average of the last seventeen years, it will amount to \$2,000,000 per annum.

TOLL RATE LOSSES

If all its sources of revenue are developed, as they would be under corporation management, it is fairly obvious that the canal can attain to a financially sound position at an early date. But this presupposes that Congress will administer the canal as a national investment, and not sacrifice its earnings to provide an indirect subsidy for American shipping.

Congressional action, or rather Congressional neglect, has already deprived the canal of 14 per cent. of its legitimate income from tolls. The facts are these:

Prior to the opening of the canal the assessment of tolls was the subject of an exhaustive study by Professor Emory R. Johnson, acting under the instructions of the Secretary of War. The actual earning capacity of vessels, as reflected in net tonnage, was universally accepted as the logical basis for tolls; but the measurement rules of the different maritime nations, including the United States, were found to be fundamentally at fault, in that net tonnage derived from them represented in a degree the manipulative skill of steamship owners and builders. Therefore the Panama Canal Rules of Measurement were formulated, which, according to the testimony of Mr. E. T. Chamberlain, United States Commissioner of Navigation, "are recognized by the most competent authorities the world over as the most exact application of the scientific principles which should govern the subject yet prepared."

Section 5 of the Panama Canal act (Aug. 24, 1912) provides that "Tolls shall not exceed \$1.25 per net registered ton," it being assumed with reason by all concerned that the net registered tonnage referred to was that derived from the Panama Canal Rules. The canal accordingly began business on that satisfactory basis.

Article VII. of the Panama Canal Rules of Measurement provided that all tolls payable on a vessel's net tonnage should be increased by the tonnage of the goods carried on the vessel's deck. A concerted agitation was at once started and persistently maintained by the West Coast lumber interests in protest against the payment of tolls for deck cargo, as provided under this article, on the ground that this was contrary to the law limiting the maximum tolls to \$1.25 per net ton. This led to an unexpected result of far more extended scope.

The whole matter was referred to

United States battleship Missouri passing through the Culebra Cut, the portion of the Panama Canal which has presented some of the most difficult engineering problems

the Attorney General, who rendered an opinion that net registered tonnage did not mean that derived from the special rules provided for the Panama Canal, but rather the equivalent of the net tonnage derived under the United States rules of measurement. Accordingly, supplementary instructions pursuant to this opinion were issued by the President, stating that "when the amount obtained by multiplying \$1.25 by the net tonnage, in accordance with the Panama Canal rules, is greater than the amount obtained by multiplying \$1.25 by the net tonnage as determined by the United States rules of measurement, the excess amount is uncollectible."

This ruling made necessary two certificates of measurement for each ship, one in accordance with the Panama Canal rules and one in accordance with the United States rules. The assessment of tolls was needlessly and ridiculously complicated, and made to depend, in the end, not on the scientific and equitable measurement rules prepared after exhaustive study especially for the canal, but on rules which by comparison are obsolete, arbitrary and

unfair. As far as canal revenues are concerned, the result has been equivalent to a 14 per cent. reduction in the toll rate. Since the original rates were not burdensome, and the canal was not on a paying basis, this in itself was objectionable, but the reduction was not even uniform. Complete statistics covering the period since the canal opened show that the ratio of savings distributed among vessels of all nationalities is incontrovertibly in favor of foreign vessels. For the calendar year 1920, American vessels paid 87 per cent. of their tolls reckoned on the basis of Panama Canal net tonnage, and foreign vessels only 84 per cent. Year after year efforts have been made to restore by legislation the original Panama Canal measurement rules, but Congress has declined to act.

EXEMPTING AMERICAN SHIPS

It is now proposed to exempt American vessels engaged in the coastwise trade from the payment of tolls. If the bill having this object, which is now before Congress, is enacted into law, it will reduce canal revenues from

tolls by 12 per cent. The coastwise trade has not the least need of subsidy or legislative encouragement. It is already an American monopoly from which all foreign ships are excluded, and after being neglected during the war, when all available tonnage was diverted to the North Atlantic, it is now growing with amazing rapidity. For example, the coastwise tonnage through the Panama Canal during the first eight months of 1921 exceeded that of the entire year 1920.

It is said that the advocates of this measure, though admitting that the coastwise trade needs no subsidy, design their bill as the entering wedge leading to the exemption of all American shipping. Without discussing the policy of such an exemption, as a partial subsidy of benefit to a fraction only of the American merchant marine, or the interpretation of the Hay-Pauncefote Treaty, wherein it is provided that "the canal shall be free and open to the vessels of commerce and of war of all nations * * * on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects," it is pertinent to state that this wider exemption would have the effect of cutting 40 per cent. from the income from tolls, and postpone to the Greek Calends the day when the canal will begin to earn legitimate interest on the capital invested.

Professor Emory R. Johnson, in the paper already referred to, laid down as follows the principles which, if adopted, would make for a sound business policy:

In the long run the management of the Panama Canal will probably test the Government as fully as did the construction of the waterway. * * * During the period of construction, * * * the President, having been given by Congress unrestricted power to build the canal, was able to construct the waterway with efficiency and with great credit to the country. Business methods prevailed and succeeded. In the

management of the canal there should be the same strict adherence to business principles.

Tolls have been fixed to be paid by all vessels using the canal. * * * Doubtless pressure will be brought from time to time upon Congress and on the President to lower the rate of tolls. The Government should resist this pressure until the revenues derived from the canal cover the annual operation and maintenance expenses and the interest on what it cost to build the waterway. * * *

If the rate of tolls which has been established is maintained for ten years, and if subsequent reductions in the rate of tolls are conservatively made, it will be possible for the American people to secure from the Panama Canal revenues that will cover out-of-pocket expenses and return to the United States Treasury the sum that has been invested in the waterway. This can be done without restricting the usefulness of the canal; and if this policy is followed out, it will be possible for the United States, with less burden to the taxpayers of the country, to construct other needed public works.

A scientific code of tonnage rules has been formulated and put into force for the measurement of all vessels used in the Panama Canal. Those who have to pay tolls naturally desire and seek to have the tonnage rules so changed as to lessen the amount paid by vessel owners. It is to be hoped that the President and the Secretary of War, who are in charge of the administration of the canal, will resolutely maintain the tonnage rules as they now stand, or will make only such modifications in the rules as may be required to give them greater definiteness.

Among the economic aspects of the Panama Canal to which especial attention should be given is that of managing the canal in a businesslike manner. It is now being wisely managed. The present policy of charging reasonable tolls upon all vessels, and of applying impartially to all types of merchant vessels a code of tonnage rules so framed as to determine and express the actual capacity available for carrying cargo and for accommodating passengers, should be zealously maintained. If this be done the United States will demonstrate to the world that a great Government enterprise can be managed in accordance with sound economic principles.

This prophetic advice is as sound today as it was six years ago, when it was first published.

CHILE'S CONFLICT WITH BOLIVIA AND PERU

BY F. NIETO DEL RIO

Correspondent of El Diario, Santiago, Chile

Genesis of the three-cornered dispute over possession of the rich nitrate beds South of Tacna-Arica—How Peru linked herself with Bolivia and how both were defeated by Chile—The recent attempt to revise the treaty terms through the League of Nations

TO understand clearly the appeal made recently by Bolivia before the Assembly of the League of Nations at Geneva, it is necessary to review the causes and consequences of the war waged by Chile against both Bolivia and Peru from 1879 to 1883. This war originally started with Bolivia. Chile had had an old territorial controversy with that country over a part of the province known today as Antofagasta. The great majority of the settlers of that mining desert were Chileans. To secure South American solidarity prior to the war against Spain, Chile had finally pushed through a settlement of this dispute by a treaty signed in 1866. Under this treaty, Chile renounced her claims to territorial possession in exchange for certain advantages, including the protection of Chilean interests in Bolivia. As difficulties arose in the application of the clauses providing for Bolivia's participation in the customs duties, Chile proposed a new treaty in 1874, under which she renounced her right to control the customs offices in the boundary zone, forgave Bolivia the sums not paid for participation since 1866, and left to the latter free dominion over the territory, with the sole exception of the following restrictions in favor of the Chilean interests established there:

Article 4—The export duties to be imposed on the minerals derived from the region mentioned in the foregoing articles will not exceed the quota collected at present, and Chilean nationals, industries and

capital will not be subject to further contributions of any kind whatever, except those existing at present. The stipulation contained in this article will last for a period of twenty-five years.

Shortly after having pledged itself to this effect, the Bolivian Congress passed a law fixing a minimum duty of 10 centavos per quintal of nitrate exported. This violation of the treaty and other violations of a similar nature made it necessary for Chile to solicit, through diplomatic channels, the withdrawal of these new tax laws which affected the Chilean industries. The Chilean Government stated "that the refusal of Bolivia to grant such a just request would force Chile to declare the border treaty void, and the consequences of this painful declaration would be to the exclusive responsibility of the party that had failed to comply with the treaty." (Instructions of the Minister of Foreign Relations of Chile to his representative in Bolivia.)

Nevertheless, the Government of Bolivia went ahead with the law and proceeded to collect the tax by force from the Compañia de Chilena de Salitres and the Railroad of Antofagasta, as from Feb. 14, 1878. The company refused to pay, invoking the treaty. Then their property was seized and the manager of the company was placed in prison.

As the treaty called for arbitration, Chile proposed this upon condition that the application of the tax law

be suspended. Bolivia, having proposed, on the contrary, that the tax be collected meanwhile, did not reply to the Chilean proposition. Instead, on Feb. 1, 1879, the Bolivians issued a decree confiscating all the property of the Salitrera Company. As there was no telegraph at that time, Chile knew nothing of this last act, and, on the 5th of the same month, the Chilean Government instructed its charge d'Affaires in Bolivia as follows:

Feb. 5, 1879—Guided by a sincere spirit of conciliation, and taking into account that Bolivia is relatively a weak country, we believe that if the tax is suspended we could open and continue the discussion interrupted by that Government and reach by your influence a friendly agreement, and, if this is not possible, to constitute arbitration in conformity with the protocol annexed to the pact. In this way we will eloquently manifest that Chile, whenever dignity permits, prefers pacific solutions and is disposed to fulfill with noble loyalty her international obligations.

As Bolivia did not accept this proposal, Chile allowed forty-eight hours for a reply as to whether the law would be suspended. This time having expired, the Chilean diplomat asked for his passports, and declared to the Bolivian Government that inasmuch as the treaty of 1874 had been broken, the Chilean rights to the territory claimed in the treaty of 1866 were again in effect. On Feb. 14, 1879, Chile ordered the occupation of the Port of Antofagasta and of the "territories which she possessed before making with Bolivia those treaties which the latter has just broken." Chile could not abandon either the rights or the interests of her citizens. It was not Bolivian territory Chile was occupying, but Chilean territory, which she had ceded to Bolivia by the treaties in question.

PERU JOINS BOLIVIA

Notwithstanding the fact that in 1873 Peru had induced Bolivia to sign a pact of alliance tacitly directed against Chile, the Peruvian Government offered its mediation in the Bo-

livian-Chilean conflict, the origin of which was nothing more than Peru's monopolistic nitrate policy, which had instigated Bolivia to dispossess the Chilean industries. The mediation of Peru was accompanied by three suspicious circumstances: (1) The denial on the part of the mediating Minister of the existence of the secret treaty of which Chile had lately become aware; (2) Previous Peruvian demands compatible only with the pretensions of Bolivia; (3) Hurried war preparations of Peru, the Peruvian Government meanwhile showing a desire to gain time. These circumstances, with the fact that Bolivia did not manifest the slightest desire to facilitate an amicable adjustment, indicated to Chile that Peru was not working "bona fide," but only with the intention of strengthening the alliance. Chile then asked Peru for a pledge of confidence and for her declaration of neutrality. To this Peru replied that such a declaration would be premature, inasmuch as a state of war did not yet exist between Chile and Bolivia.

A few days later Bolivia declared war on Chile. The Chilean Government then demanded a declaration of neutrality from Peru. The Peruvian President, Senor Pardo, then confirmed the secret agreement with Bolivia, in accordance with which it would be impossible for Peru to remain neutral.

The Peruvian mediator, Senor Lavalle, upon receiving his passports in Santiago, Chile, was also given a note by the Chilean Government, stating: "My Government was surprised to learn that the Peruvian Government had drawn up and signed this secret pact at a time when Peru was demonstrating to Chile sentiments of cordial friendship. To this mysterious act and one in which the most absolute reserve was agreed upon, the Government of Chile answers by frankly declaring the relations with the Peruvian Government broken."

The Chilean plenipotentiary, on leaving Peru, dispatched a note to the Peruvian Government in which he

gave the reasons for his departure. In this note, he pointed out Peru's moral obligation to observe neutrality, especially in view of that country's attempt to undertake the delicate role of mediator.

This is how the war between Chile and her two allied neighbors was started. Let us see how it ended.

The war of Chile with Bolivia and Peru was concluded by separate treaties. With Peru the Treaty of Ancon of 1883 was signed, and with Bolivia, the truce pact of the same year. Peru unconditionally surrendered to Chile the Province of Tarapaca and ceded, also, conditional on the holding of a plebiscite, the Provinces of Tacna and Arica. This plebiscite did not take place in 1894, nor has it taken place to this day, for the reason that it has been impossible to come to an agreement with Peru with regard to the protocol indicated in the treaty.

The divergence of opinion has been fundamentally over the rules of procedure, not over the obligation of conducting the plebiscite. Peru has demanded that only the natives—that is to say, the Peruvians—should be allowed to vote; Chile wants the right extended to all the inhabitants, whether they be foreigners or citizens. Chile has never refused to hold the plebiscite, but has only discussed with Peru through diplomatic channels the form the plebiscite protocol should take. The idea that Chile objects to the plebiscite reveals ignorance of the diplomatic history of the question.

Chile rejected the proposal of the Peruvian President Billinghurst to postpone the plebiscite for twenty-one years, a period that Chile considered exaggerated and one that delayed the solution of the problem more than was expedient.

The American Minister to Peru, Leslie Combe, reported to the State Department on Nov. 17, 1909: "While Mr. Leguia [the President] made patriotism the keynote of his conversation, he confirmed the opinion I have expressed in former dispatches,

that political use is being made of the controversy [with Chile] by his Administration to bid for popularity, or at least to distract the people from thought of revolution." This report confirms the well-known fact that Peru's politicians and chieftains would lose their prestige as soon as the Tacna-Arica question was solved.

PEACE WITH BOLIVIA

I have said that in 1883 a truce with Bolivia was signed. In 1895 a final treaty of peace was drawn up. In this treaty it was stated that if Chile triumphed in the plebiscite of Tacna and Arica, a seaport of the province would be given to Bolivia. This treaty, however, was not ratified. In 1904, twenty years after the truce pact had been signed, another treaty was formulated, discussed and signed without any pressure whatever on the part of the victor. On the contrary, this new pact was drawn up in the most friendly spirit, and devised to bring about closer economic ties between the two countries. Its spirit was both moderate and conservative. The Bolivian Minister, Senor Gutierrez Guerra, said of it in 1904:

It is clear that the treaty with Chile has strengthened our international prestige and brought us close to that country to which we now bind ourselves in practical and lasting terms of friendship.

Bolivia, after signing this treaty of 1904, in which the definite cession of the Province of Antofagasta to Chile was confirmed, lived peacefully, developing her vast natural resources with Chilean and European capital. A pacific people, industrious and well governed, the Bolivians had forgotten the wounds of the war in which they had fought valiantly, and were no longer closely bound to Peru.

The treaty was put into effect under the most harmonious circumstances, Chile paying various credits against the Bolivian Government for which she had made herself responsible. Mutual confidence and friendship having been born again in the two

countries, the old idea of satisfying Bolivia in her aspirations to a port of her own on the Pacific was voiced anew in Chile. Recognizing Bolivia's need of an outlet, while awaiting the plebiscite in Tacna and Arica, Chile began the construction of a railroad from Arica to La Paz at her own expense and at a total cost of \$25,000,000. This railroad was completed in 1913, and its inauguration was made the occasion of great international celebrations emphasizing the sentiment of Chilean-Bolivian fraternity, which gave rise to favorable comments through all Latin America, with the exception of Peru—the only country that had protested against the construction of this line, on the ground that it was to cross Tacna, part of the territory still subject to a plebiscite decision.

PERU'S REVERSIVE POLICY

The diplomatic relations between Peru and Chile have been suspended since 1910, and since then the international Peruvian policy has been directed toward Bolivia. The efforts of this policy met with little success in Bolivia until the wrongly understood results of the European war inspired the idea that the "reconquest" of Alsace-Lorraine was the signal for territorial "revindications" throughout the entire world. Peru supposed that the League of Nations would annul the Treaty of Ancon, returning to Peru all that she had lost in the war of '79, and Peruvian sympathizers spread enthusiasm in Bolivia over the possibility of the League's annulling the treaty of 1904 with Chile.

This policy tended toward influencing Bolivia against the Chilean project of making a Bolivian port in Tacna and Arica, and instead presented to the Bolivians the expectation of reconquering without effort the rich littoral of Antofagasta.

The movement was resisted by the Bolivian Government presided over by Senor Gutierrez Guerra, who desired to keep the national faith

pledged by the treaty of friendship with Chile. This cost the Bolivian Government its life. The revolutionaries, instruments of Peru, came into power, exiling from the country all men of merit, just as Mr. Leguia has done to this day in Peru. The new Government came into power by promising the people the "reconquest" of Antofagasta, with all its nitrate wealth, within a short time. Peru, on its part, applauded and agitated the "revindication" of Tacna, Arica and Tarapaca, and Dictator Leguia's constituent Congress declared null and void the Ancon Treaty. There was a moment when a crisis seemed imminent in the presence of the concerted action of Peru and Bolivia to provoke Chile in 1919.

BEFORE THE LEAGUE

At last year's session Peru brought up the question of the Pacific before the League of Nations, but, as this Assembly was inclined to postpone the discussion, Peru withdrew her request at the last hour. In September this year Bolivia renewed the attempt, asking that the treaty of 1904 with Chile be revised, that is to say, asking that the territory of Antofagasta be returned to her, which in truth Bolivia never had under her control, and the eventual dominion of which she ceded definitely and irrevocably by means of this treaty, signed of her own free will.

Chile opposed the League's taking up this matter, and the Assembly postponed its discussion in a way that was equivalent to a peremptory rejection of the Bolivian claims. Its action amounted to a confirmation of the legal and moral judgment that the treaty of 1904 was a valid treaty of peace, signed with the fullest liberty of conscience. The President of the League Assembly declared: "The Assembly could not place itself in the dangerous position of going on record as being competent to revise treaties. * * * Such a course would establish a precedent for possible revision of the Versailles Treaty, and would

SHADED AREA INDICATES THE TACNA-ARICA DISTRICT, THE CRUX OF THE BOUNDARY DISPUTE THAT HAS LONG DISTURBED THE RELATIONS OF CHILE, BOLIVIA AND PERU

cause grave alarm in France and other allied countries." It may be added that, if this precedent were allowed, no defeated country would fail to ask for a revision of its agreements: Mexico and Spain would claim this right against the United States, China would invoke the precedent against Japan, Panama would set fire to the discussion in Central America, and so on. Bolivia has now withdrawn her request, but says she reserves the right to bring up the matter in another form before the League.

It must not be forgotten that Bolivia enjoys in practice all the advantages of having seaports. By the treaty Chile granted her the right to have her own Custom Houses in the Chilean ports, and at present there are Bolivian Custom Houses in both Arica and Antofagasta.

"SHEER PLEASURE FINE ARTS PAVILION"

ON a high hill in Tokio, which looks down on the bay and also gives a magnificent view of Fujiyama, there stands a great board which bears the inscription, "Kyoraku Bijutso Kwan," meaning "Sheer Pleasure Fine Arts Pavilion." On this site is to be built the most princely gift in the history of modern art. The donor, Mr. K. Matsukata, the celebrated shipbuilder of Kobe, and the son of the Marquis Matsukata, one of the few remaining Genro, or Elder Statesmen of Japan, has conceived the project of erecting here a monument of Western Art for the edification of his fellow countrymen. The working out of the architectural and other details of a magnificent gallery, in which the work of the greatest Western painters and sculptors will be exhibited, has been confided by Mr. Matsukata to Mr. Frank Brangwyn, R. A., an English painter of high merit.

Besides some thousand paintings, etchings and sculptures from Europe and America, representing the best artists of

the last fifty years, there will be famous period furniture and tapestries. Japanese art will be represented by an unrivaled collection of Japanese prints and a collection of Chinese bronzes known throughout the East as priceless and unique. All the best work of Rodin will be exhibited in bronze, and some 70 of the best works of Mr. Brangwyn in oil and water color will be represented. An inner courtyard is planned, with loggias, and a beautiful garden and a fountain in the centre are to be important features. This new gallery will be one of the beauty spots of Tokio.

The donor, Mr. Matsukata, who wishes to broaden his country's artistic education, comes of one of the oldest and most aristocratic families of Japan. His father, the venerable Marquis Matsukata, has a number of sons, whom he has sent abroad to be educated. Once a year they all return to Japan and gather around the ancestral board to relate their experiences. Otohiko Matsukata, a younger son, was a student for several years at Harvard.

Members of the Imperial Conference, held in London, July, 1921, where many momentous problems were discussed. Front row, seated, left to right: Sir Edward Montagu, Arthur Balfour, Mr. Srinivasa-Sastri, Mr. Massey, Premier of New Zealand; Mr. Meighen, Premier of Canada; Premier Lloyd George, W. M. Hughes, Premier of Australia; Jan C. Smuts, Premier of South Africa; Lord Curzon and the Maharaja of Cutch.

THE NEW BRITISH EMPIRE

BY J. ELLIS BARKER

How the idea of imperial consolidation first arose, and how it developed—Influence of the World War in showing both the dominions and the mother country the need of union—Momentous results of the Imperial Conference

FUTURE generations may see in the British Imperial Conference, which came to an end on Aug. 5, 1921, one of the most momentous events in the history of the English-speaking people and of the world. The supreme importance of that very prolonged meeting lies not so much in the resolutions which were passed as in the fact that it created highly significant precedents and marked a complete change in the character of the British Empire. Only very gradually is the public beginning to realize that a new chapter in British and in Anglo-Saxon history has begun, that the old British traditions have been abandoned. Future historians may compare the Imperial Conference of 1921 to the signing of Magna Charta.

All the great sea empires of the past since the time of the Phoenicians and Carthaginians were created for the promotion of commerce and trade. They were created mainly for the advantage of the motherland. Following the example which the nations of antiquity and the Italian, Spanish, Portuguese and Dutch colonizers had set in the past, England established all over the world trading stations, which were administered and controlled from London. Plantations were added. England followed the precedent set by its forerunners, although the English treated their colonists with greater consideration and the natives with more humanity than had been done by other nations.

A new spirit has arisen in England. The desire to give to the British do-

minions and colonies full self-government, and to replace the highly centralized empire of the past by a free imperial partnership concluded by a number of independent nations, has become stronger and ever stronger. The change in England's attitude and policy is ascribed by some to the influence of men such as Lord Rosebery and the late Mr. Joseph Chamberlain; others attribute it to the revolt of the American Colonies. In reality there have been in England two schools of thought since the beginning of England's colonial career, one favoring the subordination of the colonies to the motherland, and the other advocating the utmost liberality toward the overseas possessions.

OLD VIEW AND NEW

Many Englishmen of the eighteenth century were cold-blooded utilitarians. In the words of Bancroft, the great American historian, "They regarded colonies, even when settled by

men from their own land, only as sources of emoluments to the mother-country, and colonists as an inferior caste." The Hon. George Grenville, First Lord of the Treasury and Chancellor of the Exchequer, cynically proclaimed, "Colonies are only settlements in distant parts of the world for the improvement of trade." Adam Smith taught about that time: "If any of the provinces of the British Empire cannot be made to contribute toward the support of the whole empire, it is surely time that Great Britain should free herself from the expense of defending those provinces in time of war, and of supporting any part of their civil or military establishments in time of peace." Many Englishmen desired to get rid of the American Colonies, because they thought such a step would be monetarily profitable.

At the same time there were far-sighted men, both in England and in the American Colonies, who wished to create a united empire on the basis

King John of England setting his royal seal to the Magna Charta at Runnymede, June 15, 1215. Behind him, on his left, is Stephen Langton, Archbishop of Canterbury, to whose efforts this foundation charter of English and American liberty was largely due. The picture, based on historical data, was drawn by a British artist for *The Illustrated London News*.

of a partnership concluded between the motherland and the self-governing settlements overseas. Adam Smith, though supposed to be a strict utilitarian, wrote in his "Wealth of Nations," which was published a century and a half ago:

There is not the least probability that the British Constitution would be hurt by the union of Great Britain and her colonies. That Constitution, on the contrary, would be completed by it, and seems to be imperfect without it. The assembly which deliberates and decides concerning the affairs of every part of the empire, in order to be properly informed, ought certainly to have representatives from every part of it. * * * The principal difficulties perhaps arise, not from the nature of things, but from the prejudices and opinions of the people both on this and on the other side of the Atlantic.

The attitude of the elder Pitt and of many other eminent Englishmen of the time is so well known that it need not be mentioned. Leading men in the American Colonies also advocated the conclusion of an empire partnership and the creation of an Imperial Parliament which should include representatives sent by the colonies. Twenty-two years before the Declaration of Independence, Benjamin Franklin sent to Governor Shirley a weighty memoir "On the Subject of Uniting the Colonies More Intimately with Great Britain by Allowing Them Representatives in Parliament." In this article he wrote:

I should hope that, by such a union, the people of Great Britain and the people of the colonies would learn to consider themselves as not belonging to different communities, with different interests, but to one community with one interest, which I imagine would contribute to strengthen the whole and greatly lessen the danger of future separation. * * * The colonies are all included in the British Empire, and the strength and wealth of the parts is the strength and wealth of the whole. What imports it to the general State whether a merchant, smith or hatter grow rich in Old or New England? And if there be any difference, those who have most contributed to enlarge Great Britain's empire and commerce, increase her strength, her wealth and the numbers of her people at the risk of their own lives and private fortunes in new and strange countries, methinks ought rather to expect some preference. * * *

GROWTH OF NEW IDEA

Such enlightened views as these and others expressed by some of the most eminent Englishmen and Americans toward the middle of the eighteenth century have, in the course of ages, become predominant among the English people. Not only great liberal statesmen, but the leaders of the conservative party as well, have become more and more strongly convinced of the necessity of placing the British Empire upon a new basis. The great conservative leader, Disraeli, declared in 1876 that he could not see "how our distant colonies can have their affairs administered except by self-government. But self-government, in my opinion, when it was conceded, ought to have been conceded as part of a great policy of an imperial consolidation." It should, he thought, have been accompanied by an imperial tariff, by guarantees, and by a definition of mutual responsibilities of support in case of war, above all by the creation of a representative council embracing all the empire. That eminent Liberal Prime Minister, Lord John Russell, made a similar proposal in his "Recollections." Lord Rosebery declared that it was a question of tightening the bonds of union, or facing the prospect of losing the colonies altogether. Professor Seely, the historian of imperialism, in his "Expansion of England," pointed out the fundamental analogy with the United States, the success of whose system of State federalism proved that Federal union over vast spaces and territories could be maintained.

Leading Englishmen not only pronounced themselves in favor of reorganizing the British Empire on a modern basis, benefiting by the experience of the United States, which had solved the problem of combining a centralized government of the whole State with full self-government on the part of the member States through the creation of a Federal Union, but they prepared the ground for such a new departure by vigorous spade work. It was obviously impossible to unite

a large number of independent States for common action. Even the ablest statesman cannot negotiate with a crowd. The indispensable preliminary step toward bringing about the unification of the empire and the creation of an imperial authority representative of the whole empire consisted in effecting preliminary unions among the various independent States of Canada, Australia and South Africa, thus forming a small number of important groups of States, each of which would then be able to speak with a single voice and act with a single mind and will.

Owing to the farsightedness and ability of the late Lord Durham and of other men, the separate States of Canada came together and formed in 1867 the Dominion Government, representative of all the individual parts. Owing to the activities of Mr. Joseph Chamberlain and others the Australian States acted in a similar manner and created the Commonwealth Government of Australia in 1900, while in 1909 the States of South Africa created the Union Government. There was friction at first between the States thus united, exactly as there had been friction between the United States of North America in the early days of the Union. However, the differences existing have disappeared in the course of time, and the consolidations effected have become stronger and stronger, and seem likely to last. A most important step toward organizing the States of the British Empire on the model of the United States had been taken.

THE WORLD WAR'S INFLUENCE

There was, however, a great difficulty in the way. Though the statesmen and people of the United Kingdom ardently desired the creation of a great empire union on a democratic basis, and were willing to make considerable sacrifices for that ideal, their feelings were not unreservedly reciprocated by the statesmen and peoples of the dominions and colonies. The parochial

spirit was stronger in the outlying portions of the empire than in the motherland. The inhabitants of the faraway colonies, like the people of the Western States of North America, were completely absorbed in their local problems. Economic questions filled their horizon. They talked and thought wheat, meat, minerals, fish, transport, labor, &c. They had no foreign policy. They had no local history. They did not realize that at any moment they might be carried into the maelstrom of foreign politics and of world politics. Europe seemed as far away as the moon. They felt absolutely secure where they lived. The World War and the rise of Japan suddenly opened their eyes. Events showed the wisdom of the old country in having attached the colonies to herself by silken bonds of affection. Innumerable eminent Germans had stated that the British dominions would secede in time of danger, that they would inevitably follow the precedent set by the United States, that in case of a great European war England could at the utmost throw 150,000 soldiers on the Continent, but that in all probability military intervention would be impossible because England's small army would be needed to suppress risings in all the overseas possessions.

German and other Continental observers had proclaimed so frequently that England was played out that many Englishmen and colonials had come to believe it. To the surprise of all, England and her colonies flew to arms in 1914, and instead of mobilizing 150,000 soldiers the empire mobilized 10,000,000. Little New Zealand alone raised as many troops as, according to the calculations of the German General Staff, the United Kingdom would send to the Continent. The war vastly strengthened the imperial spirit throughout the empire. Men throughout the motherland and the British dominions at last realized the absolute necessity of all the citizens of the empire standing together in the hour of danger.

Besides, all Englishmen began to feel a pride in the old country and the daughter States. Events had clearly shown that motherland and colonies were neither effete nor besotted with selfishness and money-making. Even the most parochially inclined realized the necessity of preparing for united defense and of building against future danger by placing the direction of imperial policy upon a new basis. The great dominions could obviously not be expected to bring great sacrifices in blood and treasure unless they had been given some influence over foreign policy. Otherwise they might have to suffer for mistakes made by the Government in London, in which had hitherto been vested the control of foreign policies. Hence the cry of the colonies, "Call us to your councils" found the readiest response.

Previous to the war the nucleus of an imperial organization had been formed by a number of imperial conferences, the importance of which grew steadily greater, and by the creation of an Imperial General Staff and of an Imperial War Council, these last-mentioned bodies being devoted to the study of imperial defense and to the harmonizing of the defensive forces of the whole empire. Thus a beginning had been made in uniting motherland and daughter States for common action.

FIRST IMPERIAL CABINET

Soon after the outbreak of the war the British War Cabinet was expanded and became an Imperial War Cabinet by the inclusion of eminent representatives from the British overseas lands. The work begun in the middle of the eighteenth century was crowned by the recent Imperial Conference, which not only marks one of the most important events in the history of the Anglo-Saxon peoples, but should prove of far-reaching importance also to the United States of America.

On Aug. 5, the date when the final sitting of the Imperial Conference was held, there was published an of-

ficial report of the proceedings, in which we read the highly significant sentences:

The discussions, which covered the whole area of foreign policy and extended over many days, proved most fruitful in all these respects. They revealed a unanimous opinion as to the main lines to be followed by British policy, and a deep conviction that the whole weight of the empire should be concentrated behind a united understanding and common action in foreign affairs. In this context, very careful consideration was given to the means of circulating information to the dominion Governments and keeping them in continuous touch with the conduct of foreign relations by the British Government. It was unanimously felt that the policy of the British Empire could not be adequately representative of democratic opinion throughout its peoples unless representatives of the dominions and of India were frequently associated with those of the United Kingdom in considering and determining the course to be pursued. All members of the conference expressed a vivid sense of the value of this year's meeting in that respect, and a desire that similar meetings should be held as frequently as possible.

Mr. Hughes, the Prime Minister of Australia, one of the most outspoken men living, stated in an interview on Aug. 21:

It has been a memorable conference, and, on the whole, I am satisfied with the work that has been done. The conference has confirmed the practice set up during the war—indeed, rendered necessary—whereby the policy of the empire was to be decided by the empire as a whole, and not by any one part of it. * * * We have firmly established * * * a great principle which must be regarded as the very foundation stone of this splendid edifice of the British Empire. We are a commonwealth of free nations, each dowered with full powers of self-government, but all united in matters relating to the outside world. We are many, and yet we are one, and this Imperial Conference has crystallized this vital doctrine of empire. As we proceeded to run the gamut of the great questions that were presented for our consideration, each one of us became more and more convinced that our interests, and indeed our safety, depended upon unity, and that this unity in regard to foreign and inter-empire affairs was to be obtained only by a frank recognition of the right of all the members of all the great dominions, as well as the motherland, to have an equal voice in the formulation of foreign and empire policy. The conference which has just terminated its labors differs widely from those Imperial Conferences that were held at inter-

vals of three years before the war. The war, which has changed many things, has given to the dominions a new status, and it was as full partners of the empire that the representatives of the dominions sat around the council table of empire.

Among the numerous resolutions which were passed there is one of outstanding importance, because from it should flow the organization of the British Empire on a federal basis. That most important resolution was worded as follows:

The Prime Ministers of the United Kingdom and the dominions, having carefully considered the recommendation of the Imperial War Conference of 1917 that a special Imperial Conference should be summoned as soon as possible after the war to consider the constitutional relation of the component parts of the empire, have reached the following conclusions:

(a) Continuous consultation, to which the Prime Ministers attach no less importance than the Imperial War Conference of 1917, can only be secured by a substantial improvement in the communication between the component parts of the empire. Having regard to the constitutional developments since 1917, no advantage is to be gained by holding a constitutional conference.

(b) The Prime Ministers of the United Kingdom and the dominions and the representatives of India should aim at meeting annually, or at such longer intervals as may prove feasible.

(c) The existing practice of direct communication between the Prime Ministers of the United Kingdom and the Dominions, as well as the right of the latter to nominate Cabinet Ministers to represent them in consultation with the Prime Minister of the United Kingdom, are maintained.

A PRESENT REALITY

The activities of the Imperial Conference were not solely devoted to the future. The most excellent resolutions with regard to future action may be disregarded in course of time and ultimately be forgotten. The planned empire partnership was wisely made operative at once. The statesmen from overseas, who had been called together to discuss the future organization of the empire, were immediately taken into the confidence of the British Cabinet, and all the great foreign and imperial questions which arose during the presence of the most eminent representatives

from overseas were not discussed and decided by the British Cabinet, as had been the custom in the past; but the overseas statesmen were invited to join the British Cabinet, and decisions of the very greatest moment were made for the first time by a Cabinet representative of the whole empire.

The official report of the Imperial Conference states:

The Prime Ministers of the Dominions and the representatives of India present in London this year were invited to meetings with members of the British Cabinet called to deal with imperial and foreign questions of immediate urgency which arose in the course of the sittings.

Among these urgent foreign and imperial questions were the allocation of Upper Silesia, the question whether the Anglo-Japanese agreement should be renewed, the problem of the future of China, the problem of the policy of the empire toward the United States, and many others. All these questions, of course, hang together. No imperial statesmen can discuss the problems of the Far East without discussing the attitude of the United States. Mr. Lloyd George stated on July 11 in the House of Commons, after discussing the Anglo-Japanese agreement:

The broader discussion of Far Eastern and Pacific policy, to which we then turned, showed a general agreement on the main lines of the course which the Imperial Cabinet desired to pursue. I have already explained that the first principle of our policy was friendly co-operation with the United States. We are all convinced that upon this, more than any single factor, depends the peace and wellbeing of the world. We also desire, as I have stated, to maintain our close friendship and co-operation with Japan.

FUTURE POSSIBILITIES

It will be noticed that Mr. Lloyd George spoke, not in the name of the British Cabinet, but in that of the Imperial Cabinet. During the presence of the most distinguished overseas statesmen the foundation of the Imperial Cabinet was laid, and it was made to function forthwith.

Cabinet government arose in England after the revolution of 1688. It

was modeled on the government of the Venetian oligarchy. A narrow oligarchy of statesmen has endeavored to direct the affairs of the British Empire ever since, although in course of time considerable changes were made whereby Cabinet government was modernized. These changes, however, were trifling compared with the fundamental alteration just effected. The time seems near when the government of the British Empire will no longer be the prerogative of Englishmen, when the British Empire may have an empire Cabinet in the fullest sense of the word, presided over by a Canadian or an Australian, an Afrikaner or a New Zealander. In addition there ought to arise an Imperial House of Representatives or, perhaps, two Houses comparable to those sitting at Washington. Last, but not least, it will be possible to transfer the seat of government of the British Empire from London to some town overseas. The time may come when Canada or Australia will be found more important than the United Kingdom as regards number of inhabitants, power and wealth. An Imperial Cabinet might conceivably determine to make Montreal or Ottawa, Sydney or Melbourne, the empire capital. Thus it will be possible to avoid friction and to rejuvenate the ancient fabric. Exactly as the Phoenicians transferred their capital to Carthage and as the Romans abandoned Rome for Constantinople, the increasing importance of overseas States may place Canada or Australia at the head of the British Empire. Great visions are open to colonial statesmen who hitherto were immersed in narrow local politics, and the glamour of the empire should vastly increase their affection for it.

The reorganization of the empire will, of course, be of the greatest benefit from the economic point of view. The development of the British overseas States has lagged behind largely because the energies of the empire States were frittered away. A firm imperial union should lead to the rap-

id development of the imperial resources. The empire lacks railways. Although its territory is more than four times as large as that of the United States, it has only about half as large a railway mileage. A great impetus to imperial development will doubtless ensue.

Men habitually speak of the ancient empire created by Great Britain. In reality it dates only from yesterday. Up to the Revolution of the American Colonies, the only important possessions of England were those which threw off their allegiance. Since their secession Great Britain has created a new empire. At the beginning of the last century Canada had only 240,000 inhabitants, and Australia was a desert which contained 6,500 whites. Since then England has acquired an empire inhabited by nearly 20,000,000 white people. During the coming century the British overseas dominions may become great powers in the fullest sense of the word. A British federal union may arise which will not be inferior to the United States in power, wealth and promise.

The coming development of the British Empire upon those lines which have proved so successful in the United States should be of interest and of advantage to all English-speaking nations and to the world. Peace is the greatest asset of all the nations which have sprung from the narrow islands in the North Sea. The strongest guarantee of a world peace would lie in the cordial co-operation of the British Empire and the United States. The dominions are more democratic than England. The form of government of the British Empire promises to resemble closely that of the United States. The two great federal creations and the two great English-speaking nations seem bound to draw together. Their co-operation is the hope of the world. Each of the two can learn much from the other. England and the British Empire have opened a new chapter in their own history and in the history of the world.

CANADA AS A NATION

BY J. VERNON MCKENZIE
Editor of Maclean's Magazine, Toronto

The Dominion's national status at the Arms Conference—Need of a permanent Canadian Ambassador at Washington, and the explanation of delay in appointing such a plenipotentiary

THE fact that at the Washington disarmament conference Canada is represented, not directly, but through a Canadian member of the British delegation, gives food for thought. As a Pacific power, with more than a thousand miles of seaboard and three important Pacific ports, Canada had a powerful claim to independent representation. In a recent article, Grattan O'Leary, an unusually well-informed correspondent, who accompanied the present Premier, Mr. Meighen, to London, pointed out an even stronger claim. "In any important conflict in that part of the world," he said, "Canada would be a probable theatre of war." The same writer, still more recently, has revealed some secret history which shows that the idea of a Pacific Conference originated with the leader of the Canadian Government at the Imperial Conference. Before he had been many hours in London, Premier Meighen came out strongly in opposition to a renewal of the Anglo-Japanese treaty. How he got the support of General Smuts and ultimately of Lloyd George and the majority of the Imperial Conference is now a matter of history. He won his point, but his suggestion that a Pacific Conference be held by Great Britain, Japan and the United States to clear up Pacific problems was rejected by Great Britain on the ground that such a conference would not meet with the approval of Australia. This decision, it should be pointed out, was made without consulting Australia, which was believed to be strongly in favor of the renewal of the alliance.

Canada's right to be heard in the Washington conference has been acknowledged by the appointment of Sir Robert Borden, the Canadian ex-Premier, as a member of the British delegation. Canada, however, received no official invitation to attend the conference as an independent nation. This fact has a direct bearing upon the whole question of Canada's status as a nation. There was a strong feeling in Canada that the Dominion should have separate representation at the conference, and also a feeling that it was Premier Meighen's own fault that no direct invitation from President Harding was received at Ottawa. It was felt that if Canada had had her own plenipotentiary at Washington, representing her as a distinct nation, the result would have been quite different.

An effort to have a Canadian Ambassador sent to Washington was begun about three years ago, but no action has yet been taken, though the Ottawa Government has declared at intervals that an appointment would be made. Premier Meighen has stated unofficially, since his return from London, that the Dominion will before long be represented at the United States capital. Why has the appointment been so long delayed?

This is a difficult question to answer definitely. In the first place, it is generally understood that the appointment was offered to Sir Robert Borden and to the Hon. Newton W. Rowell, but rejected by both. The scope of the position was not definitely described until this question was taken up by Mr. Meighen recently with the authorities in Downing

Street. When the appointment was first announced it was stated that the Canadian plenipotentiary would be accommodated at the British Embassy, and that he would be a "second in command," who would act as British Ambassador in the latter's absence. Premier Meighen has received assurance that no other dominion will regard direct Canadian diplomatic representation at Washington as any slight upon itself.

If the right man could be got for the position, Premier Meighen would almost certainly make an early appointment to the post. Viscount Bryce, who was British Ambassador at Washington from 1907 to 1913, has been quoted to the effect that 90 per cent. of the business transacted at the Washington Embassy appertained to Canada. This emphasizes Canada's dominant importance, and not only indicates why opposition to the appointment was withdrawn by representatives of the other dominions, but also proves the importance of securing the very best talent in Canada for the post. The man who takes this position must not only be a diplomat—in the broadest sense of the word—but he must have a definite grasp of commercial problems. Perhaps if the position were now offered to Mr. Rowell or Sir Robert Borden, one or the other might accept; it is indisputably true that there are literally scores of men who feel themselves qualified for the job, and from whom ready acceptances could be obtained.

One thing is clear—the relations between Canada and the United States are becoming closer and closer. Ten years are a comparatively short time in the history of a nation, but certain changes have taken place in this decade which would make impossible today the success of any such slogan as "No truck or trade with the Yankees," which was current in 1911 when the Reciprocity Treaty was rejected by Canada. Canadians have recognized that there must be "truck and trade" with the Yankees; the import figures

each month for several years have driven this home. The fact that the Canadian dollar is worth only 85 or 90 cents in New York has further emphasized this. Closer commercial relations, despite tariff bars, appear inevitable.

One of the ties which bound Canada to Great Britain in pre-war years was a financial bond: hundreds of millions of pounds were borrowed by Canada to aid in the upbuilding of Canadian industries. The Dominion's borrowings in London have dwindled to petty dribbles, and the money needed is now being obtained in New York.

These are potent commercial and financial reasons for a closer relationship between Canada and the United States, but politically and sentimentally there does not appear to be any cleavage with Great Britain developing. Nor does there appear to be public opinion of importance looking toward separate nationality. It is true that there are certain elements which have been preaching for years even more radical doctrines than those enunciated by Mr. Meighen in London. There was for two years in existence a paper called *The Canadian Nation*, which advocated a more complete national entity for Canada. This paper, ably edited and backed by John S. Ewart, K. C., attained a circulation of about 2,000. It suspended publication a few months ago.

There are influential newspapers in Canada today which advocate more complete Canadian autonomy—such dailies as *The Manitoba Free Press* and *The Toronto Star*. But even the editors of these papers, and citizens who think along their lines, are very definitely autonomists—not separatists. It would be difficult to find in Canada any potential public opinion of importance seeking a separate nationality.

The attitude of French-speaking Canada toward the British Empire can be expressed very briefly. The French Canadians say in effect: "We have no desire for a change. We are satisfied with our treatment under the

British flag. Our language and our civil and religious rights are adequately safeguarded under existing conditions. Any change might make us worse off; it is not readily conceivable that we would be any better off."

Since the passing of Goldwin Smith, nearly ten years ago there has been no voiced plea for annexation. Goldwin Smith and certain other Canadians of a past generation believed that the lines of communication must inevitably run north and south on this continent, and made the deduction that Canada's logical destiny was as an integral part of the United States. While traveling throughout certain portions of Western Canada, where the influx of American settlers (chiefly agricultural) has been very heavy during the past ten or fifteen years, one may occasionally hear a discussion as to the value to Canada—and to the United States—of annexation, but such discussions do not usually go very far. During the last twelve months the writer has traveled between 15,000 and 20,000 miles in Canada, visiting such far-separated cities as Halifax and Prince Rupert, and not once has the question of annexation cropped up.

Just exactly what the extent of Canada's participation in empire councils should be it would be difficult to ascertain by consulting an average Canadian. Many would undoubtedly reply that things are going along quite well now; why worry? The question of Imperial Federation had arisen before the war, but the war dragged forth into a glaring light the question of future imperial relationship. In a letter to the writer, in 1919, Viscount Bryce discussed this point as follows:

It seems to me that the position of Canada and the other great dominions will

be worked out more clearly in practice than can now be laid down by any theory. The British Empire, or British Union of Commonwealths, whichever we may call it, has been worked out in practice, like so many institutions of our race, and if it had been attempted to prescribe future developments by means of formulas, we should not have had the results which have been so happily attained hitherto.

The value of an imperial council seems to reside in the fact that it would not interfere in any way with Canadian self-government, but would provide ample opportunities for an exchange of views between the Government of the mother country and its public opinion, and the Government and public opinion of the dominions, so that each would understand one another more perfectly than they do now, and that it should be made more certain that their joint action should represent the common will and purpose of both.

We in Britain ought to know all that the dominions feel about foreign policy, and the representatives of the dominions ought to have the fullest opportunity for expressing their views. Similarly, the British members would communicate our ideas to the Governments of the dominions and their peoples, so that the action to be ultimately taken should, so far as possible, represent that which is common to both.

Canada is content—and very content—to remain as an integral part of the British Empire, a dominion on a status of equality with the mother country and the other dominions. Thus she will fulfill her destiny—a destiny which Sir Auckland Geddes described as that of an interpreter between the two great Anglo-Saxon nations. Again using the words of the British Ambassador at Washington, Canada's task is to build the bridge of understanding between England and the United States. Canadians are divided upon many topics, but on this they think, speak and act practically as one; Canada desires to remain a British dominion. What this means Canadians do not ponder very deeply; the fact itself is sufficient.

CANADA'S ORIENTAL PROBLEM

BY JOHN NELSON

Former Managing Editor and part owner of The Vancouver World

How the Chinese and Japanese have swarmed into British Columbia and forced out the Canadians—Percentage of Orientals five times as great in Canada as in the United States

THE United States, according to census figures given out at Washington Sept. 26, 1921, had a population of approximately 105,000,000, which included 171,649 Chinese and Japanese. Canada, with a population which the recent census is expected to show at not more than 8,500,000, has a Chinese and Japanese population estimated at 65,000—about 40,000 Chinese and approximately 25,000 Japanese.

The United States (particularly that portion of it which is known as California and Washington) has for some time considered that it has an Oriental problem on its hands. Yet, in proportion to the population, the Dominion of Canada has nearly five times as many Orientals as has her great neighbor to the south.

Of the Orientals resident in Canada, British Columbia has probably 90 per cent. of the Chinese and Japanese, and practically 100 per cent. of the Hindus—or about 63,000 in all. As the present census may give British Columbia in the neighborhood of 500,000 people, this means that one-eighth of the population of Canada's Pacific province is already Oriental—and growing! That in itself is serious, whether this population remains a quiescent entity, abstaining from all claim to political or civil rights, or whether it bestirs itself actively to obtain these rights. California became hysterical in 1919 when it found every thirteenth child of its population to be a Japanese.

Historically the development of

Oriental immigration to Canada differs sharply from the trek of Europeans to this dominion. The Government frankly sought and paid for Slav and Swede and Mennonite. From 1901 to 1905 Canada spent \$1,445,000 on United Kingdom immigrants. On the contrary, a head tax of \$50 was imposed on Chinese in 1885. This was increased to \$100 in 1901 and to \$500 in 1904. In the period from 1886 to 1919, inclusive, Canada derived from this tax the enormous sum of \$20,537,961. The year before last more than \$2,000,000 was taken, and last year \$500,000.

Despite this head tax, the influx of Chinese into Canada during the last twenty years has far exceeded that of the other two Oriental elements, Japanese and Hindus. From 1900 to 1907 it ceased temporarily, but it began anew and reached its peak between 1910 and 1914, when more than 30,000 Chinese came to Canada. The war again interrupted it, but from 1918 to 1919 about 4,300 entered. The total for the twenty years mentioned was 37,913. This total, however, is much larger than it seems, for many of these belonged to the exempt class—merchants and their wives and children, consular agents and their families and staffs, teachers and men of science. Many also were Chinese returning from visits to China under what are known departmentally as C-19 registrations. None the less, as I shall show, the Chinese problem in Canada is serious.

Of the other races involved the

Hinduelement is negligible; it is about 5,000, and is hardly likely to increase in the near future, in view of transportation difficulties and of Section 38 of the Canadian Immigration Act, which provides that such immigrants must come by continuous passage on through tickets purchased in the home land.

The problem with regard to the Japanese is second in seriousness only to that presented by the Chinese. Contrary to general belief, Canada's immigration relations with Japan are conditioned not by the Anglo-Japanese Treaty, but by the Treaty of Commerce and Navigation between Great Britain and Japan signed in London on April 3, 1911. This treaty provides for reciprocal rights of travel, residence, the carrying on of business between the two countries, the owning or leasing of property, exemption from military service, &c. It has been modified only in so far as the voluntary undertaking of Japan to the Hon. Mr. Lemieux to restrict Japanese immigration into Canada to 300 yearly constitutes a limitation to its provisions. Nevertheless, the number of Japanese in Canada today is considerable, and they are only inferior to the Chinese in the acquisition of land and in their growing competition in fruit producing and other lines.

Go down the Okanagan Valley, fairest of all Canadian vales, in blossom and harvest time. It is still a land of lovely homes, of people of station, of culture and means; above all, of those qualities of loyalty most difficult for any nation to secure in settlers and yet indispensable to any nation's permanency. From one end to the other of Okanagan Lake, a distance of eighty miles, there are perhaps 20,000 souls. Of that number 3,300 went to the war without hesitation and without counting the cost. Whole hamlets were deserted. While they were away a danger which had long menaced became acute. Labor was lacking, crops had to be harvested. In many instances payments had to be met; in others the strain

proved too heavy and lands had to be sold.

The ready cash buyer and the available hired hand were almost invariably the Chinaman and the Japanese. Today the situation is painfully acute. In towns like Kelowna it is of first concern. Public sentiment is alert and vigilant, but gold talks. The ability of Orientals to secure money shows that many of their colony not only have ample means, but are willing to lend it to their countrymen (doubtless with ample security).

Across the lake at Summerland there is a considerable colony of Asiatics, headed by such prominent Japanese as George Tada and Frank Agno, who now own considerable fruit acres. In the Mission-Hatzic district and other valley communities a comparison of the land holdings in the last five years shows how rapidly the process of penetration is going on. In 1915 there were 115 small fruit growers in this district, of whom 10 were Japanese. In 1920 the total had grown to 250, and 55 were Japanese. The change is even more marked in the Pitt Meadows-Haney district. The Japanese in 1915, out of 42 growers, numbered only 16; in 1920, out of a total of 248, they numbered 120. On that basis, with a very high birth rate and the expulsive effect of Japanese influx on white settlement, the small fruit industry in the Lower Frazer Valley must soon pass into alien hands.

In British Columbia there is a whole fishing community—Steveston—which is controlled by the Japanese. The children in the schools are Japanese and the instruction Japanese. The white fishing population has been forced out, and the whole salmon fishing industry on the Frazer River, once the most famous of all salmon streams, within a quarter of a century has passed completely into Japanese hands. The clumsy, inefficient yellow men who came twenty-five years ago learned how to handle the boats, taught their wives, and later became naturalized when Canadian labor stormed and protested

against fishing licenses for the Orientals; little by little the Indians and whites alike were driven out by race pressure, and this fishing town of 20,000 souls is now thoroughly Orientalized. Of a total of 1,376 Canadian gill-net licenses, including those for the Skeena, the Naas and Vancouver Island, the Japanese now receive 873, Canadians only 133, and English and Scotch 37 and 28 respectively. Canada cannot regard this situation with equanimity. The economic folly of allowing an industry worth \$25,000,000 annually to fall into non-Canadian, especially Asiatic, hands need not be emphasized.

But, as has already been stated, the Chinese problem is the more serious. Immediately about Vancouver the Chinese have acquired under ownership about 1,000 acres, every foot of which is devoted to intensive truck gardening. More than 3,600 acres are held under lease, for which the Orientals pay only \$40 per acre annually. On Vancouver Island, in the vicinity of Victoria, the Chinese own about 700 acres and lease more than 800. The Japanese in the same district lease about 100 acres and own practically none. At Enderby and Armstrong, where the finest celery in Canada is grown, the Chinese own 2,500 acres and lease 763. The Japanese lease sixty acres in this valley. In the Okanagan the

Chinese own about 100 acres and lease about 1,230. The Japanese hold about 250 acres freehold and 600 leasehold. The largest holdings in the interior by Chinese are at Ashcroft, where title to 2,500 acres has passed to them and where they operate another 2,000. Ashcroft is almost another Steveston.

The whole land situation in British Columbia spells danger. Hon. E. D. Barrow, the Provincial Minister of Agriculture, stated recently that 90 per cent. of the Vancouver produce came from Chinese. Only two greenhouses in Victoria remain outside of Mongolian control. A recent survey made by the Department of Agriculture for the province shows that there are 1,080 Asiatics controlling 26,918 acres. This includes 367 orchard lands, 2,341 fruit lands, 10,659 truck farms, 515 dairy farms, 3,677 acres for mixed farming. Japanese logging camps are also multiplying. Legislative action, drastic and thorough, has protected the metalliferous mining of the province from the penetration which is proceeding in the case of agriculture, fishing and lumber.

The Oriental problem is as serious and menacing for Canada as for any other nation represented in the present Pacific conference at Washington.

FIRST GERMAN LINER IN SEVEN YEARS

THE new German steamship Bayern arrived at New York from Hamburg on Oct. 2, 1921. It was the first German passenger vessel to enter an American port since August, 1914. It brought nine cabin and 594 steerage passengers, of whom 175 were American citizens. The ship was met at Quarantine by a Reception Committee designated by Mayor Hylan; the commit-

tee went out in a steamer gayly decked with flags and having on board a German society band, which played popular tunes. From Quarantine to the pier of landing the Bayern made a triumphant progress. Thus was international communication between Germany and the United States resumed under the separate peace treaty recently signed at Berlin.

INDIA'S MOVEMENT AGAINST BRITISH RULE

BY V. B. METTA*

The Indian side of the non-co-operation movement and its causes—Grievances that have led many of the people to support Mr. Gandhi's boycott—Why the Moslems have joined the Hindus in hostile demonstrations against everything British in India

The message of Non-Co-operation is self-purification, self-sacrifice, courage and hope.—M. K. Gandhi.

THE political situation in India is of absorbing interest, because the popular movement against British government, known as the Non-Co-operation Movement, is headed by Mr. Gandhi, a strange mixture of a saint, a statesman and a radical reformer. He is as clear-sighted and practical in some matters as any other leader of men in any other country on the face of the earth, and as tragically though charmingly unpractical as Ruskin and Tolstoy were in some other matters. He is more loved in India than any other political leader has ever been since the British Government was established there. Older Indian politicians like Sir P. M. Mehta and Mr. Gokhale were semi-aliens in their own country, because they spoke always in English, and therefore they addressed only those Indians who had received an English education. Their ideals and aspirations, their mode of dressing and living were considerably influenced by those of the West, and therefore they made hardly any appeal to the majority of their countrymen. But Mr. Gandhi dresses like the humblest of them, addresses them in Hindi, and preaches and practices those ideals which have been in their life-blood for thousands of years, and which, therefore, they instinctively comprehend and admire. He talks to them not about Mill and Macaulay, but of the moral, spiritual and po-

litical ideals which are expressed in the Vedas, the Epics, and early Indian history. And they feel that he is their real spokesman, because, like a true Indian, he puts character and conduct above mere knowledge.

It would not be correct to say that Mr. Gandhi hates Britishers as Britishers. He hates them for the kind of government which they have established in India, a government which unduly favors British interests and does not take sufficient notice of Indian interests, protests and aspirations. From the days when the East India Company was firmly established, until about forty years ago, the British Government went on suppressing or destroying Indian industries and commerce for the sake of promoting British industries and commerce in the country. There were indignant protests now and then against this heartless policy from some of the ablest and noblest Britishers themselves, but they were not heeded, because self-interest with most human individuals as well as groups of men shapes their actions more than moral principles do. Then Indians like Dr. Naoroji, Mr. Dutt and Mr. Ranade wrote and showed clearly in their works how unfair, how un-British, such a policy was

*Mr. Metta is a native of India who received his education in England at Cambridge University, becoming a barrister. In his home country, the Bombay Presidency, he is widely known as a writer on problems of the day, and on Oriental history, art and literature. He is the author of two books, "National Education" and "Wake Up, Princes!" Mr. Metta is now visiting the United States.—EDITOR.

toward India. They were instrumental in sowing the seeds of the Swadeshi movement—the movement in favor of buying home-made goods and boycotting foreign goods—which was born in 1906, and which spread like wildfire all over the country before the end of 1908. The Morley-Minto reforms then followed, but Indians soon found out that they were substantially no better off under them than before. After that followed the Montagu-Chelmsford reforms of two years ago, which, though considerably more liberal than the older scheme of a decade ago, have disappointed many Indians, because they do not enable them yet to regulate the financial policy of their country, legislate for themselves, and make British officials in India responsible to the Indian public.

CAUSES OF HOSTILE SPIRIT

What are the remote as well as the immediate causes and grievances of Indians underlying this Non-Cooperation Movement? First of all, there is the great, great wrong of Amritsar of 1919 to be righted. There was no reason for Sir Michael O'Dwyer, the Governor of the Punjab, to suspect that any large conspiracy was organized to upset the British *raj* in India then. It was simply a little local trouble. And even if the use of force was considered to be necessary at the time, there was no reason why General Dyer, after putting down the rising, should have given "crawling" and such other orders to the "offenders" as would degrade any self-respecting human beings in any part of the world. And yet Sir Michael, the instigator of the massacre, has got off without any punishment, while Dyer, the man of blood, is taught by the British House of Lords and a newspaper like *The Morning Post* to regard himself as a hero and savior of his countrymen in India. This naturally hurts the pride of all Indians, and therefore Mr. Gandhi and his followers insist that both men be adequately punished.

Then there is the Khalifate agitation. While the war was going on and the British Government wanted Indian soldiers (many of whom are Mohammedans) to fight for England against their co-religionists, the Turks in Mesopotamia and Palestine, it promised Indians that the Turkish Empire would not be dismembered by the Allies at the end of the war. But that promise has unfortunately not been kept, since Great Britain has practically taken possession of Palestine and Mesopotamia, while France has seized Syria.

How does the dismemberment of Turkey affect Indian Mohammedans?—the readers of this impartial periodical might ask. Well, it is this way: The Turkish Sultan has a double rôle to play. He is at once the temporal head of all those people who live within his empire and the spiritual head (called Khalifa) of all Sunni Mohammedans in the world,

V. B. METTA

Hindu lawyer and journalist, who is now visiting the United States

whether Turkish, Egyptian, Syrian, Arab, or Indian. The first Turkish Sultan to assume the title of Khalifa

Turkish Sultan be regarded as Khalifa any longer?

This is what the Mohammedans of India are asking, and this is why they are agitating to have Mesopotamia and Arabia restored to Turkey. They are willing to agree that in the government of these two countries the Turkish Sultan might take the advice of able and high-souled Europeans and Americans on certain occasions, but they insist that he should remain thoroughly independent of them as before. The Hindus have joined their Mohammedan compatriots in this agitation, because they feel sorry for the dismemberment of Turkey; though they are not Mohammedans, they feel as other Asiatic peoples, such as the Japanese or Chinese, do. It is not their religious but their continental pride that is hurt by the Treaty of Sevres as it stands today.

M. K. GANDHI

Leader of the movement in India to boycott everything British, and to abolish all machinery. The Gandhi cap, which he and his followers wear, is made of hand-woven cloth

FINANCIAL ABUSES

Without being able to control the financial policy of their country a people cannot become au-

tonomous in any way. They remain slaves of the power that has it. British colonies, such as Canada, Australia and South Africa, have got the right to decide how their money is to be spent, to what extent, and why; but India has no such right. She tried all she could to get it before the Montagu-Chelmsford reforms were formulated, but she did not succeed. She is poor, and therefore she cannot afford to go on paying money for Great Britain's military adventures and exploits in countries which are situated beyond her borders. Had the Indian Army

(Caliph) was Selim I. in the sixteenth century, and since then all his successors have remained and acted as Khalifas. And among the necessary qualifications to be the Khalifa of Islam are: (1) That he should be absolute and undisputed lord of Arabia and of a greater part of Mesopotamia also; (2) that he should be the protector of the two holy cities of Mecca and Medina. If the British take Mesopotamia and set up a protege of theirs (that is how Indian Mohammedans regard King Feisal) on its throne, and make Arabia independent, how can the

been maintained for defending only India, the British Government would have been justified in asking Indians to pay for its maintenance. But it has been sent to fight in Egypt, South Africa, China, and other countries for helping "the cause of the empire," as British statesmen put it; and yet, India alone has always had to pay for all those wars! This is hardly fair to her. Why should Great Britain not pay at least a portion of the annual expenditure for its upkeep, especially if she means to employ it for wars outside of India? There are large bodies of Indian troops in Persia and Mesopotamia still.

Then, again, there is a huge annual drain on the slender resources of the country in the shape of pensions, "on leave" salaries, &c., which are paid to British officials, all of whom, it may be mentioned, are paid much higher salaries than those that are paid to the majority of Indians. A few good posts in the Government of India, which are now offered to Indians, do not make any material difference to India from the economic point of view. What she wants is full financial autonomy, which means the power to spend her money for her own pressing needs first.

FAULTS OF SCHOOL SYSTEM

The Educational Department is another which Indians want to control. The school system of the country was established some eighty years ago by Lord Macaulay, who knew nothing of the temperament and traditions of its people. The result has been disastrous in the extreme. Men turned out by Government schools and colleges in India are pseudo-Englishmen rather than good Indians. They do not learn their own languages properly. Instead, they fritter away their energies in trying to master an alien tongue. They learn more of Shakespeare and Tennyson than of Kalidas and Kabir, their national poets. They are not taught to look at their own history with the eyes of their own temperament, so to say, but with the eyes of the temperament of

Britishers, who naturally do not feel much disposed to admire it. In spite of all that may be said on the other side, history is an art, and is therefore mostly subjective. It is not facts that make us look at our own past or that of any other people with favor or disfavor, but the way in which those facts are handled or arranged by historians. Therefore no people can feel proud of themselves and achieve anything great, so long as they read their own history through other people's glasses—as Indians are made to do at present. The present educational system in India not only destroys the sense of patriotism and self-respect, but initiative, independent thinking and originality in Indian students. It is for these reasons that Mr. Gandhi is opposed to it heart and soul. The national schools and colleges which he has established all over the country recently are by no means ideal institutions, their curricula are very defective from the point of view of intellectual breadth, but they are at least trying to make the Indian student throw off his "slave psychology" and become more patriotic in his outlook on life.

A country cannot ever become happy or contented if it cannot make its own laws. And India is one of those unfortunate countries. During the war Indians were praised and promised many good things for their loyalty to England. They were told again and again that but for their help in France and Flanders, Mesopotamia, Palestine, Egypt and East Africa, Great Britain could not do what had to be done. But immediately the war was over, the Press act was more strictly enforced and the Rowlatt act was passed. Indian editors still cannot write what they consider to be truth in the interests of their own country. Is it not strange that a paper like *The Bombay Chronicle*, edited by broad-minded Britishers like Mr. Horniman and Mr. Pickthall, should still be on the blacklist of the Government of Bombay? And how many editors of other papers in India have been recently prosecuted

by the Government of India, for reasons which in England or the United States would be considered trivial! It cannot be denied that there were some small groups of people in India who conspired during the war against the British Government, but that certainly does not mean that the majority of Indians were or are disloyal to the British Crown. Therefore the passing of the Rowlatt act, which enables the Government to act high-handedly whenever it likes, raised a storm of protest all over the country—from Moderates, from Extremists and from some Britishers also. If India had the power of legislating for herself, or even of preventing the passing of obnoxious and unfair laws, it is certain that these acts would never have been passed.

MR. GANDHI'S IDEALS

Mr. Gandhi is an idealist of the ascetic rather than of the socio-economic type, and therefore he turns his eyes backward with a great soul-hunger. The past shines goldenly for him. Such a man cannot always understand or handle the economic problems of his country with common sense. He is totally opposed to the industrial type of civilization which dominates the world today. He wants his countrymen to have nothing to do with modern machinery, which he believes has been instrumental in making the lives of its operators unspeakably miserable. "Let us have handwoven cloth and agricultural life as in the old days," he says to his followers. It is a noble ideal, but thoroughly impracticable in these days. Nations are not self-sufficient and isolated from each other to the same extent now as they were in the sixteenth century, or even at the beginning of the last century. Steam, electricity and the telegraph have brought them closer to each other than ever before in history. The last war and its results have shown how dependent they all are upon each other. How, then, can India return to wholly agricultural life, when the rest of the world is developing along

industrial lines? And it would be suicidal if she did succeed in doing so, for other countries would sell her the goods that she needs, such as iron, steel, glass, oils, at much cheaper rates than she can ever hope for if she produces them by manual work and primitive machinery.

It is, of course, a good thing for the economic welfare of the peoples that Mr. Gandhi has started the hand-weaving industry on a large scale there. If India succeeds in producing all the cloth that she requires, she will be saving some \$200,000,000 annually that she has to pay to England for imported textiles. But cloth is not the only article that she needs. Without modern machinery, how can she produce iron, steel, chemicals and dyes in quantities large enough for her present-day requirements? Modern industrialism really reached India only at the beginning of this century, and if Mr. Gandhi strikes at its root at this stage, it will be a great misfortune for the country.

IF THE BRITISH WITHDREW

There are many people, both friendly and unfriendly toward India, who have asked me what I think would happen to the country if the Britishers were to withdraw from it just now? It is, I confess, a question very difficult to answer. On the one hand, you can be very pessimistic and foresee nothing but internecine warfare or conquest by some other power, either Russia or Japan, neither of which would treat India with even as much liberalism as England has done. On the other hand, you can be optimistic and say that the state of continuous warfare which existed in India in the eighteenth century need not necessarily come back to her now. The times have changed, and with them the minds of Indians as of other peoples in the world. The past is often a great foe of the future of a country, because the enemies of that country always prophesy the return of the dark side of its past. It is a fact that Indians are more patriotic now than they ever were before in their history,

and so they would present a united front to a foreign invader. As for civil warfare, it is not probable in these times; and even if little wars were being waged in the country, it would not prevent the growth of civilization in India—of its art, its literature, its philosophy and its science—as the past fully proves. Indian society is based upon castes; therefore, in spite of wars going on in the country, more than half its inhabitants, who do not belong to the fighting castes, would go on dreaming, writing, observing, manufacturing, and selling as usual. For that reason India was not disorganized by any of her old wars half as much

as Europe has been by the last war. To come back from future conjectures to present facts, Mr. Gandhi, as I have stated, is not fighting England, but only England's present policy in India. He has no desire whatever to sever political connection with England. The following words, which he himself wrote in *Young India* on Feb. 16 of this year, testify to this fact: "Nobody, so far as I am aware, wants to end British connection for the sake of ending it." He also does not disregard British interests in India, for in the same newspaper he wrote: "European interests in India will be as safe in a self-governing India as they are today."

THE TINY KINGDOM OF LIECHTENSTEIN

THE miniature nation that lives in the "sweet valley" of the Alps, between Austria and Switzerland, has survived the war, and is now preparing for a new democratic régime under Prince John II. of Liechtenstein, its reigning monarch, scion of the noble family from which the little principality takes its name. Prince John, who ascended the throne in 1858, and who on Oct. 5, 1921, celebrated his eighty-fifth birthday, is the dean of all reigning sovereigns today. Blushing unseen, the world forgetting, by the world forgot, the tiny kingdom for many generations has remained to the outside nations little more than a name. It covers sixty-five square miles of territory, and has a population of 10,716. After Monaco and San Marino, it is the smallest State in the world.

Its history as an independent principality dates back to 1434, when two small principalities, Schellenberg and Vaduz (the latter known as the "sweet valley"), were united under the Counts of Werdenberg. It was sold by them to the Counts of Sulz in 1508, and passed from them by marriage to the Counts of Hohenem in 1613. It was bought by Prince Hans Adam of Liechtenstein in 1699 and 1712 and the Liechtenstein dynasty was by him inaugurated. The Liechtensteins favored Austria in the Austro-Prussian War of 1866, which

ended the German Bund. Forgotten by Bismarck at the Peace of Prague, Liechtenstein became an independent State, and since 1868 has not even had the ridiculously small army of scarcely 100 men which had valiantly marched to defend Austria against her enemies.

In the World War of 1914 Liechtenstein took no sides, and, like Switzerland, its neighbor, insisted on maintaining neutrality. Its sympathy for the Allies, however, was seen in its refusal to grant Austria her demand for the extradition of Austrian army deserters and allied prisoners who had escaped from Austrian territory, and in its allowing these refugees to depart to Switzerland. The insertion of Article 27 of the Versailles Treaty, recognizing it as a sovereign State, was its reward. The League of Nations, however, has so far refused it admission. Since the war Liechtenstein has drawn even further away from Austria and closer to Switzerland, whose currency and postal telegraph and telephone administration it has accepted, and with which it is now negotiating a commercial treaty. It still issues its own stamps, and preserves at least the boast of independence. It has refused to become a second Monte Carlo, and its new Constitution, approved by Prince John last August, is a model of democratic ideals.

SLESVIG'S REUNION WITH DENMARK

BY MARIUS HANSOME

Story of the loyal Danes who were torn from their mother country and annexed to Prussia in 1866, and whose hope of repatriation, cherished through more than half a century, was fulfilled by the Treaty of Versailles and the plebiscite of last year

ONE of the important results of the World War was the reunion of the northern zone of Slesvig with Denmark. Originally a Danish duchy, North Slesvig was torn from Denmark by the Prussians after the unjustified war of 1864, and became the victim of a rigid system of Prussianization. The Danes of the conquered territory, however, clung obstinately to their language, their religion, their culture and their traditions, hoping that the time would come when the Treaty of Prague, which marked the end of the war between Prussia and Austria in 1866, would be fully carried out in so far as the clause providing for the self-determination of Northern Slesvig was concerned. That time did not come until 1918, when Germany, battered and broken, was already looking to America to aid in bringing about peace. The Danish nationalists at once grew active in the German Reichstag, demanding the long-deferred plebiscite and sending Denmark's ablest annexationist leaders to the Paris Conference to plead Slesvig's cause. Many long months dragged by. The completed Treaty of Versailles, however, contained the provision for a plebiscite in Slesvig. This plebiscite was held in the Spring of 1920. The Northern zone went Danish; the Southern zone, largely populated by Germans, voted to remain with Germany. So the old sore was healed, and the Danes of Slesvig, wildly rejoicing, were reunited with the mother country.

The story of how Danish Slesvig obtained its liberty is one which proves beyond controversy the historical axiom that a liberty-loving people cannot be crushed by a political system of repression, even though that system be applied by a great and powerful nation of alien race.

Through half a century of German rule North Slesvig kept alive the Danish mother tongue, Danish ideals, and an unshakable belief that "some day" it would know the joy of reunion with Denmark. The hope of the expatriated Danes was based at first upon the Prusso-Austrian Peace Treaty of 1866, which promised them a plebiscite. The French Emperor, Napoleon III., had inserted into that Treaty Paragraph V., which read:

His Majesty the Emperor of Austria transfers to His Majesty the King of Prussia all the rights acquired by him in the peace of Vienna, Oct. 30, 1864, to the duchies of Slesvig and Holstein, with the reservation that the inhabitants of the northern district of Slesvig shall be reunited to Denmark if, by a free plebiscite, they express the wish therefor.

This provision remained to the Slesvig Danes the lone star of hope to which their collective gaze was upturned. It voiced the principle of self-determination. The Danes will always associate the first enunciation of that principle with Napoleon III. Strange as it may seem, Mr. Wilson, who gave popularity to the phrase "self-determination" on this side of the Atlantic, forgot to mention its application to North Slesvig among his famous Fourteen Points.

From the early fifteenth century Slesvig and Holstein were duchies, politically governed by a single ruler, a Duke, the King of Denmark. There was no change down to the civil war of 1848, as a result of which the Eider River defined the southern limit of Danish influence. Then followed the war with Germany in 1864. Denmark lost all of North Slesvig. The inhabitants were torn by violence from their mother country, from their own people, to whom they were bound in language, customs and memories of more than a thousand years of honorable history.

The Prussianization policy began in earnest with the Peace of Vienna in 1864. Paragraph XIX. gave the Danes the option of becoming permanently either Prussian or Danish within six years. If they chose to remain Danish, then they would be treated as Danish immigrants settled in Prussia, but not naturalized.

In the meantime Prussia and Austria went to war over the spoils, and Prussia was victorious. When the Treaty of Prague was formulated in 1866, and when, at the suggestion of Napoleon III., the paragraph was inserted providing for the retrocession of North Slesvig to Denmark, the idea was generally regarded as visionary. The South Jutlanders, however, clung to the illusion through all the years, and their faith was rewarded when the Treaty of Versailles restored the amputated province to Denmark.

Drunk with power through the acquisition of Alsace-Lorraine in 1871, Imperial Germany began those forty years of war preparations which were destined to end in disaster. Little did she dream that the ruthless treatment of her subject peoples on the western, northern and eastern frontiers would mean her eventual undoing. Without consulting any one but Austria, she decided to rescind the promise in Paragraph V. of the Prague Treaty.

During the interim of six years allowed the Slesvigers to choose be-

tween Prussian or Danish citizenship, many Danes, rather than submit to the Prussian yoke, had crossed into Denmark to await there the promised plebiscite. After the abrogation of Paragraph V. in 1878 they returned to their homes and estates in Slesvig only to find themselves outlawed. They had lost all citizenship, both in Denmark and in Prussia. They were homeless, people without a country, treated as a herd of cattle, beaten and driven under the cruel lash of official Prussia.

THE PRUSSIAN YOKE

To blot out every vestige of Danish national feeling was the aim and order of the day. To this end, the notorious von Koller was imported as Governor of Slesvig-Holstein. During his rule 1,000 poor families were expelled. As a boy, I attended school for several years in North Slesvig, and I recall with horror how the work of oppression proceeded. Brutal teachers were imported. Military discipline ruled in the schools. Sometimes gendarmes were called in to scare refractory pupils. All Danish speech was forbidden, even on the playgrounds. Only one hour of religion was allowed in Danish. Danish colors, songs, books were taboo. Danes were muzzled. To sing a Danish song at a party might cause the singer to be reported by spies who infested the province and result in his being expelled from house and home. Many Danes were told brutally to quit the country within twenty-four hours.

The Prussians knew the value of Bismarck's remark: "What you would have appear in the life of the nation, put that into the schools." The force of song has ever been one of the means to psychologize the "common herd." Children were compelled to commit to memory German songs: "Ich bin ein Preusse," "Deutschland uber Alles," "Heil dir im Siegerkranz," "Schleswig-Holstein Meerumschlungen," &c. German school readers, especially designed to make good Prussians, were printed and dis-

tributed. German histories were only recitals of camp and court, of princes and potentates, war and conquest, and always in the name of "Gott und das Vaterland." "Vaterland!" What mockery to the conquered Danes, who might be driven out at any moment on one pretext or another! The iron fist ruled alike in civil, political and religious life. Every school had a life-sized picture of that moral coward and fugitive who is now hiding behind the petticoats of Queen Wilhelmina. I visited some of the schools down there last Spring. The teachers told me that Kaiser Wilhelm's pictures had been burned.

But though a foreign overlord may rend a people with civil feuds and tear asunder all that has material form, he cannot rob a people of its soul, strike down its ideals, erase its memories, or permanently hinder the realization of its purposes. The words of Georg Brandes, in an address to the South Jutlanders in 1902, deserve citation here:

It is humiliating to be weak [said Brandes], so weak that you can't even make your rights count, but submit to fate without protest. It is a misfortune to be small, so small that one's presence remains unacted upon and little noticed by the big world. But it is stimulating and uplifting to be the one who, despite weakness and

littleness, does not give up and does not fall into spiritual sleep or death.

It is good to be big, but only when the objective bigness reflects a subjective bigness, not when it is expressed in conceit of presumptuous advantages. A people is not big when it is arrogant and ignoble. It is good to be strong, but only when that power is applied to common welfare. To live for self is not enough. To live and share of one's inner riches is better.

HANSSEN'S WORK FOR FREEDOM

One of the dominant personalities in the South Jutland question, a man who realized that if the Danish language and ideals were to endure, forces must be set in motion to combat the heavy inroads of the Prussian compulsion-rule, is H. P. Hanssen of Aabenraa. He was during many years a member of the Reichstag, elected by the Danish votes in Slesvig. In 1893, he purchased the daily paper, *Hejmdal*, through whose columns he has kept the North Slesvig issue before the people has far as the rigid censorship would permit. He, more than any other man, was the guiding light in the fight against the Prussian aggression. He has been ably assisted by Nis Nissen and Kloppeborg-Skrumsager, also members of the Landtag from North Slesvig. All three men were members of the

ZONE OF NORTH SLESVIG, WHICH WAS TAKEN FROM GERMANY AND RETURNED TO DENMARK BY THE PLEBISCITE OF 1920.

German Government until the close of the plebiscite.

Mr. Hanssen was particularly active in the language and cultural societies. Through his efforts a large circulating library was built up. Those books were a powerful influence for the preservation of Danish. A Danish book was a treasure during Prussian times, a friend, a solace, a welcome visitor to old and young. The old folksongs were still sung; the lullabies were chanted beside the cradle, fables and folklore were repeated, the adventures of dwarfs and giants were not forgotten.

So, at last, the will to freedom of a small ethnic group triumphed over the will to power of a strong alien rule. "Now the times of the sword are ended and plow time has begun. I feel as if I had one foot in Denmark already," rejoiced H. P. Hanssen, still a member of the Reichstag from North Slesvig, when world peace was declared. After a quarter of a century of activity in the Reichstag and through his daily paper in behalf of his people, he saw now imminent the crowning of his work—the reunion of Danish North Slesvig with the motherland. There was, however, much work and campaigning ahead before the solution could be reached. There was the question of boundary to be determined, on which there was sure to develop a fight even within Denmark. Some wanted the "Clausen Line" (named after Magister H. V. Clausen, the Danish historian); the annexationists raised the cry of the old "Eiderpolitikken."

Hanssen therefore appealed to the North Slesvig Voting Society—a well disciplined organization. A resolution with an overwhelming majority of the voters was sent to Hanssen, praying for a just solution of this aged and trouble-brewing question. With this resolution in hand, he rose in the Reichstag on Oct. 23, 1918, and said:

I demand as representative of the Danish inhabitants in North Slesvig, in the name of justice and righteousness, that Paragraph V. of the Prague Treaty be executed,

and thus through the coming peace program that a final solution of this problem be reached on the basis of the principle of self-determination.

Practically the same resolution was passed by the Danish Rigsdag on the same day, unknown to Hanssen. On the following day, Oct. 24, Dr. Solf, speaking for the German Government in the Reichstag, acknowledged Hanssen's resolution and replied: "When we have received Wilson's program as a basis for world peace, we will in all directions and upon all points fulfill the demands loyally and in the spirit of righteousness." Hanssen was overjoyed, and Slesvig and Denmark rejoiced with him.

Having been thus favorably recognized in the German Reichstag, the Voting Society of North Slesvig solicited the Danish Government to appeal to the Allies to take the necessary steps in order to secure recognition of the rights of the Danish North Slesvigers at the peace table. Simultaneously the Society met in convention at Aabenraa, North Slesvig, and passed a resolution which expressed the views of the Danish Government and of North Slesvig relative to the boundary and plebiscite questions.

A delegation was appointed by the Danish Government to press the North Slesvig issue in Paris. The members were: Ambassador Bernhoft, assisted by the historical expert, H. V. Clausen; one representative of each of the four political parties, viz., Dr. P. Munch, N. Neergaard, Alex Foss and C. Bramnaes. The four South Jutlanders who were members of the Reichstag also participated: H. P. Hanssen, Nis Nissen, Kloppenborg-Skrumsager, and P. Grau.

A BITTER STRUGGLE

The delegation was harmonious upon the Aabenraa resolution. Unfortunately, to use Hegel's epigram: "Men learn from history that men learn nothing from history." In contrast with the harmony and serenity

that characterized the delegation, stood a few fanatical nationalists and annexationists at home who wanted Slesvig annexed as far south as the Eider River, regardless of the free plebiscite. Failing this plan, they wanted a third zone established in South Slesvig to vote for reunion. Now, South Slesvig had become thoroughly Germanized. Few well-informed persons entertained the least hope of restoring even the second zone, containing the Baltic port Flensburg, with an adult population of 40,000. Of this number only 1,500 voted for restoration, and those were not wholly of pure Danish origin. Had Hanssen not foreseen the necessity of dividing Slesvig into three zones, the case would have been lost, as Middle and South Slesvig could easily have outvoted the Danes in the first zone.

When the treaty was finally prepared, it provided for a popular vote on linguistic lines, by zones, under an international commission, in the Spring of 1920. The result was the return of Northern Slesvig, first zone, to Denmark.

THE PRESENT SITUATION

This result of the plebiscite brought to Denmark an area of 1,505 square miles, or territory a little larger than Rhode Island. Its population numbers 170,000. Of this number approximately 10 per cent. are Germans. The province is largely rich marshland, diked in, as in Holland. Thousands of acres of mud flats can be reclaimed on the west coast, joining the islands of Romo and Mano to the mainland. The flats

here run dry at half ebb tide. The sea does not always encroach on coastal lands. The topographical history of the west coast of the province shows continual accretion. In the 16th century large ships could sail into the harbor of Tonder, and the town of Ribe was the headquarters for the Greenland whaling expeditions. Those towns are now far inland, the former being twenty kilometers removed from the coast. Like Holland, North Slesvig is a land of grass and cows, mud and manure.

This new acquisition to Denmark is not all velvet. A provision in the Peace Treaty called for recompense to Germany for railroad property and all State buildings. Then there was the problem of restitution to Danish citizens for the loss in exchange in crowns, known as the "Valuta" question. Denmark must also be responsible for pensioning the widowed and orphaned and the disabled soldiers.

Improvement of railroads and schools is badly needed. I visited many schools and found them in a dilapidated condition, without equipment, without even decent seats. Jacob Appel, the new Minister of Education, has already won State aid to rehabilitate these schools. Conservative estimates have been made by the Danish Ministry, placing the cost of the province in the neighborhood of 400 million crowns. While many smiled at escaping from the heavy tax burden imposed by Germany, some will frown when the tax schedule is announced to meet the aforementioned cost. The land, however, is fertile and the inhabitants are industrious and frugal.

LATVIA, THE GATEWAY TO RUSSIA

BY FRANCES A. BLANCHARD

Interesting facts that show why the Lettish Republic is comparatively prosperous while Soviet Russia is starving—Latvian representative in the United States tells why he thinks his country can keep its independence—Treaty with Russia

AS an independent republic, Latvia is but little known to the ordinary Westerner. As a part of the "Baltic States," which for centuries have been the gateway to European Russia, it is more or less known to be the home of a peasant race descended from Indo-European ancestors of thirty-five centuries ago. Accordingly, the average American is amazed to discover that as one of the new, independent nations which have separated themselves from Soviet Russia it is a third larger than Switzerland and nearly twice the size of the Netherlands; that it has established a permanent Government with a Constituent Assembly consisting of 150 members; that this Government has already been recognized by twenty-two nations of the world, and that the leaders of this Government are a progressive, educated, capable body of men, ambitious that their country shall excel politically, industrially and intellectually.

The representative from Latvia to the United States, Charles Louis Seya, with his Secretary, Arved L. Kundzin, is now in Washington, D. C., where he is seeking official recognition for his Government from the State Department. Great Britain, France, Germany, Italy, Japan, Russia and Switzerland, together with fifteen other powers, have already granted such recognition.

One interesting development which encourages us to have faith in the future of such a republic is the intense earnestness with which the

rulers have decreed that the people shall not "spend money for that which is not bread." Only those commodities may be imported which will assist in building up industry and providing necessary supplies. No frivolous perfumery, no pleasure automobiles, no silk and velvet dresses, no mechanical musical instruments, playing cards, precious jewels or confectionery may be admitted into the country, nor any alcoholic beverages. Such things are classed as luxuries,

CHARLES LOUIS SEYA

Latvian representative to the United States; formerly Professor of French in the University of Riga and a member of the Foreign Office staff

for which the hard-earned Lettish ruble may not be recklessly spent.

Instead of these gewgaws there is a demand for American plows, American harvesters, American textile machinery and American tractors. At the present time farm machinery which was seized and has been returned badly worn by the Germans is being repaired to do whatever service it can. According to a recent number of the *Baltic Review* (published in London) the Government has seven Fordson tractor plows, which are lent to the ruined districts to facilitate reconstruction of fields. It has ordered from America 2,000 grass mowers, Spring harrows, and horse rakes, and 250 reaping machines.

We have to visualize the fact that this whole country was as war-swept as Belgium, not only suffering from German invasion and pillage, but also being compelled to hand over many of its possessions to Russia; hence the call for work horses, breeding cattle, tools for wood and metal working industries, power machinery, steam

boilers and other appliances that were plentiful before 1915.

PLANS TO DEVELOP TRADE

In order to stimulate trade and industry an agreement has been drawn up by which:

1. For five years, beginning Jan. 1, 1921, Latvia permits, duty free, the import of machinery, apparatus and appliances to build up new industries.
2. For three years, beginning Jan. 1, 1921, Latvia will admit, duty free, raw materials, half-manufactured and manufactured articles required by Section 1.
3. Industrial undertakings in Section 1 are exempted from income tax, trade and industrial tax, real estate tax, and duty on increased value until they commence to earn profit, but not exceeding five years.

The economic policy of the new Government includes a study of all the country's natural resources. Agricultural pursuits have always been the principal occupation of the Lettish people, about 85 per cent. of whom are peasants. There are abundant forests. Because of its position on the Baltic Sea, Latvia has large fishing and shipping interests.

The Minister of Trade and Industry early in 1921 sanctioned the forming of a company called "Isstade," capitalized at a million rubles, for organizing an international exhibition, beginning Aug. 1 at Riga, the capital—a huge exhibition to emphasize modern methods in agriculture, manufacturing, education and household arts. Everything about it is planned with the idea of encouraging the best methods of utilizing the resources which already surround the people, and of securing suitable appliances to carry on the industries for their exploitation.

Since the year 1906 there has existed the Central Agricultural Society of Riga, which maintains an agricultural school and many experimental farms, horticultural stations, cattle-breeding farms and a printing and publishing office. It has nearly forty specialists in different branches and more than 130 instructors.

Large quantities of flax have always been raised in Latvia—not the

Z. A. MEIEROVICA

highest grades, perhaps, but flax which nevertheless furnishes the people with yarn for spinning and weaving cloth—while the raising of sheep furnishes the yarn for weaving woolen cloth. By means of Government assistance, the spinning and weaving factories, which have reorganized since the war, have increased their output to five times its volume a year ago.

Because of the great abundance of timber lands, the manufacture of paper pulp and all kinds of wrapping and newsprint paper has employed many workers. Paper mills which suffered during the war are gradually being restored to partial production. In February, 1921, two important paper mills, the Latvian and Staizel, were turning out from five to eight tons of paper each daily.

COMPARATIVE PROSPERITY

Thus, while in Russia itself under the Soviet regime we see the population half clad and more than half starving, the Lettish people are living in comparative comfort, restoring

their demolished factories and shell-torn fields, and starting again the wheels of industry.

Although Latvia has neither iron nor coal mines, the metal industry in normal times employs 27 per cent. of all Lettish labor. One-fourth of all the metal industry of the former Russian Empire was centred in Riga and Libau, the two largest cities of Latvia. The reason for this was that the Lettish laborer produced more than the Russian. Speaking of this fact, Mr. Seya, the nation's representative in the United States, says: "The productivity of the Lettish laborer has always been much higher than that of Russia. Thus while in Latvia in 1910 each metal worker produced £194 worth of goods, in the district of Moscow a working man in the same line produced £147. The value of goods produced by each man in the lumber industry was £91 in Archangel, but £150 in Riga." For this reason Russia shipped many of her raw products into Latvia for manufacture into finished products.

As to its educational status, Latvia

Parade of all guilds and associations of Riga, some of them very ancient, at the opening of the Constituent Assembly. The railroad bridge over the Duna River is seen in the background

ranks much higher than Russia. In the census of 1920 it was found that 70 per cent. of the whole population were able to read, and 90 per cent. of these were able both to read and write. When in the year 1887 the Lettish schools were brought under the jurisdiction of the Russian Ministry of Education, resulting in the closing of secondary and higher schools conducted in the native language, the leaders in Latvia considered that the downfall of real Lettish cultural life had begun.

The result of this edict was that private tuition in Latvia became more common than in any other country of Europe. In 1913 Latvia was leading all the small nations in the number of secondary schools, as compared with the population, and in the number of its university students. The Polytechnic Institute in Riga had 2,000 students. After the formation of the independent Lettish Government this institute was converted

into the Latvian University, the lectures usually being delivered in Lettish, although the Russian and German languages are occasionally used, while with few exceptions the professors are Latvian citizens.

CAN INDEPENDENCE LAST?

What proofs have we that Latvia will be able to remain an independent democracy, since its near neighbors, Russia and Germany, have for many years looked with envious eyes upon its ports? We can judge only by the spirit of the people themselves, by their past achievements, and by conditions of government in the neighboring countries. Treaties of peace were consummated between Latvia and both Germany and the Soviet Government in the Summer of 1920. The leaders feel assured that there is no danger from German intrigue. Of their political connections with Russia Mr. Seya tells us:

One of the practical objections to the

creation of independent Baltic States has been the impossibility for Russia to exist without the excellent ports of those countries. This contention is absolutely true, and Latvia and the other Baltic States fully understand it. They have never tried to bar Russia from access to their ports; they have never tried to limit for Russia the use of those ports. In the treaties of peace between the Baltic States and the present Government of Russia the right of Russia to use the ports of the Baltic Sea is reserved without question. Despite the state of things in Russia, Latvia has concluded several important conventions with the Soviet Government, among them conventions regulating the Russian transit through Latvia, the post-telegraph relations, the floating of timber from Russia to the Baltic Sea; a general convention of commerce is under discussion.

In granting to Russia all possible facilities regarding the Latvian ports, rivers and railroads, the Latvian Government has been guided by two considerations of equal importance: (1) unless the necessity of Russia to have at her disposal the ports of the Baltic Sea is fully satisfied, there can never be entire security for the Baltic States; (2) the Russian transit is highly advantageous for Latvia. The Soviet Government is perfectly conscious of that, and has more than once suspended the Russian transit through our ports, considering this as a measure of economic reprisal for the refusal of the Latvian Government to yield to certain of its demands of a political nature. Only two months ago the Russian transit through Latvia was suspended because of the refusal of the Latvian Government to send to Russia nine terrorists who were sentenced to death.

When the political conditions in Russia are more settled the economic relations between the two countries are destined to become very close—with advantage to both. At the present time Russia has Latvia to thank for keeping three of the most important ports of the Baltic Sea—Riga, Libau, and Windau—in sufficiently good order, while Russian ports, such as Petrograd, are in so chaotic a condition that trade through them is hardly possible.

DEALING WITH BAD RUSSIANS

The reference to the nine terrorists who were executed touches upon a situation which may be easily understood to exist in a region so closely adjoining a land in which revolutionary factions are the order of the day. It is a frequent occurrence to have Russian terrorists slip secretly into the cities of Latvia, always under assumed names and using a different name in every community, and en-

deavor to stir up revolt, holding their meetings in secret. For such dangers the authorities are constantly on guard, dealing out punishment according to the merits of the offense. For instance, at the time these nine terrorists were executed ninety others were returned to Russia.

The Latvian Republic claims the southern part of the Government of Livonia, the Government of Livland, the Government of Courland, three districts of the Government of Latvia, strips of territory in the Governments of Grodno and Pskov, and a strip in East Prussia.

The salient provisions of the Peace Treaty with Soviet Russia, concluded on Aug. 11, 1920, include the return to Latvia of all property belonging to public, charitable and educational institutions taken over between 1915 and 1917; the return to Latvia of all property belonging to towns, commercial and industrial institutions and banks; the return of all means of transportation corresponding to the actual economic needs of Latvia; payment to Latvia by Soviet Russia of 4,000,000 gold rubles within two months of the ratification of the treaty; the release of Latvia from responsibility for debt and other liabilities of the former Russian Empire; the granting to Latvia of the privilege of cutting timber on 270,000 acres in Soviet Russia as near the Latvian frontier as possible.

DIVIDING UP LARGE ESTATES

In the Spring of 1919 the large estates belonging to the nobility in the districts of Livonia and Courland were confiscated, economic committees were named to superintend them, and Government inspectors were installed. Many land owners in Latvia have declared their willingness to sell such portions of their estates as can be taken care of by the purchasers within six years of the time the estates are taken by the Government. About one and a half million acres will thus be distributed in Livonia and Courland.

Considerable portions of the large estates in these two provinces were leased on the so-called "Halbkorn." The owner leased the land without any appurtenances, on condition that the farmer should furnish all his own tools and machinery, and that the proceeds should be divided between him and the owner. This form of lease acted disadvantageously upon the yield, and created a nomadic, restless lot of farmers. The Government has these "Halbkorners" in mind when it wants to provide the landless with property. It takes it for granted that the peasants will produce much more when they own the land they cultivate. Out of 19,000 families demanding land, more than 12,000 have one or more horses, and almost all have their own appurtenances. They are all to receive land. How it is to be procured is as yet undecided. It will first be taken from the former Russian Crown properties, then from church property, and lastly from portions of large estates. Factories which were evacuated during the war

and which shall not have resumed operations by a certain date also will be taken over by the Government and put into operation.

According to statements made by the Latvian Minister of Finance in 1920, revenue can be obtained only by high taxes and flax exports. Lumber exports at that time were out of the question because of lack of capital and transport facilities. These revenues were insufficient, and the Government was forced to issue paper money. This paper, however, has a higher rating than has the Russian paper ruble; at the time this is written it stands at about 450 rubles to the American dollar.

For a nation which has had only three years of independence, Latvia's problems are stupendous. The result depends on united national effort, combined with foreign co-operation. The key to success may be found in a phrase which the Latvian peasant reiterates daily: "Ludz Deevu un strada"—"Pray to God and work."

ILLITERACY IN THE UNITED STATES

THE war drafts showed that there existed in the United States a considerably larger amount of illiteracy—particularly among the foreign-born population—than was generally realized. Figures for 1920, made public by the Census Bureau in the middle of October, are interesting in the light they shed on the comparative degrees of illiteracy in various States. According to the official returns, five of the large Western States—Montana, Idaho, Wyoming, Utah and Washington—had less illiteracy to record for 1920 than any other States. The native white population of these States classed as illiterate amounted only to three-tenths of 1 per cent. The District of Columbia showed the same per-

centage. South Dakota, Nevada and Oregon came next, each with four-tenths of 1 per cent. High degrees of illiteracy, properly classified, were shown by the following States:

Georgia	5.4	Kentucky	7.0
Virginia	5.9	Tennessee	7.3
Alabama	6.3	North Carolina	8.2
South Carolina	6.5	New Mexico	11.6

The largest percentage of illiteracy among the foreign-born was 38.8, for Texas; the smallest percentage, 4.7, was for South Dakota and Washington. The negro population ranged from 38.5 in Louisiana to 2.9 in New York. Arizona decreased its illiteracy between 1910 and 1920 from 4.2 per cent. to 2.1 per cent.

THE CASE OF NORTHERN EPIRUS

BY N. J. CASSAVETES

President of the Pan-Epirotic Union

An analysis, from the Greek viewpoint, of the events which led to the award of Northern Epirus first to Greece and then to Albania — Danger of the present situation, which may lead to a new Balkan war

A GRAVE situation is developing in Northern Epirus, a situation that may again plunge the Balkans into war and bring a general conflagration to a Europe still bleeding from its wounds. After many vicissitudes and revoked decisions the Council of Ambassadors has decided that the Northern Epirotes, Greek by language and sentiment, should come under the sway of the new State of Albania. The Greek people of the district have been driven out and exiled and their property confiscated. They are preparing to resort to arms to regain their rights. Greece has vainly protested to the allied powers over the withdrawal of their pledged word. She is now appealing to the judgment and the conscience of the world. The whole history of the controversy over Northern Epirus must be made known. What are the facts?

In December, 1918, Mr. Venizelos presented the case of Northern Epirus before the Supreme Council. He traced the history of the struggle of the Greek Epirotes for freedom and union with Greece. He pointed out that Northern Epirus had been Greek since the days of Homer; that it had continued under the Romans, the Byzantines and the Turks to be the centre of Greek culture, with its famous schools at Korytsa and Moschopolis, and a centre of Greek nationalism, with Chimarra as its citadel—that Chimarra which during 500 years of Turkish domination in Eu-

rope had never yielded its liberties to the conquering Sultans.

In 1913 the Greek troops drove the Turks from Northern Epirus. The inhabitants welcomed the Greek forces as brothers and liberators. Then Austria-Hungary and Italy demanded that Greece evacuate the province and yield it to the prospective Albanian State. The Balkan wars had resulted in the creation of a greater Serbia and a greater Greece, allied against common enemies, Bulgaria in the east, Austria-Hungary in the north and Italy in the west. Austria-Hungary viewed with dismay the aggrandizement of Serbia and the consequent frustration of the Teutonic scheme for the complete control of Constantinople and the Bagdad Railway. Italy, aspiring to the exclusive control of the entrance to the Adriatic, was not less alarmed at the establishment of Greece in Northern Epirus.

At the London Conference of 1913, when the Turkish Treaty was drafted, the powers, at the unyielding demand of the Triple Alliance, decided to assign the task of settling the Greco-Albanian frontiers to a conference of the Ambassadors of the six powers. The Ambassadorial Conference appointed a commission to go to Northern Epirus and determine the nationality of the inhabitants. The committee went to Northern Epirus, instructed not to ask the people whether they wanted to be united with Greece or with Albania, but to

find out what language they spoke. No sooner had the commission begun their work than they fell to grave disagreement. The Northern Epirotes are a bilingual people; they speak an Albanian *patois*, or a Kutzo-Valach dialect, and speak also and read and write and conduct business only in Greek. Wherever the commission went they were met by delegations which assured them that the Northern Epirotes were Greek and would die rather than submit to Albanian domination.

The commission, unable to do their work, left Northern Epirus. Sir Edward Grey, according to Prince Lichnowski, German Ambassador to London, endeavored to persuade the Triple Alliance to do justice to the Northern Epirotes, but having found Austria-Hungary and Italy inexorable proposed a frontier between Greece and Albania, which left to the latter a Greek population of 120,000.

THE GREEK WITHDRAWAL.

On Feb. 13, 1914, the Ambassadors of the powers at Athens presented a note to the Greek Government, informing it of the decision of the Conference of Ambassadors in respect to Northern Epirus and asking Greece to evacuate the province. The Ambassadors, in order to force Greece to bow to their decisions, declared that unless Greece evacuated Northern Epirus she could not annex the Greek Islands of the Aegean. Greece notified the powers, not without a bitter protest, that Northern Epirus would be evacuated by the Greek troops.

The evacuation began on March 1, 1914. Italian and Austro-Hungarian agents swarmed through Northern Epirus to observe and report to their respective Governments whether or not the Greek evacuation was complete. The Albanian charge that the Greeks did not evacuate the province is absurd. The fact that the Italian and Austrian agents, who were anxious to report that Greece had not kept her word, and thus have her forfeit the Aegean Islands, could not

find a single instance of bad faith on the part of the Government of Mr. Venizelos more than disproves the Albanian allegations that the Epirote revolution, which broke out upon the withdrawal of the Greeks, was supported by official Greek forces. The first outbreak occurred at Korytsa and at Chimarra, and soon the entire province was in revolt against Albania.

The powers were finally convinced that the Northern Epirotes would not yield to Albanian domination, and a conference was arranged for in the Island of Corfu, opposite Northern Epirus, where a protocol was signed by the representatives of the six powers, of Albania and of the Northern Epirote Government. This protocol, which was ratified by all the Governments represented in the conference of Corfu, declared Northern Epirus autonomous, with the Greek language as the language of Church, school and courts.

This "agreement," however, settled nothing, and Northern Epirus became a diplomatic shuttle, driven back and forth by conflicting interests. In 1915 Sir Edward Grey asked Mr. Venizelos, in behalf of France, England, Russia and Italy, to reoccupy Northern Epirus in view of the fact that the Albanian State had disintegrated. It was agreed that the ultimate fate of the province would be settled at the Peace Conference. In 1916 Italy and France, distrusting Constantine, occupied Northern Epirus, solemnly promising to surrender it to Greece immediately after the war. Both Albania and Greece anxiously awaited the decision, which came only in 1919.

THE AWARD TO GREECE

On July 29, 1919, the Venizelos-Tittoni agreement was signed whereby Italy bound herself to support the union of Northern Epirus with Greece if France, Great Britain and the United States should consent to it. On Dec. 9, 1919, an agreement was reached at Paris, signed by Clemenceau, Frank Polk and Sir Eyre

Crowe, assigning the western part of the province to Greece and making Korytsa a subject for further consideration between the United States, England, France and Italy on the one hand, representing Albania, and Greece on the other. On Jan. 13, 1920, the Allies considered the question of Korytsa and agreed that it also belonged to Greece, and so awarded. On Feb. 10 and 25, respectively, President Wilson, in his Adriatic notes, assented to the decision of Jan. 13, 1920, in respect to Korytsa, and on May 17, 1920, the United States Senate adopted unanimously the Lodge-King resolution expressing the sense of the United States Senate that Northern Epirus, including Korytsa, should be awarded to Greece. Finally, Mr. Harding, candidate for the Presidency, in a telegram to the League of Greek-American Citizens of New England, reiterated a similar sentiment.

Meanwhile, on April 20, 1920, the Franco-Italian troops evacuated Northern Epirus. France invited Greece to occupy Korytsa, but Italy protested, adducing as argument the oral promise of Mr. Venizelos not to enforce the Supreme Council's decision of Jan. 13, 1920, until the Adriatic issue was settled. Mr. Venizelos yielded, and Northern Epirus was temporarily occupied by Albanian troops. Albania signed an agreement at Capestita in April, 1920, promising to respect the Greek population, its schools, churches and property meanwhile, and to accept the decision of the Supreme Council as to the ultimate fate of the province.

On Aug. 2, 1920, however, Italy signed at Tirana a separate treaty with Albania, recognizing the Albanian boundaries of 1913, and thus denouncing her signature to the Tittoni-Venizelos agreement and the decision of the Supreme Council of Jan. 13, 1920. On Aug. 10, 1920, at Sevres, Mr. Venizelos called the attention of the Supreme Council to the action of Italy and refused to sign the Turkish Treaty until Italy should

declare that she was bound by the Tittoni-Venizelos agreement and the agreement of Jan. 13, 1920, which recognized the right of Greece to occupy Northern Epirus irrespective of any separate agreements of Italy with Albania. Italy yielded, thus denouncing in its turn the separate treaty with Albania concluded eight days before.

The Treaty of Rapallo was signed on Nov. 12, 1920; the Adriatic question was settled and Greece was free to occupy Northern Epirus. But on Nov. 14, 1920, Mr. Venizelos fell from power, and Greece, having lost the sympathy of the powers, on account of the return of King Constantine, found herself involved in grave difficulties over Asia Minor which made it impossible for her to occupy Northern Epirus.

ALBANIA DEMANDS REVISION

A new chapter of events was opened by Albania's admission Dec. 5, 1920, as a member of the League of Nations against the protest of the Supreme Council and of the Council of the League itself. The objection to the admission was that Albania was not a State, that her frontiers had not been defined. The Assembly, however, admitted Albania into the League's membership as a State whose frontiers were to be settled by the Supreme Council.

Upon her entrance into the League Albania, supported by Italy, agitated for the recognition by the League of the Albanian boundaries of 1913. The League, however, decided that it had no right to decide upon frontier issues as long as those issues were, by the Treaty of Versailles, assigned to the Supreme Council for settlement. The League of Nations referred the Albanian frontier question to the Conference of Ambassadors at Paris. The Ambassadors invited Greece, Serbia and Albania to send commissions to attend the discussion of the Greco-Albanian and Serbo-Albanian frontiers. The Greek Commission reminded the Ambassadors of the existing solemn agreements reached by the

Supreme Council, pleaded that any reopening of the Greco-Albanian frontiers would lead to a renewal of strife, and refused to admit the right of the Ambassadors to reopen that issue. The Ambassadors, however, appointed a commission of experts and instructed them to make a report on the frontiers. That report was first to be considered by the Ambassadors, then submitted to the Supreme Council, and, finally, sent to the League of Nations.

The Albanians then, playing the part of a weak and injured party, appeared day by day before the League, lamenting and pleading protection. They declared that Albania was being invaded by Greeks and Serbians and that the League could save her only by an extremely hurried decision recognizing the frontiers of 1913, which included Northern Epirus in Albania.

The Assembly was greatly alarmed by the incessant cries of the infant member of the League, and, believing that Serbia and Greece were really after poor little Albania's head, sent message after message to the Ambassadors urging them to get those frontiers settled quickly, no "matter how," and save Albania.

The experts of the Ambassadorial Conference drafted a report in July of this year. The same French adviser who in 1919 and 1920 declared that Northern Epirus, including Korytsa, should be awarded to Greece on the principle of nationality, now gave the opinion that Northern Epirus should go to Albania. The Italian expert, of course, gladly gave a similar opinion. The British expert, Mr. Tempeley, reported as in 1919 and in 1920 in favor of the award of the province to Greece.

THE AWARD TO ALBANIA

Then the Silesian issue began to grow very critical. A secret parley took place between Lord Curzon and Marquis de la Torreta, and on Aug. 21 the Temps of Paris surprised the diplomatic world by announcing that England had finally accepted the

Italian view on the Greco-Albanian frontiers.

As soon as this news reached Geneva a resolution was introduced in the Assembly and adopted on Sept. 7, 1921, "recommending Albania now to accept the forthcoming decision of the principal allied and associated powers." Albania, of course, accepted, knowing beforehand that the allied powers had, for reasons too obvious, decided to award the Epirotes to the Albanian State.

In the course of the meeting of Sept. 7 the Greek delegation, taking advantage of the fact that the resolution included the phrase "associated powers," read the notes of President Wilson, the Senate resolution and the telegram of Mr. Harding, and assured the League that even if all the allied powers could dishonor their signatures affixed to solemn agreements reached at Paris, the United States would stand by her word, and would not now deny the right of the Northern Epirotes to choose for themselves whether they would go with Greece or with Albania.

This declaration caused general confusion among the League members and the Ambassadors. The latter are still hesitant. France desires to see the frontiers of Albania of 1913 altered to benefit Yugoslavia, but on account of hatred for Constantine desires to punish the Northern Epirotes, who had no part in the return of the King, and subject them to the tender mercies of Moslem Albanian tribes, wilder and more ruthless than the Kurds, the persecutors of the Christian Armenians. England, of course, yielded to Italy, in order to secure the Italian vote in the Silesian dispute. Italy hoped, by the occupation and fortification of the Island of Sasseno, off Valona, to control the Adriatic Sea.

The League desired to see war prevented. It voted that a commission of three impartial persons be sent to Albania to observe and report on the execution of the Ambassadors' decision. The League, moreover, had a declaration drafted (Oct. 4, 1921),

and signed by Albania, providing for the protection of "religious, linguistic and racial minorities in Albania." This declaration provided that within six months from Oct. 4 the Albanian Government should present to the League complete statements about the churches, monasteries, school and community properties of the racial, religious and linguistic minorities, and that these institutions should be respected by the Albanian Government.

ALBANIANS DRIVE OUT GREEKS

Immediately upon the adoption of the declaration, the Albanian Government ordered a systematic persecution of the Greek element in Northern Epirus. Greek churches, monasteries, schools and community property have been confiscated. The male Greek natives have been driven out or imprisoned by the tens of thousands. The homes and lands of the Greek refugees have been assigned to Albanian families imported from Central Albania. All this was done with a view to presenting to the League commission an Albanicized Northern Epirus and to induce the commission to report the Greek schools, churches, monasteries, hospitals and other Greek community property as Albanian.

Meanwhile the exiled Northern Epirotes gathered at Florina, Janina and Corfu, facing complete expatriation, loss of homes and property, and, fearing that the League commission may find imported Albanians in their villages, have decided to re-enter Northern Epirus in arms and revolt against Albania, as in 1914. Of the nearly 30,000 Northern Epirotes in America, mostly young men, forced to emigrate on account of Turkish misrule until 1912 and on account of Albanian ruthlessness since 1916, more than one-half are ready to join their relatives in the impending struggle for freedom and union with Greece. Hundreds of thousands of dollars are already at hand, and the revolt may break out at any moment,

unless the powers once more change their minds and decide to respect their signatures to the decisions of Jan. 13, 1920, and Aug. 10 of that year.

The Northern Epirus issue is a dangerous one. It may become the starting point of a new war in the Balkans and, perhaps, of a war which will involve almost half of Europe and Asia Minor. Do the Ambassadors realize this? Does the League of Nations at least understand it? France and England have no selfish interests necessitating the selling of the liberties of the Northern Epirotes. Will the French statesmen prepare another war rather than refuse Italy the mastery of the Adriatic? Will the League of Nations commission remain indifferent to the cries of the Christian Epirotes, who plead for union with Greece? And will the world conscience remain satisfied with the sending of a commission to Albania? Why has this commission been sent?

THE SOLUTION BY PLEBISCITE

Had the powers and the League been in doubt as to the will of the Northern Epirotes, they should have ordered a plebiscite. But no plebiscite could be carried out with Albanian troops in the disputed area. The Greeks have time and again appealed to the League for a referendum in Northern Epirus and have pledged themselves to accept the results, provided that the referendum is free; that neither Greek nor Albanian troops be in occupation of the Province; that Swiss, or Scandinavian, or American troops occupy the Province during the plebiscite. Such were the conditions under which the plebiscite was taken in Silesia. Neither German nor Polish troops were allowed to terrorize the inhabitants of that Province while the vote was being taken. Such a plebiscite, free from pressure, would compel both Greeks and Albanians to admit that no injustice had been done. Indeed, in 1914 the Greek revolution was a plebiscite.

But the Greeks would now again submit to the verdict of the will of the majority of the inhabitants of Northern Epirus. It is not too late to do the right thing. The Conference of Ambassadors has not yet come to an official agreement. And before a wrong

decision is reached another opportunity should be given to the people of Northern Epirus to decide for themselves, freely and without pressure, whether they desire to join Greece or the newly established Albanian State.

THE TRUTH ABOUT BULGARIA

BY THE REV. THEODORE T. HOLWAY

THE baiting of Bulgaria since the close of the World War has become a popular pastime. The Bulgarians are accused of treacherous dealings, both in 1913 and in 1915, when they entered the war against Serbia, Rumania and the Entente, and are further accused of committing atrocities on the Serbians during the period of hostilities. Recent typical examples of such anti-Bulgarian animadversions may be found in two articles by Captain Gordon Gordon-Smith, of the Serbian Army, published by *CURRENT HISTORY* in its issues of July and August, 1921.

Mr. Leland Buxton, in his recent book, "The Black Sheep of the Balkans," has a word to say about these charges of treachery. The following passage is worth quoting:

Most of the legitimate accusations made against Bulgarians, both in 1913 and more recently, apply equally to other Balkan races; for if they (the Bulgarians) suffered from swollen heads, so did (and do) their allies of 1912; if they stabbed Serbia in the back in 1915, they themselves were stabbed in the back by Serbia in 1885. With regard to Bulgarian "treachery" in 1913, nothing can excuse the criminal insanity of General Savov's attack on the Greeks and Serbs—ordered by King Ferdinand, but unknown to the Bulgarian Cabinet—on June 30, 1913; yet it is only fair to remember that the Greek and Serbian armies were fully determined on war, and had made it quite clear that they had no intention under any circumstances of withdrawing peacefully from any of the territory then occupied by them, to which Serbia had recognized the right of Bulgaria in the previous year.

The charge of treason in 1915 is also wide of the mark. Bulgaria was a free and independent State, free to act as she chose. First of all, she honestly preferred to remain neutral, as any impartial traveler through the country in 1914 and 1915 can testify. In the first Balkan War her "killed in battle" and "died of wounds" lists were three times as many as those of her combined allies. In the two Balkan wars she had mobilized over 620,000, out of a total population of less than 5,000,000. Those two wars had caused "the death or disablement of one-twentieth of the male population, and those in the prime of life, with the destruction of one-fifth of the plant of the principal national industry—the carts and cattle used for agriculture." She was war-weary. The fatal ten months of 1912-13 had added \$436,500,000 to her national debt, and at the end of it all more than a million of her co-nationals had been left under Greek, Serbian or Rumanian rule.

Despite these conditions, there is little doubt that Bulgaria would have entered the World War on the side of the Allies, had the allied diplomats early in the Spring of 1915 displayed as much generosity in Sofia as in Rome, and Bulgaria's military support would have involved also that of Greece. George Logie is right when he says this ("Bulgaria," p. 119), and also when he says:

Any intelligent person who happened to be in Sofia early in 1915, when the Entente was negotiating with Greece for her

participation in the Dardanelles expedition, could testify that the Bulgarian Government was ready to mobilize the army and march against Turkey as soon as Greece's adherence to the Entente had been announced, so as to secure a share in the spoils. Not even Czar Ferdinand thought it opportune at that time to evince his pro-Austrian leanings, so sure did he feel of the success of the proposed enterprise against the Dardanelles by the combined Entente and Greek troops.

If the powers had used the full strength of their influence on the military party at Belgrade during the Summer of 1915, Radoslavov's moderate and just offer could have been accepted. Even in the early Autumn of 1915, if Great Britain had been willing to place British and French troops in Macedonia and had exerted greater pressure in Sofia, she might have kept Bulgaria out of the war. Many Englishmen, journalists, business men and others, in touch with the negotiations in Sofia before her mobilization frankly affirm this to be true.

While the Serbian press was attacking Bulgaria fiercely, and the Serbian Government remained sullenly obstinate, and the Entente powers dallied, Germany was using every device to create sentiment in her favor. She bought up the largest paper in Bulgaria. She furnished glowing reports of German victories. She magnified Entente defeats. She exalted German inventions and harped on the perils of Serbia, until finally King Ferdinand forced the too independent Bulgarian War Minister to resign, and brought his country in on the German side.

As regards "atrocities," I can give my personal testimony that these were not wholly upon one side. As a member of The Christian Herald and Red Cross Relief Committees from 1913-15, I personally saw Serbian officials doing to Bulgarians some of the very things for which Captain Gordon-Smith so bitterly attacks the Bulgarians in 1917. I talked with many of the refugees from Greek and Serbian Macedonia as to the treatment they had been receiving in the new Serbia. During

March, 1913, four months before the "treason" of the second Balkan War, I was told by a European Red Cross official of the terrible way in which Serbians were getting rid of the Albanians in old Serbia and Novi Bazar. I talked with the Bishop of Debar, who was forced by Bulgaria's Serbian "allies" to quit his See; also with Bulgarian teachers of both sexes who had been driven out of their schools and homes without being given an opportunity to utter a word in their own defense. I heard constantly of reports, letters and bitter complaints pouring almost daily into the Government archives in Sofia. The notorious Serbian decree of Oct. 4, 1913, gave to the most insignificant Serbian official in Macedonia full powers to dispose of the lives of the local inhabitants.

I certainly have no wish to justify atrocities, by whomsoever committed. But any impartial student of affairs in the Balkans since 1912 knows that atrocity stories there have been grossly exaggerated. He knows that Serbians and Greeks were not a whit behind those whom they attacked in so clever and, too often, in so conscienceless a way.

In plain words, the charges made against Bulgaria are largely unjust. An equal injustice has been done Bulgaria by the post-war settlement which gave Southern Macedonia permanently to Serbian control. No less a personage than Viscount Bryce pointed this out in an address before the House of Lords last year. Viscount Bryce testified from personal experience that the population of this area was almost purely Bulgarian, and declared that the equitable arrangement would have been, not to give the district to Bulgaria, perhaps, but at least to make it autonomous. The action taken in effect created a Macedonia Irredenta in the Balkans, in addition to the Austria Irredenta in the Tyrol. The disaffected population, Viscount Bryce intimated, would remain a source of weakness to Serbia, which had otherwise received

enormous accretions alike of territory and population from the war.

What is needed now is the calming of all the bitter quarrels between the Balkan peoples; the absolute stopping of mutual recriminations, of all charges of atrocity, of quarrels over past mistakes, and a constant emphasizing of all common interests combined with constructive development. Make Macedonia an autonomous member of a Yugoslav United

States, enjoying the same rights and liberties that old Serbia does. Crush out jingoism in each land. Urge disarmament equally in all Balkan States, not merely in defeated Bulgaria; and recognize clearly that the vast majority of the Bulgarians, from King Boris and his Cabinet down to the people, are as genuinely democratic, progressive and peace-loving as in any other Balkan State.

Two Rivers, Wis., Sept. 7, 1921.

[COMMUNICATIONS]

BULGARIA'S RIGHTS

BY THEODORE VLADIMIROFF

What the nation has suffered at the hands of foreign powers in the past, and the injustice done by the Paris Conference

To the Editor of Current History:

Replying to my article on "Rumania in New Europe," published in the July number of the CURRENT HISTORY, Prince Antoine Bibesco, the Rumanian Minister in Washington, has presented in the September number an attempt to explain away Rumania's shortcomings. He writes:

It is plain that the real grievance behind Mr. Vladimiroff's somewhat heated denunciation is not what Rumania is today, but what she did in 1913. In that year Rumania interceded in behalf of Serbia and Greece, then treacherously attacked by their ally, Bulgaria, and decided the conflict in the former's favor. * * * Possibly Mr. Vladimiroff would be satisfied by a readjustment of Southeastern European frontiers that would protect the racial minorities of Transylvania by turning them over to Bulgaria. These minorities, however, might be less enthusiastic after consulting the Greeks and the Serbians of Macedonia, who are acquainted with the Bulgarian methods at close range.

Rumania came to the parting of the ways in 1878. She struggled hard at that time, trying to decide between right and wrong, between justice and injustice, and she fell. From that time on, morally, Rumania has been slipping downward very fast.

From the year 679 A. D. up to 1878 Dobrudja always was an integral part of Bulgaria. Dobrudja is the cradle of the

Bulgarian Kingdom. In the treaty of San Stephano in 1878 Russia assigned Dobrudja to Rumania in exchange for Bessarabia, which the Congress of Paris in 1856 had detached from Russia after the Crimean war, giving it to Rumania in order to block Russia's way to Constantinople.

The Rumanian Government, the press—in a word, all the organs expressing the will and conscience of the Rumanian people—solemnly arose against this exchange, objecting in the most emphatic manner that the Danube divided Rumania and Bulgaria, that Dobrudja was a Bulgarian country, and that its annexation would be an infraction of the rights of nationalities, to which Rumania owed her creation as a State. The entire press of Rumania came out in unison, saying: "We cede nothing, we accept nothing; even if Bessarabia is taken away from us by brute force we will not have Dobrudja." Finally, when King Carol I. was forced by the Treaty of Berlin to accept Dobrudja, he issued a proclamation to the people of Dobrudja beginning as follows:

The great powers of Europe have by the Treaty of Berlin ceded your country to Rumania. Not as conquerors do we enter within the boundaries fixed for us by Europe, &c.

From the date when Rumania entered Dobrudja, in 1878, up to the present day, during a lapse of forty-one years, Rumania has ruled Dobrudja by what is known as "the exception régime," where the power of the local prefect is unlimited. "It is a régime of political rights without freedom under the protection of prefects and Ministers."

On Oct. 3, 1912, the Bulgarian Minister at Bucharest, M. Kalinoff, asked the Rumanian Prime Minister, Mr. Mauresco, what would be Rumania's attitude in case of war between Bulgaria and Turkey, if Bulgaria undertook to defend the rights of her nationals in Thrace and Macedonia. The latter replied: "Rumania will have no objection whatever, for she herself has obtained her freedom from the Turks after a long struggle. If Bulgaria, Greece and Serbia want to free their nationals from the Turkish yoke, Rumania will observe a strict neutrality and will have no claim upon any territory taken away from the Turk." In consequence of this assurance the Bulgarian Ministerial Council extended to Rumania most cordial greetings and thanked her heartily for the noble stand which she had decided to take toward Bulgaria. (See "Les événements de la Péninsule Balkanique: L'action de la Roumanie," Bucharest, 1913, No. 1-41).

It was in the Fall of 1912, when Bulgaria, single-handed, had to confront the Asiatic hordes east of Adrianople, that Rumania came in with a claim for extending her boundaries to the south in Dobrudja. At that time she asked only for the town and fortress of Silistra. Bulgaria agreed to cede that city to Rumania for the sake of peace. The conference of Ambassadors at St. Petersburg described the attitude of Bulgaria on this occasion in the following words:

Before parting, the conference wishes to pay homage to the well-known disposition of Bulgaria to maintain and to strengthen its ties of friendship with Rumania. These dispositions, having singularly lightened its task, the conference expresses the conviction that the powers will remember the sacrifices which they asked Bulgaria to make.

The above lines were penned on May 9, 1913. On July 10 the Rumanian Army received the order to invade Bulgaria, which at that time was at war with its former allies, trying to make them observe the sanctity of their treaties with Bulgaria. It

was Greece and Serbia who acted treacherously toward their allies.

The truth is just the reverse of the usual charge. It was Rumania who scrapped her treaty with Bulgaria, signed at St. Petersburg only two months earlier, and stabbed Bulgaria in the back; and it was done at a time when she was exhausted from the great struggle against the Turk and when she was fully occupied with her former allies, trying to drive them out of her own back yard.

Bulgaria met the buccaneers at Bucharest, and in addition to losing Macedonia to the Greeks and Serbians she lost to Rumania 8,525 square kilometers in Dobrudja, the granary of Bulgaria; and with it went a population of 282,007, out of which only 6,359 were Rumanians.

Even Venizelos himself, in his memorandum to the Peace Conference at Versailles, while pleading that Western Thrace be given to Greece, said: "Besides, if one keeps account of the fact that Rumania would be disposed, once her national unity is accomplished, to cede back to Bulgaria that portion of Dobrudja which fell to its share in 1913, and which forms one of the richest regions in the Balkans. * * * Bulgaria will be the only one among her allies which will come out of the war undamaged."

Bulgaria has fought three wars for territory which three international tribunals had pronounced to be inhabited by Bulgarians and to belong to Bulgaria.

As regards the Greeks and the Serbians in Macedonia, I refer Prince Bibesco to that splendid public document, "The Report of the International Commission to Inquire Into the Causes and Conduct of the Balkan Wars." The main conclusion of that report was that, in so far as atrocities were concerned, the conduct of the Bulgarians, as compared to that of their allies, was the least reprehensible, and that whatever atrocities were committed by them were done under great provocation.

To the Big Four of the Peace Conference, in so far as their decisions on Balkan matters are concerned, I will quote Edmund Burke's words: "But with respect to you, ye legislators, ye civilizers of mankind! Your regulations have done more mischief in cold blood than all the rage of the fiercest animals in their greatest terrors."

A BULGARIAN VIEW OF CERTAIN NEIGHBORS

BY VELKO N. MEDOLOFF

To the Editor of Current History:

The article of Gordon Gordon-Smith in *CURRENT HISTORY* for July, entitled "Bulgaria's Crimes Against Serbia," stirred me up, because it happens that I was a volunteer in the Balkan War of 1913 and had the honor to be taken prisoner by the "brave Serbians" at Sultan Tepe. They robbed me of everything I possessed—money, boots (of which they never had any), haversack, and everything they could think of that was useful. To my plea that they should let me keep \$10, they said "Die."

I know their brutality, and how they betrayed their brethren of the bravest and smallest nation in the whole world—Montenegro—and how they subdued them under their tyrannical Government. Look up the reports of the English and Danish correspondents to their respective Governments a year ago. See how the Serbians outraged innocent women and children, equaling any Turkish brutality, the only difference being that the Serbians committed these

crimes upon their brethren, brave Montenegrins.

In the same magazine is an article on "Rumania and the New Europe," page 631, by Theodore Vladimiroff. I cannot too highly express my appreciation of that article, as it is of great concern to me and all those who are interested in the Balkan States. I used to live in Rumania and know that everything the writer says is true. The only regret I have is that he has not said enough, particularly on the question of immorality and the acceptance of bribes by the officials from the lowest to the highest. It happens that I have the honor to possess a poem entitled "Ode to the Rumanian Army," composed by an American lady in Bulgaria. This poem has never been published and I am sending it to you herewith. It expresses exactly my view of the Rumanian Government at that time—how it entered Bulgaria in a sneaking manner and committed crimes of every description on innocent children, women and old men. It runs as follows:

ODE TO THE RUMANIAN ARMY

BY ELIZABETH HUDSON HOLWAY.

King Carol viewed in princely way,
His wealth in livestock, land and gold;
"My realm is broad by land and sea,
My flocks and herds o'er-run the lea,
My palaces are fair to see;
But Bulgar fields are rich, I'm told,
And all the men are far away."

King Carol mustered in array
Six times a hundred thousand guns;
"We scoff at danger, laugh at fears;
Who says we're not the Bulgar's peers?
We'll seize their land ere many suns,
While all the men are far away."

King Carol laughed, as Kinglets may,
When planning to assuage his thirst
For Naboth's vineyard, and to wage
A war unknown to history's page
On weeping widows, wives and babes;
"So forward, my brave troops; but first
Make sure the men are all away."

King Carol marched one Summer's day,
To invade his neighbor's helpless land;
He marched across a bridge of boats;
He said: "There's nothing safer floats;
Nor fear we Bulgar keeps or moats,
For I've this great invasion planned,
When all the men are far away."

King Carol hastened on his way,
And gloried in his army's might;
Dismantled forts they bravely stormed,
Old men and boys, with care, disarmed,
And in defenseless cities swarmed—
Then from their precincts fled in fright,*
Lest all the men were not away.

King Carol swooped upon his prey,
And stripped it clean with fiendish glee;
Ate up its substance with the zest
Of caterpillars; brought the pest,
Took all he could and spoiled the rest;
"Hurrah! For who's afraid?" quoth he,
"With all the men so far away?"

*As, for example, at Orhany, whence they fled during the night at the firing of a single rifle—
V. N. M.

THE JEWS IN POLAND

BY JAMES JAY KANN

To the Editor of Current History:

By way of reply to Maurice Samuel's criticism of my article in your August issue on "The Jewish Problem in Poland," allow me to state that my allusion to "rare instances" of physical violence refers to five or six cases, with one exception located at the time within the zone of military warfare. Regarding these cases I wish to quote from Commissioner Morgenthau's report as follows:

Just as the Jews would resent being condemned as a race for the action of a few of their undesirable co-religionists, so it would be correspondingly unfair to condemn the Polish nation as a whole for the violence committed by uncontrolled troops or local mobs. These excesses were apparently not premeditated, for if they had been part of a preconceived plan the number of victims would have run into the thousands instead of amounting to about 280.

In substantiation of my statement that the Polish Government's failure to protect the Jews is not due to any predetermined policy, I cite this from Mr. Morgenthau's report:

It is believed that these excesses were the result of a widespread anti-semitic prejudice aggravated by the belief that the Jewish inhabitants were politically hostile to the Polish State. When the boundaries of Poland are once fixed and the internal organization of the country is perfected the Polish Government will be increasingly able to protect all classes of Polish citizenry.

The following passages are from the report of Homer H. Johnson, a third member of the Morgenthau Mission:

We are of the opinion, in view of the previous training of the Polish soldiery in the German, Austrian and Russian Armies, the Eastern low valuation of human life, the want of food and clothing which had accompanied the breaking up of the Central Powers, and the universal tenseness of popular nerves worn by the vicissitudes of war, that the antagonism felt by the Polish military toward the Jews and resulting in depredation and violence against them is not a matter of surprise, reprehensible and regrettable as it is.

In concluding the matter of physical violence to the Jews, I quote the following from the report of Sir Stuart Samuel, British Chief Commissioner to Poland, for the investigation of this matter:

The military authorities endeavored to restrict the action of the soldiers as much as possible * * * as the civil authority has been able to make its power effective; so the position in the rear of the troops has become more and more satisfactory.

Captain P. Wright, also a member of the British Commission, reports as follows, in speaking of the number of Jews killed: "One would be too many, but taking these casualties as a standard with which to measure the excesses committed against them (the Jews), I am more astonished at their smallness than their greatness."

Regarding the criticism of my statements that the Jews form the great class of merchants, the greater percentage being "peddlers or petty traders," I wish to add that this state was forced on them by the laws of the country, and to quote from the Morgenthau report as follows:

If American Jewry want to cure the evils in Poland, they must get at the root of them. Sending one or two million Jews to Palestine will do little good; the evil consists in allowing the Jews in a town to follow one or two pursuits. Where there are 5,000, perhaps 1,000 could make an honest living, but 5,000 must cheat each other or starve.

Where is the historical authority for the statement that there were Jews in Poland before the Poles, and if so, why has the country been known as Poland for centuries? And if my critic considers the Litwacs the "modernizing element" among the Jews in Poland, how would he characterize the Jewish "Assimilators," to whom they are violently opposed?

If, as my critic states, the "separatism of the Polish Jew is confined to utterly harmless details of dress and appearance," why does Henry Morgenthau say:

Polish national feeling is irritated by what is regarded as the "alien" character of the great mass of the Jewish population. This is constantly brought home to the Poles by the fact that the majority of the Jews affect a distinctive dress, observe the Sabbath on Saturday, conduct business on Sunday, have separate dietary laws, wear long beards and speak a language of their own. The great majority of Jews in Poland belong to separate Jewish political parties. * * * The concentration of the Jews in separate districts or quarters in Polish cities also emphasizes the

line of demarkation separating them from other citizens.

My critic states that the Jew in Poland does not need or desire outside tuition as to the modern conception of religious practice. In reply let me once again quote Henry Morgenthau, who says:

They must be given schools of instruction. They must change their mode of life. It will take a year's intensive study to find out how to do it, but it would be a most creditable achievement for those Jews who have benefited by liberty in this country.

In substantiating the conclusions drawn in my article I can do no better than to

refer once more to the conclusion of Mr. Morgenthau's able report, which reads:

All citizens of Poland should realize that they must live together. They cannot be divorced from each other by force or by any court of law. When this idea is once thoroughly comprehended, every effort will necessarily be directed toward a better understanding and the amelioration of existing conditions, rather than toward augmenting antipathy and discontent. The Polish nation must see that its worst enemies are those who encourage this internal strife. A house divided against itself cannot stand. There must be but one class of citizens in Poland, all members of which should enjoy equal rights and render equal duties.

A PROTEST AGAINST THE ZIONISTS IN PALESTINE

BY F. C. SAKRAN

A native of Palestine and a member of the Palestine National League of America, which is opposed to Zionism and is in agreement with the Mohammedan-Christian League of Palestine

To the Editor of Current History:

I have read Gershon Agronsky's article, "Troubles of the Zionists in Palestine," in the October CURRENT HISTORY, with strong feelings of dissent and indignation. Well may the Zionists "concede that they have reached a searching time in their movement." The people of Palestine are thoroughly awake to the dangers of Zionism, and the world is beginning to question the motives of the apostles of this cult. The Zionists may be able to fool some people, but they can't fool all the people—at least, not all the time. Truth, crushed to earth, shall rise again. Zionism is headed toward certain failure, because it is founded on the exploded doctrine that might makes right and feeds on the discarded idea of divine rights.

The author seems to be impatient over the fact that the mandate has not been approved yet. He desires the League of Nations to grant immediately, and without delay, the demands of the Zionists concerning Palestine—demands which cannot be supported by any principle of law or logic—without even giving the people of that country an opportunity to express their views upon the matter. He complains that the suspension of Jewish immigration is a concession to the Arabs. Is there any

greater arrogance than this, or do the Arabs need a better warning or more convincing evidence of what they may expect from Zionism if their country should fall into its clutches? But the immigration question in Palestine will be settled by the people of that country and not by Russian Jews.

By what right do the Zionists of Russia, or of America claim title to the Holy Land which is not their country, and has not been for over two thousand years? By what authority do they assume jurisdiction over that province and undertake to dictate to its people? Mr. Agronsky seems to proceed on the false supposition that Palestine belongs to the Zionists, but he does not tell us how he arrives at such conclusions. According to him, the inhabitants of that country must not ask for anything but what the Zionists, through generosity or charity, allow them to retain. He forgets that the case is just the other way round and that the present population of Palestine, who have inherited the land from generation to generation, are the only people who have any right to say who should come into it or what form of government it should have. This right is guaranteed to them by the League of Nations covenant. The Zionists have no more right to dictate

to the people of Palestine, or to meddle in their affairs, than you or I have to meddle in the internal affairs of Siam.

He even condemns those British officers in Palestine who still possess sufficient freedom of judgment to see that the natives are not being given a square deal. Because the leaders of the people cry out against Zionist aggressions and try to defend their rights, he calls them "Arab agitators," but he quite overlooks the Zionist radicals. He admits, however, that the Zionists have tried to plant the seeds of labor troubles in the Holy Land. If any one doubts that many Zionists favor socialism, I can furnish sufficient evidence to satisfy any curious mind. The recent outbreaks in Palestine were caused by Jewish Bolshevik agitators and not by the peace-loving natives. The people of Palestine, Arabs and Jews, lived in peace together for centuries, until the Zionists invaded the land. The Jew enjoyed equal rights with his neighbors, the Mohammedans and Christians, until Russian radicals began to swarm into the country. Their attempt to divide the people, however, has utterly failed, and instead of starting a "class war" it has served to strengthen the ties of union among the in-

habitants. The seeds of radicalism cannot take root in the soil of Palestine. As for "the ordinary native," I can say on his behalf, just let him alone and don't force your services upon him, for he has not asked your assistance. When he appeals to you for help, you may go to his rescue, but until that time keep away from him.

Peace in Palestine is assured the moment the Zionist quits intriguing against that country. Peace cannot, however, be secured by having the League of Nations approve a mandate that carries any concessions to Zionism. This would be the sign for real trouble. The only way to restore peace and prosperity to the Holy Land is to abrogate the Balfour declaration, which cannot be defended on any ground whatsoever, and which amounts to the same proposition as if I attempted to dispose of your automobile without your knowledge or consent; to end the agitations of Zionists and their schemes to get possession of the country, and to recognize the indisputable right of the people to choose their own government and shape its course according to their own wishes. Until this is done the world will look in vain for peace and progress in the Holy Land.

THE GREEKS IN MACEDONIA

BY PHILIP STYLIANOS

Boston University School of Law, '22

To the Editor of Current History:

I note that Mr. Koudjoharoff, in the October CURRENT HISTORY, warns Americans against Greek-Macedonian propaganda. I am a Macedonian, and I know of no propaganda in behalf of Macedonia other than the Bulgarian propaganda. I invite Mr. Koudjoharoff to point to a single Greek Government organization here or abroad which is carrying on propaganda about Macedonia or any other portion of the Balkans. And in my turn I call his attention to the following Bulgarian propaganda agencies in America and abroad: (a) The Near East American, a weekly newspaper, published by Mr. Koudjoharoff and Mr. Poulieff, former Counselor of the Bulgarian Legation at Washington. This weekly is published at Washington anonymously in order to avoid being suspected as a Bul-

garian organ. (b) The recent lectures and newspaper interviews given in this country by Irene Shismanova Stephanova, professor in the Royal University of Sofia. All her lectures are appeals for the Bulgarization of Macedonia and Thrace. (c) The appeals made by the Narodni Glass of Granite City, organ of the Bulgarian Committee of Sofia in America. This organ, to which Mr. Koudjoharoff is a regular contributor, announced a few days ago that the Central Committee at Sofia would send to the Bulgarians in the United States the program of activities here, and that the Bulgarian Minister, Mr. Panaretoff, who has made many friends here, would be able to exert great influence over the United States Government to secure autonomy for Macedonia and Thrace. (d) The Albanian newspaper, Dielli, announced in one of its issues of

September that the Bulgarian Bureau and the Albanian Bureau at Geneva, under the label of Bureau of Unredeemed Balkan Peoples, were doing beautiful work among the delegates of the League of Nations for the revision of treaties in a way to favor Bulgaria at the expense of Greece. (e) Mr. Koudjoharoff and Mr. Poulieff, as the official agents of the Central Committee of Sofia, presented a few days ago to the State Department a document in which they pretend that over 300,000 Bulgarians of Thrace have been driven out by the Greeks and are now refugees in Bulgaria. In this connection it is well to note that the Turkish statistics of 1908 put the total number of Bulgarians in Thrace at 107,843!

Mr. Koudjoharoff also shows a profound knowledge of Mr. Brailsford's book, "Macedonia and Her People." Mr. Brailsford's testimony, on page 57 of the work mentioned, sustains the contention of the author of an article in *The Monitor* that Macedonian nationalism, speaking of Macedonia as a whole, is an artificial creation of Balkan propagandists and komitadjis.

I feel, however, that the writer in *The Monitor* did not do justice to the Greek Macedonians. Greece received what is termed the extreme south of Macedonia. It is known even to grammar school readers of history, even in Bulgaria, that Saloniki, Kavalla, Serres, Xanthi, Castoria, Ellassona, Katerini, have always been Greek cities and districts. The Bulgarians have never yet contested those wholly Grecophone districts. As to a number of districts bordering on the Serbo-Bulgarian frontiers, which are Slavophone, we might adduce the following incontestable evidences to show that those Slavophones had a Greek conscience as recently as the year 1912:

(a) In 1912 the Young Turks, having shown clear signs of desiring to Turkify Macedonia, the Bulgarian Exarchate and the Greek Patriarchate, acting in full accord with the Governments of Sofia and Athens, respectively, came to a solemn agreement. It was agreed that at the then impending Turkish elections the Greeks should elect six deputies from Macedonia and the Bulgarians only four. It is to be noted here that the Bulgarians recognized the Districts of Ellassona and Kozani as

being so Greek that they were not included in the above-mentioned agreement.

(b) The Greek elections of 1915 brought into the Greek Parliament a large number of Turks and Jews from Macedonia, *but not one single Bulgarian Deputy*. And I challenge Mr. Koudjoharoff and all his Bulgarian agents, here or abroad, to produce reliable evidence proving that, while perfect liberty was accorded to the Turks, when Greece was at war with Turkey, to elect their own representatives for the Greek Parliament, such liberty was denied to the Bulgarian nationality in Greek Macedonia. Even Mr. Koudjoharoff will admit that the absence of a Bulgarian Deputy in the Greek Parliament is a conclusive proof of the absence of Bulgarians in Greek Macedonia.

Furthermore, taking into account that the Young Turks elected one Deputy for every 100,000 inhabitants, according to the agreement of 1912 between Bulgaria and Greece, for six Greek Deputies and four Bulgarians, there were in Macedonia at that time 600,000 Greeks. These numbers are sustained by the Italian ethnologist Amadori Virgili, who gives the total number of Greeks in Macedonia in 1908 as 592,302. Greek Macedonia today has a total population of 500,000. It is evident, then, that Greece has left to somebody in the Balkans a total Greek population of 100,000 and is quite willing to remain content with the Treaty of Bucharest as regards Macedonia.

As to the fiction of the undocumented declaration of a Greek officer that a Slav-speaking regiment in Macedonia was Bulgarian in soul, I need hardly advise Mr. Koudjoharoff that the readers of *CURRENT HISTORY* will receive it with that welcome accorded to invented, undocumented and *ex parte* propaganda.

I understand perfectly why there is a Bulgarian propaganda and why there is no Greek propaganda and no need of any. But what I cannot very well understand is the meaning of the outcry of Mr. Koudjoharoff against the imaginary Greek propaganda. I fear that he is quixotic in this case, or that he tries to justify the existence of Bulgarian propaganda by alleging the existence of Greek propaganda.

37 Batavia Street, Boston, Oct. 12, 1921.

THE GUILT OF KING CONSTANTINE

BY M. J. PATISTEAS

Massachusetts Institute of Technology, '22

To the Editor of Current History:

I wish to reply to the following contentions of Mr. Gregory in his letter in the October issue of your magazine:

(1) That Mr. Cassavetes did not convince him of the guilt of Constantine in regard to the violation of the Greco-Serbian Treaty. I believe that Mr. Cassavetes did not try to prove the guilt. He merely stated that it was established by the tribunal of mankind's foremost students of international agreements. That Constantine signed the decree for a general mobilization in 1915, with the explanation of Mr. Venizelos that Greece was treaty-bound to aid Serbia, should leave no doubt in the minds of the Greek royalists about the cowardly act of Constantine.

(2) That the cold-blooded assassination of French marines in the streets of Athens was, as Mr. Gregory agrees, perpetrated by Royalist Greeks, wearing the Greek uniform, but that they were not, forsooth, Greek soldiers. Very well. Where, then, were the Athenian police? How did the "mob" get the uniforms, the machine guns, and the Greek Army rifles? Could a mob have terrorized officers? And were the mob leaders punished?

(3) That Constantine surrendered Fort Rupel to the Germans in order to match the occupation of Saloniki by the Allies. This is what Mr. Cassavetes has contended. Saloniki was occupied at the invitation of the Greek Government with the assent of Constantine, who changed his mind only on the eve of the landing of the allied troops. Fort Rupel was surrendered to the Germans secretly with the avowed purpose of weakening the position of the Allies. Constantine was anxious to see the Germans

whip the Allies. In other words, he was pro-German. And that is exactly the contention of Mr. Cassavetes.

(4) That the largest and most intelligent cities of Greece voted against Mr. Venizelos. Here Mr. Gregory is lamentably in error. Athens, Volo, Saloniki, Patras, Pyrgos, Calamata, Piraeus, Jannina, Preveza, Cavalla, Rhodosto, Adrianople, Xanthi, Serres, Chania, the Islands of the Aegean, Thrace, Epirus, admittedly the most progressive portions of Hellenism, all went for Mr. Venizelos. The rural classes of Greece and the Jews and Turks of Macedonia voted against him.

Mr. Gregory writes: "My object is not to defend the King of the Hellenes, but the good judgment of the Hellenes themselves." I do not know of a more remarkable method of reasoning than this. Mr. Gregory admits that he does not know whether Constantine is guilty of the moral crimes attributed to him by the entire allied world and by America; but he defends "the good judgment of the Hellenes," who brought Constantine back. I venture to suggest that Mr. Gregory's judgment would have been infinitely better if he had first made up his mind as to the culpability or innocence of Constantine. Then only would he have been in a position to give sound judgment on "the good judgment of the Hellenes," who voted for Constantine.

The "intellectual Greek Royalists"—the "Democrat" Royalists, if you please—deny the guilt of Constantine with as perfect equanimity as they deny the unmorality of cheering for democracy in South Carolina and for absolute monarchism in Athens at the same time and in one breath.

Boston, Mass., Oct. 14, 1921.

CZECHOSLOVAKIA'S RIGHT TO STATEHOOD

BY ADAM POLIAK

Secretary of the Slovak League of America, Chicago District

To the Editor of Current History:

In your August issue you published an article, "Czechoslovakia's Right to Statehood Assailed," written by Anthony Pessenlehner, in which the author held that the new Czechoslovak Republic has no right to Statehood from a historical, political, economical or ethnographical standpoint. This article was pure Magyar propaganda, intended to disunite the Slovaks from the Czechoslovak Republic. Slovakia is the solid basis upon which the Magyars economically depended, for it is rich in natural resources; it was to the Slovaks, therefore, that the Magyars preached the Roman freedom, and, from 1840 to 1914, the English freedom with a Mongolian spirit. Ever since the Magyar invasion of Hungary (in 896 A. D.) their object has been to Magyarize all who lived in Hungary; but they have failed because there was too large a population of Slavic nationalities.

Historically speaking, the ancestors of present Czecho-Slavs entered Hungary in the fifth century. The Moravian Empire existed in 861-894—the reign of Svatopluk of the Great Moravia. There is also proof that St. Methodius was created Archbishop of the Great Moravia and Pannonia by the Pope in 868.* So, also, there is historical proof that the "Pannonians were all Slavs."† Again, there was the Czech Kingdom, whose independence was lost in 1620.‡

In 1844 the Magyars deposed the Latin language from its place as the official language of Hungary and substituted their own instead. But "in this struggle lay the germ of a conflict of races which was later to be most disastrous to the Magyars themselves; they were not willing to grant to others the rights which they had demanded

for themselves."§ Louis Kossuth, who pushed the Magyars ahead, was of pure Slovak parentage, and Alexander Petori, the poet, was likewise of Slovak origin. "While the Slovaks thus presented the Magyars with two of their traditional heroes, they at the same time produced two men of the highest literary eminence who were destined to influence the entire Slav world."§§ These two men were Paul Safarik (Schafarik) and John Kollár.

Mr. Pessenlehner says that "until a few decades ago the Czechs were quite content with their lot within the confines of Austria," and that "the masses of the Slovak people remained loyal to Hungary." These statements are contrary to fact. In the World War the Czechoslovak soldiers everywhere proved that they were Czechoslovak in spirit—that they already had a national soul; later their republic was promptly recognized by the civilized world.

The Slovaks, Czechs, Moravians and Rutenians understand each other and their literature without any interpreters. It is too late for any Magyar propagandist to try to convince the world that they are aliens to each other.

PARTITION OF UPPER SILESIA

Text of the decision of the League of Nations Council, which divides the rich mining district between Germany and Poland, at last settling a dispute which caused two years of turmoil

THE Premiers of the Interallied Supreme Council, assembled in Paris for discussion and settlement of the dangerous problem of Upper Silesia, decided at the session of Aug. 12, 1921, that they could reach no agreement, owing to irreconcilable differences of view between the British and French Governments, and that the whole matter in dispute should be referred to the Council of the League of Nations. This result came after weeks of note exchanges between France and Germany on the one hand, and France and Great Britain on the other. It was the negative culmination of a series of events dating from the signing of the Treaty of Versailles.

The revised treaty calling for the holding of a plebiscite in this rich coal territory, claimed both by the Germans and the Poles on historical and population grounds, was signed on June 28, 1919. The plebiscite was long deferred. Meanwhile intense excitement prevailed in Upper Silesia, and many clashes occurred between the two elements. In February, 1920, an Interallied Commission was appointed and placed in charge of the district pending the holding of the popular vote. The date for this event was finally fixed for March 20, 1921. The plebiscite was held; its final result, as given by the Interallied Commission itself, was as follows: Germans, 716,408; Poles, 471,406. Though this seemed to mean a victory for Germany, the situation was vastly complicated by the peculiar distribution of the vote, especially in the southeastern triangle, which contained the majority of the coal mines. Faced with this complication, the allied Premiers were in great

doubt as to what course to pursue. The English favored giving the largest part of the province to Germany, as she demanded; the French insisted that their protégé, Poland, should receive most of the mining district.

While the Premiers and the Interallied Commission were still deliberating, unable to reach a decision, a false rumor was printed in a German paper declaring that the Allies had decided to grant Germany almost all the disputed area. Believing this, the Poles of Upper Silesia, headed by Adalbert Korfanty, the Polish High Commissioner, started an insurrection, which assumed alarming proportions and threatened

Both shaded areas together represent Upper Silesia. Dark line separating the two kinds of shading is new boundary fixed by the League of Nations between German and Polish portions of disputed territory. Each gets a share of the mines.

for a time to break the friendship between France and England. Finally, on June 10, 1921, Korfanty, realizing that his coup had failed, signed an agreement with the Inter-allied Commission, promising to demobilize his troops on condition that Germany did the same. The allied Premiers met on Aug. 12 for a last desperate attempt to settle the boundary question, but their differences proved irreconcilable. By mutual consent, therefore, they agreed to refer the whole matter to the League of Nations Council, pledging themselves (Aug. 24) to accept the League Council's solution. The League accepted the task on Aug. 29 and began work upon it at once. The details were referred to a committee composed of four non-permanent members of the League Council, viz., M. Paul Hymans of Belgium, Senhor da Cunha of Brazil, Señor Quinones de Leon of Spain, and Dr. Wellington Koo of China. These four sent a neutral commission to the plebiscite area and themselves heard evidence from both Poles and Germans of all ranks. In due time they formulated what they regarded as a just solution of the knotty problem. By the first week in October this solution had been adopted by all the allied Governments and had been laid before the disputants. It caused some agitated comments and gestures in Germany, but by the end of October it had been accepted by both sides and had apparently gone into history as the first large practical achievement of the League of Nations.

The full text of the League Council's solution of the Upper Silesian problem was made public on Oct. 20 by the British Foreign Office. All the essential portions of the document, with a map showing the new boundary line dividing the plebiscite area, are given herewith. While Upper Silesia is partitioned between the two disputants, the whole is to remain for fifteen years under the control of the Upper Silesian Mixed Commission, which is to aid in the prevention of friction during the period of adjustment. The British Foreign Office sent out the text with a covering letter which stated that the League's decision had now become the decision of the conference of Ambassadors, "acting in the name of and by the special mandate of the British Empire, France, Italy and Japan, signatories, together with the United States of America,

as the principal allied and associated powers, of the Treaty of Peace of Versailles."

TEXT OF THE DECISION

The text of the League Council's decision, with a few unessential omissions, is as follows:

The council, being convinced that its duty was, above all, to endeavor to find a solution in conformity with the wishes of the inhabitants, as expressed by the plebiscite, while taking into account the geographical and economic situation of the various districts, has been led to the conclusion that it is necessary to divide the industrial region of Upper Silesia. Owing to the geographical distribution of the population and the mixture of the racial elements, any division of this district must inevitably result in leaving relatively large minorities on both sides of the line and in separating important interests.

In these circumstances, the council considered that it would be desirable to take measures to guarantee during a provisional period of readjustment the continuity of the economic life of this region, which, owing to the density of its population, the number of its industrial undertakings, the closely woven network of its means of communication, possesses the character of a vast agglomeration. It was also of the opinion that it would be desirable to provide for the protection of minorities. Such are the general principles by which the council was governed.

The council came to the conclusion that the most equitable solution would be obtained by the frontier line which is described below and the adoption of which it unanimously decided to recommend.

READJUSTMENT PERIOD

The measures which the council considers necessary in order to insure the continuity of the economic and social existence of Upper Silesia, and to reduce to a minimum the inconvenience of the period of readjustment, are chiefly designed with the following objects:

To preserve, for a certain time, for the industries of the territory separated from Germany their former markets, and to insure the supplies of raw material and manufactured products which are indispensable to these industries; to avoid the economic disturbances which would be caused by the immediate substitution of the Polish mark for the German mark as the sole legal currency in the territory assigned to Poland; to prevent the working of the railways serving Upper Silesia from being affected by the shifting of the political frontier; to regulate the supplies of water and electricity; to maintain freedom of movement for individuals across the new frontier; to guarantee respect for private property; to guarantee, as far as possible, to the workers that they shall not lose, in the portion of territory assigned to Poland, the advantages which were secured to them by Ger-

man social legislation and by their trades union organization, and, finally, to ensure the protection of minorities on the basis of an equitable reciprocity.

The solution of these problems should be achieved by means of arrangements effected under the form of a general convention between Germany and Poland. The Treaty of Versailles has provided, in several analogous cases, for conventions of this kind. As regards Upper Silesia, the treaty has regulated certain questions by means of special provisions. Article 92 stipulated, moreover, that "further agreements will regulate all questions arising out of the cession of the above territory which are not regulated by the present treaty."

The conclusion between the parties of a general convention, which will place Upper Silesia under a special régime during the transitional period, seems to correspond to the intentions already expressed by the States concerned. Both Germany and Poland have indeed already considered the establishment of special institutions for this region.

THE MIXED COMMISSION

With a view to facilitating the preparation and to supervising the application of the above temporary measures, which should be incorporated in a general convention, the council considers that it is necessary to set up a commission composed of an equal number of Germans and Poles from Upper Silesia, and of a President of another nationality, who might be designated by the Council of the League of Nations. This commission might be called the "Upper Silesia Mixed Commission." It would be essentially an advisory organ.

Further, it would also be expedient to constitute an arbitral tribunal to settle any private disputes which might be occasioned by the application of the temporary measures. All disputes in connection with the carrying out and the interpretation of the general convention should be settled in conformity with the provisions of this convention and, where necessary, with the covenant of the League of Nations.

A Frontier Delimitation Commission should mark out the course of the frontier on the spot. It will be the duty of the Interallied Commission already in existence to take the necessary measures for the maintenance of order during this preliminary period. The mixed commission referred to above should be appointed without delay in order that it may give its assistance to the Interallied Commission, which, taking into account the provisions of paragraph 6 of the Annex to Article 88 of the Treaty of Versailles, will take measures for preparing the transition from the present situation to the provisional régime.

[This treaty clause provides for the taking over by the German and Polish authorities of the administration of the territory assigned to them respectively within a month of the official notification of the fixing of the frontier and the immediate dissolution of the allied Control Commission on this taking place. To avoid prema-

ture withdrawal, the Allies on Oct. 20 "communicated" the Upper Silesian decision to Germany and Poland, reserving the "notification" for some later date when the Economic and Mixed Commissions shall have things in running order.]

BOUNDARY DEFINED

[The council attached four annexes to its recommendations. In Annexe I, it set out the general principles by which it was guided in arriving at its decision. In Annexe II, it traced the suggested line of demarcation in detail. Annexe III, enumerates the important provisions designed to secure continuity in the life of Upper Silesia after the partition and to reduce to a minimum the difficulties of the period of adaptation. Finally, in Annexe IV, the council sets out its decisions on the rights of nationality and domicile and protection of minorities in Upper Silesia. The description of the frontier line, as recommended in Annexe II,—and now adopted—is as follows:]

The frontier line would follow the Oder from the point where that river enters Upper Silesia as far as Niebetschau, would then run towards the northeast, leaving in Polish territory the communes of Hohenbirken, Wilhelmsthal, Raschütz, Adamowitz, Bogunitz, Lissek, Summin, Zwonowitz, Chwallenczitz, Ocholetz, Wilcza (upper and lower), Kriewald, Knurów, Gieraltowitz, Preiswitz, Makoschau, Kunzendorf, Paulsdorf, Ruda, Orzegow, Schlesiengrube, Hohenlinde;

And leaving in German territory the communes of Ostrog, Markowitz, Babitz, Gurex, Stodoll, Niederdorf, Vilchowitz, Nieborowitz, Hammer, Nieborowitz, Schönwald, Ellguth Zabrze, Sosnica, Mathesdorf, Zabrze, Bisputitz, Bobrek, Schomberg;

Thence it would pass between Rossberg (which falls to Germany) and Birkenhain (which falls to Poland), and would take a northwesterly direction.

Leaving in German territory the communes of Karf, Miechowitz, Stollarzowitz, Friedrichswille, Ptakowitz, Larischhof, Miedar, Hanusek, Neudorf-Tworog, Kottenlust, Potemba, Keltzen, Zawadski, Plüder-Petershof, Klein-Lagiewnik, Skrzidlowitz, Gwosdzian, Dzielna, Cziasnau, Sorowski,

And leaving in Polish territory the communes of Scharley, Radzionkau, Trockenberg, Neu-Repten, Alt-Repten, Alt-Tarnowitz, Rybna, Piassetzna, Boruschowitz, Mikoleska, Drathhammer, Bruschick, Wüstenhammer, Kokottek, Koschmieder, Pawonkau, Spiegelhof (Gutsbezirk), Gross Lagiewnik, Glinitz, Kochschütz, Lissau.

To the north of the latter place it would coincide with the former frontier of the German Empire, as far as the point where the latter frontier joins the frontier already fixed between Germany and Poland.

[The following provisions, embodied in Annexe III, are designed to insure continuity in the economic life of Upper Silesia after the parti-

tion, and to reduce to a minimum the difficulties of the period of adaptation:]

The administration of railway and tramway systems which belong to private concerns or municipalities shall continue to be governed by the terms of their concessions, as regards rights and obligations. The railway system of the Schlesiische Kleinbahn Aktiengesellschaft shall continue to be operated as a single unit for fifteen years. For the German State railways, both normal and narrow gauge, a joint system of operation shall be put into force in the plebiscite area, for fifteen years.

The amount of rolling stock allotted to the plebiscite area shall be determined in accordance with Article 371 of the Treaty of Versailles. Railway rates shall be uniform. The administration of the State insurance and social insurance employes of the Silesian railway system shall be undertaken by that system.

Expenses of new construction shall be borne by the State on whose territory they are carried out. The working capital necessary for operation shall be lent by the German State; the interest on this capital will be charged to the account of the system. The profits or deficit shall be divided between the two countries, in proportion to the length of the line belonging to each and the amount of traffic.

In so far as the territory which comprises the existing water supply system has not been entirely allotted to one of the two countries, in default of a special agreement between the parties, the existing system shall be maintained. The reserve water supply of the Tarnowitz and Olhucz district shall be at the disposal of the whole territory of Upper Silesia. The Oberschlesische Elektrizitätswerke shall continue to operate as at present for a period of three years. After this the Polish Government may purchase the Chorsow power station and the system dependent thereon. The above company shall furnish electricity on the same terms to both parts of the territory, so long as a Polish company shall not have been established.

During a period which shall not exceed fifteen years the German mark shall remain the only legal unit of currency in the plebiscite area, and the Polish Government shall recognize in the territory assigned to Poland the rights and privileges of the German Reichsbank, which shall be permitted to maintain its branches in such territory. The two Governments may decide by common agreement to modify this system before the expiration of this period.

Failing agreement between the two Governments, and in the case when a modification of the monetary system should become necessary, a date may be fixed as from which the German mark would cease to be the only legal unit of currency. The customs frontier will be made coterminous with the new political frontier as soon as the latter has been fixed. The German and Polish customs law and customs tariffs shall be applied with certain exceptions (specified by the League Council) to meet for varying periods up to the limit of fifteen years the need of allowing the interchange of raw material and other commodities between the two partitioned areas free of customs duty.

In conformity with Article 268 of the Treaty of Versailles, natural or manufactured products which originate in and come from the Polish zone of the plebiscite area shall on importation into German customs territory be exempt from all customs duty during three years from the notification of the delimitation of the frontier to Germany and to Poland.

The two countries shall undertake to facilitate during fifteen years the export from their respective territories of products indispensable for the industry of either zone of the plebiscite area, by supplying the necessary export licenses and by authorizing the execution of contracts entered into between private individuals.

Any arrangement with regard to the customs régime on the new Polish-German frontier in Upper Silesia, which is not an application of the principle stated above, shall be considered as an ordinary commercial agreement between Poland and Germany.

THE COAL MINES

In conformity with Article 90 of the Treaty of Versailles, Poland shall permit for fifteen years the exportation to Germany of the products of the mines in the Polish zone of the plebiscite area. As regards coal, account shall be taken in the application of this article of the provisions of the different treaties of peace, and of the international decisions and agreements, between Germany, Poland, and the countries directly or indirectly concerned in the importation of coal from Upper Silesia, which impose obligations on Germany and Poland in respect of coal.

Germany shall permit for fifteen years the exportation, to the Polish zone of the plebiscite area, of the products of the mines in its territory, under Article 90 of the Treaty of Versailles. The quantities of the products of the mines to which this provision shall apply shall be calculated on the basis of the average exchange of these products in the years 1911 to 1913.

The German and Polish Governments shall recognize for fifteen years those unions of employers and workers whose activities take place within the plebiscite area. These unions may enter into collective contracts throughout the whole plebiscite area.

The transfer of the funds of German social and State insurances to Poland should take place in accordance with Article 312 of the Treaty of Versailles. The Polish Government shall establish as soon as possible for the Polish zone the special insurance societies and the special jurisdiction for administrative matters and for the hearing of causes.

FREE MOVEMENT

[Rights of nationality and domicile are defined in Annexe IV. as follows:]

During fifteen years any inhabitant regularly domiciled in the plebiscite area, or having a regular or professional occupation therein, shall receive a circulation permit free of payment, which will permit him to cross the frontier without other formalities.

The two countries shall recognize and respect, in the territory which shall be allotted to them, rights of all kinds, in particular concessions and privileges acquired at the date of the partition by individuals, companies, or other legal entities. Poland shall renounce for fifteen years the powers granted by Article 92 as regards the expropriation of industrial undertakings, mines or deposits, save where such powers are indispensable to insure continued operation.

Any dispute between the German and Polish Governments which may occur within fifteen years in respect of any legislative measure adopted by either of the two countries for the control of companies or industrial or commercial enterprises, and limiting in a manner contrary to justice the freedom of these companies or enterprises, from the point of view of the nationality of their personnel, of their directors or

of their capital, may be referred by the Government concerned to the Council of the League of Nations, whose decision both Governments undertake to accept.

[Questions of nationality will be decided under Article 91 of the Treaty of Versailles, and Articles 3-6 of the Minorities Treaty of 1919. German nationals who opt for German nationality may still retain their domicile in the Polish partitioned area for fifteen years. The same principle applies to those who opt for Polish nationality, but have their domicile in the German partitioned area. With regard to the protection of minorities in the partitioned areas, Germany for fifteen years at least must accept the same obligations as those which will operate under the treaty of June, 1919, with regard to the Polish portion of Upper Silesia.]

GERMANY'S DIFFICULTIES

Dr. Wirth's Cabinet reorganized because of popular dissatisfaction with the Silesian decision—Measures sought to stop the alarming fall of the mark—Business operating feverishly under the false stimulus of inflation

[PERIOD ENDED NOV. 10, 1921]

AFTER having furnished a German political version of the old railroad story of "Off again, on again," Dr. Wirth is still Chancellor of the German Republic. With the exchange value of the mark dropping every day, little headway being made with his taxation program, the Reparation Commission in Berlin studying the financial situation, and the People's Party (the big business group headed by Hugo Stinnes) demanding practical control of the Government as the price of coming to his aid with foreign credits estimated at 1,000,000,000 gold marks, Dr. Wirth is in a decidedly uncomfortable position, but he seems determined to try to weather the storm without steering the ship of State too far to either the right or the left.

On Oct. 22, unable to persuade the People's Party leaders to agree to support his plan to accept the League of Nations decision dividing Upper Silesia between Poland and Germany, and to send a German Commissioner to negotiate with the Poles on the economic situation, Dr. Wirth resolved on a trial of strength and placed the resignation of his Cabinet in the hands of President Ebert. Three days later, after vain efforts to induce representatives of the

People's Party to help form a new Cabinet, the Social Democratic President asked Dr. Wirth to resume his old post and do the best he could. This request was heeded, and the next day (Oct. 26) the Chancellor announced the makeup of the new Government. The Reichstag gave him a vote of confidence the same evening, the vote being 230 to 132. The Chancellor's supporters were the Social Democrats (Majority Socialists), the Independent Socialists, the Centrists and the Democrats. Neither the Independents nor the Democrats obligated themselves to support Dr. Wirth in all circumstances, but they promised qualified support. The new Cabinet is as follows:

Chancellor and Minister of Foreign Affairs—**DR. WIRTH** (Centrist).

Minister of the Treasury and Vice Chancellor—**GUSTAV BAUER** (Social Democrat).

Minister of the Interior—**ADOLF KOESTER** (Social Democrat).

Minister of Defense—**DR. GESSLER** (Democrat).

Minister of Economics—**ROBERT SCHMIDT** (Social Democrat).

Minister of Agriculture and Foodstuffs, and Finance and Interim—**ANDREAS HERMES** (Centrist).

Minister of Posts and Telegraphs—**JOHANN GIESBERTS** (Centrist).

Minister of Labor—DR. HEINRICH BRAUNS (Centrist).

Minister of Transportation—GENERAL GROENER (Democrat).

Minister of Justice—DR. GUSTAV RADBRUCH (Social Democrat).

The post of Minister of Reconstruction was left open, but it was expected that Dr. Walter Rathenau, the former incumbent, would be able to obtain the consent of his fellow-Democrats to re-enter the Cabinet as a matter of patriotic duty, despite the fact that the Democratic Party did not intend to assume any responsibility for the acts of the new Government. From a political viewpoint the Cabinet is Centrist-Social Democratic, as Dr. Gessler and General Groener are supposed to be serving merely as non-partisan experts. The new men in the Cabinet are Dr. Radbruch, a professor at Kiel University, and Dr. Koesler, who was Foreign Minister in the Herman Mueller Ministry. The three members of the old Cabinet not present in the new Government are Dr. Rosen, ex-Foreign Minister; Dr. Schiffer, ex-Minister of Justice, and George Gradnauer, ex-Minister of the Interior. Herr Gradnauer has been named Saxon representative in Berlin.

Dr. Schiffer was appointed by the Cabinet on Oct. 27 as National Commissioner to negotiate with the Poles and the Council of the League of Nations on Upper Silesian conditions, with Dr. Lewald, Secretary of State in the Ministry of the Interior, as his deputy. The Council of Ambassadors in Paris was duly notified of Germany's acceptance of the Upper Silesian decision. [The text of this decision is printed on pages 501-4.] This notification was accompanied by a German protest, but in acknowledging its receipt the Council of Ambassadors remarked that the protest was "without foundation" and would, therefore, "be considered null and void." The main fact was that the Germans apparently had decided to make the best of what they called an "outrageous situation," and trust to the future for possible changes in their favor. The German Government officially denied Paris rumors of German sabotage of industrial plants and railways in Upper Silesia, and on Oct. 29 officials of German mining and smelting companies in the Koenigshuette and Laurahuette districts met in Berlin and declared that they intended to run their plants as efficiently as possible,

even if they were under Polish political rule.

The first concrete result of the decision of the Goerlitz Social Democratic Convention allowing its members to work with People's Party men where this could be done to the advantage of the republic was seen on Nov. 5, when, according to a Berlin cablegram, Otto Braun, a leading Social Democrat and former Prussian Minister of Agriculture, was elected by the Diet to head the Prussian Ministry in place of Adam Stegerwald, who had resigned on Nov. 1. Premier Braun's new Cabinet was reported to be made up of three Social Democrats, two Centrists, two People's Party men and one Democrat. Such a combination would be sure of a big majority in the Diet, whereas the Centrist-Democratic Cabinet of Herr Stegerwald, organized last April, only existed on sufferance.

The arrival of the entire Reparation Commission in Berlin on Nov. 10 for the purpose of studying the financial crisis, due to the rapid fall in the exchange value of the mark, and consulting with German officials and experts regarding means of guaranteeing future payments on the reparation account, gave rise to a huge crop of rumors concerning the imminent bankruptcy of the republic, its taking over by the allied powers as receivers, and similar possibilities. The definite facts available up to Nov. 10 showed that the Reparation Commission had no intention of crowding its German creditors, as the payment scheduled for Nov. 15—some 300,000,000 gold marks, representing 26 per cent. of the German exports for the three months ended July 31—had been covered by deliveries of materials, and it appeared that the commission was willing to help make it easier for Germany to pay the regular fixed instalment of 500,000,000 gold marks due on Jan. 15, 1922. It was also reported that the problem of arranging for the carrying out of the Wiesbaden reparation agreement between Germany and France in such a way as to overcome the objections raised by Sir John Bradbury, British representative on the Reparation Commission, would be tackled.

Developments of the Wiesbaden agreement are treated in the article on France.

If a plan for economy in administration, recommended to the Supreme Council on Nov. 8 by an Interallied Commission ap-

pointed by the Council for the purpose of studying the situation in the occupied territory, is put into effect, the occupation costs to Germany during 1922 will be about 22,000,000 gold marks less than those of the current year. There will be a further reduction due to the winding up of the work of many of the allied commissions in Germany and the expected lessening of the forces of occupation. On Nov. 3 the German Government asked the Allies to evacuate such watering places as Wiesbaden on the ground that the presence of troops annoyed visitors and cut down the receipts of the resorts. Prince von Hatzfeld, the new German Commissioner for the occupied territory, was formally welcomed to Coblenz on Oct. 15. Under a German order, unopposed by the Interallied Rhine-land Commission, and effective Oct. 26, foreigners traveling through the occupied territory cannot take advantage of the depreciation of the mark by wholesale shopping, as they are forbidden to buy anything in the retail stores except what they need for immediate use or maintenance.

According to the decision on the delivery of river shipping to the Allies rendered by Walker D. Hines, the American arbitrator, Germany is to be credited with 15,450,000 gold marks for deliveries of Rhine vessels, with 8,350,000 for Elbe deliveries, and with 338,940 for Danube deliveries.

As the result of the protest against the continued military formation of the Security Police made by General Nollet, head of the Interallied Military Control Commission, the number of men in each unit was reduced from 121 to 104.

Through the decline in the value of the mark, which fell so low that 100 marks could be bought for 33 cents in New York on Nov. 7 and 330 for \$1 in Berlin on Nov. 8, the budget estimates and taxation plans of the Wirth Government were all upset. To this was added a promised increase of some 20 per cent. in the wages of all the State employes, including the railroad men, calculated to add about 30,000,000,000 marks to the yearly expenses of the Government. In explaining the new taxation bill to the Reichstag on Nov. 4, Minister Hermes pointed out that estimates for the fiscal year 1922 put receipts at 97,000,000,-

000 marks and expenditures at 182,000,000,000. He took occasion to remark that "an effective way out of this immense financial distress cannot be found until our erstwhile adversaries realize that, in the interests of their own peoples, the position of the German people, made considerably worse through the Silesian decision, must be rendered tolerable by reasonable adaptation of Germany's obligations to her capacity."

The League of German Industrialists, in which Hugo Stinnes plays a big rôle, voted on Nov. 7 to place foreign credits to the amount of 1,000,000,000 gold marks at the disposal of the Government, provided the Wirth Cabinet would agree to an efficiency program calling for governmental economies, the freeing of the country's economic life from hampering restrictions—such as the eight-hour day—consultation with private interests in formulating tax bills and the managing of State enterprises in such a way as to stop their drain upon the Treasury. The Socialist and radical press immediately warned the Government against being dictated to by private capitalists, and a conference held Nov. 9 between representatives of the industrialists and Chancellor Wirth was reported as fruitless. Stories of foreign loans to Germany were numerous, but nothing definite was reported.

In the midst of all the financial chaos German industries continued to operate feverishly, despite the high prices in paper marks demanded for foreign raw materials. The first week of November it was reported that the number of unemployed persons drawing Government aid was only about 100,000, against 189,000 on Oct. 1. As the mark dropped, the prices of industrial stocks went up and almost everybody owning large amounts of marks seemed determined to turn them into pieces of paper of more substantial value.

Baron Edmund von Thermann, described as a "special envoy commissioned to take up diplomatic relations with the United States pending the arrival of a regular German Ambassador," left Berlin for the United States on Nov. 5. The Baron was in the diplomatic service of the old empire.

AUSTRIA'S NEW FINANCIAL HOPES

Conclusion of peace with the United States regarded as a long step toward obtaining a foreign loan—Important arrangement between Vienna banks and their French creditors—The United States still demands the impossible

[FROM AN AMERICAN CORRESPONDENT IN VIENNA]

WHILE the news of the signing of the Peace Treaty with the United States, Aug. 24, 1921, at Vienna, was received quietly by the general public and was forgotten the following week amidst the popular indignation at the Hungarian coup in West Hungary, the Government and the Viennese financial press attached great significance to the treaty as being the greatest step yet taken toward realization of the much-talked-of foreign loan, upon which Austria has built its last hopes of avoiding utter collapse, and disintegration. The necessity of obtaining foreign credits was given by Federal Chancellor Schober as the reason for signing the treaty, when he laid that document before the Foreign Relations Committee of the National Assembly. The treaty was ratified Sept. 2 without debate, and became effective Nov. 8 with the exchange of ratifications in Vienna by Chancellor Schober and Arthur Hugh Frazier, the American Commissioner.

The Ter Meulen scheme for assisting Austria is based on the waiving for twenty years, by the allied and associated powers, of their general lien on Austrian resources imposed as security for reparations and other claims. During the week preceding the signing of the Austro-American Treaty, Italy agreed to waive her rights, thus leaving only the United States, Yugoslavia and Rumania still in the attitude of demanding payment of their bills against a bankrupt nation. It is generally recognized that any action taken by the United States would be followed by the other two countries. The Austrian Government hopes that, when the present obstacles are removed, a loan will be forthcoming through the Financial Committee of the League of Nations, which has the matter in charge.

The treaties signed with the three Central Powers—with Austria on Aug. 24, Germany on Aug. 25, and Hungary, Aug. 29—are alike in that the most important sections—the fi-

nancial and economic—are yet to be negotiated. In the case of Germany, the magnitude of the trading, shipping and investment interests involved endows the negotiations with great significance. As regards Austria, there is much less at stake, the inter-related problems of pre-war debts and Austrian property in America being the most important matters to be solved.

American trade with Austria has never been of the first magnitude. Foodstuffs have composed the bulk of American exports to Austria since the armistice, and will continue to hold first place in the trade with that country. With the exception of magnesite, which is extensively demanded in the United States, and of which Austria and Czechoslovakia have a virtual monopoly, Austrian exports to the United States have been chiefly articles of luxury, such as fancy leather goods, antiques, and the like. Declared exports from Austria to the United States for July amounted to only \$173,307. The conclusion of peace will be a great relief to Austrians wishing to go to America on business; hitherto it has been almost impossible to obtain visés. The thousands anxious to emigrate to America probably will be disappointed.

Settlement of pre-war debts is a question of vital interest to Austria at this time. The amount due creditors in the United States is approximately \$2,000,000, a small sum in comparison with the £6,000,000 due to English creditors and the 125,000,000 francs due in France. Before the war most American trade with Austria was financed in London.

Austria's assets in the United States, which were sequestrated by the Government during the war, amount to nearly \$8,000,000. It is for Congress to decide whether this property shall be returned to its private owners or held until all claims against Austria are settled. As the United States asks no reparations, those claims will consist for

the most part only of private pre-war accounts. Settlement of this question will release several million dollars in Austria's favor—a sum which looks very large to Austria at this time, as its Government is in desperate need of foreign "valuta" with which to pay for food imports.

In August considerable progress was made toward settlement of Austria's pre-war debts to the allied countries. It had long been evident that if Austrian debtors were forced to meet at par all their pre-war obligations payable in crowns, every large enterprise in the country would be forced into bankruptcy, owing to the extreme depreciation of the currency. [On Sept. 1 the exchange was about 1,100 crowns to the dollar, as compared with the normal rate of 5 crowns to the dollar.] The uncertainty of the situation has hung like a sword of Damocles over the heads of Austrian banks during the last three years. This uncertainty has been an obstacle to commerce, because bank guarantees, which are the cornerstone of the trading structure, have been valueless as long as the solvency of the banks themselves was in question.

Long strides toward a settlement, however, have now been made. The most important recent developments are: (1) A proposal of the Austrian Government to refund one-half of the foreign debts of Austrian concerns, and (2) an agreement reached at Paris Aug. 2 between the leading Vienna banks and their French creditors, according to which Austrian debts payable in crowns are scaled down to 30 centimes for each crown of the original debt. As the assistance promised by the Government, however, will be in the form of 5 per cent. State bonds, and not in cash, this

help will not be as important as it sounds, for the bonds will never reach par. But the Paris agreement is of great importance, as it furnishes an opportunity for the Viennese banks to regulate their position on the Paris market. The agreement provides that a first instalment of 12 centimes is due Dec. 31, 1921, further instalments of 9 centimes being payable on Dec. 31, 1922 and 1923, with 5 per cent. interest. French creditors were allowed—until Oct. 31, 1921—the option of accepting payment in francs, as above described, or of demanding payment in crowns of an equivalent value, this value to be calculated on the basis of the Zurich exchange the day the option was exercised.

The sum due France is partly covered by French debts to Austrian creditors, and partly by other Austrian assets in France, but after these credits are deducted there will still be left a balance of many million francs which Austrian debtors must pay within the next three years.

Austria's obligations to England are for the most part in the hands of the Bank of England, and the largest Viennese debtor is the Anglo-Austrian Bank. A bill was introduced in the National Assembly Sept. 3 to authorize the Anglo-Austrian Bank to convert itself into an English institution; the purpose of this plan is to allow a reorganization of the bank whereby the London creditors will be satisfied by a new issue of preferential stock. A similar bill authorizing the Laender Bank to change its headquarters to Paris was defeated at the last session of the National Assembly, after a stormy fight which developed sensational charges and counter-threats.

THE WAY TO WORLD PEACE

ELIHU ROOT, one of the American delegates to the Disarmament Conference, speaking in New York on Oct. 26, 1921, analyzed the obstacles in the way to universal peace, and pointed out the way to overcome them, in the following words:

The world is full of hatred and strife and murder today because of the incapacity of millions of people in organized States to receive the truth that is being spread throughout all civilization and that is to be theirs in centuries to come—but they are not ready for it. That

is a matter not of intellectual power, it is not a matter of learning, it is not a matter of precept; it is a matter of the development of character. * * * The development of character must come through exercise of the virtues that make human character—mercy, compassion, kindly consideration, brotherly affection, sympathy with fellow men, unselfish willingness to sacrifice for others. The exercise among the people of those qualities is the essential and the only way by which the character of the people may be developed, so that they may become truly civilized and truly Christian.

CHARLES OF AUSTRIA-HUNGARY EXILED

Ex-Emperor's second attempt at restoration ends in failure—Sent to the Madeira Islands—Hapsburgs permanently barred from the Hungarian Throne

AS was foreseen, the tangled situation in Burgenland was utilized by the supporters of ex-King Charles's claims to the throne for launching another attempt to restore Charles at Budapest. From the beginning the Magyar troops, regular and irregular, which occupied the Burgenland and prevented its transfer to Austria, were sharply divided into a Karlist and a Horthyist group, the former being led by Colonel Lehar, Major Ostenburg, Count Sigray, Commissioner for West Hungary, and the former Premier Stephen Friedrich, the latter by Colonel Pronay and Lieutenant Hejjas, close friends of Regent Horthy. On Oct. 22 Charles, accompanied by the ex-Empress Zita, appeared at Oedenburg, having made the trip from Herenstein Castle, near Lucerne, Switzerland, by airplane. His arrival was apparently better prepared for than the previous attempt at

Easter, for this time an army of 12,000 was placed immediately at his disposal.

After a day's delay, spent in celebrating the expected victory, Charles and his entourage proceeded, at the head of this army, which was commanded by Major Ostenburg, toward Budapest. At first it seemed that Charles would attain his goal without much difficulty. The garrison at Raab (Gyor), the first important city on his route, joined him, and a Cabinet was formed with Stephen Rakovsky, former Speaker of the National Assembly, as Premier, and including Count Julius Andrássy, Dr. Gustav Gratz and Edmund Beniczky, foremost Karlist leaders in Parliament. From Raab Charles issued a proclamation to the people, announcing his return, and convoking the old Parliament that had been dissolved by the revolution of October, 1918.

At Budapest the coup d'état created the greatest consternation. The Government, headed by Count Bethlen, assumed an equivocal attitude, apparently making its decision dependent on the attitude of the Entente Powers and the development of Charles's chances. Count Bethlen, the Premier, and other Ministers had been suspected of Karlist sympathies, and there is reason to believe that they would have gone over to Charles en bloc had there been an assurance of success. The bourgeoisie, mostly Jewish, as well as the organized workers, though by no means enthusiastic for a Hapsburg revival, were prepared to hail Charles as a welcome substitute for the terrorism of the Horthy régime, but they, too, preferred to mark time. On the first and even the second day of the crisis the allegiance of the military was similarly doubtful. Budapest was very scantily garrisoned, most of the army being concentrated in West Hungary and on the Yugoslav frontier. Meanwhile Charles's advance continued.

In the Entente capitals the Hapsburg venture was received with unanimous hostility. That the Little Entente would oppose the restoration was more or less a foregone conclusion; but the Karlist leaders had believed that their

THE ONLY WAY TO GET HIM OUT

friends at Paris and London wielded sufficient influence to turn the issue in their favor. They had the success of Constantine and of the Portuguese reactionary coup in mind, and thought that, as in those cases, the Allies would not interfere with an accomplished fact in Hungary. The more sanguine even hoped that the opposition to Hapsburg restoration was, as far as the Little Entente was concerned, sincere and thoroughgoing only in Czechoslovakia, and that in both Rumania and Jugoslavia the monarchistic element would tacitly sanction the return of legitimate monarchy. These hopes were openly expressed in press interviews by the Karlist leaders; they were, however, doomed to great disappointment.

A few hours after the news of Charles's landing at Odenburg had spread, mobilization was ordered in Czechoslovakia and Jugoslavia, and at Bucharest assurances were given that the Rumanian Government would stand by the anti-Hapsburg covenant with the other two succession States. On Oct. 24, two days after Charles's attempt, the Council of Ambassadors sent an ultimatum to Budapest, demanding Charles's deposition and delivery to the Entente representatives.

When this ultimatum arrived, however, the

fate of Charles was already settled by the quick and determined action of Horthy. After the first flurry of surprise the Regent, although he could not be sure even of the support of his own Cabinet members, rallied some loyal troops, recruited mostly from the region between the Danube and Theiss, and marched to meet Charles. An engagement was fought at Budaors, a few miles southwest of Budapest. Simultaneously with Horthy's attack the Karlist troops were attacked from the rear by the troops of Pronay and Hejjas, which had been hurried from Burgenland. Charles's defeat was complete, and the ex-King, after having ordered his troops to surrender so as to avoid further bloodshed, was himself taken prisoner with Queen Zita, while in flight toward Komorn. All the Karlist leaders at Raab—Andrassy, Rakovzky, Major Ostenburg, Count Sigray, Beniczky and Gratz—were arrested, and so were their sympathizers at Budapest, headed by Prince Louis Windischgrätz.

The captured leaders were taken to Budapest and jailed under allied supervision. Charles and Zita were first taken to the Esterhazy Castle near Tata-Tovaros, where the ex-King's half-hearted attempt at suicide was thwarted by his wife. Later they were transferred to the old Benedictine Abbey of Tihany, on Platten Lake, where Charles consistently refused repeated requests of the Government for his abdication. For several days his fate hung in the balance, as the Allies had resolved to exile him to a place sufficiently isolated to make a third return to Hungary impossible.

Finally the Council of Ambassadors selected the Island of Madeira, off the west coast of Africa. On Nov. 3 Charles and Zita were put on board a British monitor on the Danube at Bala, taken down to the Danube delta, and there transferred to the British cruiser Cardiff, which immediately proceeded with the ex-royal couple toward their distant destination.

A bill depriving the House of Hapsburg of its hereditary rights to the Hungarian throne was passed by the Hungarian National Assembly. The wording of the bill was protested by the Council of Ambassadors, as it was obvious that the statute left a loophole open for the election by popular vote of a member of the Hapsburg dynasty. On Nov. 8 the Hungarian Government issued a declaration, subject to ratification by the Assembly, correcting the ambiguity of the statute by an interpretation which bars the election of a Hapsburg King.

After the flight of Charles from Switzerland it developed that he had left behind debts running into several million francs. His property at Hertenstein was attached by the creditors. Not even the airplane which took him to Hungary was paid for.

SETBACK FOR GREECE IN THE NEAR EAST

THE situation in the Near East and the respective relations between Mustapha Kemal, on the one hand, and France, Italy and Great Britain, on the other, has been clarified by the successful termination of the peace negotiations with Angora conducted by France. The head of the French mission, Henry Franklin-Bouillon, has returned to Paris with the treaty, which was signed on Oct. 21 at Angora and ratified a few days later by the Angora Grand Parliament. It follows the lines of the treaty negotiated on March 9 at London, except in two clauses, the inclusion of which has caused the new treaty to be severely censured by Lord Curzon. These clauses—Articles VIII. and X.—embody concessions which Lord Curzon declares France had no right to make, as they dispose of mandated territory. Article VIII. fixes a boundary line between Turkey and French Syria running from the Bay of Alexandretta, near Bayas, to the railway station of Melden; thence southeast, leaving the region of Marsova in Syria and Killis in Turkey; thence to the railway at Tchebin Bey to Nisibin; thence north-east to Jezireh on the Tigris. Article X. record-

ed the consent of the Angora Government to the concession of the Bagdad Railway between Bozabti and Nisibin and the branch lines in the province of Adana to the French group.

The conclusion of this treaty, which gives France important advantages, including the possibility of withdrawing her troops from Cilicia, has left Greece isolated. After obtaining a vote of confidence, the Greek Premier, M. Gounaris, departed on a visit to the Western Chancelleries on Oct. 15 to stave off the expected signing of the Franco-Turkish Treaty. He left Paris empty-handed on the very day the treaty was signed. In London he persuaded Lord Curzon to remonstrate with France. Lord Granville, the British Minister at Athens, meanwhile took steps to negotiate with Angora in behalf of Greece. In case the Greeks should ultimately be able to comply with Mustapha Kemal's demands.

[The article on Near Eastern affairs in last month's *CURRENT HISTORY* contained an extract from a letter of Ali Fuad, Turkish Ambassador at Moscow, to the Soviet Government, explaining certain incidents in connection with the Kemalists. Due credit for the translation used—that of *The New York Nation*—was inadvertently omitted.—Editor].

FRANCE AND MUSTAPHA KEMAL

PREMIER BRIAND was strongly endorsed by Parliament at the sessions of Oct. 27 and 28, the vote in the Senate being 301 to 9; in the Chamber the majority was 106. This implied a ratification of the acceptance of the offer by a German labor syndicate to rebuild—with German material and German labor—eleven ruined villages on the Somme, as well as an endorsement of M. Briand's general policy toward Germany. Thus the Premier was able to depart for the Washington conference with the solid backing of Parliament.

The French treaty with Mustapha Kemal was given out after the Premier's departure. By its terms France withdraws from Cilicia, the boundary is drawn between French Syria and Turkey, and France receives various economic advantages, notably a concession for the operation of the Bagdad Railway from the Mediterranean to the Tigris River, and a ninety-nine-

year lease on the iron, chrome and silver mines of the valley of Harchite (Northern Anatolia), near the shores of the Black Sea. Politically, this treaty is beneficial to France, is displeasing to Great Britain, and especially to the Greeks, who are still trying to dispose of the troublesome Mustapha by force of arms. It means that France has recognized the Government of Mustapha Kemal as the ruling Government of Turkey, rather than the Government at Constantinople, recognized by Great Britain. The agreement was negotiated for the French by Henry Franklin-Bouillon, an agent of somewhat vague status, who conferred at Angora with Youssouf Kemal Bey, Foreign Minister for Mustapha Kemal; it was ratified by the Angora Parliament before M. Franklin-Bouillon brought it to Paris. Formal approval of this important pact was one of the last official acts of Premier Briand before he sailed for America.

ALBANIA'S FRONTIER ESTABLISHED

THE status of Albania underwent a great change on Nov. 5. Her territorial entity was established by the Council of Ambassadors and her political entity centred at Tirana was recognized by the Supreme Council. The first decision set the frontiers about as they were arranged by the London Ambassadorial Conference in 1913, when the great powers were bent on making the country a Moslem State governed by Prince William of Wied, and rendered nought the stipulations in the Treaty of London of April, 1915, as well as the Wilson-Lloyd George-Clemenceau compromise favoring Greece and the Nitti-Lloyd George-Clemenceau compromise

favoring Serbia of four years later. As a result of the decision of the Council of Ambassadors, Great Britain, France and Italy have invoked Articles XI. and XVI. of the Covenant in a note sent to the Council of the League of Nations to ascertain what measures the Council intends to take in order to have the findings of the Council of Ambassadors respected by Greece in the south and by Yugoslavia in the north.

The general line of the frontier laid down by the Council of Ambassadors on Nov. 5 rectifies the line of 1913 as follows: The district of Ligne is given to Albania; the Dibra-Striga road is given to Yugoslavia; also the territorial angle

which secures Yugoslavia a better position in Prizren and Podgaritz; Scutari is to go to Albania, but Yugoslavia is to have the use of its port of Duleina on the Adriatic.

On Nov. 9 the foregoing was put in the form of a protocol and communicated to the Governments of Yugoslavia, Greece and Albania and to the secretariat of the League. This protocol automatically put into execution the following resolution of the Council of the League of Nations, adopted at the recent Geneva conference:

"The Council approves of the appointment of a commission of three impartial persons to proceed to Albania and to report fully on the execution of the decision of the principal allied and associated powers as soon as it is given, and on any disturbances which may occur on or near the frontier of Albania. The commission shall have power to appoint impartial observers to enable it to discharge its functions. The Council in its anxiety to see peace preserved, and feeling assured that the decision of the principal allied and associated powers [as represented by the Council of Ambassadors] will be taken without delay, considers that the commission should arrive in Albania by Nov. 1, 1921, but that it should take no action until the decision of the principal allied and associated powers is given."

On Nov. 9 the British Prime Minister, acting for the Supreme Council, invited the Council of the League of Nations to assemble at Paris on Nov. 18 for the purpose of considering the attitude of Yugoslavia toward Albania. This is

the first time the aid of the Council of the League of Nations has formally been invoked by the Supreme Council to take action against a member of the League invaded by another.

The long and bitter boundary dispute between Yugoslavia and Albania was finally settled by the Council of the League of Nations at Paris on Nov. 18. Representatives of the two nations were summoned before the Council, the Yugoslavs having previously been notified in a peremptory manner that the troops that had invaded Albanian territory must be withdrawn immediately. The representations of the two nations were made before the Council at a public session, a new departure for this body. The Serbian Representative, Nata Boekovitch, denied the charge of invasion, justifying his country's course as best he could. Midsat Frasherli, the Albanian delegate, then presented his side of the case with equal eloquence. In the end both representatives agreed to accept the boundary recently decided upon by the Council of Ambassadors, promising to live in peace and respect the obligation thus assumed. A protocol to that effect was to have been signed on Nov. 19, but when it was presented for signature the Yugoslav delegation injected certain reservations, saying they would withdraw their troops from the territory allotted to Albania but refused to recognize as permanent the line fixed by the Ambassadors. The Yugoslav delegation announced that they would continue to urge reconsideration of the boundary line.

STATE TRIALS IN BULGARIA

THE High Court called to judge the members of the Radoslavoff Cabinet and General Gekoff, the former charged with having conspired with the dethroned "Czar" Ferdinand to cause the nation to enter the great war on the side of the Central Empires, and the latter with having illegally executed the decrees of the said conspiracy, convened at Sofia on Oct. 11. This is the third time in the history of modern Bulgaria that the High Court has been assembled. The first time was in 1903 and the second in 1914. Although almost the entire press urged the members of the court to act "with justice and, having acted with justice, to execute the verdict with firmness," some conservative papers point out the difficulty of governing under a monarch like Ferdinand in the early years of the war, with the people still bitter over the great surrender in the Treaty of Bucharest in 1913.

As a public diversion from the trial, it was the intention also to bring to justice the men who were charged with having profited by the acts of the Radoslavoff Ministry—and a special article to this effect had been incorporated in the law, condemning those responsible for plunging the country into the late war. This special clause (Article IV.) provided for the arrest of war profiteers and the sequestration of their property. As an attempt to execute this article, judging from the arrests already made under it, would have seriously disturbed both the political

and the industrial life of the country, the Inter-allied Reparation Commission at Sofia advised that it be repealed; this was done on Sept. 2.

The cable dispatch which announced the assassination of M. Dimitroff, Minister of War, together with his chauffeur and two companions, on Oct. 22, while motoring near Kôstendil, where he was born in 1877, gave no cause for the tragedy. M. Dimitroff's manner of executing the Treaty of Neuilly and his unfriendly attitude toward the agents of Soviet Russia, however, are known to have arrayed two forces against him—the adherents of the dethroned Ferdinand, who have attempted to have Bulgaria resume her alliance with Turkey against Greece, and the Bulgarian communists, many of whom have been jailed for their activities.

Alexander Dimitroff was Minister of the Interior when the Peasant Premier Stambolisky formed the Ministry in October, 1919, which was to sign the Treaty of Neuilly. Although of known pro-Entente sentiments, he had been in office since 1917. He assumed the portfolio of war last Summer. During the absence of Premier Stambolisky on his round of visits to the Western chancelleries last Winter, M. Dimitroff assumed the portfolio of Foreign Affairs, and fulfilled his duties in a manner which gave the Entente nothing to complain of. As Minister of War he has co-operated with General de Fourton, head of the Interallied Military Mission, in the matter of disarmament.

THE NEW KING OF JUGOSLAVIA

KING ALEXANDER, whose acceptance of the Crown of Yugoslavia had been in doubt for two months, left Paris for Belgrade on Oct. 29 and took the oath to support the new Constitution of the monarchy of the Serbs, Croats and Slovenes at the capital on Nov. 5. When his father, the aged King Peter, died, Alexander, then Prince Regent, was ill in Paris. On Aug. 17 he proclaimed his acceptance of the crown, but still lingered in the City of Light, and then in a villa he had taken at Versailles. It has now become known that he underwent an operation in July at a private hospital, when a piece

of bomb was extracted which had been in his body since the attempt to assassinate him last year. Subsequent to the operation the patient required the utmost quiet. There was another reason, however, for his prolonged stay in Paris. It was his desire to bring to a happy conclusion his courtship of Princess Sophie, second daughter of Prince Emmanuel, Duc de Vendôme et d'Alençon, a member of the Bourbon-Orléans family. The differences of religion and the Princess's disinclination to reside in Belgrade are said to have been the reasons for the unsuccessful termination of King Alexander's suit.

RUMANIA AND SOVIET RUSSIA

ALTHOUGH the Soviet Government at Moscow has finally agreed to the claim "in principle" of Rumania to Bessarabia, the Government at Bucharest is having more difficulty in persuading the Soviet to return the gold and treasure which during the retreat in Moldavia of the Rumanian Army was sent for safe keeping to Moscow, then under the Czar.

At the beginning of the negotiations, which have been going on at Warsaw and which reached a conclusion on Oct. 20, it was estab-

lished that the Rumanian gold no longer existed. The Soviet Government had used nearly all of it. It appears that the Soviet delegation sought to set aside this issue in favor of their Bessarabian claim. But the Rumanian delegation, headed by M. Filality, still insisted on the return of the gold or its equivalent. There the matter stands, with the Soviet delegation ready to open the question of Bessarabia, should the Rumanian delegation prove too pressing for the expropriated gold.

ANOTHER REVOLUTION IN PORTUGAL

Elucidation of the confused events that led up to the murder of ex-Premier Granjo and other friends of Paes—Personnel of latest Cabinet, headed by Pinto

[PERIOD ENDED NOV. 10, 1921]

SINCE the proclamation of the republic on Oct. 5, 1910, there have been no fewer than seven revolutions, or attempted revolutions, in Portugal. Two of these have been Monarchical—for the restoration of the deposed King Manuel II. now living in England—the rest have been due to one faction of the Republican Party attempting to oust its rivals, so that it might enjoy the benefits of office.

Both the elections of last July and the successive Governments of Querioz and Granjo had been the outcome of a military movement of the preceding May, which had brought pressure to bear upon President Almeida for a more conservative administration with proclivities favoring Royallist prisoners and unfavorable toward the victims of Major Sidonio Paes's revolution of December, 1917. These victims, a year later, became the murderers of Paes, and the results of his revolution drove ex-President Dr. Bernardino Machado and ex-Premier Dr. Alfonso Costa into exile.

Since last Spring the victims of the Paes revolution who were still at liberty had determined on military action in order to restore the one-faction Government as it had existed prior to the revolution of December, 1917. What probably sealed the fate of the late Premier, Senhor Antonio Granjo, was his unrelenting attitude toward political murderers.

The promoters of the Lisbon revolution of Oct.

19, Colonel Manuel Maria Coelho, Major Cortez dos Santos, Captain Rosa Mateus, Lieut. Commanders Procopio de Freitas and Serrao Machado, had, they declared, hoped to achieve their ends by peaceful means. But they allowed the Carbonarios to arm themselves at the naval arsenal. These Carbonario, or professional revolutionary elements, had long cherished the idea of punishing all the partisans of the Moderate President, Sidonio Paes, who had not already been accounted for, as well as other Conservative Republicans. The revolution of Oct. 19 gave them their sinister opportunity.

At 7 o'clock A. M. a shot was fired as a signal by a company of the Republican Guard, and it was immediately answered from the warships in the Tagus, Sao Gabriel and Vasco da Gama. Thereupon Colonel Coelho took up strategic positions, particularly at Edward VII. Park, with some 8,000 cavalry and a score of machine guns, while Machado and de Freitas took command at the arsenal. At 9:30 a deputation of the revolutionary junta, consisting of Colonel Nobre da Viega, Machado, Dr. Jacinto Simões, and Senhor Affonso de Macedo, waited upon President Almeida and demanded the dismissal of the Granjo Government and the dissolution of the July Parliament. The President asked for time to consider, and the delegation withdrew. A few moments later he received a message from Senhor Granjo, who had sought

asylum with a loyal detachment of the Republican Guard at Carmo. Granjo's letter stated that he had not enough faithful troops to resist the revolutionists, and that he left the decision in the President's hands. President Almeida replied in a note which approved Granjo's action and at the same time relieved him of the responsibility of office.

At 12:30 P. M. a second revolutionary delegation visited the President. It included, in addition to the first delegation, Lieut. Commander de Freitas, Captain Montez, and Colonel Rego Chaves. This time the proposal of the junta was accepted, and a Cabinet was announced, headed by Colonel Coelho. The first act of the new Government was to issue a proclamation, on the morning of Oct. 20, repudiating the events of the previous night.

After receiving the reply to his letter Senhor Granjo motored from Carmo to his home and thence to the home of Senhor Cunha Leal, the Financial Minister of the fallen Government. There he was arrested and taken with the other prisoners to the naval arsenal. Then took place the lynchings by the Carbonarios. Senhor Granjo, Captain Freitas da Silva, and Captain

Carlos da Maia, thrice Minister of Marine, who had first become Minister under President Paes, were shot dead, and Senhor Cunha Leal wounded. Another partisan of Paes, Lieutenant Teofilo Duarte, was searched for at the house of the Countess Ficalho, but managed to escape. Admiral Machado dos Santos, the "founder of the republic," was murdered by his guards while being taken to the arsenal under arrest.

The new Government was kept busy cleaning its hands of the charges of being responsible for the assassinations, but public opinion was so aroused that on Nov. 4 Colonel Manuel Maria Coelho thought it best to withdraw in favor of Senhor Pinto, who then assumed the Premiership and portfolio of the Interior, and reconstructed the Cabinet as follows:

Minister of Justice, Vasco Vasconcellos.
Minister of Finance, Senhor Trancoso.
Minister of War, Senhor Perez.
Minister of Marine, Senhor de Carvalho.
Minister of Foreign Affairs, Velga Simões.
Minister of Commerce, Senhor Simas.
Minister of Colonies, Senhor Nunez.
Minister of Instruction, Senhor Cabral.
Minister of Labor, Senhor Garcia.
Minister of Agriculture, Artao de Carvalho.

MEXICO'S EXTERNAL DEBT

THOMAS W. LAMONT returned to New York on Oct. 26 from Mexico City without having concluded any definite arrangement regarding the payment of principal or interest on Mexico's external debt, which was the chief object of his mission as representative of the International Committee of Bankers, representing the associated holders of Mexican bonds. According to published interviews, Secretary de la Huerta had proposed adjusting the Mexican external debt by buying in the Government's obligations at the market price and replacing them, if necessary, by a new loan. Mr. Lamont and his associates had objected to diverting funds pledged to paying defaulted interest to such a buying in at depreciated quotations. The net result of the ensuing debate was that the negotiations failed, and that both sides were disappointed. The Lamont negotiations had an indirect bearing on the question of recognition, as no new foreign loan could be floated prior to recognition by the United States, on whose action Great Britain and France are waiting. Mr. Lamont went to Washington on Nov. 2 and conferred at length with Secretary Hughes on Mexican conditions.

During the negotiations, General Calles, head of President Obregon's Cabinet, from a sanitarium at Rochester, Minn., made a spirited defense of the Vera Cruz law of compulsory profit-sharing with labor. He denied that this law would result in injury to capital, charged that the industrials and landowners had maintained virtually a system of slavery in Mexico,

and declared that the Government was seeking the liberation of the working classes. The labor bonus, he said, was only 10 per cent. of gross profits. Thus, a business capitalized at 100,000 pesos and earning 20,000 pesos yearly would, after payment of 16,000 pesos for interest and amortization of capital, have to pay the employees 10 per cent. of the remaining 4,000 pesos, or a total of only 400 pesos for the year.

Secretary de la Huerta, replying on Oct. 22 to a bitter editorial attack in the columns of *El Universal*, came out with a list of the Government's actual achievements, among which were the following: Repatriation of thousands of Mexicans at a cost of millions of pesos; the expenditure of 8,000,000 pesos to aid destitute towns and villages; reduction of the army by 40,000 men; establishment of cordial relations with twenty-six countries; acquisition of fifteen vessels for the merchant marine; better educational facilities; normalization of the bank situation, and the stabilizing of monetary affairs. The return of all confiscated property had been brought about or arrangements made to settle with owners, except in a few isolated affairs still pending. The Mormon Church had accepted \$94,477 for its claims. Spanish claims were being adjusted with the Spanish Government.

Government expenditures for 1922 presented to Congress on Nov. 1 showed a reduction of 30,500,000 pesos for the War and Navy Departments. There is an increase of 10,000,000 pesos for education. Gold and silver coinage is continued.

CENTRAL AMERICAN UNION'S ELECTIONS

THE first elections in the new Federal Republic of Central America took place on Oct. 30 in Guatemala, Honduras and Salvador, the three constituent States. Carlos Herrera, formerly President of Guatemala, issued the call for the elections, which chose members of Congress. Each State chose fifteen Deputies and fifteen alternates. All the Deputies, totaling, with the representative of the Federal district, forty-six, will meet on Jan. 15. The Senate will have nine members, three to be elected by each State. The Federal Council, which is the executive power, was also elected on Oct. 30. Salvador elected Francisco M. Suárez, Honduras Policarpo Bonilla, Guatemala Dr. Julio Bianchi, who was Minister from Guatemala to the United States during the war. Each State Government also named a Commissioner to go to Washington to secure recognition of the new federated republic. All the Commissioners had arrived in Washington by Nov. 15.

NICARAGUA—The Government on Oct. 22 declared a state of martial law for sixty days, and a state of war in five northwestern departments, three of which border on Honduras, from which revolutionary movements have been organized. Nicaragua now has 1,500 soldiers at this danger point to repel attacks and invasions.

COSTA RICA—The public debt of Costa Rica

has increased about \$7,500,000, owing to her differences with Panama, and now totals about \$45,000,000, or nearly \$100 per capita. The Government has decreed the construction of a city near Coto, along the Panama frontier, which was the scene of the recent dispute between the two countries.
